SCOTTISH HOSPITALS INQUIRY

# Bundle of documents for Oral hearings commencing from 19 August 2024 in relation to the Queen Elizabeth University Hospital and the Royal Hospital for Children, Glasgow

# Bundle 17 - Procurement History and Building Contract PPP

This document may contain Protected Material within the terms of Restriction Order 1 made by the Chair of the Scottish Hospitals Inquiry and dated 26 August 2021. Anyone in receipt of this document should familiarise themselves with the terms of that Restriction Order as regards the use that may be made of this material.

The terms of that restriction order are published on the Inquiry website.

# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME ONE

## PROJECT SCOPE AND COMMERCIAL DOCUMENT

## Invitation to Participate in Competitive Dialogue

**Foreword**

NHS Greater Glasgow and Clyde provides high quality services to our patients and we are proud of our numerous achievements in healthcare related activities as well as the skill, dedication and professionalism of our workforce in the delivery and support of our services.

Throughout this decade the Board has been developing its Acute Services Review ("ASR") to modernise the acute adult health service in Glasgow. The ASR proposals were approved in 2002 and subsequently updated in 2006 to reflect the decision that the New Children's Hospital would be located on the Southern General site.

The New South Glasgow Hospitals (NSGH) Project is the major element of the second phase of the ASR. Following on from the successful completion of phase one, namely the building of the new West of Scotland Beatson Cancer Centre at Gartnavel General Hospital and the commissioning of the two new build Ambulatory Care Hospitals to replace the major parts of Stobhill Hospital and Victoria Infirmary. In all phase one comprised investment of some £330million in state of the art health care facilities.

We are committed to the success of this Project in order to provide further new facilities and create one of the most modern healthcare campuses in the UK that not only local community, patients and staff can be proud of but as a statement of the quality of healthcare in Scotland.

I am pleased that the Board are in a position to issue you this Invitation to Participate in Competitive Dialogue, and continue the process of design and construction of our new facilities.

The requirements of the Board are outlined in this document and we look forward to receiving your detailed proposals in due course.

**Robert Calderwood**

Chief Executive
NHS Greater Glasgow and Clyde
May 2009

## 1.0 Introduction

1.1 The procurement of the New South Glasgow Hospitals (NSGH) Project (the "Project") comprises a new adult acute hospital, a new children's hospital, laboratory facilities, associated support areas and other site facilities and infrastructure on the existing hospital site at the Southern General in Govan, Glasgow.

1.2 The Project involves a capital investment estimated to be in the region of £550-600million to provide in the order of 175,000m2 of new hospital facilities for the Board's services comprising:

- a 1,109 bed adult hospital;
- a 240 bed children's hospital;
- laboratory facilities; and
- support accommodation, including energy and facilities management structures and infrastructure.

1.3 This Invitation to Participate in Competitive Dialogue (ITPD) has been developed to incorporate the relevant direction, guidance, information and documentation to facilitate the procurement of the design and construction of the Project. The ITPD follows approval of the Outline Business Case (OBC) for the Project by the Scottish Health Directorates (SGHD) on 21 May 2008 and the subsequent scoping, development and masterplanning of the requirements of the Board and shortlisting of bidders.

1.4 NHS Greater Glasgow and Clyde ("the Board") will procure the Project using the Competitive Dialogue procedure, under the Public Contracts (Scotland) Regulations 2006, which will provide for a structured and iterative approach to the procurement and provision of bids by the shortlisted bidders. The overall procurement will be conducted over a period of less than two years (from publication of the OJEU) with a specific strategy whereby the laboratory element of the Project will be on site within ten months of the issue of the ITPD documentation. The key stages of the procurement are set out below:

- pre-qualification to short-list bidders;
- issue of ITPD to short-listed bidders;
- opening of Competitive Dialogue;
- submission of Final Bids;
- evaluation and selection of the Contractor;
- commencement of Laboratory construction and design-development of adult and children's hospitals; and
- Full Business Case.

1.5 The procurement will be followed by the construction phase for the laboratory building and hospitals, to be operational in February 2012 and Summer 2015 respectively.

1.6 The Board has undertaken a considerable amount of masterplanning, exemplar design and scoping of its requirements in order to provide clarity to bidders. The Board believes that this approach will enhance the efficiency of the procurement process as well as reduce transaction costs and the length of the procurement timetable.

## 2.0 Document Structure and Scope

2.1 The ITPD is divided into three volumes:

| | |
|---|---|
| **Volume 1** | **Project Scope and Commercial Document** |
| | This provides an overview and outlines the scope and commercial parameters of the Project. It sets out the background to the Project, outlines the detailed procurement process and timetable, identifies the competitive dialogue process and incorporates the draft construction contract. The draft construction contract is based on the standard template NEC3 – Engineering and Construction Contract Option C Target Contact. |
| **Volume 2** | **Employer's Requirements** |
| | This sets out the technical and clinical requirements of the Board. These include Clinical Output Specifications for all departments, masterplan and exemplar design information, output specifications regarding the construction works, building and engineering services to be provided plus ADB Room Data Sheets, Schedules of Accommodation and Equipment Lists (by Group). Volume 2 is comprised of Volume 2/1 relating to the Hospitals and Volume 2/2 relating to the Laboratories. |
| **Volume 3** | **Bid Return and Evaluation** |
| | This details the range of deliverables required from bidders and the evaluation strategy and scoring approach that will be applied by the Board. |

## 3.0 ITPD Objectives

3.1 The purpose of the ITPD is to allow bidders to assess the Board's requirements and be in a position to respond to the Board's Invitation to Submit Final Bids (ISFB). The ITPD aims to:

- provide information to bidders on the Project and the opportunities available;
- set out clearly the Board's requirements;
- provide information on the Board's approach to the Competitive Dialogue procurement process, including a programme of workstreams and sessions;
- set out the deliverables required from bidders at the end of the bid period; and
- set out the evaluation criteria that the Board will use to assess bidders' responses to the bid deliverables.

## 4.0 Background to the Project and Strategic Context

### 4.1 NHS Greater Glasgow and Clyde

4.1.1 The Board is Scotland's largest health board. Formed in April 2006, it joined the Clyde region of the former Argyll & Clyde Health Board with the former Greater Glasgow Health Board to create NHS Greater Glasgow and Clyde. The Board has 40,000 staff serving a total population of 1.2million people, with a budget of £2.6billion.

4.1.2 Acute services are delivered from 10 hospitals, 3 of which lie within Clyde and the remaining 7 are located within the Greater Glasgow area. The geographical area covered includes West Dunbartonshire, Inverclyde, Renfrewshire, East Renfrewshire, East Dunbartonshire, Glasgow City, South Lanarkshire (Rutherglen & Cambuslang) and North Lanarkshire.

4.1.3 Within Glasgow, the Western Infirmary and Gartnavel General Hospitals operate in tandem delivering acute care in the west-end of the city. In the north-east of the city acute care is delivered from Stobhill Hospital and Glasgow Royal Infirmary. The Victoria Infirmary serves the south-east and the Southern General Hospital the south-west of the city. Services for children are provided centrally from the Royal Hospital for Sick Children, Yorkhill. Full adult Accident and Emergency services are provided at the Western Infirmary, Glasgow Royal Infirmary, the Victoria Infirmary and the Southern General Hospital. Stobhill Hospital has a casualty department which is covered by Consultant staff from Glasgow Royal Infirmary and the Western Infirmary.

### 4.2 Acute Services Review

4.2.1 Over the last ten years the Board has been developing its Acute Services Review ("ASR") to modernise the acute adult health service in Glasgow. The ASR proposals were approved in 2002 and subsequently updated in 2006 to reflect the decision that the New Children's Hospital would be located on the Southern General site. The strategy is to reduce the number of adult inpatient sites from the current five hospital sites to three, all of these providing acute receiving facilities, with two sites providing A&E and trauma services. The A&E and trauma services will be located at the Glasgow Royal Infirmary and the Southern General sites, with the acute receiving facility only at Gartnavel General. This will involve building a new inpatient hospital on the Southern General site and refurbishment/smaller builds at the Glasgow Royal Infirmary and Gartnavel General sites.

4.2.2 The ASR proposals are comprised of four distinct phases:

| Phase 1 | Phase 2 |
|---|---|
| • West of Scotland Cancer Centre at Gartnavel;<br>• Replacement of major elements of Victoria Infirmary and Stobhill Hospital with the development of new Stobhill and Victoria Hospitals;<br>• The transfer of Cardiothoracic Services to Golden Jubilee Hospital; and<br>• Laboratory development on Gartnavel site. | • New maternity build at Southern General Hospital allowing full closure of Queen Mother's Hospital;<br>• New Children's Hospital allowing full closure of Royal Hospital for Sick Children;<br>• New build major acute hospital for South Glasgow (enabling closure of Western Infirmary, Victoria Infirmary and Mansionhouse Unit); and<br>• New Build Laboratory Facility. |
| **Phase 3** | **Phase 4** |
| • Glasgow Royal Infirmary – redevelopment. | • Gartnavel General Hospital – redevelopment. |

4.2.3 ASR Final Configuration

The conclusion of the ASR programme will create the following final configuration:

- New cancer hospital at Gartnavel Hospital;
- Cardiothoracic service and interventional cardiology at Golden Jubilee Hospital;
- 2 maternity units (Princess Royal Maternity Hospital and Southern General Hospital);
- 2 new Ambulatory Care Hospitals (Stobhill/Victoria);
- 2 major acute sites (Southern General Hospital and Glasgow Royal Infirmary);
- 3rd acute inpatient site (Gartnavel General Hospital);
- New children's hospital; and
- Transfer of services and closure of Western Infirmary, Stobhill Hospital, Victoria Infirmary, Mansionhouse Unit, Queen Mother's Hospital and Royal Hospital for Sick Children.

## 4.3 Key Benefits

4.3.1 It is anticipated that the Project will deliver the following range of benefits for patients and staff:

- Provision of high quality services which are timely, accessible and consistently available by providing local access to core medical and surgical services and consolidating specialist and tertiary services on fewer sites within the city;
- Investment in high tech equipment and Information Technology;
- Attention to design and landscaping to improve the patients overall care;
- Facilities that are fully accessible to all and DDA (Disability Discrimination Act) compliant;
- Reduced waiting times for treatment through the provision of more efficient services increasing clinical capacity by investment in Information Technology (IT), the concentration of clinical teams onto fewer sites, optimising departmental and functional relationships and improving access to diagnostic services such as laboratory services;
- Access to highly specialised care provided by skilled staff facilitated through the centralisation of adult acute services;
- Rapid, one stop services through high volume processing of diagnostic tests and an extended working day to fit in with new models of care;
- The support of a progressive and consistent elective workload due to the segregation of emergency and elective treatments;
- Enhanced staff skills and knowledge through improved retention and recruitment due to a radically better working environment;
- Modern, fit for purpose facilities which meet the needs of patients, visitors and staff; and
- Enhanced University links through co-location of an academic centre with the New South Glasgow Hospitals. This will enhance teaching, and research and play a significant role in attracting and retaining high quality staff in all disciplines.

4.3.2 Further, the development is seen as a catalyst for wider economic and social regeneration activity, contributing to the creation of higher aspirations for the physical development of the local area as well as substantially contributing to the economy of the South West area of Glasgow and the wider locality.

### 4.4 Critical Milestones Reached

4.4.1 The following key milestones have been achieved in the procurement of the Project to date:

- Outline planning permission secured (subject to Section 75 Agreement, in relation to transportation issues) in April 2007;
- Outline Business Case approval by the Scottish Government in May 2008;
- Approval to proceed to market from Gateway 2 Review in January 2009;
- Publication of OJEU notice and Industry Day in February 2009;
- Return of Pre-Qualification Questionnaires and shortlisting of bidders in March/April 2009.

## 5.0 Project Scope

### 5.1 Introduction

5.1.1 As illustrated in *Appendix A – Hospital Site and Surrounding Area*, the Southern General Hospital site extends to some 28.6 hectares and is located within the Govan area, lying to the south-west of Glasgow City Centre adjacent to the residential neighbourhood of Drumoyne and the industrial areas of Shieldhall and King George V Dock. The site is located 500 metres south of the River Clyde. The site's northern boundary is defined by Renfrew Road/Govan Road with the eastern boundary defined by Moss Road/A739 (Clyde Tunnel approach road). Langlands Drive and residential developments delineate the southern boundary and Hardgate Road runs north-westwards to identify the western boundary of the site.

5.1.2 The development site for the Project extends to some 8.6 hectares and is located in the west-central area of the hospital site as identified in *Appendix B – Existing Site Plan.* The development site is bounded by operational healthcare buildings to three sides, with boundaries to neighbouring industrial areas to the north/north-west. The existing buildings within the development site (as identified in Appendix B) are to be demolished by the Board in advance of the Project, as described in section 2.2.3. below.

5.1.3 The project includes the provision of 1,109 adult and 240 children's beds, with target operational dates of February 2012 (Laboratories) and Summer 2015 (Hospitals). The bed numbers are illustrated below in *Table 1 – Proposed Bed Numbers – Adult and Children's Hospitals.*

| **Adult Hospital** | | **Children's Hospital** | |
|---|---|---|---|
| **Specialty** | **Beds** | **Specialty** | **Beds** |
| General Medicine (incl MHDU + AAU) | 405 | Inpatient (incl critical care areas) (*12 beds in maternity facility) | 193* |
| CCU | 20 | Short-stay (observation ward) | 20 |
| Stroke | 26 | Day Care/Day Surgery | 27 |
| Haematology | 14 | **Total Inpatient Beds** | **240** |
| Dermatology | 18 | | |
| Nephrology | 80 | | |
| Geriatric Medicine | 93 | | |
| Surgery & Vascular (incl AAU) | 164 | | |
| Urology | 39 | | |
| Orthopaedics/rehab | 139 | | |
| ENT | 31 | | |
| ITU | 20 | | |
| SHDU | 23 | | |
| Clyde/Contingency | 37 | | |
| **Total Inpatient Beds** | **1,109** | | |

*Table 1 – Proposed Bed Numbers – Adult and Children's Hospitals*

### 5.2 Masterplanning and Exemplar Design

5.2.1 The Board has carried out an extensive masterplanning exercise in respect of the Project, encapsulating the wider Southern General hospital site. This has been carried out to assist the scoping and planning of the Project by the Board as well as to satisfy the requirements of the Planning Department at Glasgow City Council.

5.2.2 Further, the Board has completed an exemplar design to illustrate the development of the brief and provide a working solution in drawn design terms for consideration by the bidders. The exemplar design is appended to Volume 2 of this ITPD and may generate queries during the dialogue process from bidders. The adjacencies identified in the drawn and written exemplar design must be adhered to.

### 5.3 Planning

5.3.1 As is noted above, Outline Planning was obtained in April 2007, subject to forty-three conditions and conditional on a Section 75 Agreement being concluded in respect of transportation issues.

5.3.2 The Section 75 Agreement Heads of Terms are agreed between the Board and the Council, the Heads of Terms for a proposed Fastlink service will be concluded by the Board as an aspect of the masterplanning prior to the conclusion of the competitive dialogue process.

5.3.3 The original consent from the Planners as well as a matrix detailing the current status and responsibility for each planning condition are appended to Volume 2 of this ITPD.

### 5.4 Accommodation Overview

5.4.1 New Adult Hospital

This will provide A&E services and acute specialist in-patient care as well as medical day services and out-patient clinics serving the local population. Key components of the facility will include:

- In Patient Accommodation
  Surgical beds (general surgery, orthopaedics, urology, vascular, ENT and renal); Medical beds; Acute Assessment Unit – 118 beds, ICU/HDU/CCU – 79 beds, Acute Stroke – 26 Beds and Care of the Elderly 93 beds.

- Out Patient Accommodation
  Full range of general outpatient clinics including, among others, diabetic unit, respiratory, orthopaedics and urology.

- Day Services
  22 medical day bed area; 30 station dialysis unit.

- Treatment & Diagnostic Services
  Emergency Department, 20 operating theatres, imaging, and endoscopy.

- Clinical Support Services
  Pharmacy dispensary, medical physics, medical illustration. Laboratory services linked to the hospital by underground route and pneumatic tube system, aseptic unit within the children's hospital. The pneumatic system to extend across the abutment with maternity and the link to neurosciences to provide for expansion of the system to these areas.

- Non Clinical Support Services
  Main entrance, medical records, administration, chaplaincy, social work, staff changing, switchboard, estates, facilities, security, catering, portering, domestic, management and energy centre.

5.4.2 New Children's Hospital

This will provide A&E services and a comprehensive range of inpatient and day case specialist medical and surgical paediatric services on a local, regional and national basis. The new development will also have outpatient facilities. The care strategy is that all of Glasgow's Children's Services (up to the age of 16 and up to 18 years where appropriate) will be provided at the New Children's Hospital. Of the 240 beds planned, around 20% of the beds will be for day patients and the balance for inpatient requirements.

Key components of the facility will include:

- Outpatient Accommodation
  Full range of Children's outpatient clinics including audiology, general paediatrics, orthopaedics, ENT etc;

- Day Services
  Circa 10 medical day beds; 4 dialysis stations and circa 25 day surgery beds;

- Treatment & Diagnostic
  Accident and Emergency, minor injuries, Imaging, 9 theatres, rehabilitation;

- Clinical Support Services
  Aseptic unit, pharmacy, medical physics, medical illustration;

- Non Clinical Support Services
  Facilities, ancillary services, administration, spiritual services, medical records, staff change, staff dining.

5.4.3 Laboratory Facilities

The new facilities will be one of two major laboratory sites in Glasgow (the other at Gartnavel General). The services to be delivered from the new laboratory build include biochemistry, haematology, medical genetics, microbiology, mortuary and post mortem. The mortuary and post mortem facilities includes the re-provision of the Glasgow City mortuary which also provides forensic services for the city of Glasgow. Road infrastructure to support the operation of the laboratory function requires to be completed with the laboratory build aspect of the overall project.

5.4.4 Facilities Management Building and Energy Centre

These key support accommodation areas are included in the site masterplan and the operational needs of the Board in relation to the facilities management building are identified in Volume 2 of the ITPD. The Board require the separation of service (FM) traffic from patient and public traffic, and the facilities management building will be linked to the main hospitals building via an underground tunnel system, this to provide for goods in and goods out as well as transfers to the laboratory and mortuary areas. The Board is desirous of a robotics (automatic material handling systems) solution for the movement of certain goods and this will be developed with bidders during the competitive dialogue process. The approach to energy provision is that the new facility will provide energy on a site wide basis, the extent of this and relevant considerations are identified in Volume 2 of this ITPD.

5.4.5 Retained Facilities

The remainder of the site will retain approximately 630 beds within the institute of neurological sciences, maternity, spinal injuries, mental health facilities and Langlands buildings. The Langlands facility provides older people's services, dermatology and services for the young physically disabled.

The new hospital will abut the neo-natal/maternity building to provide a physical link as well as link to the neurosciences building at Level 1.

### 5.5 Site Investigations and Existing Site

5.5.1 The Board commissioned a site investigation (SI) of areas of the existing campus and the site. The resulting SI information is available to bidders and the benefit of this work will be provided to the Contractor. The SI is appended to Volume 2 of this ITPD.

5.5.2 The Board will carry out certain enabling works in relation to the existing site to support and prepare for the construction period of the scheme. This includes:

- demolition of the existing structures on the site (including the former residences, the catering/dining facilities and the conference facility);
- removal of foundations and roads within the site; and
- the diversion of the majority of the existing utilities from the site.

It should be noted that the diversion of the culvert and relocation of the waste compound (to a position agreed with the Board) will be a responsibility of the Contractor, as will demolition of the existing surgical block.

5.5.3 The Southern General is a live hospital site, and as such the Contractor and his team will face certain constraints in the delivery of the Project. Essential 'blue light' and other access routes will require to be kept clear and unobstructed by the Contractor at all times for the duration of the construction period, with interface protocols, communications plans and emergency/contingent planning to be discussed and agreed with the Board during the dialogue process to ensure clarity over these critical issues.

### 5.6 Equipment and ICT

5.6.1 Equipment requirements are appended to Volume 2 of this ITPD, listings per equipment Group. The Contractor shall supply and fit Group 1 equipment, Group 2 shall be free issue by the Board and fitted by the Contractor, and the Board shall supply (and fix where relevant) Group 3 and Group 4 equipment. The Contractor is required to provide all necessary fixings, supports and services connections and requirements to support all of the groups of equipment listed.

5.6.2 It should be noted that Information Management and Technology (IM&T) is out with the scope of this Project. The Board is procuring software and end-use hardware as part of a separate IM&T project. The Contractor shall, however, provide the requisite hard infrastructure to support the Board's IM&T requirements, as detailed in Volume 2 of this ITPD.

### 5.7 Energy and Sustainability

5.7.1 The Board have developed energy and sustainability strategies and targets in relation to the Project. These have been developed through consultation with the Carbon Trust, Waste Resources Action Programme (WRAP) and other agencies and are contained in Section 8.0 and Appendix M of Volume 2 of this ITPD.

5.7.2 Energy and sustainability issues are very important to the Board at a project and corporate level and will attract a commensurate level of review and consideration in the bid evaluation and design development of the scheme. The Carbon Management Plan of the Board is contained in Appendix P of Volume 2 of this ITPD and bidders are required to adhere to the principles and requirements therein.

### 5.8 Community Engagement

5.8.1 The Project Team and the Board's Community Engagement Managers have established the required community benefit considerations for incorporation in the procurement of the Project. These have been developed in line with the Scottish Government's Guidance on Community Benefits in Public Procurement. In particular the Board will seek to work in partnership to develop initiatives around the following:

- Targeted recruitment & training;
- Developing Small and Medium Enterprises (SMEs); and
- Developing Social Enterprises.

## 6.0 Project Management

### 6.1 Project Management

6.1.1 The Board has established a project organisation structure to oversee the implementation of the ASR, including this Project. The ASR Programme Board is responsible for the implementation of the ASR strategy. The ASR Programme Board consists of the Chief Executive; the Acute Services Chief Operating Officer; the Director of Acute Services Strategy, Implementation and Planning; the Project Director; Divisional Directors; Finance Director; Executive Medical and Nursing Directors; Partnership Representation; and a Senior Civil Servant.

6.1.2 A Project Director, who has executive responsibility for the implementation of the Project, and a Project Team have been appointed by the Board. The New South Glasgow Hospitals Executive Board has been established to ensure that all the governance and Project milestones are achieved.

6.1.3 The Project Team includes a range of staff from clinical, operational, planning, facilities, finance and estates areas and is responsible for the co-ordination of all workstreams, reporting to the Board through its governance structures. The Project Team is led by the Project Director and is supported by legal, financial and technical advisors, as identified in *Table 2 – Key Board and Advisory Roles* below.

| Role | Individual/Organisation |
|---|---|
| Senior Responsible Owner | Ms Helen Byrne<br>Director of Acute Services Strategy, Implementation and Planning |
| Project Sponsor | Mr Robert Calderwood<br>Chief Executive |
| Project Director | Mr Alan Seabourne<br>Project Director – New South Glasgow Hospitals Project |
| Project Technical Lead | Mr Peter Moir<br>Head of Major Projects |
| Board Technical Advisor | Currie & Brown UK Limited |
| Board Legal Advisor | Shepherd + Wedderburn LLP |
| Board Financial Advisor | Ernst & Young LLP |

*Table 2 – Key Board and Advisory Roles*

**6.2 A number of groups have been set up to support the Project as follows:**

6.2.1 New South Glasgow Hospitals Executive Board

The New South Glasgow Hospitals Executive Board ("Executive Board") will have delegated authority to make executive decisions on critical points in the Project's process. The role of the Executive Board will be to oversee the overall process of the Project and to co-ordinate work streams. The Board will meet bi-monthly or more frequently depending upon the stage of the project and will report into the ASR Programme Board.

6.2.2 ASR Systems Redesign Group

The development of the New South Glasgow Hospitals will result in a number of radical changes not just in reconfiguring clinical services across Glasgow but also in working practices and the way in which patients receive their treatment. A comprehensive and co-ordinated process will be developed to take forward the re-design aspects and in an integrated fashion with staff, human resources and workforce planning to ensure both staff involvement and that the right number of staff and skills are available to support the new ways of working.

6.2.3 Procurement and Finance Group

This has been established to meet the requirement for specialist skills in relation to taking the procurement process forward, as well as with regard to the funding, affordability and value for money aspects.

6.2.4 Joint Project Team

The Joint Project Team is responsible for managing the day to day complexities of the Project. The Joint Project Team reports to the Executive Board and, where necessary, to the ASR Programme Board, the ASR Systems Redesign Group and the Procurement and Finance Group. The Joint Project Team will be responsible for planning the following:

- Designing a plan;
- Identifying activities;
- Estimating;
- Scheduling;
- Commissioning;
- Analysing risk; and
- Completion of plans.

6.2.5 Site Programme Co-ordinating Group

There is a very substantial construction programme planned over the next six years at the Southern General Hospital. The site will continue to operate during the full construction programme and therefore there is an established group to monitor, co-ordinate and control all on-site works.

6.2.6 Site Planning Group

The Site Planning Group provides a mechanism for all site project leads, technical advisers, operational staff and health & safety advisors to meet as a group and enable projects to be progressed and developed in a safe and co-ordinated way.

## 7.0 Programme

The outline timetable for the procurement is as follows:

| Event | Milestone |
|---|---|
| Publication of OJEU (incl MoI and PQQ) | 10 February 2009 |
| Closing date for responses to PQQ | 20 March 2009 |
| Evaluation of PQQ responses and shortlisting of bidders | 08 April 2009 |
| Issue of Invitation to Participate in Competitive Dialogue (ITPD) to bidders | 01 May 2009 |
| Tender Return | 11 September 2009 |
| Evaluation of Bids and Contract Award | November 2009 |
| Stage 1 (Design + Construction of New Laboratories) commences | November 2009 |
| Stage 2 (Detailed Design of Adult, Children's and Infrastructure to FBC Submission) commences | November 2009 |
| Stage 2 completion, FBC and approval to proceed with Stage 3 | November 2010 |
| Stage 3 (Engagement to carry out the construction of the Adult, Children's and Infrastructure) commences | November 2010 |
| Stage 1 Completion (Construction) - Laboratory Facilities | December 2011 |
| Operational Date – Laboratory Facilities | February 2012 |
| Stage 3 Completion (Construction) – Hospitals | January 2015 |
| Operational Date – Hospitals | Summer 2015 |
| Stage 3A (Demolition of Surgical Block and associated buildings, and completion of soft landscaping) commences | Summer 2015 |
| Stage 3A completion | Summer 2016 |

## 8.0 Procurement Strategy

### 8.1 Procurement

8.1.1 The Board's procurement strategy will use the competitive dialogue procedure to facilitate discussion with bidders around pre-determined technical and commercial matters. The outcome of the competitive dialogue will be the selection of a preferred partner who will contract with the Board under an NEC agreement to (i) design and construct the new laboratory building and (ii) design and construct the new Adult and Children's Hospital under a target price arrangement.

8.1.2 This arrangement provides for the contract to be awarded following evaluation of the bids to be submitted in September 2009. Post contract award, concurrent activities of the Contractor commence of designing and building the Laboratories element of the Project whilst under taking design development of the Hospitals element of the Project. The (design development) culminates in the FBC compilation and approvals: this forming an essential gateway which must be achieved to allow the commencement of the construction of the Hospitals element of the Project.

8.1.3 The terms of the contract awarded (including the overall target price for the works and programme dates and activity schedule milestones) is based on the preferred contractor's final tender response at the end of the competitive dialogue process. As is noted above, specific gateway criteria (including necessary business case approvals) will be incorporated into the design development, programme and activity schedule in the contract through to the commencement of construction of the Adult and Children's Hospital.

8.1.4 During the dialogue the Board would like to discuss the detail and proposals for an extended defects liability period and this shall form a workstream for discussion with bidders.

8.1.5 The Board has considered the time and cost implications of the bidding market in its procurement strategy and considers that the route being adopted reflects market requirements and the commercial drivers of bidding a scheme of this size, nature and type: this is supported by the market sounding and engagement that took place with regard to the scheme. The Board has identified the particular aspects of the Project that will form the basis of discussion during the competitive dialogue, these are detailed in Section 9.0. Further, the Board has developed certain levels of Works Information (contained in Volume 2) aimed at minimising transaction time and costs for Bidders.

8.1.6 Design development of the laboratory facility will continue by the Board during the bid period after the Competitive Dialogue is closed. The designers and the further developed design will then be novated to the Contractor.

8.1.7 In summary the stages of the procurement can be summarised in outline as follows:

| Stage | Heading | Outline Activities/Milestones |
|---|---|---|
| Stage 0 | Competitive Dialogue | Bid and design development leading to submission of technical and cost information in final tenders. Identify maximum target price and agree pain/gain share. Select contractor – contract award. |
| Stage 1 | Construct Laboratories | Consecutive to Stage 0 and concurrent with Stage 2. |
| Stage 2 | Detailed Design of Adult, Children's and Infrastructure to FBC Submission | Design development of adult and children's hospitals. |
| Stage 3 | Construct Adult and Children's Hospital | Consecutive to Stage 2. |
| Stage 3A | Demolition of Surgical Block and associated buildings and completion of soft landscaping | Consecutive to Stage 3. |

*Table 3 - Stages of Procurement*

**8.2 Construction Agreement**

8.2.1 This contract is based on the standard template NEC3 – Engineering and Construction Contract Option C Target Contract with Secondary Option Clauses as stated in Contract Data.

8.2.2 The contract covers the design development and construction of:

- Laboratory Buildings;
- Adult Hospital;
- Children's Hospital; and
- Associated Infrastructure.

8.2.3 The Target Price for the Project will be agreed prior to the contract award and will comprise three distinct areas with separate Programme and Activity Schedule details, namely:

- Conclusion of design and construction of the Laboratory Buildings;
- Design Development to FBC Stage for the Adult and Children's Hospitals; and
- Conclusion of design and construction of the Adult and Children's Hospitals.

The Construction Contract is contained in Appendix C to this ITPD Volume 1.

## 9.0 Competitive Dialogue Strategy

### 9.1 Competitive Dialogue

9.1.1 The Board is procuring the Project using the competitive dialogue procedure under the Public Contracts (Scotland) Regulations 2006.

9.1.2 The overall project programme is outlined in Section 7.0, however the specific requirements of the Dialogue process include particular key dates and processes. These are illustrated in a weekly planner of the Dialogue process included below at Section 9.2 and a detailed daily programme for the Dialogue included in Appendix E of this Volume 1 of the ITPD (this identifies the specific dates and sessions for each Dialogue Issue).

9.1.3 The key dates for this process are summarised below:

| Milestone | Date |
|---|---|
| ITPD Issue | 01 May 2009 |
| Dialogue Period | 01 May – 17 July 2009 |
| Final Bid Submission | 11 September 2009 |
| Selection of Preferred Solution | 23 October 2009 |
| Contract Award | November 2009 |

### 9.2 Overview of the Competitive Dialogue Procedure

9.2.1 The purpose of this Section 9.0 is to give Bidders an understanding of how the Board envisages the competitive dialogue procedure ("the Dialogue") working in practice.

9.2.2 The Board have considered the application of Dialogue and the implications in time and cost as well as the areas that require discussion. As a result the Board have chosen to limit the Dialogue to the under noted aspects of the project, together the "Dialogue Issues".

9.2.3 The Board will use the Dialogue to develop, refine and finalise its requirements, and assist Bidders in developing their proposals, on the Dialogue Issues before it invites Bidders to submit their final bids. The process for dealing with the Dialogue Issues is described more fully in Section 9.3 below.

| Design/Site | Topics | Aspects |
|---|---|---|
| | Design Brief | Clarifications and requests by the Bidders. |
| | Design Proposals | Clarifications and requests by the Bidders / Programme. |
| | Specification | Clarifications and requests by the Bidders. |
| | Services Strategy | Essential systems / Robotics. |
| | Masterplan | Coverage / Strategy. |
| | Planning/Other Consents | Coverage / Status / Risk share. |
| | Utilities and Sustainability | Strategy / Timings. |

| Logistics | Topics | Aspects |
|---|---|---|
| | Site Facilities/Welfare | Location / Timing / Coverage. |
| | Flexible Site Accommodation | Co-location / Lifespan. |
| | Deliveries/Materials | Parameters / Constraints. |
| | WRAP | Approach / Coverage. |
| | Traffic Management | Parameters / Constraints. |
| | Utilities (to temporary accommodation) | Proposals / Timings. |

| Laboratories/FM Facilities | Topics | Aspects |
|---|---|---|
| | Buildability | Logistics / Programme. |
| | Interfaces | Build phase / Operational phase / Interaction with main hospital. |

| Commercial | Topics | Aspects |
|---|---|---|
| | Contract | Compliance / Proposals |
| | Pain/Gain Share | Proposals / Ratios. |
| | Payment/Activity Schedules | Coverage / Content / Detail. |
| | Risk | Acceptance / Allocation. |
| | Extended Defects | Extent / Timescales. |
| | KPIs | Level / Coverage. |
| | Performance Damages | Items / Impacts. |

9.2.4 The Board's requirements on the remaining aspects of Project are fixed as per this ITPD document. Bidders' proposals for meeting these requirements will be developed during the Dialogue Period but out with the "Dialogue" process itself. Bidders will be entitled to attend clarification meetings with the Board and its advisers to assist in the development of these aspects of their proposals. The process for these clarification meetings is described more fully in Section 9.4 below.

9.2.5 Within 5 days of receiving this ITPD, Bidders wishing to participate in the Dialogue must return the following documentation to the Board (submit to [redacted]):

- Confidentiality Agreement (Appendix F, Part1);
- Receipt of ITPD Documents Form (Appendix F, Part 2);
- The Certificate of Acceptance of Form of Bid Conditions (Appendix F, Part 3); and
- The Certificate of Confirmation of PQQ Submission (Appendix F, Part 4).

9.2.6 Thereafter the Board will engage with Bidders about its requirements and the Bidder's proposals for the Project through a structured series of Dialogue and Clarification meetings (see Sections 9.3 and 9.4 below).

9.2.7 When the Board considers that the Bidders' proposals are sufficiently developed, it intends to close the Dialogue with the Bidders and invite Final Bids.

9.2.8 Bidders will be required to return bids on the basis of the requirements specified in Volume 3 of this ITPD. The Board anticipates that it may develop and refine its position on the Dialogue Issues through Dialogue with Bidders. If it does so, the Board will inform all of the Bidders of its amended requirements prior to requesting Final Bids. The Board's position on all other aspects of the Board's requirements, which are not covered within the Dialogue Issues, is fixed. These will be subject to clarification in accordance with the process described in Section 9.4, below, and again will be confirmed in writing prior to Final Bids being requested.

9.2.9 The final bids will be evaluated against the criteria specified in Volume 3 of this ITPD to determine which Bid is the most economically advantageous.

9.2.10 Following the submission of the Final Bids and prior to Contract Award, the Board's scope for further discussion with the Bidders will be limited to non-material clarifications of the Bids and no changes will be permitted to the basic features of any Bid at this stage.

9.2.11 On this basis, it will be the Dialogue stage that offers the most flexibility. The Board intends the Dialogue to be used for open and detailed discussion that will allow Bidders to develop proposals on the Dialogue Issues that translate into fully developed and detailed Bids.

9.2.12 Given the limited scope for discussion after the final bids have been submitted, it is essential that the Dialogue continues until the Board is confident that its requirements on the Dialogue Issues are sufficiently defined and the Bidders' proposals on the Dialogue Issues are sufficiently developed. The Board would welcome a constructive and focussed approach to resolving the Dialogue Issues and believes that this is crucial to the success of the programme to Contract Award, and to the Project more generally. Bidders should recognise the importance of resourcing their bid teams appropriately to ensure that the Board's objectives are met.

### 9.3 Dialogue Meetings

9.3.1 This Section 9.3 sets out the process for briefing the Bidders and the discipline to be applied to the regular meetings that will form the basis for interface between the Board and the Bidders on the Dialogue Issues. The process has been developed to:

- provide a framework discussions;
- ensure that the Bidders are treated equitably thus providing a level playing field with regard to the Bid requirements;
- minimise the number of Bid qualifications submitted;
- encourage Bidders to develop proposals that reflect fully the requirements set out in this ITPD and identify examples of deviation from the requirements during the Dialogue rather than following bid submission.

9.3.2 Close communication between the Board and the Bidders will be key to developing the Board's requirements and the Bidders' proposals in relation to the Dialogue Issues. To this end, a programme has been established for individual Dialogue meetings at which the Dialogue Issues may be discussed and resolved at the earliest opportunity. This will in turn enable Bidders to produce Bids that incorporate fewer qualifications and thus facilitate a more straightforward evaluation exercise.

9.3.3 Dialogue meetings will be held with the individual Bidders on agreed, nominated days to allow for forward planning. The programme of Dialogue meetings is contained in Appendix E and includes the identified time allocations for each bidder with regard to each Dialogue date. The summary 'weekly view' programme is illustrated below in *Table 4 – Competitive Dialogue Programme*. Please note that the arrangements for Dialogue meetings may be amended by the Board.

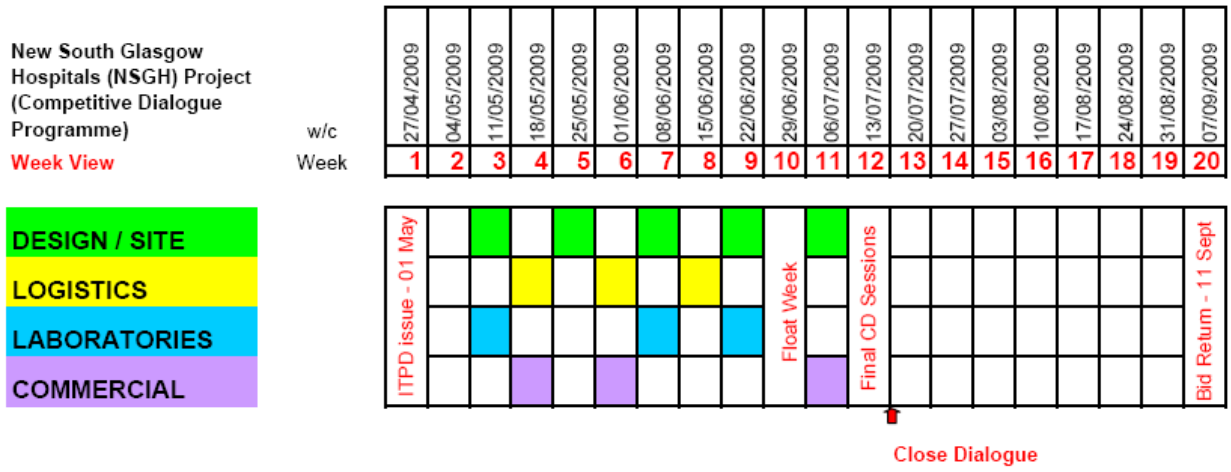

*Table 4 – Competitive Dialogue Programme*

9.3.4 To maximize the benefit of the Dialogue meetings for all parties, information setting out the parties' respective positions on the relevant Dialogue Issues should be exchanged between the parties in sufficient time to allow them to fully prepare for the meetings. In each of the following areas, the approach set out below will apply:

- Logistics – The Board will set the agenda for the first Dialogue meeting and will provide this to the Bidders by 5pm the Wednesday preceding the first meeting. Thereafter, the Bidders will be invited to propose agenda items and related supporting questions/queries for subsequent meetings, which proposals will be subject to comment by the Board. Bidders' agenda and related queries/questions must be received by the Board by 5pm the Wednesday the week preceding each relevant meeting;

- Laboratories – As above;

- Design/Site Issues – Bidders will be invited to propose agenda items and related queries/questions for Dialogue meetings. These must be received by the Board by 5pm the Wednesday the week preceding each relevant meeting.

- Commercial – Briefing papers will be issued by the Board by 5pm the Wednesday the week preceding each scheduled Dialogue meeting and Bidders will be required to submit questions, by noon the Monday of the week of the meeting, pertaining to the particular subject to be covered at the meeting. The Board's briefing papers will set out its objectives for each commercial issue. During Dialogue meetings, Bidders will be invited to comment on whether the Board's ambitions can be delivered and if not, why not and what alternative proposals can be offered by Bidders.

- The meetings held during the Dialogue will also allow the Bidders to demonstrate the general theme of their proposals. Bidders may produce drawings, models or other documentation to support their proposals and indeed may be required to do so by the Board in preparation for a Dialogue meeting. In discussing their proposals, Bidders are encouraged to demonstrate how they satisfy the requirements of this ITPD.

- Following a Dialogue meeting the Board may:

  - require a Bidder to prepare a written minute of the meeting for review by the Board;
  - require a Bidder to prepare a written submission on the relevant Dialogue Issue; and/or
  - schedule a further Dialogue meeting,

  as it deems necessary in order to finalise its requirements or develop the Bidder's proposals prior to final bid submission.

- All agendas and supporting query/question lists and minutes of Dialogue meetings must utilise the pro-forma contained in Appendix H. The pro-forma is a combined document that shall be used to firstly record the agenda and queries and post-meeting to host the minute. A dedicated document will be generated and recorded separately for each dialogue session in each Dialogue Issue (workstream) for all Bidders.

- Nothing said or intimated by the Board or its advisers at these meetings will provide the Bidders with any kind of approval for their proposals in relation to their adequacy in meeting the requirements of the ITPD (as developed throughout the Dialogue). The Board will provide advice where proposals are clearly likely to fail in the event that they proceed, unchanged, to Bid submission stage.

- The fact that the Board mentions or confirms that a Bidder may pursue a particular line or strategy does not mean that the same will necessarily score well on evaluation nor that it is or will be the Board's preferred route. All that it means is that it is not ruled out at this stage.

- Proposals put forward by different Bidders may be subtly different even if they appear the same. In any event all aspects of a Bid have to be read in context of the whole of the Bid. Accordingly, the fact that the Board replies to a question raised by a Bidder that a suggestion would not be acceptable does not mean it would be unacceptable if raised in another context by another Bidder.

- The Board may request that particular items are included in the agenda prepared by a Bidder for a dialogue meeting, may request that particular queries/questions are responded to by Bidders and may provide for particular information to be provided for discussion at a dialogue meeting. The Board shall advise Bidders of any specific requirements during the process in this regard.

- Questions submitted by the Bidders will be answered during the established programme of meetings. In the event that an issue raised is considered by a Bidder to require earlier attention, the Board will provide an appropriate response. Where the response to questions merely provides clarification of a specific aspect of the ITPD requirements, the response will be given to the Bidder asking the original question. Where the question requires a change to the ITPD requirements, the response, and the question that prompted it, will be provided to all Bidders.

- The Board reserves the right to request additional Dialogue meetings with one or more Bidders. Any Bidder wishing to arrange any additional meetings during the Dialogue shall propose their agenda and meeting date at least 7 days in advance. The Board shall endeavour, but shall not be obliged, to accommodate such requests.

### 9.4 Clarification Meetings

9.4.1 For those aspects of the Project that fall outside the scope of the Dialogue Issues, the following procedure will apply:

- General Principles of the Process – The Board will not enter into formal discussions over substantial elements of its bid requirements. Rather, it will be happy to consider requests for clarification, either in writing or in a meeting forum (to be followed up in writing, where appropriate), of particular aspects of this ITPD or other Project-related information provided by the Board to Bidders. Such clarifications will not modify substantial aspects of this ITPD.

- Requests for clarification – The process for formal written clarification requests is set out in Section 12.2 of this Volume 1 of this ITPD.

- Clarification Meetings – If a Bidder believes that a written response to its clarification request has been or will be insufficient to fully clarify its query, then that Bidder may request that the matter is raised as a separate agenda item at a Dialogue meeting (noting that the terms of this Section 9.4 will apply to the matter raised for clarification in that meeting) or dealt with in an additional clarification meeting. In either case, the Bidder should propose its agenda and meeting date at least 7 days in advance. The Board shall endeavour, but shall not be obliged, to accommodate such requests. The Board may utilise a Dialogue meeting to provide updates or information relation to clarifications – as a separate aspect of the meeting following the completion of Dialogue discussions at the relevant meeting.

- Clarifications raised by one Bidder may be made available to others – Please note that the applicable provisions of this ITPD, including those under Section 9.5, below, apply also to the clarifications process.

### 9.5 Overall Management of Procurement Process

9.5.1 The Board will conduct the procurement process in such a way as to ensure:

- Affordable and Value for Money Bids are received.
- Probity and accountability in the procurement process is achieved.
- Compliance with the Board's own financial regulations and/or procedural and contract standing orders.
- Compliance with the requirements of the Public Contracts (Scotland) Regulations 2006 (the 'Regulations') which require the procurement to be carried out:
    - with transparency;
    - with fairness between Bidders;
    - without discrimination between Bidders, and
    - in accordance with the procedural requirements of the Regulations.

9.5.2 The distinguishing feature of the competitive dialogue procedure developed for this Project is that it is still a competitive process involving a number of Bidders and the normal rules of public sector competitive tendering must be observed.

9.5.3 To comply with the above requirements, whilst there remains more than one Bidder in the competition, the procurement process will be conducted in accordance with the following principles: -

- Bidders may take into account only written information and instructions from those identified as having Board authorisation to issue such information and instructions.
- Clear records will be kept of all information requested and all information and instructions issued.
- The confidentiality of commercially sensitive information divulged by Bidders will be respected and protected and used only for the purpose for which it was provided.
- Any information provided to an individual Bidder that is or could be material to the Bid submission will be provided to the other Bidders. To avoid the risk of prejudicing a Bidder's position by divulging commercially sensitive information to competitors, Bidders will be notified whenever it is considered that an answer to their query would have to be provided to the other Bidder, and they will be given the option of either withdrawing their query or sharing their response with other Bidders.
- At any point in the process, no reference to proposals or prices submitted or referred to by one Bidder will be made to the other Bidders.

9.5.4 During the Dialogue and the evaluation of Bids, questions will arise in respect of the interpretation placed by Bidders on the requirements of the Board set out in the ITPD, how the Board might react to certain aspects of a proposal that a Bidder is considering, and the evaluation team's interpretation of Bidders' proposals. These points of clarification or confirmation will be dealt with as an integral part of the evaluation process, following the general procedural guidance set out above.

## 10.0 Guidance to Bidders

### 10.1 Confidentiality, Publication and Copyright

10.1.1 The information contained in this ITPD or otherwise provided to the Bidders by the Board is made available on the condition that it is treated as confidential by the Bidders and their directors, officers, employees, or advisers ("Bidder Party") and is not disclosed, copied, reproduced, distributed or passed to any other person at any time except for the purpose of enabling a bid submission to be made, for example, disclosure by a Bidder to its insurers or to actual or prospective Bidder Parties who are directly involved in the Project, provided they have each given an undertaking at the time of receipt of the relevant information (and for the benefit of the Board) to keep such information confidential.

10.1.2 Other than as specified above, the Bidders and the Bidder Parties shall not make any of the information available to any other parties in any circumstances without the prior written consent of the Board nor use it for any purpose other than that for which it is intended.

10.1.3 The Bidders acknowledge and agree that at key stages in the Project the Board will be obliged to disclose detailed information relating to the submissions to stakeholders and make available for public inspection key documents. The Bidders acknowledge and agree that, in accordance with the provisions of HDL (2002) 49 issued by the Scottish Executive's Health Department, the Board's Full Business Case will be made public together with a copy of the contract documents. Whilst the Board will act reasonably as regards the protection of commercially sensitive information, it can only do so in the light of the latest published guidance on this area.

10.1.4 All information submitted to the Board may need to be disclosed and/or published by the Board. Without prejudice to the foregoing generality, the Board may disclose information in compliance with the Freedom of Information (Scotland) Act 2002, (the decisions of the Board in the interpretation thereof shall be final and conclusive in any dispute, difference or question arising in respect of disclosure under its terms), any other law, or, as a consequence of judicial order, or order by any court or tribunal with the authority to order disclosure.

10.1.5 The Bidders shall be responsible for the confidentiality of their own information whilst on the Board's property. The Board cannot be held liable for loss or damage to any property of the Bidders arising whilst on the Board's premises or otherwise on the Site.

10.1.6 This ITPD is the copyright of the Board. The Bidders shall not reproduce any of the ITPD in any material form (including photocopying or storing it in any medium by electronic means) without the written permission of the Board, other than for the purpose of preparing their submissions in relation to the Project. This ITPD and any document at any time issued as supplemental to it shall remain the property of the Board and must be returned or destroyed upon demand.

10.1.7 The Bidders are required to sign the Confidentiality Agreement set out at Appendix F, Part 1 on receipt of this ITPD document and return it in accordance with Section 9.2.

### 10.2 Publicity

The Bidders must obtain approval from the Board's Project Director in writing before any disclosures are made to the press or in any other public domain. The Bidders will not undertake any publicity activities with any part of the media in relation to the Project without the agreement of the Board in writing, including agreement on the format and content of any publicity.

**10.3 Right of Rejection**

10.3.1 The issue of this ITPD in no way commits the Board to award any contract pursuant to the bid process. The Board is not bound to accept any bid received. Nothing in this ITPD shall oblige the Board to award a contract and the Board shall be able to withdraw from negotiations at any stage.

10.3.2 The subject matter of this ITPD shall only have any contractual effect when it is covered and contained in the express terms of an executed contract. Any such contract will be governed by Scots law.

10.3.3 The Board reserves the right, subject to relevant legislation, and at any time, to reject any Bid and/or to terminate discussions and negotiations with any Bidder.

**10.4 Definitions and Interpretation**

The Bidders are referred to The Contract Documents set out in Appendix C of this Volume 1 of the ITPD, which contains a series of definitions which shall apply throughout the ITPD.

**10.5 Precedence**

This ITPD sets out the Board's current requirements in respect of the Project. In the event of any inconsistency, this ITPD and its appendices shall take precedence over any documents previously issued by the Board.

**10.6 Law**

The law of Scotland shall apply to this ITPD, any bids received and the Project generally.

**10.7 Right to Cancel or Vary the Process**

The Board reserves the right to:-

10.7.1 cancel the selection and evaluation process at any stage;

10.7.2 require a Bidder or, where relevant, any member of its consortium to clarify its submission in writing and/or provide additional information. (Failure to respond adequately may result in the Bidder or member of its consortium being disqualified.)

10.7.3 amend the terms and conditions of the bid process.

10.7.4 The Board reserves the right to issue amendments or modifications to the ITPD until the Tender Return Date. These will be issued and bids received will be assumed to take account of any such modifications and amendments.

10.7.5 The Board intends to issue from time to time clarification notes to the Bidders. The purpose of these will be to keep the Bidders informed of amendments and clarifications to the ITPD. Bids received will be assumed to take account of any such clarifications notes.

10.7.6 The Board reserves the right to require the Bidders to clarify (with confirmation in writing if a clarification is given orally) any details of its submission.

10.7.7 The Bidders must notify the Board without delay of any information, matter, event or other happening which comes to light at any time and which causes or may cause any understanding of the Board or any information given to the Board to be inaccurate, incomplete or misleading. Should the Bidders wish to raise any further questions or obtain any further information not contained in the ITPD or the Data Room or not otherwise publicly available it must do so in accordance with the provisions set out in Section 12.3 of this Volume 1 of the ITPD.

10.7.8 Lastly, the Board reserves the right to introduce further bid stages and down-selection of Bidders during the Dialogue as it considers necessary to encourage the development of Bids that best meet its requirements for the Project, including value for money and affordability.

## 11.0 Conditions of Bid

### 11.1 Structure of Bidder

The Board is relying on the information provided by the Bidders in the pre-qualification concerning the members and structure of the Bidder. If, at any time during the bid period, there are any changes to the structure of any Bidder, the relevant Bidder must advise the Board as soon as practicable. The Board reserves the right to re-evaluate that Bidder on the basis of the pre-qualification assessment criteria.

### 11.2 Canvassing

If any Bidder or any Bidder Party, in connection with this Project:

11.2.1 offers any inducement, fee or reward to any member or officer of the Board or any person acting as an advisor for the Board or in connection with the Project; or

11.2.2 does anything which would constitute a breach of the Prevention of Corruption Acts 1889 to 1916; or

11.2.3 canvasses any of the persons referred to in paragraph (a) in connection with the Project; or

11.2.4 contacts any officer of the Board about any aspect of the Project, except as authorised by this ITPD, including (but without limitation) for the purposes of discussing the possible transfer to the employment of the Bidder of such officer for the purpose of the Project or for soliciting information in connection with the Project, the Bidder concerned will be disqualified from any further involvement in the Project (without prejudice to any other civil remedies available to the Board and without prejudice to any criminal liability, which such conduct by the Bidder may attract).

11.2.5 The Bidders will be required to sign the Certificate of Non-Canvassing included in Volume 3 of this ITPD when returning its Bid.

### 11.3 Non-Collusion

If any Bidder, in connection with the Project has done or does any of the following:

11.3.1 enters into any agreement or arrangement with any person (other than, where relevant, a member of its own consortium) with the aim of fixing or adjusting the amount of any bid or the conditions on which any bid is made; or

11.3.2 enters into any agreement or arrangement with any person with the aim of preventing bids being made; or

11.3.3 causes or induces any person to enter such agreement as is mentioned in either Sections 11.3.1 or 11.3.2 above; or

11.3.4 canvasses any of the persons referred to in Sections 11.3.1 or 11.3.2 above in connection with the Project; or

11.3.5 offers or agrees to pay or give or does pay or give any sum of money, inducement or valuable consideration directly or indirectly to any person for doing or having done or causing or having caused to be done in relation to any other bid or proposed bid for the Project any act or omission; or

11.3.6 Communicates to any person other than the Board the amount or approximate amount of its proposed bid (except where such disclosure is made in confidence in order to obtain quotations necessary for the preparation of the bid, for insurance or contract guarantee bonds and/or performance bonds or professional advice required for the preparation of a bid), the Bidder concerned may be disqualified (without prejudice to any other civil remedies available to the Board and without prejudice to any criminal liability, which such conduct by the Bidder concerned may attract).

11.3.7 The Bidders will be required to sign the Certificate of Non-Collusion appended to Volume 3 of this ITPD when returning their Bids.

**11.4 Signing of Certificates**

11.4.1 The Bidders should note that, save where Section 11.1 above applies and a satisfactory evaluation takes place, the Board is prohibited by EU procurement rules from entering into a contract with a legal body who was not invited to tender and did not submit a bid. Accordingly, the Bidders must ensure that the correct body or organisation signs the:

11.4.2 Certificate of Non-Canvassing (Appended to Volume 3 of this ITPD);

11.4.3 Certificate of Non-Collusion (Appended to Volume 3 of this ITPD);

11.4.4 Confidentiality Agreement (Appendix F, Part 1);

11.4.5 Certificate of Acceptance of Form of Bid Conditions (Appendix F, Part 2);

11.4.6 Certificate of Receipt of ITPD Documents (Appendix F, Part 3); and

11.4.7 Certificate of Confirmation of PQQ Submission (Appendix F, Part 4).

11.4.8 If it is proposed that a consortium will deliver the Project, but it has not yet been incorporated, the Certificates listed above should be signed by each of the companies or organisations who it is proposed would be members in the consortium.

**11.5 Conflicts of Interest**

The Bidders should advise the Board as soon as practicable in the event of a conflict of interest arising in respect of their Bids. In such circumstances, the Board may require further information from the Bidders but reserves the right to disqualify Bidders from further involvement in the Project.

**11.6 Costs and Expenses**

11.6.1 The Bidders remain responsible for all costs and expenses incurred by them or by any third party acting under their instructions in connection with their Bid, whether before or after the submission date and whether incurred directly by them or their advisors or subcontractors and regardless of whether such costs arise as a consequence direct or indirect of any amendments made to this ITPD by the Board at any time. For the avoidance of doubt, the Board shall have no liability whatsoever to the Bidders for the costs of any negotiations or communications in connection with this Project.

11.6.2 Any advisors appointed by the Board, whether legal, financial, technical or other, will not be responsible to anyone other than the Board, or its nominated officers, for providing advice in connection with the Project.

### 11.7 Reliance on Information and Liability of the Board

11.7.1 Information in this ITPD, together with any other information to be provided at any time during the procurement process is provided in the interests of assisting the Bidders to develop relevant bids. It is intended only as an explanation of the Board's requirements and is not intended to form the basis of the Bidders' decisions on whether to enter into any contractual relationship with the Board.

11.7.2 Accordingly, information provided does not purport to be all-inclusive or to contain all the information that a prospective contractor may require. The Bidders and their advisors must take their own steps to verify information which they use and must make an independent assessment of the opportunity described in this ITPD after making such investigation and taking such professional advice as they deem necessary.

11.7.3 None of the Board, the Board's directors, officers, employees, agents or advisors or any representative of any other NHS body who are involved with the procurement process shall be considered to make or be deemed to have made any representation or warranty as to the adequacy, accuracy, reasonableness or completeness of the information provided. The Board does not exclude any liability that it may have for fraudulent misrepresentation or any other liability not capable of being excluded by law.

11.7.4 Neither the Board nor its professional advisors shall be liable for any loss or damage arising as a result of reliance on the information provided or other information subsequently provided, nor for any expenses incurred by the Bidders at any time. No third party has been or will be authorised to accept or agree to accept on behalf of the Board any such liability.

### 11.8 Bid Validity

Bids shall remain open for acceptance until the last day of January 2010, or in the case of any re-submissions, from the date specified by the Board for receipt thereof.

### 11.9 Sub-Contractors

Where any Bidder intends to use sub-contractors, it will be the responsibility of the Bidder to provide the sub-contractor with all necessary information throughout the bid process.

## 12.0 Project Organisation and Communication

### 12.1 External Advisors

The Board has appointed the following external advisors:

12.1.1 Legal

Shepherd+ Wedderburn
155 St. Vincent Street
Glasgow G2 5NR
Contact: Rhona Harper
Tel: [redacted]

12.1.2 Financial

Ernst & Young
50 George Square
Glasgow G2 1RR
Contact: Michael McVeigh
Tel: [redacted]

12.1.3 Technical

Currie & Brown UK Limited
140 West Campbell Street
Glasgow G2 4TZ
Contact: James R Hackett
Tel: [redacted]

### 12.2 Lines of Communication

12.2.1 The Bidders may request clarification of matters covered by this ITPD or request further information in relation to the Project. These issues shall be raised in writing and addressed to the Board as soon as possible and in any event not later than 1 week prior to Dialogue or clarification meetings and no later than 2 weeks prior to the Tender Return Date in accordance with the procedures outlined below.

12.2.2 The Bidder may request clarifications either by e-mail.

12.2.3 Clarification requests should be addressed to the Board as follows:

| Name | Post/E-mail |
|---|---|
| Peter Moir | NHS Greater Glasgow and Clyde<br>St Andrew's House<br>80 Queen Elizabeth Avenue<br>Hillington<br>Glasgow<br>G52 4NQ<br><br>[redacted] |

12.2.4 On receipt of written clarifications, the Board may either address the query or refer the query to the appropriate member of the Board's Project Team. Where a Bidder is requesting specific information relating to the Project they should use the Request for Clarification Proforma set out at Appendix D of this ITPD. All requests for information must be dated and have a unique reference number per the instructions contained in Appendix D.

12.2.5 Communications not sent and addressed in accordance with the clarification procedure (set out above and in Appendix D) run the risk of being delayed. Within one week of receipt of this ITPD, the Bidder shall submit to the Board (to the e-mail account identified in 12.2.3 above) the name, contact details and designation of the nominated person within their own organisation through whom all communications with the Board will be directed during the bid period (the "Bidder's Nominated Person") as well as a nominated seconder in the event of illness of the Bidder's Nominated Person.

12.2.6 The Board will endeavour to respond to bidder's communications by way of formal clarification issued by the Board in a timeous manner. Any communications by telephone or in meetings shall only become valid communications if both the query and the reply are confirmed in writing (this to be via the RFI process, where the Contractor issues an RFI for Board confirmation). All formal amendments, updates, clarifications, questions and further information will be issued to the Bidders by the Project Manager (or such delegated persons). Formal communications directed to or between any persons within the Board's or the Bidders' organisations, including their respective advisers, other than through the Project Manager shall be deemed to be invalid.

**12.3 Access to Data**

12.3.1 The Board are using an electronic data management route to host and transfer project data.

12.3.2 The system being utilised is BIW, with access details for each individual bidder having been issued under separate cover.

## 13.0 Bid Returns and Evaluation

### 13.1 Submission Procedure

13.1.1 Bidders' Tenders must be delivered, together with all accompanying documents, to:

Carol Craig
NHS Greater Glasgow & Clyde
St Andrew's House
80 Queen Elizabeth Avenue
Hillington
G52 4NQ

Tel: [redacted]
Fax:
Email:

13.1.2 It is the Bidders' sole responsibility to obtain a receipt bearing the date, time and tender envelope reference for any bid delivered by hand. Any bid or accompanying document submitted after such date may not be considered.

13.1.3 Bids must be sealed and the boxes or packages must be affixed with the label provided by the Board in Appendix G, to be printed on white A4 paper by each Bidder and prominently placed on each box/package relating to their tender submission.

13.1.4 In case it is lost, the label reads:

**TENDER FOR NEW SOUTH GLASGOW HOSPITALS PROJECT**

**Carol Craig**
**NHS Greater Glasgow & Clyde**
**St Andrew's House**
**80 Queen Elizabeth Avenue**
**Hillington**
**G52 4NQ**

**NOT TO BE OPENED BEFORE 12 NOON ON 11 September 2009.**

13.1.5 No package or box shall bear on the outside any name or mark by which the Bidders can be identified including any name or mark appearing on the envelope by virtue of the method of delivery, such as Post Office Recorded Delivery or courier. The Bidder is requested to complete its response to this ITPD, including any supplementary information, and to provide [four] hard paper copies and ten electronic copies on CD-ROM (affixed to the hard copies) of its response, including all supplementary information. All responses must be in English.

13.1.6 Responses sent via e-mail will not be considered.

13.1.7 All documents and electronic submissions should be completed in:

- a format capable of being read by Microsoft Word, in Arial Font size 10 and Microsoft Excel 2000;
- electronic copies of drawn material must be AutoCad compatible; and
- all pages should be sequentially numbered.

13.1.8 All documents should include detailed lists of contents including cross-references to all supporting documentation.

13.1.9 All response documents must comply with the requirements prescribed in Volume 3 of this ITPD document. If any Bidder has not complied with the requirements set out in this ITPD, the Board may reject its Bid at any stage.

### 13.2 Incomplete Bids

On receipt of each Bidder's submission, the Board's Project Team will carry out an initial evaluation checking, inter alia, that all documents and matters requested have been fully and properly submitted. If any Bidder has not submitted all the information requested the Board may, at the Board's discretion, reject the relevant Bid at this stage. The Board may use its discretion to grant extra time to a Bidder to complete its bid by submitting any missing documents or information, such extra time, if granted, will require a Bidder to submit the missing documents or information to the Board within seven days of being notified by the Board of the missing documents or information. The Bidders must provide a single point of contact for clarifications in accordance with Section 12.2.5 of this Volume 1 of the ITPD.

### 13.3 Presentations

The Board reserves the right to call the Bidders to interview to present their proposals to an agenda set by the Board at any time during the process.

### 13.4 Bid Evaluations

Following the initial completeness check in accordance with Section 13.2 above, the Board will further evaluate the submissions in accordance with the bid submission requirement and evaluation criteria set out in Volume 3 of this ITPD.

**[ • ] (The *Contractor*)**

# 1 INTRODUCTION

The purpose of this Guidance Manual is to provide background information on the procurement method for the New South Glasgow Hospitals project and the compilation and use of its contract documentation, to select a *Supply Chain Partner (SCP)* to act as the *Contractor* (NEC3) on the project.

This Guidance Manual is a contract document which sets out the procedure and method for completing the contract documents between the NHS Health Board and the *Supply Chain Partner (SCP)* engaged to act as the *Contractor* under the NEC3 Engineering and Construction Contract and as further defined in Works Information within this contract.

# 2 OVERVIEW

## 2.1 The Proposed Construction Framework for New South Glasgow Hospitals Project.

The Proposed NSGH project is a collaborative procurement method for the delivery of NSGH project through the application of best procurement practices. One of the key principles underpinning this collaborative approach is the establishment of an integrated project team made up of participants from both the public sector (i.e. the Health Board and its advisors) and the private sector (i.e. the Contractor and its supply chain selected by the Health Board). This integrated project team will work together in a non-adversarial manner to achieve the participants' common goal of delivering the NSGH project. The establishment of an integrated project team has many benefits, some of which are:

- Project management
- Cost certainty
- Time certainty
- Design quality
- Construction quality
- Value for money
- Skill development

## 2.2 The Supply Chain Partner and its Supply Chain

NHS Greater Glasgow and Clyde will select a Contractor to carry out the NSGH project through the OJEU process. The *Contractor* as part of its tender will provide details of its supply chain of pre-selected key sub-Contractors and sub-consultants ("the *Supply Chain Member's (SCMs*)") with which it is to have a pre-existing working relationship. SCM are likely to comprise the following disciplines:

- Architects
- Structural and civil engineers
- Mechanical and electrical engineers
- Mechanical and electrical specialist SCMs
- Any other relevant specialist sub Contractors / consultants

The purpose of ensuring there is a working relationship between the *Contractor* and its *SCMs* is to ensure the *SCMs* are involved in the design and development process. Once a *Contractor* has been appointed to the project, it may not change any of its *SCM*s without the Health Board's consent.

## 2.3 Reviews and Approvals

Once appointed to a project, the *Contractor* and Health Board will work together to finalise the detailed design for the project through each stage of the approval process.
The project will proceed in distinct stages (see paragraph 3 for further information) and the selected *Contractor* will, subject to the termination rights, carry out the works and services for all stages of the project.

This project is divided into separate stages and the Health Board has the right to terminate the engagement of the *Contractor* both during a stage and at the end of each stage for any reason.

**2.4 Payment under the Contract**

Throughout the contract the *Contractor* is paid its Defined Cost and fee together with Defined Cost of sub-contracted work and the sub-contracted fee, subject to target and maximum price thresholds for each Stage.

The pricing arrangement is structured to promote incentivisation through innovation and efficiencies, and is referred to a Maximum Price Target Cost (MPTC) which comprises:-

| | |
|---|---|
| Target Cost (Defined Cost + Overhead Element of Fee | The most realistic estimate of the likely final costs when the work is done, assuming an average level of efficiency. Costs are the *Defined Costs* (in accordance with Schedule of Cost Components), Contractor accepted risk allowance and *Fee* (overhead element only) |
| Target Profit (Profit Element of Fee) | The amount of profit (calculated as a percentage of Target Costs, but expressed as £'s) payable without adjustment if the actual costs come out at target Cost. |
| Target Price | The sum of the agreed Target Cost plus the agreed Target Profit |
| Shareline | The ratio in which the Employer and Contractor will share costs underruns (where actual costs are less than Target Cost) and overruns (where the actual cost exceeds the target Cost but are less than or equal to the Maximum Cost |
| Maximum Cost | Most pessimistic view of the final costs. It is the point where the Employer stops sharing costs overruns and where all such additional overruns fall to the Contractor. At this point the maximum price will have been reached |
| Maximum Price | Maximum Price is the maximum contracted liability of the Employer and is the sum of the Maximum Cost and the value of the profit payable at that point under the shareline provision |

The defined costs plus fee are compared to the MPTC and the *Contractor* shares in the gain where actual costs are less than Target and pain share where actual costs exceed Target but less than maximum. Above Maximum Price level the Contractor takes 100% of pain share. The *Contractor* is therefore incentivised to bring real value engineering and cost management skills to the project.

Separate MPTC's are calculated for each of the Stages, aggregated together to generate the contract MPTC. The *Contractor* must deliver the Works required for each Stage for the MPTC (note that the MPTC may be revised upward or downward where compensation events occur under the Contract).

**2.5 Open Book Accounting**

In support of its applications for payment it is not practical to expect the Health Board to be able to deal with the *Contractor's* monthly application by reviewing many lever arch folders of individual invoices and therefore the *Contractor* should provide a breakdown of its application for payment. This approach will be backed by the right for the Health Board, upon request, to audit the *Contractor's* books to verify the amounts which form any application for payment (this right may be exercised on an ad hoc basis by the Health Board, Advisors and / or its internal/external auditors).

The objective of both the *Contractor* and the Health Board will be to separate out (so far as is practical) prices (from the *Contractor* and its *SCMs*) into the separate elements of:

- the Defined Cost of works, materials and services;
- any risk allowances; and

- the Percentage Fee (overheads and profit) applied to such sums.

The aim underpinning this approach is to reduce costs by understanding the risks that may make it higher and managing / removing those risks and at the same time seeking to plan the services / works provided by the *Contractor* and its *SCM*s so that the construction stage (in particular) will be more effectively carried out.

**2.6 Maximum Price Target Cost**

The MPTC should represent a 'win – win' opportunity for both the *Contractor* and the Health Board. The MPTC should be affordable within the Health Board's budget.
The Health Board and its advisors will need to work closely with the *Contractor* to understand the estimated costs and the potential risks to the project and how they may be removed / managed.

The MPTC should offer a reasonable incentive for the *Contractor* to manage its *SCMs* (and wider sub Contractors and sub-consultants) effectively to deliver the required quality to time and, hopefully, for less than the Target Price so as to qualify for a share in any saving if the defined cost plus fee is less than the Target Price.

The Target Cost estimate forming part of the MPTC should reflect the level of price uncertainty in the cost estimates for the scope or works. The risk allowance forming part of the MPTC should reflect the discrete risk accepted by the Contractor and the potential cost impact on the Target Cost should they occur.

The Contract Data Part one sets out the details of the pain/gain share allocation which may apply to the project. As part of the tender submission the bidders have to propose their pain / gain share allocation that reflects their own MPTC submission.

Where a SCM's contract value is estimated to exceed £2,000,000 they should be engaged on similar terms to this Contract i.e MPTC arrangement, open book actual costs with incentivisation.

**2.7 Form of Contract**

The Contract is the NEC3 Engineering and Construction Contract Option C Target Contract with Secondary Option clauses as stated in the Contract Data Part one and as amended by the Z Clauses.

**3 FUNDING AND BUSINESS CASE APPROVALS UNDER THE CONTRACT**

**3.1 Approvals Process**

The processes contained in the Scottish Capital Investment Manual will apply to Stage 2 of this Contract.

Following submission of the relevant information to it by the relevant Health Board, the Scottish Executive Health Department will at end of Stage 2 confirm whether or not the Final Business Case submitted is approved.

**3.2 Business Cases**

The approval process for the funding and business cases impacts on the contractual structure for the project and the Stage 2 Final Business Case must be approved before Stage 3 construction can commence. The procedure requires the submission and approval of the following funding and business cases:

- Full Business Case ("FBC"): for the Adult, Childrens and Infrastructure works, approval means that funds are committed and that construction can begin.

**3.3 Stages under the Contract**

Acceptance of the *Contractor's* successful tender will be followed by a letter of appointment stating a time for agreeing an overarching contract for the entire project. The structure of the Contract reflects the approval process for the business and funding cases by providing for the following three stages of works and/or services:

- Stage 1 – Design and Construction of New Laboratory Building
- Stage 2 – Detailed Design of Adult, Childrens and Infrastructure to FBC Submission
- Stage 3 – Engagement to carry out the construction of the Adult, Childrens and Infrastructure
- Stage 3A : Demolition of Surgical Block & associated buildings, and completion of soft landscaping

**3.4 Health Board's right to terminate**

If a Health Board does not wish to proceed with the Contract, even if the *Contractor's* is not in breach, the Health Board has the right to terminate the Contract both during a Stage or at the end of each Stage and the *Contractor's* would not be entitled to claim for the loss of any anticipated profits should subsequent Stages not be awarded; the exception to this rule is the cancellation of the Scheme once Stage 4 has been awarded.

**4 KEY DOCUMENTS AND PROCESSES COMPRISED WITHIN THE CONTRACT**

**4.1 Works Information**

The documents containing the Works Information provided by the Health Board are identified in Part 7 of this Contract. Works Information for the *Contractor's* design is identified in the Contract Data Part Two by the *Contractor.*
Most of the information will be given in a specification and on drawings.
Works Information referred to in Contract Data Part One includes the following items:

- Introduction
- Description of *works* -scope
- Plant and materials - specifications and details
- Health and Safety - requirements
- *Supply Chain Partner's* design – parts of the *works* the *Contractor's* is to design
- Completion - work required to be done by the Completion Date
- Working with the *Employer* and Others
- Sub-contracting – procedures and Contract requirements
- Programme - procedures and Contract requirements
- Tests – testing and inspections
- Title – Plant and Materials outside the Working Areas
- Acceptance or procurement procedures
- Commercial requirements, Accounts and record
- Parent Company Guarantee

**4.2 Site Information**

The documents in which the Site Information is contained are identified in the Part 8 of this Contract. The Site Information includes the following:

- Sub-soil investigation, borehole, records and test results
- Reports obtained by the Employer on the physical condition within the site or its surroundings
- References to publicly available information about the site and its surroundings (e.g. published papers and interpretations of the geological survey)

- Information about plant and the services below the surface of the Site
- Information about piped and other services
- Information about buildings, structures, plant adjacent to and on the site

**4.3 Contract Data**

Contract Data referred to in the Contract is the data which exists at the date of the Contract. The data is not necessarily that issued by the Health Board (Data Part one) at OJEU notice stage or returned as part of the successful *Contractor's* tender (Data Part two).

The Contract Data defines details for the Contract. The terms and conditions of the Contract make provisions for certain changes to that data (e.g. replacement of key personnel, and amended completion date and replacement of an adjudicator etc).

Contract Data Part one is included at Part 3 of this Contract and, Contract Data Part Two for completion and return with the Tender by the *Contractor's* is the Bid Deliverables detailed in Volume Three of this ITPD.

**4.4 Z Clauses**

Z Clauses are the conditions of contract additional to the standard form NEC3 Engineering and Construction Contract Option C which the Health Board identifies in the Contract Data Part one. The Z Clauses contain additional conditions of contract as well as any project specific requirements.

**4.5 Activity Schedule**

In the Works Information issued with the ITPD the Health Board will set out an indicative list of the activities which it would expect the *Contractor* to perform at each Stage. The *Contractor's* selected for the Works provides an activity schedule and a price for each of the specified activities through each of its Stages and gateways totalling the Target Price.

For the avoidance of doubt, the *Contractor's* Fee (profits and overheads) are included in addition to the Defined Costs specified on the activity schedule.

**4.6 Schedule of Cost Components**

The *Contractor's* will be entitled to reimbursement of its Defined Costs throughout the term of the Contract. The Schedule of Cost Components under the NEC3 Contract sets out the basis on which the Defined Costs will be calculated, costs not identified are to be included in the Fee.

A schedule of cost components is included in Part 4 of this Contract.

**4.7 Risk Register and Risk Management**

Risk may be viewed as the combination of the probability of an event and its consequence and risk management as the process by which an organisation identifies, prioritises and develops management action to control the risks. Under this contract the *Contractor's* and Health Board are required to manage the risks which may arise proactively and collaboratively by the use of a risk register.

During Competitive Dialogue period, the *Contractor's* will discuss with the Health Board:

- the potential risks which may impact on the price, build programme and/or quality of the Scheme;
- the probability of the identified risks occurring;
- a financial estimate of each risk's most likely consequences; and

- whether the *Contractor's* or Health Board is best placed to manage the identified risk.

The key to the success of risk management is bullet point 4 above; it is not a question of each party seeking to push an unpalatable risk on to the other, the emphasis is on ensuring that the party best able to manage a risk assumes it.

The risks accepted by the *Contractor* will form part of MPTC for the project.

This risk allowance forming part of the MPTC should be a calculated allowance determined utilising modelling techniques. The use of Monte Carlo modelling is preferred, with the Target Price including a risk allowance based on 50% modelled probability, and the risk allowance included within Maximum Price based on 90% modelled probability. Actual process for risk cost estimating will be confirmed during Competitive Dialogue process.

The risk register will be reviewed and updated by the *Employer's Project Manager* and *Contractor's* at regular project meetings during each Stage.

**4.8 Achieving Excellence Design Evaluation Toolkit ("AEDET")**

AEDET is an NHS toolkit designed to assist the NHS in determining and managing their design requirements from initial proposals through to post-project evaluation by reference to a non-technical set of criteria. AEDET has three main categories: Functionality, Impact and Build Standard which are themselves subdivided into 10 sub categories: Use, Access, Space, Character and Innovation, Citizen Satisfaction, Internal Environment, Urban and Social Integration, Performance, Engineering and Construction.

Approval of the FBC will include an assessment of the design largely based on its compliance with the AEDET criteria.

AEDET (or a similar process proposed by the *Contractor*) will therefore be crucial to the *Contractor* and the Health Board in the development and maintenance of acceptable design throughout all Stages of the Contract. The *Contractor* will be required to submit its design to the rigours of AEDET.

**4.9 Contract Administration Pro forma (CAP3)**

CAP3 is an administration process toolkit designed to assist the Health Board and *Contractor's* to comply with the communication and notification requirements of NEC3.

The *Project Manager* and *Contractor's* use the pro forma within the toolkit for all contract communications and notifications, including acceptances, compensation events and recording of Defects and their correction.

The pro forma master register is used to inform the Health Board of the monthly status of the contract for matters of time, quality, cost and identification of any non-compliance with contract procedures.

**PART TWO – THE CONTRACT**

**AGREEMENT**

between

**GREATER GLASGOW AND CLYDE HEALTH BOARD** of Dalian House, 350 St Vincent Street, Glasgow G3 8YZ ("the *Employer*"); and

[ ] having its principal place of business at [ ] (the "*Contractor*").

WHEREAS: -

The *Employer* wishes to have the Contractor Provide the Works for the New South Glasgow Hospital Comprising: Management and delivery of design and construction services as follows: -

| Stage | Heading | Outline Activities |
|---|---|---|
| Stage 1 | Design and Construct Laboratories | Detailed design and construction of the Laboratories, FM Hub and Energy Centre (shell only). Concurrent with Stage 2. |
| Stage 2 | Design Development - New Hospitals Building | Detailed design of New Adult Acute and New Children's Hospitals and Kit Out of Energy Centre to Full Business Case Submission. Concurrent with Stage 1. |
| Stage 3 | Design and Construct New Hospitals Building | Design and Construction of New Adult Acute and New Children's Hospitals. Consecutive to Stage 2. |
| Stage 3A | Demolition of Surgery Block | Demolition of surgical block and associated buildings and completion of soft landscaping. |

**NOW IT IS AGREED THAT**

1. The *Contractor* will Provide the Works in accordance with the NEC Engineering and Construction Contract, Option C: Target contract with activity schedules, June 2005 (as the same are amended in accordance with this Agreement) ("the conditions of contract") and the principles stated in Appendix 1 of this Agreement.

2. The *Contractor* acknowledges and agrees that the final Price for Work Done to Date will not exceed the sum of £[ ] ("the Maximum Price"). If the effect of a compensation event is to increase the total of the Prices, the Maximum Price will be increased by that increase in the Prices multiplied by [*the percentage differential between the Prices tendered by the Contractor and the Maximum Price*]%. If the effect of a compensation event is to reduce the total of the Prices and Clause 63.11 of the conditions of contract applies, the Maximum Price will be reduced by that reduction in the Prices multiplied by [*the percentage differential between the Prices tendered by the Contractor and the Maximum Price*]%.

3. The *Employer* will pay the *Contractor* the amounts due for each Stage of the *works* in accordance with this Agreement, the conditions of contract, the Contract Data and as may be detailed in the Works Information.

4. The *Contractor* acknowledges and agrees that as at the Contract Date the Contractor shall be authorised to proceed with Stage 2 and Stage 2A only. The *Contractor* is authorised to commence and proceed with Stage 3 upon written authorisation given by the *Employer* in the form attached as Appendix 2 hereto. The *Contractor* is authorised to commence and proceed with Stage 3A upon written authorisation given by the *Employer* in the form attached as Appendix 3 hereto. In the event that the *Contractor* commences and proceeds with Stage 3 or Stage 3A without such written authority from the *Employer*, the *Contractor* does so at his own cost and risk.

5. The documents forming part of this Agreement are:

5.1 The *Employer*'s letter of appointment/award of contract dated
[Note this is the Contract Date unless otherwise stated]

5.2 the conditions of contract

5.3 Contract Data part one — data provided by the *Employer*

5.4 The *Contractor*'s Tender Return Submission, reference [ ] dated [ ] Including:

5.4.1 Contract Data part two - Data provided by the *Contractor* including Appendices [ ] to [ ]
5.4.2 The bid deliverables defined in Volume 3 Contract Documents and;
5.4.3 the following documents:
(*other documents to be listed here*)

IN WITNESS WHEREOF these presents consisting of this and the 2 preceding pages together with Appendices 1 and 2 and the Contract Data part one (including its Appendices) and Contract Data part two are executed as follows: -

EXECUTED for and on behalf of the *Employer* at [ ] on the [ ] day of [ ] 200[ ] as follows: -
(Authorised official) Before this witness: -
Full name …….
Address …….
…….
…….

EXECUTED for and on behalf of the *Contractor* at [ ] on the [ ] day of [ ] 200[ ] as follows: -
(Director/Authorised Signatory) Before this witness: -
Full name ……..
Address …….
…….
…….

**This is Appendix 1 to the foregoing Agreement between Greater Glasgow and Clyde Health Board**
**and**
**[Contractor]**

**Principles governing the Agreement**
**Definitions**

| **Defined Term** | **Definition** |
|---|---|
| "Overriding Objective" | means the objective set out in Paragraph 4. |
| "Overriding Principle" | means principle set out in Paragraph 1. |
| "Professional Advisor" | means any party providing specialist advice to the *Employer*. |
| "Supply Chain" | means the individuals and organisations appointed by the *Contractor* and approved by the *Employer* who will be responsible for the majority of the management and delivery of design and construction (and where appropriate operation) in relation to the *works* including the Specified Subcontractors and Specified Consultants. |

1. The Overriding Principle of this agreement is to work together with the Supply Chain and the *Employer* (and any Professional Adviser) in a co-operative and collaborative manner to achieve the Overriding Objective acting in good faith and in the spirit of mutual trust and respect.

2. In order to work together in co-operative and collaborative manner the *Employe*r and the *Contractor* agree that they should each give to and welcome from each other, the Supply Chain and any Professional Adviser feedback on performance and shall share information openly and highlight any difficulties at the earliest practical time. The parties shall support collaborative behaviour and confront behaviour that does not comply with the Overriding Principle.

3. The terms of the Agreement shall be interpreted according to their natural meaning but in the event of any ambiguity in their natural meaning they shall be interpreted so as to give best effect to the Overriding Principle.

4. In entering into the Agreement the parties' Overriding Objective is by working together in accordance with the terms of the Agreement to achieve the successful delivery by the *Contractor* of the *works*: -

4.1 to the standard and functionality defined or as reasonably inferred from the *Employer*'s requirements set out in the Works Information to a quality which meets or exceeds these requirements;

4.2 at a cost to the *Employer* that offers best value for money taking into account whole life (as well as capital) costs over the proposed design life of the *works* through the application of the principles of value engineering;

4.3 to the timescale acceptable to the *Employer* and agreed between the parties without compromising health and safety or the *Employer*'s required standards and the quality of the completed *works* and in any event before the Completion Dates set out in the Agreement; and

4.4 with an appropriate allocation of the risks associated with the *works* to the party best able to manage such risks.

5. The *Contractor* shall carry out the management and be responsible for the delivery, design and construction of the *works* in accordance with the Agreement and shall work and liaise with the *Employer*, the Supply Chain and any Professional Adviser as necessary or appropriate or as requested by the *Employer* in order to achieve the Overriding Objective.

6. The *Contractor* shall engage persons from the key people set out in the Contract Data — Part two in the performance of the *works* to be provided by the *Contractor* under the Agreement

and shall not replace any of the key people without the approval of the *Employer* (such approval not to be unreasonably withheld). The *Contractor* will ensure that where a member of its key personnel is replaced that they have the skills, qualifications, experience and ability to provide the best service to the *Employer*.

7. When engaging its Supply Chain the *Contractor* shall either use the appropriate contract from the NEC3 Suite of Contracts and where they do not use the NEC3 Suite of Contracts they shall ensure that the forms of contract used reflect the principles and procedures identified in the Agreement and the NEC3 Suite of Contracts.

8. In relation to personal data: -

8.1 The *Contractor* shall only undertake processing of personal data reasonably required in connection with the *works* and services, shall only process such personal data in accordance with the *Employer*'s written instructions.

8.2 The *Contractor* shall not disclose personal data to any third parties other than: -
8.2.1 to the extent required for the proper provision of the *works* and services; and/or
8.2.2 to the extent required by law or under a court order.
Provided that disclosure under Clause 8.2.1 is made subject to written terms substantially the same as and no less stringent than the terms contained in this clause 8.

8.3 The *Contractor* shall bring into effect and maintain all reasonable technical and organisational measures to prevent unauthorised or unlawful processing of personal data and accidental loss or destruction of or damage to personal data including but not limited to taking reasonable steps to ensure the reliability of staff having access to the personal data.

8.4 If at any time during the period of the Agreement the *Contractor* or any person or persons engaged by him (whether as an employee or an independent contractor):

8.4.1 is furnished by the *Employer* with or otherwise obtains (with or without the knowledge or consent of the *Employer*) access to confidential or personal or commercial data owned or held by the *Employer*, or
8.4.2 at any time makes improper use of or either directly or indirectly discloses the copies of any such data to a third party or allows the third party unauthorised access to it; or
8.4.3 is responsible for or causes the loss, damage, destruction of all or any such data;

the *Contractor* shall make good to the *Employer* any loss or damage suffered by the *Employer* and any cost and expenses incurred by the *Employer* in relation to any claims or proceedings brought against the *Employer*.

9. Throughout the period of the Agreement the performance of the *Contractor* shall in relation to the *works* be monitored against the Key Performance Indicators defined in the Works Information.

10. During the period of the Agreement amendments may be made to the Key Performance Indicators by agreement between the *Employer* and the *Contractor* except where the *Employer* is required by the Scottish Government or regulatory bodies to provide Key Performance Indicators. In such cases the *Employer* will provide information on any requirements to the *Contractor* as soon as reasonably practicable.

11. At **[2]** monthly intervals or at such other intervals as the parties may agree during the performance of the Agreement, the *Employer* and the *Contractor* shall undertake formal reviews of the performance of the *Contractor* against its Key Performance Indicators. [In addition the performance of the *Employer* against the *Employer*'s Key Performance Indicators as set out in the Agreement will be monitored.] The *Employer* and the *Contractor* will discuss any way in which the performance of the *Contractor* and/or the *Employer* may be improved.

12. The formal review process will also include an open book process where the *Contractor* will be subject to an independent ongoing review.

13. The *Contractor* shall keep a comprehensive record as specified by the *Employer* of all performance monitoring carried out under the Agreement in such form as the *Employer* may reasonably request for a period of 6 years after the expiry or earlier termination of this Agreement and shall provide copies of such records to the relevant Project Director for the works to enable him to record, disseminate and compare the performance of the *Contractor*. Each record shall be retained in a format that can be read and copied and kept with the IT requirements on an electronic based database.

14. Throughout the Agreement the *Contractor* will be required to operate an open book accounting regime providing the *Employer* or their nominated representative with access to such relevant financial or other information as may be required to provide evidence that the Overriding Principle is being applied and that the Overriding Objective is being met. This open book accounting regime will be applied to the Specified Subcontractors and the Specified Consultants therefore the *Contractor* should make all Specified Subcontractors and Specified Consultants aware of this requirement.

15. The open book regime referred to above will be achieved in three stages:

15.1 a detailed review on the valuation of the *Contractor* and the Specified Subcontractors and Specified Consultants processes, costing structures and accounts to ensure that systems are in place to enable the Contractor and the Specified Subcontractors and Specified Consultants to work within the Agreement.

15.2 ongoing financial audits to ensure that costs fall within the contractual definition of Defined Cost.

15.3 ongoing reviews of the procurement processes to ensure that all parties are operating systems for the delivery of the *works* in accordance with this agreement.

16. The *Contractor* shall throughout the period of the Agreement look for and seek to achieve in conjunction with the Supply Chain continuous improvement in the quality and functionality of the *works* while reducing low life costs, wastage, construction related accidents and the time taken to deliver the works. Innovation and best practice will be shared with the *Employer*.

17. To achieve the aim set out in Clause 16 the *Contractor* shall actively participate in the continuous improvement "learning sets" with the Project Director and the Supply Chain in relation to the Agreement. This commitment is likely to involve meetings at least once every **[3]** months in relation to the works and meetings at least once every **[6]** months in relation to the lessons to be learned. The *Contractor* shall also use reasonable endeavours to procure the involvement of members of its Supply Chain in such learning sets where considered appropriate.

**This is Appendix 2 to the foregoing Agreement between Greater Glasgow and Clyde Health Board**
**and**
**[Contractor]**

**GREATER GLASGOW AND CLYDE HEALTH BOARD** of Dalian House, 350 St Vincent Street, Glasgow G3 8YZ ("the *Employer*"); and

[ ] having its principal place of business at [ ] (the "*Contractor*").

WHEREAS

1. The *Employer* and the *Contractor* entered into the Agreement dated [ ] whereby the *Contractor* is to Provide the Works in connection with the New South Glasgow Hospital Project.

2. The *Employer* wishes the *Contractor* to continue to Provide the Works by commencing and carrying out:

| | | |
|---|---|---|
| Stage 3 | Design and Construct New Hospitals Building | Design and Construction of New Adult Acute and New Children's Hospitals. Consecutive to Stage 2. |

NOW IT IS AGREED THAT

1. The *Employe*r hereby authorises the *Contractor* to commence and carry out Stage 3 of the *works* ie the Design and Construction of the New Adult Acute and New Children's Hospitals.

2. The *Contractor* will continue to Provide the Works in accordance with the Agreement.

3. The Agreement is amended and modified to the following extent:-
**[***Any amendments to Works Information and/or Contract Data which will have come about during Stage 2 including adjusted target/Maximum Price***]**

EXECUTED for and on behalf of the *Employer* at [ ] 20[ ] as follows:-

**CONTRACT DATA PART ONE —**
**DATA PROVIDED BY *THE EMPLOYER***

**Contract Data Part one - Data provided by the *Employer***
**Statements given in all Contracts**

**1. General**

- The conditions of contract are the core clauses and the clauses for main Option C, dispute resolution Option W2 and Secondary Options — X2, X4, X7, X13, X15, X16, X17, and Z of the NEC3 Engineering and Construction Contract (June 2005).
- The works are Management and delivery of design and construction services for the New South Glasgow Hospital Project as the *works* are more specifically referred to in the Works Information
- The *Employer* is
  Name: Greater Glasgow and Clyde Health Board
  Address: Dalian House, 350 St Vincent Street, Glasgow G3 8YZ
- The *Project Manager* is
  Name: Currie & Brown Limited
  Address: 140 West Campbell Street, Glasgow, G2 4TZ
- The *Supervisor* is
  Name: [tba]
  Address: [tba]
- The *Adjudicator* is
  Name: [tba]
  Address: [tba]
- The Works Information is in:
  ITPD Volume One, Appendix C — The Contract Documents: Part 7
- The Site Information is in:
  ITPD Volume One, Appendix C — The Contract Documents: Part 8
- The boundaries of the site are set out in
  ITPD Volume One, Appendix C — The Contract Documents: Part 8
- The *language* of the contract is English.
- The *law of the contract* is the law of Scotland subject to the jurisdiction of the Courts of Scotland.
- The *period for reply* to a communication is
  - Reply to *Contractor's* design package submitted for acceptance (Clause 21.2) six (6) weeks
  - Reply to a *Contractor* notification of a compensation event (clause 61.4, fourth paragraph, first bullet point) is four (4) weeks
  - Reply to all other communications unless otherwise stated in this contract two (2) weeks
- The *Adjudicator* nominating body is:

[The Royal Institute of Chartered Surveyors]

- The *tribunal* is the Scottish Courts
- The following matters will be included in the Risk Register:

  **[Items to be listed once agreed as Contractor Risks during Competitive Dialogue Period]**

**3. Time**

- The *starting date* is [Date]
- The access dates are

| | Part of the Site | Date |
|---|---|---|
| 1. | | |
| 2. | | |
| 3. | | |
| 4. | | |

- The Contractor submits revised programmes at intervals no longer than four (4) weeks alternatively calendar monthly

**4. Testing and Defects**

- The defects date is (i) in relation to structure, external fabric and finishes and internal fabric and finishes is [104] Weeks after Completion of the relevant section of the *works* and (ii) in relation to all services, lifts, plant and equipment [156] Weeks after Completion of the relevant section of the *works* .
- The defect correction period is two (2) weeks except that:
  - Subject to the following bullet, the defect correction period for accommodation occupied by the NHS for patients on an operational basis is 2 days unless notified as an urgent repair requiring immediate attention
  - The defects correction period for works which are urgent and might affect the safe and secure running of the site eg security systems, fire alarm systems, building heating systems, building potable water supplies, sanitation, building mains electricity supply systems (excluding works to be carried out by utility providers) is 24 hours.

**5. Payment**

- The *currency of this contract* is the pound sterling (£)
  The *assessment interval* is four (4) weeks alternatively calendar monthly.
  The interest rate is 5% per annum

**Optional Statements for Clause 5**

The Contractor's share percentages and the share ranges are

| *share range* | *Stage 1: Contractor's share percentage* | *Stage 2: Contractor's share percentage* | *Stage 3 and 3A: Contractor's share percentage* |
|---|---|---|---|
| Less than Target Price | [35 %] | [20%] | [20%] |
| Between Target Price and Maximum Price | [35%] | [40%] | [40%] |
| Greater than Maximum Price | [100%] | [100%] | [100%] |

The *Contractor* prepares forecasts of Defined Cost for the *works* at intervals no longer than four (4) weeks alternatively calendar monthly.

**6. Compensation Events**

The place where weather is to be recorded is: the Site
The weather measurements to be recorded each month are
the cumulative rainfall (mm);
the number of days with rainfall more than 5mm;
the number of days with minimum air temperatures less than Zero degrees Celsius;
the number of days with snow lying at 09.00 hrs GMT;
and these measurements:
The weather measurements are supplied by [The Met Office].
The weather data are the records of past weather measurements for each calendar month which were recorded at [ ] and which are available from [ ].

**Where no recorded data are available**

Assumed Value for ten years return weather data for each weather measurement for each calendar month are:

**8. Risks and Insurance**

The minimum limit of indemnity for insurance in respect of loss of or damage to property (except the works, Plant and Materials and Equipment) and liability for bodily injury to or death of a person (not an employee of the Contractor) caused by activity in connection with this contract for any one event is

**[£20,000,000.00 (twenty million pounds sterling)]**

The minimum limit of indemnity for insurance in respect of death or bodily injury to employees of the *Contractor* arising out of and in the course of their employment in connection with this contract for any one event is

**[£10,000,000.00 (ten million pounds sterling)]**

The amount of the minimum limit of indemnity for insurance (CAR) in respect of loss or damage to the works in connection with this contract is the replacement cost
And the amount for replacement of any Plant and Materials provided by the Employer is

**[£10,000,000.00 (ten million pounds sterling)]**

The amount of the minimum limit of indemnity for Professional Indemnity Insurance for design liability in connection with this contract for any one event is

**[in any one event / *in the aggregate of £20,000,000 (twenty million pounds sterling)]**

Contractor to provide documentary evidence to which insurance option is being provided

The *Contractor* provides all other insurances required by the law
[The *Employer* provides these insurances from the Insurance Table
1. **Insurance against:**
   Cover/indemnity is:
   The deductibles are:
2. **Insurance against:**
   Cover/indemnity is:
   The deductibles are:

The *Employer* provides these additional insurances
1. **Insurance against:**
   Cover/indemnity is:
   The deductibles are:
2. **Insurance against:**
   Cover/indemnity is:
   The deductibles are:] [Not required]

[The Contractor provides these additional insurances
1. **Insurance against:**
   Cover/indemnity is:
   The deductibles are:
2. **Insurance against:**
   Cover/indemnity is:
   The deductibles are:]

**Optional Statements**

**If the Employer has decided the completion date for the whole of the *works***

The Completion date for the whole of the *works* is 30 August 2016

**If no programme is identified in part two of the Contract Date**

The Contractor is to submit a first programme for acceptance within four (4) weeks of the Contract Date

**If the Employer has identified work which is to meet a stated *condition* by a *key date***

The *key dates* and *conditions* to be met are

| **Condition to be met** | **key date** |
|---|---|
| Stage 1: Completion of handover of labs | 31st January 2012 |
| Stage 2: Detailed design to FBC | 31st October 2010 |
| Stage 3: New Hospitals | 31st January 2015 |
| Stage 3A: Surgical Block | 30th August 2016 |

**If there are additional *Employer's* risks**

- These are the additional Employer's risks
  1. Completion is delayed as a result of a Contractor's insurable event; insurable events include fire, lightening, explosion, storm, tempest, flood bursting or overflowing water tanks, apparatus or pipes, earthquake, aircraft and other aerial devices or articles dropped there from.
     Clarification - limit of the Employer's risk:
     Where there is delay as a result of the Contractor's insurable event the completion date is changed, but there is no effect on the Prices; cost incurred in remedy of the event is a Disallowed Cost. The Project Manager notifies a compensation event if timing or sequence of operations is to be changed to alleviate the effect of the delay.
  2. Any variance in the rate of insurance due to market conditions, will form part of the project specific Maximum Price.
  3. The works are delayed or suspended due to an act of terrorism
  4. [*others*]

**If Options X5 and X7 are used together**

- Delay damages for the sections of the *works*

| Section | Description | Amount per day |
|---|---|---|
| 1 | Laboratories | |
| 2 | Detailed Design New Hospitals | |
| 3 | New Hospital | |
| 3A | Demolition of Surgical Block | |

**If Option X13 is used**

The amount of the performance bond is 5% of the Maximum Price

**If Option X16 is used**

- The retention percentage is

Stage 1 - 5%
Stage 2 - 10%
Stage 3 – 5%
Stage 3A – 3%

**[If Option X7 is used (whether or not Option X5 is also used)** - Project specific

- Delay damages for the whole of the works are [ ] per day**]**

**If Option X17 is used**

- The amounts for low performance damages are

| **Amount** | **Performance level** |
|---|---|
| | for |
| | for |
| | for |

**If Option Z is used**

*The additional conditions of contract are*

**Amendments and additions to existing Clauses:**

**Z 1 Additions to Clause 11.2 - Identified and Defined Terms**

11.2(34) "Collateral Warranty Agreement" is an agreement in the relevant form attached as Appendix Parts 1 and 2 hereto to be granted in favour of the *Employer* by the *Contractor* and (i) each Specified Subcontractor and (ii) each Specified Consultant.

11.2(35) The "Supply Chain Member (SCM)" *is* the individuals and organisations appointed by the *Contractor* and approved by the *Employer* who will be responsible for the majority of the management and delivery of design and construction (and where appropriate operation) in relation to the *works*.

11.2(36) "Law" is (a) any applicable statute or proclamation or any delegated or subordinate legislation; (b) any enforceable community right within the meaning of the European Communities Act 1972; (c) any applicable guidance, direction or determination with which the *Employer* and the *Contractor* is bound to comply to the extent that the same are published and publicly available or the existence or contents of them have been notified to the *Contractor* by the *Employer*; and (d) any binding judgment of a relevant court of law which is binding precedent in Scotland.

11.2(37) "Documents" includes, without limitation, all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things provided or

to be provided by or on behalf of the *Contractor* in connection with the works

11.2(38) "Agreement" means the form of agreement entered into between the *Employer* and the *Contractor* in respect of the works forming part of this contract

11.2(39) "Hospital" means together the new acute adult hospital and the new children's hospital as the same are more specifically described in the *Works Information*.

11.2(40) "Laboratories" means the new laboratory block as the same is more particularly described in the *Works Information.*

11.2(41) "Laboratory Consultants" means [*BMJ* ]

11.2(42) "Novation Agreement" means an agreement in the relevant form set out in Appendix Part 3 hereto

11.2(43) "Specified Subcontractors" means those Supply Chain Members specified as such in the Works Information

11.2(44) "Specified Consultants" means those Supply Chain Members specified as such in the Works Information.

**Z 2 Amendment to clause 11.2 (25) - Identified and Defined Terms**

At end of first bullet point after 'records' add: 'including amounts for invoices that the Contractor is liable to pay but has not paid within 28 days from having been included in the Project Manager's assessment',

**Z 3 Amendment to clause 11.2 (29) - Identified and Defined Terms**

Delete "the Project Manager forecasts will have been paid by the Contractor before the next assessment date" and replace with "the Contractor has paid"

**Z4 Amendment to Clause 17.1 – Ambiguities and inconsistencies**

Add the following sentence to the end of Clause 17.1
"Instructions issued under this clause do not necessarily give rise to a compensation event"

**Z5 Addition to Clause 17 – Ambiguities and inconsistencies**

"17.2 The Project Manager and the Contractor agree that inconsistencies and ambiguities between (a) the NHS Mandatory Documentation and NHS Guidance Documentation and building control or (b) between the NHS Mandatory Documentation and NHS Guidance Documentation and the Schedules of Accommodation or (c) between the NHS Mandatory Documentation and NHS Guidance Documentation and any information issues to the Contractor by the Employer, dealt with in accordance with the procedures set out in the Works Information."

**Z6 Amendment to Clause 19 – Prevention**

Add new Clause 19.2
"Notwithstanding the provisions of Clause 60 and subject to Clause 19.4, the *Contractor*'s sole right to payment in respect of the occurrence of an event under Clause 19.1 is as provided in Clause 93."
Add new Clause 19.3
"The *Contractor* and the *Employer* take all reasonable steps to mitigate the effect of the occurrence of an event under Clause 19.1."
Add new Clause 19.4
"If the *Project Manager* instructs the *Contractor* to take steps to Provide the Works in a manner not prevented by the occurrence of an event under Clause 19.1, and such instruction changes the Works Information, the *Contractor* is entitled to notify a compensation event under clause 60."

**Z7 Amendment to Clause 21.1 - The *Contractor's* design**

At the end of the Clause add: "the *Contractor* designs the *works* using the degree of skill and care that would reasonably be expected of a competent professional

designer experienced in carrying out design activities of a similar nature, scope and complexity to those comprised in the *works*.

**Z8 Amendment to Clause 21.2 – The *Contractor's* design**

Add at the end "The *Project Manager* replies to the *Contractor's* submission within the *period for reply.* A failure by the *Project Manager* to reply within the *period for reply* is not deemed acceptance of the *Contractor's* design.

**Z9 Amendment to Clause 22.1 – Using the *Contractor's* design**

Delete and replace with: -

"22.1 Subject to Clause 21, the copyright and all intellectual property rights in the Documents remains vested in the *Contracto*r or the person responsible for the production (as the case may be).

22.2 Where documentation (including drawings) is (or are) provided by the *Employer* copyright and such documentation and drawings remain vested in the *Employe*r.

22.3 The *Employer* has an irrevocable, non-exclusive royalty free licence to copy and use the Documents and to reproduce the designs contained in them for any purpose relating to the *works* including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair, any extension of the *works* and for dissemination within the NHS as part of the feedback of information to better or enable the NHS to realise improvements in its methods and practice of construction and in the design and procurement of its construction.

22.4 The *Contractor* shall not be liable for any use of the *Employer* of the Documents for any purpose other than that for which the same is prepared and provided."

**Z10 Addition to Clause 31 – The programme**

"31.5 The *Contractor* complies with section 6.8 of the Employer's Requirement section of the Works Information in connection with commissioning and handover. The *Contractor* accepts and agrees that the *Project Manager* is not under any obligation to certify Completion unless and until the *Contractor* fully complies with such requirements."

**Z11 Amendment to Clause 51 – Payment**

In the first sentence of Clause 51.1 delete "one week" and replace with "two weeks".
In the first sentence of Clause 51.2 delete "three" and replace with "six".

**Z 12 Addition to Clause 51 - Payment**

51.5 If the Defined Cost plus the Fee at an assessment date exceeds the amount for the assessment interval as shown in the *Contractor*'s activity schedule based target price cash flow forecast, then the *Project Manager* certifies payment up to the amount forecast. Any amount exceeding the forecast is not certified but held over to the next assessment interval, where if the Defined Cost plus the Fee at the next assessment date again exceeds the *Contractor*'s activity schedule based target price cash flow forecast for the assessment interval the process is repeated. This clause does not apply where the Contractor provides a valid and acceptable reason for an exception to the limitation of the *Project Manager*'s assessment certification.

51.6 If the *Employer* intends to withhold payment of any amount due under the contract he notifies the *Contractor* no later than 7 days before the final date for payment of the sum due specifying:

- the amount proposed to be withheld
- the ground for withholding payment or
- if there is more than one ground, each ground and the amount contributable to it

**Z 13 Amendments to Clause 53 – The *Contractor*'s share**

In Clause 53.1, add at the end of the first sentence, "for each Stage"
In Clause 53.1, in the second sentence add after "of the Prices", "for each Stage"
In Clause 53.2, after "total of the Prices" where it appears twice, add "for each Stage"
In Clause 53.3 after "final total of the Prices", add "for each Stage"
In Clause 53.4 after "final total of the Prices", add "for each Stage"

**Z14 Amendment to Clause 60.1(19)**

Add new bullet point 6, "does not arise from a Sub-Contractor ceasing to trade or becoming insolvent (or other equivalent event)"
Add at the end, "provided that the occurrence of such event only entitles the Contractor to a change to the Completion Date or a change to a Key Date and not to a change in the Prices and Clauses 61 – 65 are interpreted accordingly."

**Z 15 Amendment to Clause 61.4 - Notifying of Compensation events**

In line 15 delete "two" and substitute "four"

**Z16 Amendment to clause 80.1 - Employer's Risks**

Bullet point 1, sub-bullet 1 – delete.
Bullet point 3, sub-bullet 1 second line after 'power,' add 'terrorism (except to the extent insured by the *Contractor* in relation to the works at the time of any loss or damage),'

**Z17 Addition to Clause 84.2 – Insurance cover**

Add at the end of line 3 before the full stop, "except in the case of professional indemnity insurance which is in the name of the *Contractor* and runs from the *starting date* to the date twelve years after Completion"
Add to the Insurance Table:

| | |
|---|---|
| Liability for negligent management or design – professional indemnity insurance | The amount specified in the Contract Data for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months from the date the *Contractor* starts to Provide the Works for a period of twelve years from Completion, with insurers of good repute carrying on business in the European Union provided always that such insurance is available at rates and terms which are commercially reasonable to contractors of a similar size and standing in the UK In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the Sub-Contractor shall be ignored. |

**Z18 Amendment to Clause 91.7 – Reasons for Termination**

Add at the end "notwithstanding that a delay to the Completion Date has previously been notified to the Contractor in respect of such event"

**Z19 Addition to Clause 91 - Reasons for termination**

91.8 The Employer may terminate during or on completion of Stage 2 or if the submitted Full Business Case (FBC) proposal is not acceptable (R22)

**Z20 Addition to 92.2 - Procedures on termination**

P5 The Contractor hands over to the Project Manager all hard copy and electronic data for the Contractor's design including material prepared by a subcontractor, the Works Information for the Contractor's design and Site

Information obtained so far as prepared at termination. At such termination the Employer has the right to use such material for completion of the *works*.

**Z21 Termination Table — additions**

| Terminating Party | Reason | Procedure | Amount Due |
|---|---|---|---|
| The *Employer* | R22 | P1, P2 and P5 | A1 (excluding principle bullet point 3) and A2 |

**Z22 Amendment to Clause 93.7 - Payment on Termination**

Add new Clause: - "On termination, the *Employer* shall not be liable to the *Contractor* for loss of profit, loss of expectation of profit, loss of use, loss of production or indirect and consequential damages."

**Z23 Addition to Clause W2.1(1) – Dispute Resolution**

Add at the end: - "The word "dispute" in this Clause W2 includes any difference under or in connection with this contract".

**Z24 Addition to Clause W2.3(8) – the adjudication**

After "reasons" add the words, "(which will be in writing)"

**Z25 Addition to Clause W2.3(11) – The adjudication**

Delete the first sentence and replace with, "The decision of the *Adjudicator* is binding until the dispute is finally determined by the *tribunal* or by agreement."

**Z 26 New Clause — Assignation**

- The *Employer* has the right to assign this contract to another NHS body without having to seek the *Contractor*'s consent.
- The *Employer* notifies the *Contractor* of the intention to assign the contract to another NHS body.
- The *Employer* notifies the *Contractor* of the assignation of the contract to another NHS body

**Z27 New Clause - Confidentiality**

Z27.1 The *Contractor* shall not append their name or give authority to the appending of their name to any publicity concerning this agreement or the works or indulge in any publicity concerning the works without the prior written consent of the *Employer*.

Z27.2 The *Contractor* warrants the accuracy of all information of a legal, commercial or financial nature provided by them to the *Employer*. Details must be provided by the *Contractor* to the *Employer* regarding any matter as and when they take place, which affects the legal, commercial or financial standing of the *Contractor.*

Z27.3 The *Contractor* undertakes to treat any information derived from or obtained in the course of the Agreement as confidential and to take all the necessary precautions to ensure that its employees and sub-contractors and their employees treat any information as confidential and in doing so the *Contractor* shall ensure that its employees and sub-contractors and their employees keep secret and do not disclose information of a confidential nature by him or them by reason of the Agreement.

**Z28 New Clause – Data Protection**

Z28.1 The *Contractor* warrants and will at all times comply with the provisions of the Data Protection Act 1996 ("the 1996 Act") and any other subordinate legislation enacted pursuant thereto.

Z28.2 The *Contractor* shall only undertake such processing of personal data as is reasonably required in connection with the performance of its obligations under pursuant to the Agreement. To the extent required by the 1996 Act the *Contractor* shall notify the Information Commissioner of any processing which is being carried out and maintain any such notification in full force and effect.

Z28.3 The *Contractor* in its role as Data Processor undertakes to comply with the obligations imposed on a Data Controller under the 7th Data Protection Principle as set out in Part 1 of Schedule 1 of the 1996 Act in respect of all personal data processed pursuant to this Contract.

Z28.4 The *Contractor* shall not, other than in accordance with the 1996 Act, transfer any personal data to any country or territory outside the European Economic Area.

Z28.5 Terms defined within the 1996 Act shall have the same meaning when used in this clause.

**Z29 New Clause – Freedom of Information**

The *Contractor* co-operates, facilitates, supports and assists the *Employer* to comply with the Freedom of Information (Scotland) Act 2002 and any codes of practice applicable from time to time relating to access to public authorities' information. In the event that the *Employer* is required to provide information to any person as a result of a request made to it under such Act and/or codes, the *Employer* shall adhere to the requirements of such Act and/or codes in disclosing information relating to this Agreement, the Project Documents and the *Contractor*.

**Z30 New Clause: Collateral Warranty Agreements**

Z30.1 Immediately following execution by each Specified Subcontractor of its subcontract the *Contractor* delivers to the *Employer* Collateral Warranty Agreements from each Specified Subcontractor in favour of the *Employer* together with a copy of the relevant subcontract.

Z30.2 Within 10 days of request by the *Employer* the *Contractor* delivers to the *Employer* Collateral Warranty Agreements from each Specified Consultant in favour of the *Employer* together with a copy of the relevant appointment.

**Z31 New Clause – Novation Agreements**

On execution of the Agreement, the *Contractor* enters into a Novation Agreement with the *Employer* and the Laboratory Consultant. At the same time, the *Contractor* delivers to the *Employer* a Collateral Warranty Agreement from the Laboratory Consultant generally in terms of the relevant Collateral Warranty Agreement.

**Z32 New Clause – Failure to deliver Collateral Warranty Agreements and/or Novation Agreements**

Clause 50(3) applies when any subcontract, Collateral Warranty Agreement or Novation Agreement is not supplied as required pursuant to Clauses Z30 and Z31.

**Z33 New Clause – Third Parties**

The *Contractor* performs its obligations under this contract in such a manner and at such times that no act, omission or default of the *Contractor* in relation thereto constitutes, causes or contributes to any breach by the *Employer* of any third party agreement or any other obligation it may owe to a third party relating to the works, details of which the *Contractor* was made aware of prior to the Contract Date.

**Z34 New Clause - Inconsistencies**

In the case of any inconsistency between these Additional Conditions of Contract and the other terms of the contract, the Additional Conditions of Contract prevail. In the event of any inconsistency between the Core Clauses and any other term of this contract (except these Additional Conditions of Contract) the Core Clauses prevail.

**Z35 New Clause – Approval**

No inspection, testing, approval or review nor any omission to inspect, test, approve or review on the part of the *Employer* diminishes any duty or liability under this contract of the *Contractor*.

**Z36 New Clause – Set off**

Without derogating from its rights under this contract or at Law, whenever any sum of money is recoverable by the *Employe*r against the *Contractor*, such sum is deducted from any sum due or which may become due to the *Contractor* under this or any other contract with the *Employer*.

**Z37 New Clause – Security**

Z37.1 The *Contractor* submits to the *Project Manager* details of people who are to be employed by him and his Subcontractors in connection with the *works*. The details include a list of names and addresses, the capacities in which they are employer and other information required by the *Project Manager*.

Z37.2 The *Project Manager* may instruct the *Contractor* to take measures to prevent unauthorised persons being admitted on the Site. The instruction is a compensation event if the measures are additional to those required by the Works Information.

Z37.3 Employees of the *Contractor* and his Subcontractors are to carry an Employer's pass whilst they are on the parts of the site stated in the Contract Data.

Z37.4 The *Contractor* submits to the *Project Manager* for acceptance a list of the names of the people for whom passes are required. The *Project Manager* issues the passes to the Contractor. Each pass is returned to the *Project Manager* when the employee no longer requires access to that part of the Site or after the *Project Manager* has given notice that the employee is not to be admitted to the Site.

Z37.5 The *Contractor* does not take photographs of the Site or the *works* or any part of them unless he has obtained the approval of the *Project Manager*.

Z37.6 The *Contractor* takes the measures needed to prevent his and his Subcontractors' people taking, publishing or otherwise circulating such photographs.

**Schedule of Cost Components**

Delete the Schedule of Cost Components and replace with the Schedule of Cost Components in ITPD Volume One, The Contract Documents: Part 4.

This is the Appendix referred to in the foregoing Contract Data Part One

1. Form of Collateral Warranty Agreement from Specified Sub-Contractors
2. Form of Collateral Warranty Agreement from Specified Consultants
3. Form of Novation Agreement

**SUB-CONTRACTOR'S COLLATERAL WARRANTY**

This Agreement is among

(1) **GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street Glasgow, G3 8YZ ("the Beneficiary" which expression shall include its successors in title or permitted assignees under this Agreement)

(2) **[ ]** (Registered number [ ]) of [ ] (" Main Contractor" which term shall include any successor including any parties taking over the obligations of Main Contractor. under the Project Agreement)

(3) **[ ],** (registered number [ ]) whose registered office is at [ ] ("the Sub-Contractor")

WHEREAS:

A The Beneficiary has entered or is about to enter into an agreement with Main Contractor ("the Building Contract") in connection with the design and construction of the New South Glasgow Hospital, Govan, Glasgow ("the Project").

B The Main Contractor has engaged or is about to engage the Sub-Contractor under a [design and build] contract ("the Sub-Contract"), which expression shall include all documents incorporated therein and any agreed amendment thereto, to carry out [design and] works as more particularly described in the Sub-Contract ("the Sub-Contract Works"), which expression shall include any additional works performed by the Sub-Contractor under the Sub-Contract including in connection with any modifications or variations made thereunder.

C It is a condition precedent of the Building Contract that the Sub-Contractor, the Main Contractor and the Beneficiary enter into this agreement ("this Agreement").

NOW IT IS AGREED:

1 The Sub-Contractor warrants and undertakes to the Beneficiary that it has complied and will continue to comply with all the terms and obligations under the Sub-Contract on the Sub-Contractor's part to be performed and observed and shall complete the Sub-Contract Works in accordance with the Sub-Contract.

2. Without prejudice to Clause 1 of this Agreement, the Sub-Contractor further warrants and undertakes to the Beneficiary that:

2.1 it has exercised and will continue to exercise all the reasonable skill, care and diligence to be expected from a competent and qualified professional designer experienced in carrying out works similar in nature, size and complexity to the Sub-Contract Works in:

2.1.1 the design of the Sub-Contract Works; and

2.1.2 the selection of goods and materials for the Sub-Contract Works, and in particular in ensuring that it has not and will not specify for use in relation to the Sub-Contract Works any products or materials not in conformity with relevant British or European standards or Codes of Practice or which are at the time of specification generally known within the United Kingdom to an experienced professional designer of works such as the Sub-Contract Works to be deleterious to health and safety or to the durability of buildings and/or other structures and/or finishes and/or plant and machinery in the particular circumstances in which they are used;

2.2 the Sub-Contract Works will on completion satisfy all performance specifications and other requirements contained in the Sub-Contract;

2.3 the Sub-Contract Works and all materials and goods comprised therein will correspond as to description, quality and condition with the requirements of the Sub-Contract; and

2.4 the Sub-Contract Works will on completion comply with the requirements of the Sub-Contract in respect of compliance with Legislation, Guidance and Good Industry Practice (all as defined in the Sub-Contract);

Provided that:

2.5.1 the obligations of the Sub-Contractor under this Agreement shall be no greater in extent or quantity than if the Beneficiary had been named as joint employer with the Main Contractor under the Sub-Contract; and

2.5.3 the Sub-Contractor shall be entitled in any action or proceedings brought by the Beneficiary to rely on any limitation in the Sub-Contract and to raise the equivalent rights in defence of liability (excluding counterclaim and set-off in respect of amounts due to the Sub-Contractor under the Sub-Contract) as it would have if the Beneficiary had been named as joint employer with the Main Contractor under the Sub-Contract;

3. The Beneficiary has no authority to issue any direction or instruction to the Sub-Contractor in relation to the Sub-Contract unless and until the Beneficiary has given notice under Clauses 4 or 5, below. The Beneficiary or its appointee has no liability to the Sub-Contractor in relation to amounts due under the Sub-Contract unless and until the Beneficiary has given notice under Clauses 4 or 5.

4. The Sub-Contractor agrees that it will, if so required by notice in writing given by the Beneficiary, subject to Clause 6, below, accept the instructions of the Beneficiary or its appointee, as the case may be, (which for the avoidance of doubt and without limitation may include a third party appointed by the Beneficiary to act as "the Employer" under the Sub-Contract) to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Sub-Contract. The Main Contractor acknowledges that the Sub-Contractor shall be entitled to rely on a notice given to the Sub-Contractor by the Beneficiary under this Clause 4 and further acknowledges that such acceptance of the instructions of the Beneficiary or its appointee, as the case may be, to the exclusion of the Main Contractor shall not constitute any breach of the Sub-Contractor's obligations to the Main Contractor under the Sub-Contract.

5. The Sub-Contractor further agrees that it will not without first giving the Beneficiary not less than 35 days notice in writing exercise any right or purported right it may have to determine its employment under the Sub-Contract, treat the same as having been repudiated by the Main Contractor, or discontinue the performance of any duties or obligations thereunder. Further, the Sub-Contractor shall within 14 days of giving the said notice, provide statements to the Beneficiary containing the following:

   5.1 all amounts properly due and payable to the Sub-Contractor under the Sub-Contract on or before the date of issue of the said notice which remain unpaid;

   5.2 in the reasonable estimation of the Sub-Contractor, the amount of any monetary claim (if any) asserted by the Sub-Contractor against the Main Contractor under the Sub-Contract arising out of or in connection with the breach for which the said notice was served; and

   5.3 where the Sub-Contractor intends to terminate the Sub-Contract due to some default or breach of contract of a non-financial nature:

      5.3.1 the provision of the Sub-Contract alleged to have been breached or not fulfilled;

      5.3.2 supporting information in reasonable detail to enable the Beneficiary to identify the material facts;

5.3.3 the steps reasonably required to remedy the specified breaches or conditions not fulfilled;

5.3.4 the time within which the specified steps can reasonably be expected to be taken;

5.3.5 (if applicable) the amount of damages claimed and the basis of their calculation; and

5.3.6 (if applicable) the relief to be sought.

The Sub-Contractor warrants to the Beneficiary that to the best of the Sub-Contractor's knowledge and belief, having made all proper and appropriate enquiries, the statements submitted under this Clause 5 shall be true, complete and accurate statements of the amounts to which the Sub-Contractor considers itself entitled. In the event that the Sub-Contractor shall delay in giving such notice and information within the said 14 days, the period of 35 days shall be extended to correspond with the period of any such delay. The Sub-Contractor's right to determine its employment under the Sub-Contract or to treat the same as having been repudiated or to discontinue performance shall cease if, within the said 35 day period (extended as appropriate) and subject to Clause 6 the Beneficiary shall give notice in writing to the Sub-Contractor requiring the Sub-Contractor to accept the instructions of the Beneficiary or its appointee to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Sub-Contract.

6. It shall be a condition of any notice given by the beneficiary under clauses 4 or 5 above, that the beneficiary or its appointee, as the case may be, accepts liability for payment of the sums due under the sub-contract and detailed in the statements provided under clause 5 (and makes payment within a period of 28 days of such notice from the beneficiary), and for subsequent performance of the main contractor's obligations. Upon the issue of any notice by the beneficiary under clauses 4 or 5, the sub-contract shall remain in full force and effect as if no right of determination of its employment under the sub-contract, or any right of the sub-contractor to treat the sub-contract as having been repudiated by the main contractor. Had arisen and the sub-contractor shall be liable to the beneficiary and/or its appointee, as the case may be, under the sub-contract in lieu of its liability to the main contractor.

7. The beneficiary may at any time following the issue of any notice by the beneficiary under clauses 4 or 5, serve a further notice that following the expiry of 28 days from the giving of such notice the beneficiary will have no liability (save in respect of the beneficiary's antecedent breach) for any sums due or to become due to the sub-contractor in respect of the

period following expiry of the last mentioned 28 day period. The beneficiary may exercise any of its rights pursuant to clauses 4 or 5 on more than one occasion.

8. The sub-contractor shall maintain for the period expiring 12 years after completion (or equivalent event under the sub-contract) or until termination of the sub-contractor's employment under the sub-contract, professional indemnity insurance in an amount of not less than £[10]m [(ten million pounds)] sterling for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months with insurers of good repute carrying on business in the european union provided always that such insurance is available at rates and terms which are commercially reasonable to contractors of a similar size and standing in the uk. In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the sub-contractor shall be ignored. The sub-contractor shall immediately inform the beneficiary if such insurance ceases to be available at rates and terms which are commercially reasonable in order that the sub-contractor and the beneficiary can consider alternative means of best protecting their respective positions in respect of the project in the absence of such insurance provided that the beneficiary shall be entitled to require the sub-contractor to maintain such lesser amount of professional indemnity insurance as is available to the sub-contractor at rates and terms which are commercially reasonable. As and when it is reasonably requested to do so by the beneficiary (but not more than once in any period of insurance) the sub-contractor shall produce for inspection documentary evidence satisfactory to the beneficiary (acting reasonably) that its professional indemnity insurance is being maintained.

9. The sub-contractor hereby grants to the beneficiary or its appointee and all those authorised by the beneficiary an irrevocable, non-exclusive and royalty-free licence (which shall be capable of assignation) to use and reproduce all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things whatsoever provided or to be provided by the sub-contractor in connection with the project (the "**documents**") for any purpose relating to the project including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair and any extension of the project and for dissemination within the nhs as part of the feedback of information to better or enable the nhs to realise improvements in its methods and practice of construction and in the design and procurement of its construction. Such licence shall carry the right to grant sub-licenses and shall subsist notwithstanding that the sub-contract is terminated or the obligations and duties thereunder have been completed. For the avoidance of doubt, the grant of such licence or sub-licences shall not impose any additional liability on the sub-contractor. The sub-contractor will not assign or agree to assign the copyright in any of the documents without the prior written consent of the beneficiary. The sub-contractor shall on reasonable demand provide to the beneficiary or its appointee and those authorised by the

beneficiary additional copies of any documents on receipt of reasonable copying costs. The sub-contractor shall not be liable for any use by the beneficiary of any of the documents for any purpose other than those authorised by this clause.

10. This agreement may be assigned on a maximum of two occasions in whole or in part by the beneficiary to any party to whom the beneficiary's interest in the main contract or any part thereof is assigned or disposed to without the consent of the main contractor or the sub-contractor being required and any such assignation shall be effective upon written notice thereof being given to the main contractor and to the sub-contractor. No other or further assignation of this agreement, other than permitted by this clause, by the beneficiary or any other party shall be permitted. The sub-contractor shall not be entitled to assign or transfer any rights or obligations hereunder without the consent of the beneficiary.

11. The sub-contractor undertakes that it will not raise as a defence to any action by the beneficiary for alleged breach of this agreement the fact that the obligations of the main contractor to the beneficiary in respect of the design and construction of the sub-contract works have been released as a result of the termination of the building contract.

12. No failure, approval, act or forbearance on the part of the beneficiary in respect of any right of the beneficiary pursuant to this agreement shall constitute any waiver of any right of the beneficiary under or arising out of this agreement nor relieve the sub-contractor of any of its duties or obligations under or arising out of this agreement.

13. Any notice, consent or demand to be given or made by any party under this agreement (hereinafter called a **"notice"**) shall only be validly served if in writing and delivered personally or sent by pre-paid first class recorded delivery post to the following address and marked for the attention of the following person in the case of each party:

| Party: | **Address:** | Person: |
|---|---|---|
| Beneficiary | Dalian House, 350 St Vincent Street Glasgow, G3 8YZ | Head of Board Administration |
| Main Contractor | | |
| Contractor | | |

Any party may by Notice to the other party/parties change its address or the title of the person for whose attention Notices are to be given or made pursuant to this Clause. Any such Notice shall be deemed to have been received:

13.1 if delivered personally, at the time of delivery;

13.2 in the case of pre-paid first class recorded delivery post, on the first Business Day after the date of posting.

If any Notice is delivered after 5 p.m. on a Business Day, or at any time during a day which is not a Business Day, that Notice shall be deemed to have been received at 9 a.m. on the next Business Day. For the purposes of this Clause, "Business Day" means any day which is not a Saturday, a Sunday or a public holiday in Scotland. In proving service it shall be sufficient to prove that the envelope containing such Notice was properly addressed to the relevant party and either delivered personally to that address or delivered into the custody of the postal authorities as a pre-paid first class recorded delivery letter. For the avoidance of doubt, Notices shall not be validly served if sent by e-mail or fax

14 No action or proceedings for any breach of this Agreement shall be commenced against the Sub-Contractor after the expiry of twelve years from Completion or earlier termination of the Sub-Contractor's employment under the Sub-Contract.

15. The definitions of words and phrases used in this Agreement shall be those set out in the Sub-Contract except where expressly defined in this Agreement.

16. This Agreement shall be governed by and construed in accordance with Scots Law and the parties hereto submit to the exclusive jurisdiction of the Scottish Courts.

**CONSULTANT'S COLLATERAL WARRANTY**

This Agreement is among

(4) **GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street Glasgow, G3 8YZ ("the Beneficiary" which expression shall include its successors in title or permitted assignees under this Agreement)

(5) **[ ]** (Registered number [ ]) of [ ] (" Main Contractor" which term shall include any successor including any parties taking over the obligations of Main Contractor. under the Project Agreement)

(6) **[ ],** (registered number [ ]) whose registered office is at [ ] ("the Consultant")

WHEREAS:

A The Beneficiary has entered or is about to enter into an agreement with the Main Contractor ("the Building Contract") in connection with the design and construction of the New South Glasgow Hospital, Govan, Glasgow ("the Project").

B The Main Contractor has engaged or is about to engage the Consultant under an appointment ("the Appointment"), which expression shall include all documents incorporated therein and any agreed amendment thereto, to carry out [ ] services as more particularly described in the Appointment ("the Services"), which expression shall include any additional services performed by the Consultant under the Appointment including in connection with any modifications or variations made thereunder.

C It is a condition precedent of the Building Contract that the Consultant, the Main Contractor and the Beneficiary enter into this agreement ("this Agreement").

NOW IT IS AGREED:

1 The Consultant warrants and undertakes to the Beneficiary that it has complied and will continue to comply with all the terms and obligations under the Appointment on the Consultant's part to be performed and observed and shall complete the Services in accordance with the Appointment.

2. Without prejudice to Clause 1 of this Agreement, the Consultant further warrants and undertakes to the Beneficiary that:

2.1 it has exercised and will continue to exercise all the reasonable skill, care and diligence to be expected from a competent and qualified professional designer experienced in carrying out services similar in nature, size and complexity to the Services including in the selection of goods and materials for the Project; and

2.2 it has not and will not specify for use in relation to the Project any products or materials not in conformity with relevant British or European standards or Codes of Practice or which are at the time of specification generally known within the United Kingdom to an experienced professional designer of works such as the Project to be deleterious to health and safety or to the durability of buildings and/or other structures and/or finishes and/or plant and machinery in the particular circumstances in which they are used;

Provided that:

2.3.1 the obligations of the Consultant under this Agreement shall be no greater in extent or quantity than if the Beneficiary had been named as joint employer with Main Contractor under the Appointment; and

2.3.3 the Consultant shall be entitled in any action or proceedings brought by the Beneficiary to rely on any limitation in the Appointment and to raise the equivalent rights in defence of liability (excluding counterclaim and set-off in respect of amounts due to the Consultant under the Appointment) as it would have if the Beneficiary had been named as joint employer with the Main Contractor under the Appointment;

3. The Beneficiary has no authority to issue any direction or instruction to the Consultant in relation to the Appointment unless and until the Beneficiary has given notice under Clauses 4 or 5, below. The Beneficiary or its appointee has no liability to the Consultant in relation to amounts due under the Appointment unless and until the Beneficiary has given notice under Clauses 4 or 5.

4. The Consultant agrees that it will, if so required by notice in writing given by the Beneficiary, subject to Clause 6, below, accept the instructions of the Beneficiary or its appointee, as the case may be, (which for the avoidance of doubt and without limitation may include a third party appointed by the Beneficiary to act as “the Employer” under the Appointment) to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Appointment. The Main Contractor acknowledges that the Consultant shall be entitled to rely on a notice given to the Consultant by the Beneficiary under this Clause 4 and further acknowledges that such acceptance of the instructions of the Beneficiary or its appointee, as

the case may be, to the exclusion of the Main Contractor shall not constitute any breach of the Consultant's obligations to the Main Contractor under the Appointment.

5. The Consultant further agrees that it will not without first giving the Beneficiary not less than 35 days notice in writing exercise any right or purported right it may have to determine its employment under the Appointment, treat the same as having been repudiated by the Main Contractor, or discontinue the performance of any duties or obligations thereunder. Further, the Consultant shall within 14 days of giving the said notice, provide statements to the Beneficiary containing the following:

5.1 all amounts properly due and payable to the Consultant under the Appointment on or before the date of issue of the said notice which remain unpaid;

5.2 in the reasonable estimation of the Consultant, the amount of any monetary claim (if any) asserted by the Consultant against the Main Contractor under the Appointment arising out of or in connection with the breach for which the said notice was served; and

5.3 where the Consultant intends to terminate the Appointment due to some default or breach of contract of a non-financial nature:

5.3.1 the provision of the Appointment alleged to have been breached or not fulfilled;

5.3.2 supporting information in reasonable detail to enable the Beneficiary to identify the material facts;

5.3.3 the steps reasonably required to remedy the specified breaches or conditions not fulfilled;

5.3.4 the time within which the specified steps can reasonably be expected to be taken;

5.3.5 (if applicable) the amount of damages claimed and the basis of their calculation; and

5.3.6 (if applicable) the relief to be sought.

The Consultant warrants to the Beneficiary that to the best of the Consultant's knowledge and belief, having made all proper and appropriate enquiries, the statements submitted under this Clause 5 shall be true, complete and accurate statements of the amounts to which the Consultant considers itself entitled. In the event that the Consultant shall delay in giving such

notice and information within the said 14 days, the period of 35 days shall be extended to correspond with the period of any such delay. The Consultant's right to determine its employment under the Appointment or to treat the same as having been repudiated or to discontinue performance shall cease if, within the said 35 day period (extended as appropriate) and subject to Clause 6 the Beneficiary shall give notice in writing to the Consultant requiring the Consultant to accept the instructions of the Beneficiary or its appointee to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Appointment.

6. It shall be a condition of any notice given by the beneficiary under clauses 4 or 5 above, that the beneficiary or its appointee, as the case may be, accepts liability for payment of the sums due under the appointment and detailed in the statements provided under clause 5 (and makes payment within a period of 28 days of such notice from the beneficiary), and for subsequent performance of the main contractor's obligations. Upon the issue of any notice by the beneficiary under clauses 4 or 5, the appointment shall remain in full force and effect as if no right of determination of its employment under the appointment, or any right of the consultant to treat the appointment as having been repudiated by the main contractor. Had arisen and the consultant shall be liable to the beneficiary and/or its appointee, as the case may be, under the appointment in lieu of its liability to the main contractor.

7. The beneficiary may at any time following the issue of any notice by the beneficiary under clauses 4 or 5, serve a further notice that following the expiry of 28 days from the giving of such notice the beneficiary will have no liability (save in respect of the beneficiary's antecedent breach) for any sums due or to become due to the consultant in respect of the period following expiry of the last mentioned 28 day period. The beneficiary may exercise any of its rights pursuant to clauses 4 or 5 on more than one occasion.

8. The consultant shall maintain for the period expiring 12 years after completion of the services or until termination of the consultant's employment under the appointment, professional indemnity insurance in an amount of not less than £[10]m [(ten million pounds)] sterling for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months with insurers of good repute carrying on business in the european union provided always that such insurance is available at rates and terms which are commercially reasonable to consultants of a similar size and standing in the uk. In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the consultant shall be ignored. The consultant shall immediately inform the beneficiary if such insurance ceases to be available at rates and terms which are commercially reasonable in order that the consultant and the beneficiary can consider alternative means of best protecting their respective positions in respect of the project in the absence of such insurance provided that the beneficiary shall be entitled to require the

consultant to maintain such lesser amount of professional indemnity insurance as is available to the consultant at rates and terms which are commercially reasonable. As and when it is reasonably requested to do so by the beneficiary (but not more than once in any period of insurance) the consultant shall produce for inspection documentary evidence satisfactory to the beneficiary (acting reasonably) that its professional indemnity insurance is being maintained.

9. The consultant hereby grants to the beneficiary or its appointee and all those authorised by the beneficiary an irrevocable, non-exclusive and royalty-free licence (which shall be capable of assignation) to use and reproduce all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things whatsoever provided or to be provided by the sub-contractor in connection with the project (the "**documents**") for any purpose relating to the project including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair and any extension of the project and for dissemination within the nhs as part of the feedback of information to better or enable the nhs to realise improvements in its methods and practice of construction and in the design and procurement of its construction. Such licence shall carry the right to grant sub-licenses and shall subsist notwithstanding that the appointment is terminated or the obligations and duties thereunder have been completed. For the avoidance of doubt, the grant of such licence or sub-licences shall not impose any additional liability on the consultant. The consultant will not assign or agree to assign the copyright in any of the documents without the prior written consent of the beneficiary. The consultant shall on reasonable demand provide to the beneficiary or its appointee and those authorised by the beneficiary additional copies of any documents on receipt of reasonable copying costs. The consultant shall not be liable for any use by the beneficiary of any of the documents for any purpose other than those authorised by this clause.

10. This agreement may be assigned on a maximum of two occasions in whole or in part by the beneficiary to any party to whom the beneficiary's interest in the main contract or any part thereof is assigned or disposed to without the consent of the main contractor or the consultant being required and any such assignation shall be effective upon written notice thereof being given to the main contractor and to the consultant. No other or further assignation of this agreement, other than permitted by this clause, by the beneficiary or any other party shall be permitted. The consultant shall not be entitled to assign or transfer any rights or obligations hereunder without the consent of the beneficiary.

11. The consultant undertakes that it will not raise as a defence to any action by the beneficiary for alleged breach of this agreement the fact that the obligations of the main contractor to the

beneficiary in respect of the services have been released as a result of the termination of the building contract.

12. No failure, approval, act or forbearance on the part of the beneficiary in respect of any right of the beneficiary pursuant to this agreement shall constitute any waiver of any right of the beneficiary under or arising out of this agreement nor relieve the consultant of any of its duties or obligations under or arising out of this agreement.

13. Any notice, consent or demand to be given or made by any party under this agreement (hereinafter called a **"notice"**) shall only be validly served if in writing and delivered personally or sent by pre-paid first class recorded delivery post to the following address and marked for the attention of the following person in the case of each party:

| Party: | **Address:** | Person: |
|---|---|---|
| Beneficiary | Dalian House, 350 St Vincent Street Glasgow, G3 8YZ | Head of Board Administration |
| Main Contractor | | |
| Contractor | | |

Any party may by Notice to the other party/parties change its address or the title of the person for whose attention Notices are to be given or made pursuant to this Clause. Any such Notice shall be deemed to have been received:

13.1 if delivered personally, at the time of delivery;

13.2 in the case of pre-paid first class recorded delivery post, on the first Business Day after the date of posting.

If any Notice is delivered after 5 p.m. on a Business Day, or at any time during a day which is not a Business Day, that Notice shall be deemed to have been received at 9 a.m. on the next Business Day. For the purposes of this Clause, "Business Day" means any day which is not a Saturday, a Sunday or a public holiday in Scotland. In proving service it shall be sufficient to prove that the envelope containing such Notice was properly addressed to the relevant party and either delivered personally to that address or delivered into the custody of the postal authorities as a pre-paid first class recorded delivery letter. For the avoidance of doubt, Notices shall not be validly served if sent by e-mail or fax

14 No action or proceedings for any breach of this Agreement shall be commenced against the Consultant after the expiry of twelve years from Completion or earlier termination of the Consultant's employment under the Appointment.

15. The definitions of words and phrases used in this Agreement shall be those set out in the Appointment except where expressly defined in this Agreement.

16. This Agreement shall be governed by and construed in accordance with Scots Law and the parties hereto submit to the exclusive jurisdiction of the Scottish Courts.

**NOVATION AGREEMENT**

**amongst**

**NHS Greater Glasgow and Clyde** of Dalian House, St Vincent Street, Glasgow (hereinafter referred to as "the **Board**");

and

**[ ]**, incorporated under the Companies Acts (Company Number [ ]) and having its Registered Office at [ ] (hereinafter referred to as the "**Contractor**" which term shall include its successors and assignees);

and

**BMJ Architects Limited,** incorporated under the Companies Acts (Company Number SC255758) and having its Registered Office at 2 Central Quay, 89 Hydepark Street, Glasgow, G3 8BW (hereinafter referred to as "the "**Consultant**"");

WHEREAS

(A) By an agreement dated [ ] ("the Appointment") the Board has appointed the Consultant to carry out Services in connection with a new Laboratory Block forming part of the New South Glasgow Hospitals Project at the Southern General Hospital, Glasgow (the "**Project**").

(B) The Board and the Contractor have entered into or shall enter into a building contract ("the **Building Contract**") for, inter alia, the construction and completion of the Project, as more particularly described therein (hereinafter referred to as "the **Works**");

(C) It is intended that the Contractor will in terms of the Building Contract be responsible to the Board for all design and construction work required as part of the Project, including the Services undertaken or to be undertaken by or on behalf of the Consultant under the Appointment;

(D) It is a condition of the Building Contract and the Appointment that the Contractor and the Consultant shall enter into a Novation Agreement with the Board in respect of the Appointment in connection with the Works, under exception of the [Cost Consultant/Quantity Surveyor][*if required can be defined by reference to a schedule to the novation agreement*] (hereinafter referred to as the "**Excluded Services**".

(E) The Board, the Contractor and the Consultant have agreed to novate the Appointment, under exception of the Excluded Services, so that it shall be between the Contractor and the Consultant to the exclusion of the Board on the terms and conditions of this agreement

NOW THEREFORE the parties hereto DO HEREBY AGREE as follows: -

1. The Board hereby novates to the Contractor its entire rights, benefits, liabilities and obligations under and pursuant to the Appointment including its accrued rights, benefits, liabilities and obligations with the exception of (a) the right to receive, and obligation on the Consultant to perform the Excluded Services and (b) the Board's obligation to pay the Outstanding Fee if any (as hereinafter defined).

2. The Consultant and the Contractor hereby release and discharge the Board from any and all of the obligations and liabilities under the Appointment, past, present or future owed by the Board to the Consultant under or in connection with the Appointment with the exception of the Board's obligation to pay the Outstanding Fee if any (as hereinafter defined), provided that nothing in this clause shall operate to exclude or limit the liability or obligations of the Consultant to the Board in terms of the collateral warranty granted or to be granted to the

Board in terms of this Agreement or in respect of the Excluded Services whether such liabilities or obligations arise or occur before or after the date of this Agreement.

3. The Consultant shall provide the Services (with the exception of the Excluded Services) to the Contractor from the effective date specified in clause 10 of this Agreement.

4. Subject to Clause 1 the Consultant accepts the liability of the Contractor under the Appointment in substitution for the liability of the Board.

5. The Consultant hereby warrants and undertakes to the Contractor that it has performed and will continue to perform each and all of its obligations, duties and undertakings under and pursuant to the Appointment as and when required by and in all respects in accordance with the Appointment. The Contractor shall have the right to enforce its rights and remedies in connection with the Appointment and to pursue all claims and demands in connection with any breach, negligence, omission, default of the Consultant or those for whom it is responsible in connection with the Appointment and/or the Works irrespective of when losses, costs, expenses or claims occurred or the breach, negligence, omission or default occurred. For the purposes of this Clause 5, the expression "the Appointment" shall include the original appointment between the Board and the Consultant and the novated appointment between the Contractor and the Consultant.

6. The Contractor undertakes to the Consultant and to the Board that it accepts the past performance of the Services (with the exception of the Excluded Services) by the Consultant and undertakes to perform all the duties and obligations on the Board's part under the Appointment and to be bound by the terms of the Appointment as if the Contractor had been the employer under the Appointment from the date of commencement of the Services (with the exception of the Excluded Services) or the date of the Appointment, whichever is the earlier, in substitution for the Board.

7.1 The Consultant shall owe no greater duty to the Contractor hereunder than it would have owed to the Contractor if the Contractor had been named as employer under the Appointment from the outset in substitution for the Board.

7.2 The Consultant shall be liable to the Contractor subject to and in accordance with the terms of the Appointment for the Services (with the exception of the Excluded Services) and performance of its obligations under the Appointment whether performed prior to, on or after the effective date referred to in Clause 10 below and irrespective of: -

(i) to whom the relevant Service or obligation was performed;

(ii) whether or not any losses, costs, expenses or claims could be conceived as having been suffered by the Board or the Contractor and irrespective of whether attributable to the period before or after the effective date referred to in clause 10 or suffered or incurred by the Contractor;

(iii) the fact that the Board has suffered no losses, costs, expenses or claims or could not have suffered losses, costs, expenses or claims or in either case the losses, costs, expenses or claims caused, were in whole or in part attributable to an act, omission, breach, default or negligence in the period before or after such effective date or are different in extent, nature or otherwise from those suffered or incurred or which could have been suffered or incurred by the Board.

7.3 The Consultant shall not be entitled in defence or mitigation of any claim to state a defence of no loss or to state a defence that the Contractor has suffered or incurred a loss, which would not have been suffered or incurred by the Board.

8. For the avoidance of doubt, the parties hereto agree and undertake that save to the extent expressly provided otherwise, nothing contained in this Agreement shall:

(i) limit, vary or discharge any right or liability arising under or in connection with the Appointment save to the extent of the identity of the creditor and/or debtor in respect of the relevant right and/or obligation;

(ii) waive, discharge, limit or affect any of the rights, obligations or liability of the Consultant and any beneficiary under or in connection with any collateral warranty agreement issued pursuant to the Appointment;

(iii) adversely affect any right of step-in granted to any party under any collateral warranty agreement referred to above.

*9.* The Consultant acknowledges and agrees that save for the sum of £[ ] (the "Outstanding Fee") the Consultant has been paid the whole fee due to the Consultant by the Board in connection with the Appointment. The Board undertakes to pay the Outstanding Fee to the Consultant in accordance with the payment provisions contained in the Appointment [*or insert milestones for payment*].

10. The provisions of this Agreement shall take effect between the parties hereto on the effective date of the Building Contract notwithstanding the dates of execution hereof ("The Effective Date").

11. The Consultant hereby undertakes to the Board to execute and deliver to the Board a collateral warranty agreement in terms of that specified in the Appointment in favour of the Board within 14 days of a written request by the Board.

12. Words and expressions used in this Agreement shall, unless the context otherwise requires, bear the same meaning ascribed to them in the Appointment. The rules of construction and interpretation provided for in the Appointment shall apply to this Agreement. Save insofar as expressly amended hereby the terms of the Appointment shall continue in full force and effect.

13. This Agreement and the rights and obligations of the parties hereto shall be governed and construed according to the Law of Scotland and the parties hereby prorogate the non-exclusive jurisdiction of the Scottish Courts;:

The following matters are examples of risk to be considered and discussed during the Competitive Dialogue process for inclusion in the agreed Risk Register.

| Risk Ref | Description |
|---|---|
| | **Character and innovation risks** |
| | Impact of change in design required by Operator (Hospital) |
| | The change in design required due to external influences specific to the NHS |
| | The introduction and incorporation of changes to SHA / Health Authority requirements |
| | Innovative design / materials solutions |
| | **Form and materials risks** |
| | External Materials not to required standard |
| | External detailing of building below expected quality |
| | Poor signage |
| | **Staff and patient environment risks** |
| | The introduction of technological change of elements of the building / Obsolescence |
| | The life expectancy of the asset |
| | Change in Environmental Standards / Green issues |
| | Privacy / Dignity issues not adequately addressed |
| | Consideration to staff and patient environment (e.g: views etc.) |
| | **Urban and social integration risks** |
| | Does the design fit well on the site |
| | Any unexpected changes in the epidemiology of the people in the catchment area |
| | **Performance risks** |
| | The discovery of latent defects in new building after handover |
| | The Performance of *CONTRACTOR* to build to expected standards |
| | Any disputes leading to adjudication |
| | The determination of the Contract by either Party |
| | The non performance of building functions on completion |
| | The incorrect estimate of cost of providing clinical services |
| | The incorrect estimated cost of maintenance of facility |
| | The incorrect estimated cost of energy used |
| | The impact of Patient Infection - other (inappropriate design) |

| Risk Ref | Description |
|---|---|
| | |
| | The non-performance of building services on completion |
| | The poor performance of building services on completion |
| | Any unexpected changes in medical technology |
| | **Engineering risks** |
| | The failure by *Contractor* to design to NHS Original Brief |
| | The change in the scope of work requirements of the NHS Brief |
| | The continuing development of design by the *Contractor* within the brief |
| | Will additional Mechanical Ventilation be required to deep plan spaces |
| | Failure by *Contractor* to co-ordinate of M&E Installations |
| | Failure by *Contractor* to co-ordinate M&E services with the building structure |
| | Impact of any additional works at links to buildings |
| | General Design quality by *Contractor* |
| | Impact of demolition works on design |
| | The requirement of additional plant (e.g. boiler) |
| | Adequacy of VIE plant (cryogenic vessel) |
| | Adequacy of security requirements (CCTV etc.) |
| | Adequacy of emergency generator provisions |
| | The additional costs associated with services rationalisation |
| | Incorrect Cost estimates for planning approval |
| | Imposed conditions by Government or Regulatory Bodies. |
| | The impact on service delivery due to late planning approval |
| | The effect on the scheme failure to obtain planning approval |
| | Consideration in Design to prevent cross infection (MRSA and similar infections) |
| | **Construction risks** |
| | The impact of incorrect program and duration by *Contractor* |
| | Failure to award contract on time |
| | The impact of unforeseen site conditions |
| | Archaeology - Impact due to significant find |

| Risk Ref | Description |
|---|---|
| | |
| | Archaeology - Impact due to small find |
| | Discovery of unforeseen ground conditions |
| | Discovery of unknown major services |
| | Any unforeseen ground/site conditions under the footprint of existing facilities |
| | Impact of delay in gaining access to the site |
| | Failure to maintain adequate on-site security (Project) |
| | Failure to maintain adequate site security (Hospital) |
| | The impact of Third Party claims (utilities etc.) |
| | The impact of "Compensation Events' to the *Contractor* (variations) |
| | The impact of Legislative/Regulatory change: NHS specific |
| | The compliance with any new Mandatory Standards |
| | The impact of Legislative/Regulatory change: non-NHS specific (Building Regulation) |
| | The compliance with Health & Safety Standards, CDM etc. |
| | The impact of changes in taxation |
| | The impact of changes in the rate of VAT |
| | The non-realisation of VAT reclaim and introduction of new Statutory costs |
| | Any other changes in VAT |
| | The impact of Contractor default (insolvency etc) |
| | The impact of delivery due to poor project management |
| | The Failure of *Contractor* to manage industrial relations |
| | The impact of incorrect program and cost estimates for decanting from existing premises |
| | The impact of incorrect program and cost estimates for commissioning new building |
| | Any additional infrastructure changes for utilities<br><br>(e.g. gas, water, electric, etc.) |
| | Failure to control dust (Aspergillus) |
| | **Use risks** |
| | The non-realisation of existing equipment transfer into new facilities |

| Risk Ref | Description |
|---|---|
| | The equipment costs exceed equipment budget |
| | Any unexpected sudden increases in demand, due to major incidents |
| | **Access risks** |
| | Impact on gaining access to site (non-construction) |
| | Fire services - The provision of any additional fire fighting requirements |
| | Fire services - The provision of any additional means of escape |
| | Complying with Section 106 / Transport strategy |
| | Delays caused by protester action groups |
| | Delay / Consultation caused by Local Resident's Groups |
| | **Space risks** |
| | The change to appropriate space standards |
| | The change to and flexibility of the building to meet future clinical delivery |
| | The changes in the volume of demand for patient services |

## PART THREE – GATEWAY PROCEDURES

### 1 Approval Gateways

In order to promote good management, controls of costs and to ensure compliance with Employers Requirements Design Approval Gateways are required at key stages in the programme

- Stage 1 – Design Approval Gateways will be required and these should be identified on the Contractors programme and align with key activities from the Priced Activity Schedule. A minimum of 4 Approval gateways are expected. The programme should identify periods allowed for Board review and comment.

- Stage 2 – Design Approval Gateways will be required and these should be identified on the Contractors programme and align with key activities from the Priced Activity Schedule. A minimum of 6 Approval gateways are expected. The programme should identify periods allowed for Board review and comment.

- Stage 3 – Design Approval Gateways will be required and these should be identified on the Contractors programme and align with key activities from the Priced Activity Schedule. A minimum of 12 Approval gateways are expected. The programme should identify periods allowed for Board review and comment.

- Stage 3A – Design Approval Gateways will be required and these should be identified on the Contractors programme and align with key activities from the Priced Activity Schedule. A minimum of 4 Approval gateways are expected. The programme should identify periods allowed for Board review and comment.

## PART FOUR – SCHEDULE OF COST COMPONENTS AMENDED

**(Clarification: Items struck through and noted as 'Deleted' are included in the Fee)**

This schedule is part of the conditions of contract only when Option C, D or E is used. In this schedule the Contractor means the Contractor and not his Sub-Contractors. An amount is included only in one cost component and only if it is incurred in order to Provide the Works

People 1 The following components of the cost of

- people who are directly employed by the Contractor and whose normal place of working is within the Working Areas and
- people who are directly employed by the Contractor and whose normal place of working is not within the Working Areas but who are working in the Working Areas.

Clarification – exclusion to People

Company executives, directors, managers and other people visiting the Working Areas for the purpose of meetings and liaison are excluded from the clarification in bullet two above. Their costs are included in the Fee.

11 Wages, salaries and amounts paid by the Contractor for people paid according to the time worked while they are within the Working Areas.

12 Payments to people for

(a) bonuses and incentives
(b) overtime
(c) working in special circumstances
(d) special allowances
(e) absence due to sickness and holidays

Note;

1. In the event of an extended period of absence and where payments to the person are not otherwise covered by a sickness benefit scheme reimbursement to the *CONTRACTOR* in respect of any payments to the person is limited to one (1) week

2 Holidays are those applying under statutory obligations and company schemes

~~(f) severance related to work on this contract.~~ deleted

13 Payments made in relation to people for

(a) travel
(b) subsistence and lodging
~~(c) relocation~~ Deleted
(d) medical examinations
~~(e) passports and visas~~ deleted
~~(f) travel insurance~~ deleted
~~(g) items (a) to (f) for dependants~~ deleted

(h) ~~protective clothing~~ Deleted and included within 25 - Payments for the purchase price of Equipment which is consumed.
(i) Meeting the requirements of the law
(j) pensions and life assurance
(k) death benefit
(l) occupational accident benefits
(m) medical aid
(n) a vehicle
(o) safety training.

14 The following components of the cost of people who are not directly employed by the Contractor but are paid for by him according to the time worked while they are within the Working Areas.

Amounts paid by the Contractor.

Equipment 2 The following components of the cost of Equipment which is used within the Working Areas (including the cost of accommodation but excluding Equipment cost covered by the percentage for Working Areas overheads).

21 Payments for the hire or rent of Equipment not owned by

- the Contractor,
- his parent company or
- by a company with the same parent company

at the hire or rental rate multiplied by the time for which the Equipment, is required.

22 Payments for Equipment which is not listed in the Contract Data but is

- owned by the Contractor,
- purchased by the Contractor under a hire purchase or lease agreement or
- hired by the Contractor from the Contractor's parent company or from a company with the same parent company open market rates, multiplied by the time for which the Equipment is required.

23 Payments for Equipment purchased for work included in this contract listed with a time-related on cost charge, in the Contract Data, of

- the change in value over the period for which the Equipment is required and
- the time-related on cost charge stated in the Contract Data for the period for which the Equipment is required.

The change in value is the difference between the purchase price and either the sale price or the open market sale price at the end of the period for which the Equipment is required. Interim payments of the change in value are made at each assessment date. A final payment is made in the next assessment after the change in value has been determined.

If the Project Manager agrees, an additional item of Equipment may be assessed as if it had been listed in the Contract Data.

24 Payments for special Equipment listed in the Contract Data. These amounts are the rates stated in the Contract Data multiplied by the time for which the Equipment is required.

If the Project Manager agrees, an additional item of special Equipment maybe assessed as if it had been listed in the Contract Data.

25 Payments for the purchase price of Equipment (including People 13 (h) protective clothing) which is consumed.

26 Unless included in the hire or rental rates, payments for

- transporting Equipment to and from the Working Areas other than for repair and maintenance,
- erecting and dismantling Equipment and
- constructing, fabricating or modifying Equipment as a result of a compensation event

27 Payments for purchase of materials used to construct or fabricate Equipment

28 Unless included in the hire rates, the cost of operatives is included in the cost of people.

Plant and Materials 3 The following components of the cost of Plant and Materials

31 Payments for

- purchasing Plant and Materials,
- delivery to and removal from the Working Areas
- providing and removing packaging and
- samples and tests.

32 Cost is credited with payments received for disposal of Plant and Materials unless the cost is disallowed.

Charges 4 The following components of the cost of charges paid by the Contractor

41 Payments for provision and use in the Working Areas of

- water,
- gas and
- electricity

42 Payments to public authorities and other properly constituted authorities of charges which they are authorised to make in respect of the *works*

43 Payments for

(a) cancellation charges arising from a compensation event
(b~~) buying or leasing land~~ Deleted
~~(c) compensation for loss of crops or buildings~~ Deleted

(d) royalties
(e) inspection certificates
(f) charges for access to the Working Areas
(g) facilities for visits to the Working Areas by Others
(h) specialist services
(i) consumables and equipment provided by the *Contractor* for the *Project Manager's* and *Supervisor's*

44 A charge for overhead costs incurred within the Working Areas calculated by applying the percentage for Working Areas overheads stated in the Contract Data to the total of people items 11, 12, 13 and 14. The charge includes provision and use of equipment, supplies and services, but excludes accommodation, for:-

(a) catering
(b) medical facilities and first aid
(c) recreation
(d) sanitation
(e) security
(f) copying
(g) telephone, telex, fax, radio and CCTV
(h) surveying and setting out
(i) computing
(j) hand tools not powered by compressed air.

Manufacture and fabrication

5 The following components of the cost of manufacture and fabrication of Plant and Materials which are:-

- wholly or partly designed specifically for the works and
- manufactured or fabricated outside the Working Areas.

51 The total of the hours worked by employees multiplied by the hourly rates stated in the Contract Data for the categories of employees listed.

52 An amount for overheads calculated by multiplying this total by the percentage for manufacturing and fabrication overheads stated in the Contract Data.

Design

6 The following components of the cost of design of the works and Equipment done outside the Working Areas.

61 The total of the hours worked by employees multiplied by the hourly rates stated in the Contract Data for the categories of employees listed.

62 An amount for overheads calculated by multiplying this total by the percentage for design overheads stated in the Contract Data.

63 The cost of travel to and from the Working Areas for the categories of design employees listed in the Contract Data.

Insurance

7 The following are deducted from cost:-

- the cost of events for which this contract requires the Contractor to insure and
- other costs paid to the Contractor by insurers.

**Pro forma Fee Workbook**

The pro forma Fee Workbook for calculation of the fee applicable to the Defined Cost is provided in the Tender Return Submission workbook (Excel format) for completion by the *Contractor* and inclusion with the Bid Deliverables noted in Volume 3 of this ITPD.

## PART SIX – MAXIMUM PRICE TARGET COSTS

### 1 Pro forma MPTC Schedule

1.1 The pro forma MPTC Schedule is provided in the Tender Return Submission workbook (Excel format) for completion by the *Contractor* and inclusion with the Bid Deliverables noted in Volume 3 of this ITPD.

## PART SIX – ACTIVITY SCHEDULES

### 1 Pro forma activity schedules

1.1 The pro forma activity schedules are provided in the Tender Return Submission workbook (Excel format) for completion by the *Contractor* and inclusion with the Bid Deliverables noted in Volume 3 of this ITPD.

# PART SEVEN - WORKS INFORMATION

## 1 INTRODUCTION

### 1.1 The *Employer's* objectives

The *Employer's* objectives for the contract are to;

- Appoint a the *Contractor* to undertake design of the required *works* and undertake delivery of the *works*;
- Appoint the *Contractor* as CDM co-ordinator to take over from the CDM co-ordinator current at the time of *Contractor* appointment
- Achieve Completion of the *works* by

| Stage | Heading | Outline Activities | Completion Date |
|---|---|---|---|
| Stage 1 | Construct Laboratories | Construction of the Laboratories. Concurrent with Stage 2. | 31st December 2012 |
| Stage 2 | Design Development | Design development of Adult and Children's hospital. Concurrent with Stage 1. | 31st October 2010 |
| Stage 3 | Construct Adult and Children's Hospital | Construction of the Adult and Children's Hospital. Consecutive to Stage 2. | 31st January 2015 |
| Stage 3A | Landscaping Completion | Completion of landscaping following full migration of clinical Services & Demolition of Surgical Block | 30th August 2016 |

and

- Provide, in a MPTC "risk and reward" contract strategy, an environment that will promote harmonious and cooperative conduct encompassing the whole of the human resources necessary to complete the contract.

### 1.2 The *Employer's* Strategy

(i) In entering into the Agreement the Parties' Overriding Objective is by working together in accordance with the terms of the Agreement to achieve the successful delivery by the *Contractor* of the *works*;

- to the standard and functionality to meet with the *Employer's* requirements set out in this Works Information to a quality which meets or exceeds these requirements;
- at a cost to the *Employer* that offers best value for money taking into account whole life (as well as capital) costs over the proposed design life of the *works* through the application of the principles of value

engineering, whilst providing the opportunity for the *Contractor* to make a return;

- to the timescale acceptable to the *Employer* and agreed between the parties without compromising health and safety or the *Employer's* required standards and the quality of the completed *works* and in any event before the c*ompletion date or dates* set out in the Agreement, and

- with an appropriate allocation of the risks associated with the *works* to the party best able to manage such risks.

**1.3 Contract philosophy and general principles of application**

(i) Contract philosophy:

- The basis of the contract is the NEC3 Engineering and Construction Contract Option C – Target contract with activity schedule stated in the Invitation to Participate in Dialogue (ITPD)

- Following selection of the *Contractor* by tender the contract is initiated by the *Employer's* letter of appointment and the *Contractor's* acceptance

- The Parties enter into the Agreement within the time stated in the letter of appointment

- The *Contractor* undertakes to carry out the design, management and be responsible for the delivery of and construction of the *works* in accordance with the Agreement, and

- work and liaise with the *Employer*, the Supply Chain and any Professional Adviser as necessary, appropriate or as requested by the *Employer* in order to achieve the Overriding Objective.

(ii) General principles of application

- The Contract will be awarded to the Contractor after the Competitive Dialogue Tender period and will comprise the Stages as outlined in Section 1.1. Approval to proceed with each Stage is required in accordance with the Contract.

- Phasing of the project necessitates structuring of the ITPD documents forming the contract in such a manner as will enable them to be reviewed and updated for each Stage within the Contract as work proceeds.

**1.4 The Contract documentation**

The specific documentation for the Contract includes:-

- Form of Agreement and Appendices

- *Contractor's* Tender Return Submission

- Contract Data Part one

- Contract Data Part two

- Attendant Appendices and/or Attachments

- Works Information referred to in Contract Data Part one - Data provided by the *Employer*.
- Site Information referred to in Contract Data Part one – data provided by the *Employer*.
- Maximum Price Target Cost
- Works Information referred to in Contract Data Part two. Data provided by the *Contractor* for the *Contractor's* design (i.e the Bid Deliverables as required by Volume 3 of this ITPD)

**1.5 The design**

The *Contractor* undertakes development of the design for the whole of the *works* through the applicable Stages of the Contract.

The *Contractor*:

- Maintains continuity of design staff in so far as may be reasonable.
- Impresses on all persons under his direction the need for dedication to completion of the contract.
- Maintains hard copy dossiers for Works Information for the design together with electronic data.

**1.6 Definitions**

For the purposes of this contract the following definitions apply:-

- 'Maximum Price Target Cost – the Price ceiling as per Clause 2 of the Contract
- 'Project' – one of the four Stages of work named within Works Information 2 (iii) - Description of *works*

**1.7 Performance**

The *CONTRACTOR* will be measured against the following Key Performance Indicators:

- Client Satisfaction – Product
- Client Satisfaction – Service
- Cost predictability – design and construction
- Time predictability – design and construction
- Safety (based on accident incident rates)
- Defects at handover

**2 Description of *works***

2.1 Introduction

(i) The general scope of work is for the *Contractor* to provide management and delivery of design and construction services for the whole of the *works*.

(ii) The *works* are undertaken in Stages as set out in Section 1.1

(iii) The *works* are as set out in ITPD Volume 2 Employer's Requirements.

2.2 CDM Co-ordinator

(i) The *Contractor* is required to take over the role of the current CDM co-ordinator from appointment of the Contract

(ii) The CDM co-ordinator prior to appointment of the *Contractor* is;

URS Corporation

The *Contractor* is to obtain all relevant data, including any pre-construction information, from the above named.

(iii) The *CONTRACTOR* provides a CDM Plan outlining:-

- the responsibilities of the individuals he nominates to assist in carrying out the duty of CDM co-ordinator
- identification of the lead designer
- proposed details of the design co-ordination process
- the contents and format of the Health and Safety File for the works within the contract.

**3 Plant and Materials**

3.1 Materials and workmanship specifications:-

- Materials and workmanship is to conform with requirements set out in ITPD Volume 2 Employers requirements

In addition:-

- The standards to be employed in the parts of the *works* designed by the *Contractor* are to be confirmed, identified and stated by the *Contractor* within the Works Information for the *Contractor's* design; to be submitted by the *Contractor* with his design packages for acceptance.

3.2 Items of Plant to be provided by the *Employer*

The *Employer* provides the following items for incorporation in the *works*:

- Group 2 Equipment (Refer to room Data Sheets and Equipment List – Volume 3 Appendix E & F)

3.3 Items of Materials to be provided by the *Employer*

The *Employer* provides the following items for incorporation in the *works*:

- None

3.4 Storage of Plant and Materials

The storage of Plant and Materials by the *Contractor* is to conform to requirements of the Vendor and the relevant specification.

3.5 *Employer's* requirements for provision of spares for Plant provided by the *Contractor* are set out in ITPD Volume 2 Employers Requirements

3.6 Vendor data for Plant provided by the *Contractor*

The *Contractor* ensures Vendor data for Plant incorporated in the *works* is available during commissioning and transferred to the *Employer* before Take Over of the *works* or section of the *works.*

**4 Health and Safety**

4.1 Construction (Design and Management) Regulations 1994

(i) The *Contractor* is appointed CDM co-ordinator for the *works*.

(ii) The *Contractor* acts as designer for the *works*

- The *Contractor* assumes the duty of the designer when he is appointed to the contract.

(iii) Principal Contractor

- The *Contractor* assumes the duty of Principal Contractor when he is appointed to the contract.

4.2 Health Board health and safety regulations for the *Employer's* facility where the *works* are being provided:-

(i) The Health Board health and safety regulations are contained in the following documents;

- Volume 3 Appendix P – Site Policies
- Volume 3 Appendix T – CDMC Pre Construction Information

4.3 The contract Pre-construction information:-

A CDM co-ordinator has been appointed prior to appointment of the *Contractor*

(i) The current Pre-construction information for each project is provided in documents supplied with the ITPD

(ii) The *Contractor* as CDM co-ordinator continues to;

- provide/continue to develop the pre-construction information during Stage 1, and during Stage 2 prior to commencement of Stage 3

4.4 The Construction phase plan in Compliance with Regulation 23 for

i) Stage 1 requires to be submitted at tender stage fully detailed in order to facilitate construction phase of Stage 1

ii) Stage 3 & 3A requires to be submitted in draft at tender stage and requires to

be developed during Stage 2

4.5 Employer constraints

(i) The following constraints on how the *Contractor* provides the Works are notified by the *Employer* and are to be considered and observed by the CDM co-ordinator in collation of the pre-construction information and incorporated in the *Contractor*'s construction phase plan;

- The safety of patients, staff and visitors is of absolute importance throughout the works
- All clinical services must be continuously provided throughout the duration of the works. Any necessary mains services shutdowns or other reasons for unavailability of any part of the buildings outside of the area within the *Contractors'*s site must be agreed with the *Employer* at least ten working days before implementation.
- All In-patient facilities are to be security tested and accepted prior to submission for handover.

4.6 Security

(i) The *Contractor* complies with NHS Client security policy and procedures for existing facilities.

- For *works* within the boundaries of existing NHS Client facilities the *Contractor* provides all regular contract employees with photo identification cards and installs a photo-recognition system for entry on to its site.
- Casual visitors are to be issued with day passes to be returned at the end of each day of the visit.
- The *Contractor* complies with the *Employer* specific security procedures.

## 5 The *Contractor's* Design

5.1 Design provided by the *Employer*

(i) The following elements of the design have been undertaken by the *Employer*:

- Stage 1 – Design to RIBA Stage D or E
- Stage 2, 3 & 3A – Design to Stage C

(ii) The *Employer* accepts no design responsibility for design issued with the ITPD

(iii) The *Employer's* design aims, functionality requirements and design brief for the contract are described in ITPD Volume 2 Employers Requirements

5.2 The *Contractor* assumes design responsibility for the *works* for the project from the point of contract award and in respect of providing the completed design for the contract is to:-

- provide the design for the *works* within the economic envelope of affordability for the contract.

- produce all required drawings to the appropriate degree of detail to allow completion of the works.

5.3 Procedures which the *Contractor* is to follow in carrying out his design

(i) The *Contractor* provides a Quality System for his design identifying

- Lead designer
- Number of design packages and their names to be submitted to the *Project Manager* for acceptance - Items of design to be undertaken by *Supply Chain Members (SCM's)* are to be separately identified
- The *Contractor* submits copies of all design packages direct to the *Project Manager* who will confirm acceptability or otherwise
- Designer responsible for each package
- Process for, each package, checking and certification prior to submission for acceptance
- Process for unique document reference
- Process for document transmittal (see (ii) following)

(ii) Electronic transmission of design documents to the *Project Manager.*

- Electronic transmission of design documents by the *Contractor* is only achievable where the *Project Manager* and the NHS Client have compatible systems available.
- For this Contract drawings are to be transmitted to the *Project Manager* through the project extranet and paper copies (5Nr)

(iii) The *Contractor* assumes design responsibility for the *works* and in respect of providing the design for the *contract*:-

- within the Maximum Price Target Cost submitted at time of tender

5.4 Works Information for the *Contractor's* design

(i) The *Contractor* provides Works Information for the *Contractor's* completion of the design, during all Stages

(ii) The Works Information for the *Contractor's* design is:-

- Provide for each Stage in a form that gives all necessary information to supplement the design drawings and identify the standards, specifications, codes of practice and construction requirements identified during production of the design and to be employed in Providing the Works.
- Hard copies of the relevant sections are made available/provided to the *Contractor's* staff supervising the *works*.

(iii) The Works Information for the *Contractor's* design includes:

- Those tests and acceptances to be undertaken during construction and commissioning.

- Those test and inspections the *Contactor* wishes the *Supervisor* to witness and accept.

## 6 Completion

6.1 Core clause **Identified and defined terms 11**, 11.2 (2) states, quote:-

"Completion is when the *Contractor* has:-

- done all the work which the Works Information states he is to do by the Completion Date and

- correctly notified Defects which would have prevented the *Employer* from using the *works* and Others from doing their work".

6.2 The work required to be done by the Completion Date for the whole of the *works*

(i) Whole of the *works*

Work to be done by Completion for each project, unless stated otherwise in (ii) below, is:

- Construction of the building and its services
- External work
- Commissioning of Plant, Systems and other installed equipment
- Handover of maintenance manuals
- Operator training
- Security systems proving and certification
- Interior decorations and furnishings
- Rectification of Defects which could affect security of the building and those requiring access to patient occupied areas

(ii) Sections of the *works*

Certain parts of the *works* require be undertaken as sections as noted below:-

| Stage | Heading | Outline Activities | Completion Date |
|---|---|---|---|
| Stage 1 | Construct Laboratories | Construction of the Laboratories. Concurrent with Stage 2. | 31st December 2012 |
| Stage 2 | Design Development | Design development of Adult and Children's hospital. Concurrent with Stage 1. | 31st October 2010 |
| Stage 3 | Construct Adult and Children's Hospital | Construction of the Adult and Children's Hospital. Consecutive to Stage 2. | 31st January 2015 |
| Stage 3A | Landscaping | Completion of landscaping | 30th August 2016 |

| | | | |
|---|---|---|---|
| | Completion | following full migration of clinical Services & Demolition of Surgical Block | |

(iii) Work that can remain to be completed after Completion for each Stage is:-

Stage 1:- Construct Laboratories

Work that can remain to be completed after Completion is;

None

Stage 2:- Design Development

Work that can remain to be completed after Completion is;

None

Stage 3:- Construct Adult and Children's Hospital

Work that can remain to be completed after Completion is;

None

Stage 3A:- Landscaping Completion

Work that can remain to be completed after Completion is;

None

**7 Working with the *Employer* and Others**

7.1 Development of the design and programme

Development of the design and associated construction programme, including for enabling works, will identify when the *Employer* and or Others will be occupying or requiring access to occupy parts of the *works* in order to carryout their work whether part of the *works* or not.

7.2 Details of Others identified by the *Employer* with regards to Stages 1 & 3

| Name of Other | Work to be Undertaken | Period of Occupation in the Working Areas |
|---|---|---|
| Group 3 Equipment | Installation & Commissioning | To be agreed during Stage 2 |
| IT Equipment & Testing | Installation & Commissioning | To be agreed during Stage 2 |
| | | |

7.3 The *Employer* provides the following services

(i) The *Employer* will provide no services, the Contractor is responsible for provision of all services required for the temporary and permanent works

7.4 The *Contractor* provides the following services & things

(i) The *Contractor* provides the following services to the *Employer* at the Site, as soon as practicable after the *access date*

- As set out in ITPD Volume 1 Employers Requirements covering temporary accommodation, meeting rooms, PPE etc
- The *Contractor* pays all charges and amounts

**8 Sub-Contracting**

8.1 Acceptable sub-contractors

(i) Acceptable sub-contractors are those sub-contractors identified in the *Contractor's* supply chain identified in his Tender Return Submission or as updated in line with Clause 26.

8.2 Work which should not be sub-contracted

It is recognised that much of the *Contractor's* work will be sub-contracted in accordance with Common practice. However, the following elements should not be wholly sub-contracted, that is where there is no direct *Contractor* management control over the operations:

- Overall responsibility for the duty of the CDM co-ordinator
- Management of the *works* including for design
- Health and Safety Management
- Quality control

8.3 Commercial requirements applicable to sub-contractors (*SCM's* including Consultants)

(i) The rates and percentages applicable are the tendered rates and percentages to be included in the sub-contract agreements. The tendered rates are, as shown in the tender work book for:

- *Contractor sub-contracted fee percentage*
- *SCM direct fee percentage*
- *SCM sub-contracted fee percentage*
- *SCM* rates for design

(ii) The engagement of *SCMs* and Consultants for the contract should consider the following:

- The NEC Suite of contracts (Pricing Option C) should be utilized for majority of works.
- All sub-contracts not based on the NEC suite of contracts should reflect the principles contained within this Contract.
- The *Contractor* obtaining a statement from *SCMs* that they are aware of and agree to comply fully with the provisions of this contract, including the obligation to act in a spirit of mutual trust and cooperation.
- *SCMs* and Consultants maintaining a system of records compatible with the *Contractor's* obligations in the contract.

- Use of the Shorter Schedule of Cost Components (SoSCC) for low value sub-contracts. If so this is stated in the sub-contract invitation.

- Adopting the Contract Administration Pro forma (CAP) procedure for communications and notifications appropriately amended for the sub-contract.

- Providing in each sub-contract / consultancy contract specific Works Information and Site Information documentation.

- Maintaining a complete documented record of all sub-contract / consultancy pre appointment communications for each proposed sub-contract / consultancy agreement. This should include records of pre appointment assessments for each proposed sub-contract / consultancy Agreement.

(vi) *SCM* / Consultant Early Warning notifications and Risk Reduction Meetings

- The *Contractor* adopts Contract Administration Pro forma (CAP) procedure for *SCM* and Consultant Early Warning notifications, and includes appropriately amended examples in the sub-contract / consultancy invitation.

- The *Contractor* maintains a register of *SCM* and Consultant Early Warning notifications and Risk Reduction Meetings and provides the *Project Manager* with information relevant to the Risk Register for this contract. The Risk Register for this contract is updated by the *Contractor* and made available to the Project Manager.

## 9 Programme

9.1 Introduction

(i) In complying with NEC3 clause 31.2 the *Contractor* working in collaboration with the *Project Manager,* provides the programme

- Reflecting the anticipated periods of pre-construction planning and design work together with anticipated sequences for the construction Stage for each of the Stages forming the Contract

- The programme is supported by a hierarchy of inter-dependant sub programmes

- In this contract the *Contractor* provides separate programmes for each Stage forming the Contract.

(ii) The programme and linked sub-programmes are provided in a format that can be electronically transmitted

(iii) The *Contractor* includes in the programmes any other activities he requires to Provide the Works and maintain the relationship with the *activity schedules for each Stage*

9.2 First programme for acceptance

(i) The early submission of the first programme for acceptance is required to confirm the entry Stage specific requirements and constraints.

(ii) On receipt of the *Employer's* letter of appointment the c*ontractor* consults with the *Project Manager* and prepares the first programme for acceptance for the whole of the *works*; incorporating known milestones and operations The First Programme will be the programme submitted at tender stage.

9.3 Stage programmes

(i) The first programme for acceptance includes a sub-programme for each Stage.

(ii) Sub-programmes specific to each Stage are closed out at the end of the relevant Stage.

(iii) During Stage 2 the *Contractor* consults with the *Project Manager* and develops the Accepted Programme to incorporate revised planning and any new activities established as a result of the continued planning and design of the contract. Stage 3 sub-programme is developed by the *Contractor* in consultation with the *Project Manager* for inclusion in the submission of Stage 2 deliverables.

(iv) The latest Accepted Programme for the whole of the *works* is identified in Contract Data Part two – Data provided by the *Contractor* to be submitted with applicable Stage 2 deliverables.

9.4 The programme

(i) The programme for acceptance for each Stage is support by a hierarchy of inter-dependant sub-programmes in the format previously described and includes;

- A programme for completion of the design
- A detailed construction programme
- The construction procurement programme linked to design and construction
- Sub-contract / Consultant procurement programme
- Commissioning programme, including Client / User interfaces
- Handover programme showing sectional or phased completions as identified
- Work that the Works Information states may be done after Completion.

9.5 Design programme

(i) Activities to be identified in the design programme are to include the following;

- *Contractor* quality procedures
- Planning meetings (including end users clinicians and others shown to have a legitimate interest in the design)
- Design co-ordination meetings required by the CDM co-ordinator where there is more than one designer

- *Contractor* review milestones
- Design validation by independent designers, including where required by the *Employer*
- Sub-contract / consultant design Stages
- Milestone dates for submission of design packages for acceptance
- Periods for *Project Manager's* acceptance of design packages
- Hold points for the *Employer* review
- Planning permission submission dates
- Submission for Gateway Reviews (Full Business Case) to the Scottish Government Health Department and Design Reviews by Architecture and Design Scotland, including contingency periods for responding to their comments.

(ii) Design programmes specific to each Stage are closed at the end of the relevant Stage, impacting information and milestones etc. are carried forward as necessary.

9.6 Procurement programme

(i) The *Contractor* provides a procurement programme within the sub-programme hierarchy.

(ii) The programme identifies *Contractor* procedures and timing for establishment of sub-contracts, utilities services, Plant and Materials; together with identification of *Employer* provided Plant and Materials, clinical or other specialist equipment

(iii) The programme identifies each item and service to be procured

(iv) Generally a procurement programme should identify

- Design completion dates
- Enquiry preparation and tender/quotation invitations
- Tender assessment period
- Placement of order – earliest / latest date
- Suppliers design programme
- Manufacturer design co-ordination meetings.
- Hold points
- Quality assurance and control procedures / audits
- Acceptance points

- Commencement/delivery dates
- Dates when the Title is to be transferred for items not yet delivered to the Site
- Installation dates
- Completion dates

9.7 *Employer* identified milestone dates and Key Dates

(i) The milestone dates identified by the *Employer* for inclusion in the contract programme are listed below. The *Contractor*, during the Stages of the contract, is required to monitor such dates against the developing requirements of the design and proposed construction schedule; where deviations are identified these are to be drawn to the attention of the *Project Manager* using the early warning procedure.

(ii) *Employer* identified milestone dates are;

- To be developed after Contract Award

(iii) Key Dates included in Contract Data Part one – Data provided by the *Employer;*

- Stage completion dates as identified in Section 1.1

**10 Tests**

10.1 Tests and inspections [40.1]

(i) Tests to be undertaken in this contract for Plant, Materials and workmanship are to be undertaken during the *works* and comply with the requirements of ITPD Volume 2 Employer's Requirements

(ii) The *Contractor* is required to consult with the *Project Manager* during the Stages to agree and schedule those tests to be applied in this contract. Such tests are to be included in the *Contractor's* quality plan for the contract

(iii) Each Stage is to be scheduled for acceptance testing and inspection by the *Supervisor* prior to the Completion Date for each Stage. Defects resulting from such inspections and tests are to be remedied prior to the Completion Date for each Stage and handover to or occupation by the *Employer*

10.2 Details of Materials, facilities and samples to be provided by the *Contractor* and by the *Employer* for tests [40.2] are set out in ITPD Volume 2 Employers Requirements

10.3 Details of Plant and Materials which are to be inspected or tested before delivery to the Working Areas, including details of the inspection or test [41.1] are set out in ITPD Volume 2 Employer's Requirements

10.4 Definition of tests of Equipment, Plant and Materials outside the Working Areas which have to be passed before marking by the *Supervisor* [41.1] are set out in ITPD Volume 2 Employer's Requirements

10.5 Details of the preparation of Equipment, Plant and Materials for marking by the *Supervisor* are set out in ITPD Volume 2 Employer's Requirements.

**11 Title**

11.1 Plant and Materials outside the Working Areas

The *Contractor* who requires to be paid for Plant and Materials prior to bringing such items to the Working Areas, identifies procurement of such items on the Accepted Programme as an activity.

11.2 Objects and materials within the Site

- Contractor has title to materials from excavation and demolition solely for use within the Site
- The *Contractor* submits proposals for the disposal of surplus materials from excavation and demolition
- Where the *Contractor's* proposals are for other than disposal at licensed tips and include for use or sale of such surplus outside of the Working Areas the *Contractor* credits all benefit to Defined Cost.

**12 Acceptance or procurement procedures**

12.1 The Prices at award of contract

The prices submitted at tender stage form the Contract Maximum Price Target cost as defined in Section XXX for all works required to deliver the scope of the project as defined in the ITPD tender documentation.

12.2 *Contractor's Fee Percentage* and Rates

(i) *Fee percentage*.

- The *Contractor's* (*fee percentage*) is to be entered in the table provided in Contract Data Part two.

(i) Hourly rates for design during Stage 2

- The *Contractor's* hourly rates for design are the Tendered Rate per hour
- Inflation is to be calculated in accordance with the Contract Data

12.3 *Contractor's SCM /*Consultant Gross Margin and rates

(i) The Agreement contains the *Contractor's* SCM/Consultant Gross Margins (*fee percentage*) and rates for design; these are to be the basis of the *Contractor's* design sub-contracts and entered in the appropriate contract agreement between the *Contractor* and SCM/Consultant (ECC Sub-contract/NEC Professional Services Contract).

(ii) *Fee percentage*.

- The *SCM/*Consultant (*fee percentage*) is to be entered in the Contract Data Part two.

(iii) Hourly rates for design during Stage 2

- The *SCM/*Consultant hourly rates for design are the Tendered Rate per hour.

- Inflation is to be calculated in accordance with the Contract Data.

(v) Engagement of *SCM* designers and other professionals as either *SCM's* or Consultants is dependant on the *Contractor's* procurement policy for the contract and in either case the appropriate NEC conditions are used unless agreed otherwise by the *Project Manager*.

12.4 *Contractor* resources - people

The *Contractor* engages persons from the key people set out in the Contract Data – Part two in the performance of any services to be provided by the *Contractor* under the Agreement and shall not replace any of the key people without the approval of the *Employer* (such approval not to be unreasonably withheld). The *Contractor* ensures that where a member of its key personnel is replaced that they have the skills, qualifications, experience and ability to provide the best service to the *Employer*.

12.9 Appointment of the *Contractor*

(i) The *CONTRACTOR* provides all resource necessary to complete the scope of work within the Accepted Programme included in the agreed MPTC.

12.13 Identification of risks

(i) Risk may be viewed as the combination of the probability of an event and its consequence and risk management as the process by which an organisation identifies, prioritises and develops management action to control the risks.

(ii) Under this Contract the Project Manager and the *Contractor* are required to proactively and collaboratively manage the risks which may arise during a Contract with reference to the risk register.

(iii) The *Employer* provides a generic Risk Matrix developed for development through the Competutive Dialogue period

(iv) Risks identified in Contract Data Part one and Contract Data Part two during the tender process and the allocation to employer or Contractor will form the basis for the Contractor's tender submission

(v) The *Project Manager* and the *Contractor* during the Competitive Dialogue period will undertake an initial qualitative and quantative risk assessment identifying the following:

- the potential risks which may impact on the costs, build programme and/or quality of the Contract;
- the probability of the identified risks occurring;
- a financial estimate of each risk's most likely consequences; and
- whether the *Contractor* or Health Board is best placed to manage the identified risk.

(vi) The key to the success of a risk register is bullet point 4 (v) above; it is not a question of each Party seeking to push an unpalatable risk on to the other, the emphasis is on ensuring that the Party best able to manage a risk assumes it.

(vii) After Contract Award the risk register is reviewed and updated by the Project Manager and *Contractor* at regular project meetings during each Stage. The *Contractor* attends and participates in the risk workshop, also arranging for SCMs / consultants and others in his supply chain to take part in the risk workshop and/or provide information required for the risk process.

(viii) Employer's risk as discussed during Competitive Dialogue is outside of the MPTC and brought into an amended MPTC by the Project Manager using the compensation event process.

12.18 Contract Quality Plan

i) The *Contractor* provides a contract Quality Plan

ii) The contract Quality Plan incorporates quality procedures and quality controls demonstrated by the *Contractor* during pre-qualification for ITPD process.

iii) The *Contractor* develops the contract Quality Plan submitted at tender stage to encompass all quality procedures and controls necessary to encompass and comply with the Works Information. In particular the Quality Plan should accord with the contract programmes established in Section 4 above.

(iv) Design submission and acceptance protocol

- Establishment of a work plan reconcilable with RIBA stages and NHS Design Development Protocol.
- Determination of the anticipated outputs of each Stage such as reports and / or register of drawings to be produced.
- Identification for each output the means of approval by the *Client*. This could be by a user group, by the Project Manager or requiring a workshop.
- Projected timescale for the issuing of each report and / or drawing, including return date for comments. It should be assumed that a workshop decision will require twenty working days for approval, a user group decision fifteen working days and a *Project Manager* decision ten days.

(v) The *Contractor's* legal and contractual obligations generally

- Construction (Design and Management) Regulations 2007
  - the *Employer*
  - Designer
  - Principle Contractor
  - Contractors
- The Agreement
- Works Information
- Design provided by the *Employer*/*Employer*

- The design provided by the *Contractor*
- NHS Client procedures applying to existing structures/plant/buildings etc.
- Interface with the *Project Manager's* quality plan/contract procedures
- Interface with the *Supervisor* and his duty

(vi) The *Contractor* issues the Quality Plan with sub-contract / consultant enquiries

(vii) SCMs and consultants comply with the Quality Plan.

12.19 Contract Execution Plan

(i) The *Contractor* prepares, develops and maintains a contract execution plan during the Stages of the *works.*

(ii) The plan should be limited to a general statement as to how and when the *works* will be carried out.

(iii) The plan should identify all target milestone dates, interfaces and obligations of the Parties so that a structured and more comprehensive knowledge base regarding proposed execution of the contract is available to *Contractor*, the *Employer's* staff and the *Employer's* User Groups for reference.

(iv) The plan could identify the existence and location of all manuals and procedures such as the

- Pre-construction information
- CDM - Construction phase Plan
- *Contractor's* Quality Plan
- *Contractor's* environmental management plan
- *Contractor's* design and construction manual

12.20 Handover

(i) The *Contractor* proposes the handover procedure.

(ii) Handover procedures are developed in conjunction with the *Employer* requirements for occupation. For the avoidance of doubt, with the exception of specialist equipment installation which requires joint working between the *Employer*, his specialist sub-contractors and the *Contractor*, the *Employer* will not take over any part of the *works* in advance of completion.

(iii) The handover procedure includes index and format of the Health and Safety File for each structure forming the contract.

(iv) Presentation of the Health and Safety file for each structure is included in the handover procedure.

(v) For this contract handover of the new buildings requires inspection and pre handover snagging to have taken place; and a certification of a Defect free condition to have been issued by the *Supervisor* prior to handover acceptance

**13.0 Commercial requirements, Accounts and records**

13.1 Forecast of Defined Cost, cash flow and expenditure projections

(i) The *Contractor* prepares forecasts of the total Defined Cost for the whole of the *works* as stated in Clause 20.4 of the Contract

(ii) The forecast of the total Defined Cost prepared by the *Contractor* is to individually identify the forecast of the total Defined Cost for each of the Stages comprising the whole of the *works*

(iii) Cash flow and expenditure projections are prepared by the *Contractor* in graphic format to coincide with the forecast of the total Defined Cost for each of the Stages and the whole of the *works*.

(iv) The cash flow and expenditure projections demonstrate the initial forecasts and current forecasts for each Stage at each assessment interval.

13.2 Records of Defined Cost

(i) The *Contractor* maintains a computerised Purchase Order driven cost allocation system showing order value and paid amount for each item.

(ii) The *Contractor* maintains copies of all goods received notes.

(iii) The *Contractor* maintains records of all amounts paid to SCMs and Consultants together with details of how the amounts were calculated.

(iv) The *Contractor* maintains records of all correspondence and meetings relevant to Defined Cost due to or paid to SCMs and Consultants.

(v) The *Contractor* keeps daily allocation records for his design and other staff for which he is reimbursed at Design rates to support all Defined Cost included in payment applications.

13.3 Assessment Procedures

(i) The *Contractor* submits an application for payment to the *Project Manager* prior to each assessment date.

(ii) The payment application does not exceed the amount forecast by the *Contractor's* expenditure profile and projection established for the agreed MPTC

(iii) The *Contractor* holds in readiness for review by the *Project Manager* all data and calculations supporting the payment application

.

(iv) The *Contractor* includes with each application for payment a list (aged creditors) showing those creditors with payments outstanding at the time of the application.

(v) The *Contractor* discusses and where appropriate adjusts the payment application with the *Project Manager's* cost advisor prior to the *Project Manager's* assessment.

(vi) The *Contractor,* on receipt of the *Project Manager's* certificate, submits his VAT invoice in the manner required by the *Employer*.

(vii) Invoices are to be submitted to:

[Address]

13.4 Early Warning / Risk Reduction Meetings

(i) The standard notification System Administration Pack (SAP) is used for Early Warning notifications. Notifications are not to be transmitted verbally or by other communication.

(ii) The *Employer* requires the *Contractor* limits Early Warning to the procedures stated in Clause 16.

(iii) Early Warning is not notified during progress or other meetings not specifically convened for the purpose of Early Warning.

(iv) Early Warning meeting discussion is to be limited to the matter notified and not expanded into more general discussion. Where more than one matter or risk is to be discussed each has its own agenda and individual record of the proposals considered and the decisions taken.

(v) Early Warning notifications or Risk Reduction Meetings are not normally given / held for compensation events that have been notified in accordance with the contract.

13.5 Compensation events

(i) Limitation of *Project Manager's* authority to accept or notify compensation events

- The *Employer* limits the *Project Manager's* authority to accept or notify compensation events to £10,000 per. event for all events that have a potential to increase the amount of the agreed MPTC.

- The *Contractor* accepts time for reply by the *Project Manager* in response to a *Contractor* notification for such an event expected to exceed £10,000 is amended to 2 weeks. This is to allow the *Project Manager* sufficient time to obtain expenditure authority from the *Employer.*

- If a compensation event in this contract has a potential to exceed the *Project Manager's* authority limit, the *Employer* endorses the *Project Manager's* notification of acceptance and instruction for the *Contractor* to submit a quotation.

- If a quotation for a compensation event in this contract exceeds the *Project Manager's* authority limit the *Employer* endorses the *Project Manager's* notification of acceptance of a quotation.

(ii) Compensation events are instructed / notified using the standard notification included in the System Administration Pack (SAP).

(iii) A compensation event is not considered to be instructed / notified if any communication other than the standard notification is used.

(iv) The original of the compensation event notification is a 'live' document and is transmitted between the parties as a record of submission, requirements and acceptance.

(v) Compensation event quotations are to be detailed and supported by contemporary records / allocation sheets where the effect of the event is on 'the Defined Cost of the work already done'.

(vi) Compensation events notified by the *Contractor* relevant to SCM / Consultant events are supported by the *Contractor's* statement of validity of contractual entitlement in accordance with the terms of the sub-contract / consultancy agreement.

(vii) Compensation event quotations that do not have an impact on Sectional Dates for Completion or the Completion Date do not require revision of the programme to be submitted with the quotation unless instructed by the *Project Manager.* .

(viii) The *Contractor* includes additional management resources in compensation event quotations only if the existing management structure and resources cannot contain the effect.

(ix) Met office weather records/data

The *Contractor* provides all data and records, supplied by the Met Office, where necessary to support identification and evaluation of a compensation event relating to the effects of weather.

**14 Parent company guarantee**

14.1 Is to be provided by the *Contractor* in a format approved by the Health Board.

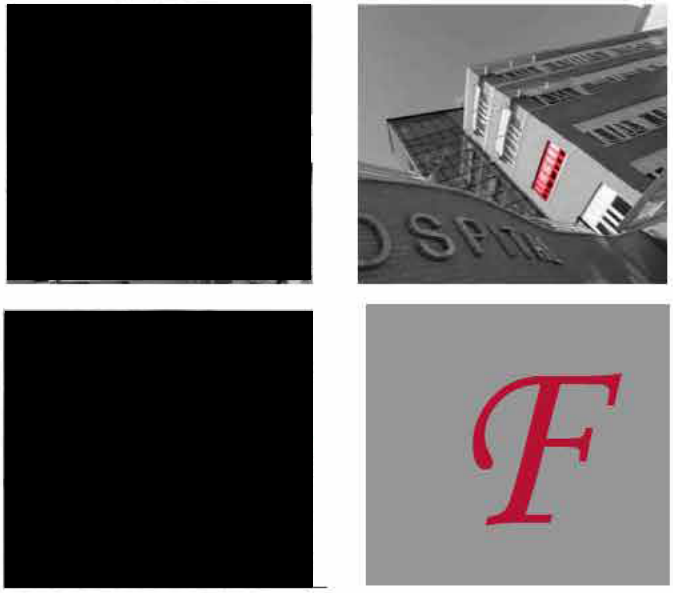
# Appendix F – Certificates



## APPENDIX F – Part 1 – Confidentiality Agreement

Name of bidder: ……

We undertake that we shall keep confidential and will not use for our own purposes or reveal to any person, firm or company the information contained in or sent with the ITPD issued by the Board in relation to the Project or which is made available in connection with any further enquiries in relation to that Project (the "Information Provided") unless we obtain in each case the prior written consent of the Board. Such consent shall not be required where the Information Provided is:

(i) disclosed on a "need to know" basis to such of our directors, officers, employees or advisers who are directly involved with the preparation of bids on our behalf provided that we shall inform each person to whom the Information Provided is made aware of the confidential nature of the Information Provided and the obligations under this Confidentiality Agreement and has given an undertaking at the time of receipt of the Information Provided to keep such information confidential;

(ii) in the public domain or shall come into the public domain otherwise than by breach of this undertaking or any other undertaking;

(iii) made available to us by a third party who is entitled to divulge such information and who is not under any obligation of confidentiality in respect of such disclosure; or

(iv) required to be disclosed by any applicable law provided that the party disclosing the information shall notify the Board of the information to be disclosed (and of the circumstances in which the disclosure is alleged to be required) as early as reasonably possible before such disclosure must be made and shall take all reasonable action to avoid and limit such disclosure.

We undertake at the request of the Board that we shall immediately return to the Board all Information Provided and all and any copies or any part thereof including any information derived or produced partly or wholly from the Information Provided which is in a tangible form. If any such information is not in a tangible form, the bidder shall destroy or permanently erase that information and all and any copies or part thereof including any information derived or produced partly or wholly from the Information Provided.

Without prejudice to any other rights or remedies which the Board may have, the bidder acknowledges and agrees that (a) damages would not be an adequate remedy for any breach by the bidder of the provisions of this undertaking and (b) the Board shall be entitled to the remedies of interdict and other relief for any threatened or actual breach of this undertaking.

Signed for and on behalf of [**bidder**] by [**name of signatory and nature of authority to sign**] and [**name of signatory and nature of authority to sign**] on the day of 2009.

……...

……...

NOTE: (i) Where the bidder is a company, to be signed by two directors or by a director and the secretary of the company, such persons being duly authorised for that purpose.
(ii) Where the bidder is a consortium yet to be established as a company, to be signed by persons duly authorised by each of the prospective members of the consortium.

**APPENDIX F – Part 2 – Certificate of Acceptance of Form of Bid Conditions**

Name of bidder: ……

In accordance with the requirements of the ITPD documents issued by the Board, we the undersigned, for and on behalf of [**the Bidder**], undertake to enter into dialogue with the Board for the development of our proposals, keeping our proposals open for the duration of such dialogue and up to the date of a contract being awarded by the Board in respect of the Project.

We recognise and accept that the Board is not obliged to accept any proposal and we undertake to bear all costs in the preparation of this submission and any dialogue in relation to the Project.

Signed for and on behalf of [**bidder**] by [**name of signatory and nature of authority to sign**] and [**name of signatory and nature of authority to sign**] on the day of 2009.

……...

……...

NOTE: (i) Where the bidder is a company, to be signed by two directors or by a director and the secretary of the company, such persons being duly authorised for that purpose.
(ii) Where the bidder is a consortium yet to be established as a company, to be signed by persons duly authorised by each of the prospective members of the consortium.

**APPENDIX F – Part 3 – Receipt of ITPD Documents**

Name of Bidder: ……..

We confirm receipt of [one hard copy accompanied by one copy in electronic format on compact disc][**to be confirmed with the Board]** of the Invitation to Participate in Dialogue documents as set out below:

Volume 1: Project Scope and Commercial Document

Volume 2: [ ]

Volume 3: Bid Deliverables and Evaluation

Signed for and on behalf of [**Bidder**] by [**name of signatory and nature of authority to sign**] and [**name of signatory and nature of authority to sign**] on the [ ] day of [ ] 2009.

……...

……...

NOTE: (i) Where the bidder is a company, to be signed by two directors or by a director and the secretary of the company, such persons being duly authorised for that purpose.
(ii) Where the bidder is a consortium yet to be established as a company, to be signed by persons duly authorised by each of the prospective members of the consortium.

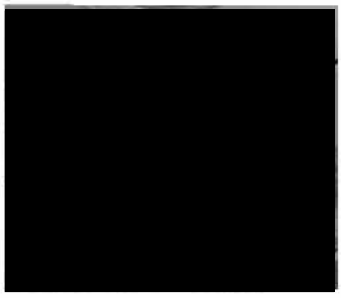
# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME 2/1

## APPENDIX K – Design Development (FBC and OverallDesign Requirements)



Appendix K has been updated to reflect the requirements of the Board with regard to design development and now takes the form of Part 1 and Part 2, explained as follows:

Part 1 represents the minimum information that is required to be agreed with the Board in advance of FBC. A milestone requirement for FBC is planning approval (gained by the Contractor) and therefore the design development programme of the Contractor (to be submitted with Final Bids) is to provide for the necessary information to allow full planning to be sought and gained. In this regard it is acknowledged that the required information of the Contractor's design development programme may therefore include items in addition to those listed in the under noted Part 1.

Part 2 is the original Appendix K requirement, with some additions. This represents the minimum design information requirements of the Board. Design development programmes for the project (to be submitted with Final Bids) require to include for the provision of all of the listed information/items for all areas of the project.

**PART 1 - Information to be completed by the Contractor and agreed (where relevant) with the Board in advance of FBC:**

| **Generally** |
|---|
| **Contractors Proposals Report:**<br><br>A full and comprehensive response to the Employer's Requirements clearly demonstrating compliance.<br><br>**Full Production Information:**<br><br>Drawings as required by SGHD to achieve Full Business Case, including FPI of the drawings listed in this Appendix K.<br><br>**Specifications:**<br><br>Full NBS specifications. |
| **Architectural (including landscaping, fire and acoustics)** |
| **Location Plan 1:1250**<br><br>**Existing Site Plan(s) 1:500**<br><br>Indicating the following information;<br><br>• Reference Datum Point for levels<br>• Building Lines<br>• Existing buildings, trees, hedges surface materials<br>• Existing levels<br>• Existing services and drainage<br>• Dotted outline of new buildings<br>• Principal Setting out lines |

- Extent of Contractor's compound, fencing etc
- Contractor's site access
- Areas identified for stockpiling topsoil, turf, spoil etc
- Positions and references of trial holes, borings etc
- Site Boundary

**Site Plan as proposed 1:500;**

Indicating the following information;

- Site Boundary
- Existing buildings, trees, hedges to be retained
- Existing level or features to be retained
- New Buildings indicated referencing entrances and exits
- New roads, pavings, fire paths, hard landscaping etc
- New levels
- Outline of/or reference to soft landscaping proposals

- Manhole covers, gulley gratings, service covers, underground ducts etc
- Lamp standards and lighting bollards

**Setting Out Plans 1:500/1:200;**

Indicating the following information;

- Setting out dimensions/coordinates for the new building perimeter, roads, pavings, fire paths, hard landscaping etc related back to reference grid.

**General Arrangement Floor and Roof Plans 1:100/1:50;**

Indicating the following information;

- Reference grid
- Structural columns and walls
- Lifts, ducts, staircases
- Windows, internal partitions, doors
- Room names and numbers
- Key section references
- Roof falls
- Plant equipment in outline
- Ridges, hips, eaves, parapets, gutters etc

**General Arrangement Elevations 1:100/1:50;**

Indicating the following information;

- Existing Ground Level/Finished ground level
- Floor levels
- Reference grid
- Walls ,doors , windows
- Roof structures
- Cladding/panel materials
- Movement joints
- Rainwater pipes , soil and vent pipes
- Outline of adjoining buildings

**General Arrangement Sections 1:100/1:50;**

Indicating the following information;

- Floor and roof construction
- Walls and windows
- Internal walls/partitions
- Floor to Floor heights
- Basements
- Service voids

**Key Elevations for Special Areas 1:50 e.g. Main Entrances, Ward Tower, Junctions of Key Building Materials;**

Indicating the following information;

- Components – cross referencing detail drawings
- Glazing and panel materials, blinds , louvers, opening windows etc
- Positioning or setting out of critical joints in materials

**Fire Drawings 1:50;**

Indicating the following information;

- Location of all fire compartment and sub compartment walls
- Location of fire stops in ceiling voids
- Areas with fire resisting sealed ceiling
- Fire doors including their fire rating and whether self closing
- Fire fighting equipment i.e. extinguishers , hosereels, fire blankets, dry riser inlets and outlets
- Fire lifts
- Reference to details

**Internal Plan Drawings 1:50; (in relation to the departmental layouts issued with the ITPD exemplar, Appendix I)**

Indicating the following information;

- Reference to structural grid
- Columns and structural walls, lift shafts, movement joints
- Changes in floor level
- External wall and window construction, window cills. Walls and openings – setting out dimensions.
- Internal glazed screen types and setting out
- Staircase plans – setting out
- Staircase and lift numbers
- Partitions and duct enclosures – positions and openings
- Doors – positions and swings, fire resistance and self closure
- Sanitary fittings, sizes and positions
- IPS sizes and positions
- Fixed mechanical and electrical equipment – types in outline
- Fixed fire fighting equipment – size and position
- Fire protection and means of escape requirements
- Access to crawlways, ducts, subways and trenches, plant etc
- Layout of lift pit, access ladders, stair/lift shaft smoke vents and lift motor room
- Fixed joinery and hardware
- Ceiling layouts incorporating all ceiling services and access requirements
- Wayfinding/Signage drawings indicating size and position
- Rainwater pipes, soil and vent pipes – dimensional position
- Reference to details through external walls, load bearing walls, window/door jambs, heads etc
- Cavity Barriers
- Internal finishes – floor, ceiling, walls (at 1:200/1:100)
-

~~**Detailed Roof Plan(s) 1:50;**~~

~~Indicating the following information;~~

- ~~Reference Grid~~
- ~~Levels and finishes types~~
- ~~Movement Joints~~
- ~~Roof pavings~~
- ~~Falls~~
- ~~Parapets, copings~~
- ~~Flashings, gutters and outlets~~
- ~~Handrails, changes in level, ladders and steps~~
- ~~Fire separation walls above or within the roof~~
- ~~Fire protections and means of escape requirements across or through roof~~
- ~~Roof lights~~
- ~~Enclosures for fire equipment or plant~~
- ~~Vent terminals, drainage vent pipes, flues, lightening protection, aerials~~
- ~~Fixed equipment above roof (i.e. window cleaning apparatus)~~
- ~~Fixed mechanical and electrical equipment and plant above roof~~

- Reference to details through eaves, ridges, balconies etc
-

**Detailed Sections 1:20/1:10;**

Indicating the following information;

- Window cill and head heights
- Balconies
- Roof construction and finish, drainage falls
- Eaves, parapets, gutters etc
- Rooflights, louvers, shading devices
- Lift pits
- Basement construction and tanking
- Damp proof coursing and membranes
- Partitions and doors – heights and junctions
- Datum for levels
- Existing ground/finishes ground level
- Reference to structural grid
- Floor to floor heights
- Suspended ceiling heights and profiles
- Movement joints
- Slab/beam construction
- Cavity Barriers

**Staircase and Lift Details 1:50/1:20;**

Indicating the following information;

- Reference to structural grid
- Setting out of treads risers , landings and relationship to structure, external wall, ceilings
- Lines of nosings with setting out dimensions to individual stair flights, landings and stairwell
- Non slip inserts or safety nosings etc
- Handrails
- Balustrades and fixings – setting out
- Reference to details
- Pit Details
-

**Detail Drawings 1:5;**

As required to sufficiently indicate key construction details.

**All 1:50 Room Layouts and RDS agreed with the Board**

**Fully loaded 1:50 Room Layouts and RDS (1:50s and RDS incl M&E/environmental) to be agreed with the Board for every room included in Appendix E and Appendix J of Volume 2/1.**

| Services Systems | |
|---|---|
| 1. | All of the items included for the original (Stage 0) main tender return~~stage one~~ with any proposed variations highlighted. |
| 2. | Detailed program of Information release |
| 3. | All work to complete outline, detailed, final proposal stages. |
| 4. | All input required for Detailed Planning and Building Regulation Compliance. |
| 5. | CLG Approved National Calculation Methodology Tool Compliance report on SPP6 and PAN84. |
| 6. | Full Dynamic modelling of the Building Environment |
| 7. | Provision of condensation analysis for each element of the building |
| 8. | Provision of comprehensive engineering solutions for the Mechanical, Public Health, Medical Gases, Electrical and Lift services solutions including:<br>• Design Calculations<br>• Detailed Design Drawings for all elements of the works (1:100~~ and 1:50~~);<br>• Detailed Specifications for all elements of the works;<br>• Detailed Plant schedules for all elements of the works;<br>• Construction drawings for all elements of the works (1:100~~ and 1:50~~);<br>• ~~Manufacturer's drawings for all elements of the works (1:20 and 1:50);~~<br>• Working drawings including:<br>• ~~General layout drawings of the complete works (1:50);~~<br>• ~~Builders work drawings (1:50):~~<br>• ~~Detailed l~~Layouts showing the location of all equipment including cable, cable tray, conduit, trunking in switchrooms and plant rooms (1:200);<br>•~~Assembly drawings of all factory built equipment and site built assemblies (1:20 and 1:50);~~<br>• System diagrams and circuit wiring diagrams for all installations and equipment (A1 to ensure legibility);<br>•~~Multi trade co-ordination drawings (1:20);~~<br>• Plantroom layout drawings (1:200); and<br>• Co-ordination sections at key "pinch" points (1:520). |
| 9. | Commissioning settings for all elements of the works, including microbiological testing proposals for operating theatres and specialist ventilation. |
| 10. | Risk assessments and detailed design statement in accordance with CDM. |
| 11. | Lift Installation proposals |
| 12. | |

| | |
|---|---|
| 13. | Issue of Co-ordination drawings to demonstrate compliance with health documents and integration of services within the building fabric and structural solution. |
| 14. | Acoustic report indicating solutions proposed for all elements of the works |
| 15. | Issue of fully integrated Asset management system for all elements of the works |
| 16. | ~~Fully integrated as fitted drawings for all elements of the works.~~ |
| 17. | ~~Fully integrated as operation and maintenance manuals for all elements of the works~~ |
| 18. | ~~Fully integrated Planned Preventative Maintenance System.~~ |
| 19. | ~~Completion of all testing and system warranty documentation~~ |
| 20. | ~~Building leakage testing~~ |
| 21. | ~~Server room air integrity test certificates~~ |
| 22. | ~~Building Log Book~~ |
| 23. | ~~Building user guides~~ |
| 24. | Confirmation that the design fully complies with the requirements of the Employers Requirements, M&E appendices 1 to 6, all HTM's, HBN's, SHTM's and current legislation. |
| | Proposals for environmental proving of all systems |

***Documents***

Flood Risk Assessment, undertaken by the Contractor but in the ownership of NHS GG&C.

Flood Risk Strategy

Drainage Management Strategy.

Deliverables for these reports as per Employers Requirements

Drainage maintenance schedule

Correspondence from SEPA confirming the Agency's approval/support of :-
SUDS Strategy
Flood Risk Assessment
Proposals for discharge to the watercourse
Proposals for re-alignment of the watercourses

Correspondence from Scottish Water confirming the Authority's approval/support of :-
Proposed discharge to the public drainage system

Correspondence from Glasgow City Council confirming the Council's approval/support of :-
Flood Risk Assessment
Flood Risk Management Strategy

Calculations for the whole sewerage system.

Calculations in support of the upgrading of culverts in the site

Specification for Drainage works, including proposals for the treatment of existing redundant drainage.

**Drawings**

*1:1250 (or greater) plans showing :-*
Drainage provision in support of SUDS and Drainage Strategy

*1:500 scale plans showing:-*
Culvert upgrading drawings
Amendments to the public sewerage system
Layout of roads and buildings
Layout of sewers, outfalls, underground storage, and SUDS features
Long sections showing proposed levels, existing ground levels, together with chambers, chainages, gradients, pipe sizes, pipe materials, and SUDS features
Structures or trees which are, or shall be, greater than 10m high within 10m of proposed

drainage.

Long sections should be to an exaggerated scale, with the horizontal scales the same as the plan

***Details***

Chamber Details
Pipe Bedding Details

**Traffic Management Strategy**

Written statement on maintaining access, Public Transport, Pedestrian flow, Ambulance access/routes, Public Safety including any proposals for the promotion of Traffic Regulation Orders.

**Acute Adults & Children's Hospital, Car Parks, Laboratory Building and Energy Centre**

**Documents**

Design Philosophy Statement taken from initial bid and expanded through to and agreed at FBC. Specific design detail should include information on:

- Loadings
- Imposed Movements
- Performance Requirements
- Construction Implications
- Design Interfaces
- Materials

In addition to initial bid document, the Design Philosophy Statement should include:

6. Modelling and Analysis
6.1 Description of overall structural behaviour
6.2 Description of modeling, analysis and design
6.3 Methods of design covering e.g. foundations, retaining walls, slabs, columns, staircases.
7. Calculations
7.1 Sample calculations undertaken
7.2 Software used
7.3 Standard details
8. Checking

**Drawings**

For FBC drawings should be developed that reflect the equivalent of RIBA Stage EF, Tender Status as a minimum. ~~Drawings status enable a robust cost to be agreed with Client.~~

**Specifications**

Full Tender Status specifications are required.

**Further Site Investigations.**

Detail any further site investigations proposed.

**Unknowns**

Method/strategy for advising of site unknowns encountered to Client, e.g. hospital waste (buried).

~~**Sub-Contracts**~~

~~List of major works to be sub-contracted.~~

**PART 2 - Information to be completed by the Contractor and agreed (where relevant) with the Board in relation to the Works ~~advance of FBC~~:**

| **Generally** |
|---|
| **Contractors Proposals Report:**<br><br>A full and comprehensive response to the Employer's Requirements clearly demonstrating compliance.<br><br>**Full Production Information:**<br><br>Drawings as required by SGHD to achieve Full Business Case, including FPI of the drawings listed in this Appendix K.<br><br>**Specifications:**<br><br>Full NBS specifications. |
| **Architectural (including landscaping, fire and acoustics)** |
| **Location Plan 1:1250**<br><br>**Existing Site Plan(s) 1:500**<br><br>Indicating the following information;<br><br>• Reference Datum Point for levels<br>• Building Lines<br>• Existing buildings, trees, hedges surface materials<br>• Existing levels<br>• Existing services and drainage<br>• Dotted outline of new buildings<br>• Principal Setting out lines<br>• Extent of Contractor's compound, fencing etc<br>• Contractor's site access<br>• Areas identified for stockpiling topsoil, turf, spoil etc<br>• Positions and references of trial holes, borings etc<br>• Site Boundary |

**Site Plan as proposed 1:500;**

Indicating the following information;

- Site Boundary
- Existing buildings, trees, hedges to be retained
- Existing level or features to be retained
- New Buildings indicated referencing entrances and exits
- New roads, pavings, fire paths, hard landscaping etc
- New levels
- Outline of/or reference to soft landscaping proposals
- Reference grid including principal setting out lines
- Manhole covers, gulley gratings, service covers, underground ducts etc
- Lamp standards and lighting bollards

**Setting Out Plans 1:500/1:200;**

Indicating the following information;

- Setting out dimensions/coordinates for the new building perimeter, roads, pavings, fire paths, hard landscaping etc related back to reference grid.

**General Arrangement Floor and Roof Plans 1:100/1:50;**

Indicating the following information;

- Reference grid
- Structural columns and walls
- Lifts, ducts, staircases
- Windows, internal partitions, doors
- Room names and numbers
- Key section references
- Roof falls
- Plant equipment in outline
- Ridges, hips, eaves, parapets, gutters etc

**General Arrangement Elevations 1:100/1:50;**

Indicating the following information;

- Existing Ground Level/Finished ground level
- Floor levels
- Reference grid
- Walls ,doors , windows
- Roof structures
- Cladding/panel materials
- Movement joints
- Rainwater pipes , soil and vent pipes
- Outline of adjoining buildings

**General Arrangement Sections 1:100/1:50;**

Indicating the following information;

- Floor and roof construction
- Walls and windows
- Internal walls/partitions
- Floor to Floor heights
- Basements
- Service voids

**Key Elevations for Special Areas 1:50 e.g. Main Entrances, Ward Tower, Junctions of Key Building Materials;**

Indicating the following information;

- Components – cross referencing detail drawings
- Glazing and panel materials, blinds , louvers, opening windows etc
- Positioning or setting out of critical joints in materials

**Fire Drawings 1:50;**

Indicating the following information;

- Location of all fire compartment and sub compartment walls
- Location of fire stops in ceiling voids
- Areas with fire resisting sealed ceiling
- Fire doors including their fire rating and whether self closing
- Fire fighting equipment i.e. extinguishers , hosereels, fire blankets, dry riser inlets and outlets
- Fire lifts
- Reference to details

**Internal Plan Drawings 1:50;**

Indicating the following information;

- Reference to structural grid
- Columns and structural walls, lift shafts, movement joints
- Changes in floor level
- External wall and window construction, window cills. Walls and openings – setting out dimensions.
- Internal glazed screen types and setting out
- Staircase plans – setting out
- Staircase and lift numbers
- Partitions and duct enclosures – positions and openings
- Doors – positions and swings, fire resistance and self closure
- Sanitary fittings, sizes and positions
- IPS sizes and positions
- Fixed mechanical and electrical equipment – types in outline
- Fixed fire fighting equipment – size and position
- Fire protection and means of escape requirements
- Access to crawlways, ducts, subways and trenches, plant etc
- Layout of lift pit, access ladders, stair/lift shaft smoke vents and lift motor room
- Fixed joinery and hardware
- Ceiling layouts incorporating all ceiling services and access requirements
- Wayfinding/Signage drawings indicating size and position
- Rainwater pipes, soil and vent pipes – dimensional position
- Reference to details through external walls, load bearing walls, window/door jambs, heads etc
- Cavity Barriers
- Internal finishes – floor, ceiling, walls (also to be provided at 1:200/1:100)

**Detailed Roof Plan(s) 1:50;**

Indicating the following information;

- Reference Grid
- Levels and finishes types
- Movement Joints
- Roof pavings
- Falls
- Parapets, copings
- Flashings, gutters and outlets
- Handrails, changes in level, ladders and steps
- Fire separation walls above or within the roof
- Fire protections and means of escape requirements across or through roof
- Roof lights
- Enclosures for fire equipment or plant
- Vent terminals, drainage vent pipes, flues, lightening protection, aerials
- Fixed equipment above roof (i.e. window cleaning apparatus)
- Fixed mechanical and electrical equipment and plant above roof
- Reference to details through eaves, ridges, balconies etc

**Detailed Sections 1:20/1:10;**

Indicating the following information;

- Window cill and head heights
- Balconies
- Roof construction and finish, drainage falls
- Eaves, parapets, gutters etc
- Rooflights, louvers, shading devices
- Lift pits
- Basement construction and tanking
- Damp proof coursing and membranes
- Partitions and doors – heights and junctions
- Datum for levels
- Existing ground/finishes ground level
- Reference to structural grid
- Floor to floor heights
- Suspended ceiling heights and profiles
- Movement joints
- Slab/beam construction
- Cavity Barriers

**Staircase and Lift Details 1:50/1:20;**

Indicating the following information;

- Reference to structural grid
- Setting out of treads risers , landings and relationship to structure, external wall, ceilings
- Lines of nosings with setting out dimensions to individual stair flights, landings and stairwell
- Non-slip inserts or safety nosings etc
- Handrails
- Balustrades and fixings – setting out
- Reference to details
- Pit Details

**Detail Drawings 1:5;**

As required to sufficiently indicate key construction details.

~~All~~**Fully loaded 1:50 Room Layouts and RDS (1:50s and RDS incl M&E/environmental) to be agreed with the Board for every room.**

| Services Systems | |
|---|---|

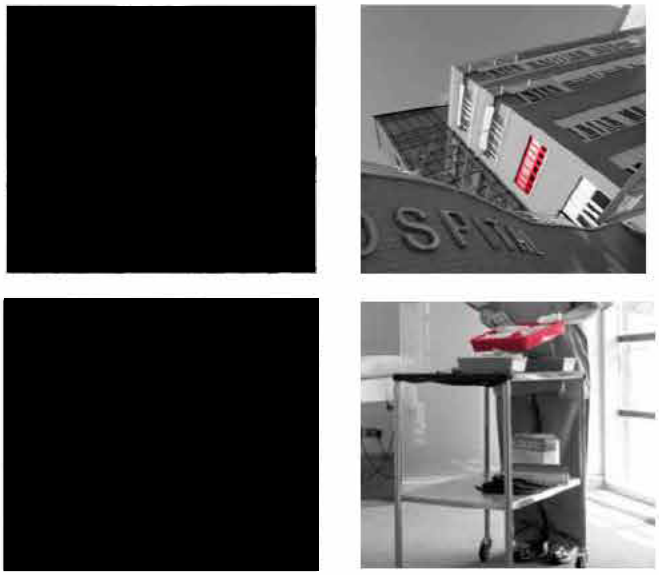
# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME 2/1

## APPENDIX M&E.1
## NEW HOSPITAL BUILDING SERVICES AND UTILITY CONNECTIONS



## CONTENTS

| | | Page No. |
|---|---|---|
| Section 1 | Introduction | 3 |
| Section 2 | Services Diversions and Construction Site Requirements | 4 |
| Section 3 | Electricity | 5 |
| Section 4 | Gas | 6 |
| Section 5 | Water | 7 |
| Section 6 | Voice | 8 |
| Section 7 | Data | 9 |

## 1.0 Introduction

### 1.1 Introduction

This document has been prepared to collate the available information and provide an insight into the proposed Utility and Site connections required to allow the contractor to formulate the detailed requirements and commence negotiations with the Utility Companies.

In addition we have recorded were additional information is required and also set out the hospital building services system interconnection requirements.

## 2.0 Services Diversions & Construction Site Supplies

### 2.1 Services Diversions

Prior to the commencement of the construction phase the buildings within the site boundary are to be demolished and the majority of existing utility and inter-site services are to be diverted, made redundant or removed by the Board. Refer to drawing G1700X G(52) combined –Site for locations of the known services.

### 2.2 Construction Site Requirements

All temporary utility services including Water / Electricity / Gas/ Comms for all construction and Technical Commissioning operations shall be provided by the Contractor at his sole cost.

### 2.3 Phased Site Handover

Areas of the site shall be retained in the Board's control to allow ongoing operations of the retained estate, the services in these areas shall be protected during the works and the Contractor shall develop a removal strategy for discussion with the Board.

## 3.0 Electricity

### 3.1 Introduction

The Board have appointed DSSR consulting engineers to negotiate the reconfiguration works required to clear the site, this work is ongoing and shall be completed prior to commencement of the main project.

The Board shall reconcile existing power connections to suit retained estate.

Special care shall be required in the vicinity of the relocated services and attention is drawn to the 11kV power cables which have been diverted to the boundary adjacent to the Laboratory site. These shall be reconfigured by the Contractor as soon as a safe route can be agreed.

### 3.2 Power Strategy

- The base load information is detailed in appendix M&E2.
- The Utility Company establishes a new Primary Sub-station with central metering based on twin feeds from the Govan grid connection point.
- The Primary Sub-station may be provided as a shared or sole asset and Scottish Power have advised that detailed proposals will be available for discussion during the tender.
- The Primary Sub-station shall be sited in the area adjacent to the present Scottish Ambulance Centre. As noted elsewhere discussions are ongoing to purchase land occupied by Scottish Ambulance Centre, if these are successful the area will be re-planned in line with the Master Plan and the Primary Sub-station will be integrated with the car park proposed for that area.
- The Primary Sub-station shall be rated to allow connection of the whole site including future proposals and the Laboratory, As a contingency a separate 11kV supply shall be procured for the Laboratory in the event that the Primary Sub-station is not available to suit the build program.
- The Contactor shall include for all aspects of the power connection including construction of a high quality building to house the Primary Sub-Station arrangement and all site trenching from public boundary of the existing hospital site to the connection point within new development and all distribution routes.
- Refer to drawing G1274/E(60)01 for proposed schematic interconnections.
- Refer to drawing G1274/U(96)01 for proposed incoming cable routes.

- Builderswork drawings shall be made available to allow the Contractor to construct the Primary Sub-station.

## 4.0 Gas

### 4.1 Introduction

The Board have appointed DSSR consulting engineers to negotiate the reconfiguration works required to clear the site, this work is ongoing and shall be completed prior to commencement of the main project.

The Board shall reconcile existing gas connections to suit retained estate.

### 4.2 Gas Strategy

- The base load information is detailed in appendix M&E2.
- A new gas supply shall be provided from a new meter position to be established in a purpose build building at Govan road. Gas shall be run in a combined services trench with connections to the Laboratories and Energy Centre, resilient pipework shall be routed from the Energy Centre to the new hospital buildings to meet the equipment and services demand e.g. steam humidifiers, sterilisation units and future proving etc.
- Scotland Gas Networks (SGN) have provided a budget quotation reference 210297 dated 20 January 2009, this is based on the initial loads considered at that time, and does not include the requirements of the secondary energy centre. The Contractor shall negotiate with SGN to allow for a quotation based on the loads including the full design requirements for their selected heating and CHP mediums and provide an assessment for all gas requirements for the works together with a further supply to meet the requirements of the second energy centre which shall be developed by the Contractor to meet the retained estate and planned new works as set out in appendix M&E2.
- Refer to drawing G1274/M(54)01 for proposed schematic interconnections.
- Refer to drawing G1274/U(96)01 for proposed incoming pipe routes.
- The Contactor shall include for all aspects of the gas connection including construction of a high quality building to house the governor/meter arrangement and all site trenching from public boundary of the existing hospital site to the connection point within new development and all distribution routes.

## 5.0 Water

### 5.1 Introduction

The Board have appointed DSSR consulting engineers to negotiate the reconfiguration works required to clear the site, this work is ongoing and shall be completed prior to commencement of the main project.

The Board shall reconcile existing water connections to suit retained estate.

Contact has been made with Scottish Water and a dialogue has been opened up regarding the philosophy for servicing the site.

After the strategy has been discussed / agreed, the Contractor shall acquire the water supplies and meters etc through the normal channels i.e. through the licensed provider (e.g. Business Stream)

### 5.2 Water Strategy

- The base load information is detailed in appendix M&E2.
- New water supplies shall be provided from new meter positions to be established at Govan and Hardgate roads. Water shall be run in a combined services trench with connections to the Laboratories and Energy Centre, resilient pipework shall be routed from the Energy Centre to the new hospital buildings to meet the equipment and services demand.
- Refer to drawing G1274/P(53)01 for proposed schematic interconnections.
- Refer to drawing G1274/U(96)01 for proposed incoming pipe routes.
- The Contactor shall include for all aspects of the water connection including all site trenching from public boundary of the existing hospital site to the connection points within new development and all distribution routes.

### 5.3 Filtered Water

The full water requirement for the Hospitals and Laboratories shall be filtered in accordance with Section 8 of the Employers requirements.

## 6.0 Voice

### 6.1 Introduction

The Board have appointed DSSR consulting engineers to negotiate the reconfiguration works required to clear the site, this work is ongoing and shall be completed prior to commencement of the main project.

The Board shall reconcile existing voice connections to suit retained estate.

### 6.2 Voice Strategy

- The main voice services shall be provided by VOIP which shall be interconnected by the Data Network Connection, Emergency fall back Telephones and general Analogue requirements shall be provided via direct service from the network Utility Companies.
- New voice incomers shall be provided from at Govan and Hardgate roads. Voice shall be run in a combined services trench with connections to the Main Hospital Buildings, Laboratories and Energy Centre,
- Refer to drawing G1274/U(96)01 for proposed incoming duct routes.
- Structured cabling shall be utilised for the main telephony requirements supplemented by Wireless connectivity.
- All voice patching (Analogue lines) shall be colour co-ordinated.

## 7.0 Data

### 7.1 Introduction

The Board have appointed DSSR consulting engineers to negotiate the reconfiguration works required to clear the site, this work is ongoing and shall be completed prior to commencement of the main project.

The Board shall reconcile existing data connections to suit retained estate.

### 7.2 Data Strategy

- The main data services shall be provided by CAT6A - RJ45 outlets with power over Ethernet facility.
- New Network incomers shall be provided from at Govan and Hardgate roads. Data shall be run in a combined services trench with connections to the Main Hospital Buildings, Laboratories and Energy Centre,
- Refer to drawing G1274/U(96)01 for proposed incoming duct routes.
- Structured cabling with power over Ethernet facility shall be utilised for the main data requirements supplemented by Wireless connectivity.
- All voice patching shall be colour co-ordinated.

SGN Connections
A Scotia Gas Networks Company

Wallace Whittle Ltd.
8 Elmbank Gardens
Glasgow
Lanarkshire.
G2 4NQ

4 Queen Anne Drive
Lochend Industrial Estate
Newbridge
EH28 8LH

Tel: [redacted]
Fax: [redacted]

Quotation Reference: N/A
SGN Quotation Reference: 210297
20/01/2009

Dear: **Mr Brian Rutherford**

**Re: New Glasgow South Hospitals, 1345 Govan Road, Glasgow, Lanarkshire. G51 4TF**

Thank you for requesting a quotation for the above address. We received your quotation request on 06/01/09. I am writing to advise you that we have carried out an initial investigation of your request, and I am pleased to be able to provide you with a budget indication of the likely costs.

**Description of works:**

SGN Connections to lay 150m x 355mm / 100m x 315mm PE LP Main from an Ex 18" CI LP main in roadway.
SGN Connections to also lay 26m x 315mm LP PE single service & terminate to an external location (kiosk & bases provided by others).
SGN Connections to excavate & reinstate in public only.
Customer to excavate and reinstate within site boundary.
This quote does not include for a gas meter.

End user to provide all outlet pipework and a suitable external kiosk/meter housing (and base) to IGE/GM/6 & 7 and IGE/SR/25.
The customer should contact their gas supplier to arrange for the installation of a suitable gas meter and associated ancillary equipment.

Budget indication is subject to customer obtaining any necessary easements/servitude/wayleaves/consents at no additional charge to SGN Connections.
Budget indication does not include for any isolations / diversions that may be required.
Budget indication does not take into account any future potential loads.

The budget indication is £49,007.99 to carry out the works, and does not represent an offer to carry out the works. We may provide a firm quotation that is significantly different from the budget indication. As a guide the price is deemed to be accurate within +/- 10%.

If you would like a firm quotation please contact the SGN Connections Front Desk on [redacted] or fax number [redacted]. We look forward to hearing from you in the near future.

It may be possible to obtain an alternative quotation from the Gas Transporters or Utility Infrastructure Providers (UIPs) for the provision of this work. A list of registered UIPs can be obtained from the Gas Industry Registration Scheme website www.GIRS.co.uk (follow the Lloyd's Register link). The Society of British Gas Industries can also provide information on alternative installers at www.sbgi.org.uk. A list of Gas Transporters can be found on the Ofgem website www.ofgem.gov.uk.

Yours sincerely,

[redacted]

**Tony Smith**

# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME 2/1

## APPENDIX M&E.2
## NEW HOSPITAL BASE BUILDING LOADS

## CONTENTS

| | | Page No. |
|---|---|---|
| Section 1 | Introduction | 3 |
| Section 2 | Integrated CHP / Boiler Load for the Children's and Adult Acute Hospitals | 4 |
| Section 3 | Integrated CHP / Boiler Load for the Retained and Future Estate | 6 |
| Section 4 | Heating Oil Storage | 7 |
| Section 5 | Electrical Load | 8 |
| Section 6 | Standby Power Load and Oil Storage | 9 |
| Section 7 | Water | 11 |
| Section 8 | Steam Services | 11 |
| Section 9 | Medical Gases | 11 |

## 1.0 Introduction

### 1.1 General

This document has been prepared to collate the available information and to provide an insight into the ratings utilised for the Utility enquires.

These calculations are for guidance only the Contractor shall incorporate their low, zero carbon and site renewables proposals within their overall energy strategy, assess the actual building loads and select the plant accordingly.

The reference to particular technologies is not prescriptive and the Contractor shall put forward their scheme design proposals to meet the loads and performance criteria together with a comprehensive base load calculation package to back up their main plant selection.

All systems proposed by the Contractor require to be proved in use with benchmark sites available for review.

The works incorporate two energy centres, the first energy centre layout has been developed schematically to highlight the requirement for system interfaces, Boiler/CCP/Generator flue requirements and special water proofing. The contractor shall develop the scheme for both energy centres and provide a working detailed plant layout drawings and schematic drawings to indicate their proposals.

### 1.2 Renewables and LZCT

Refer to Appendix M&E 4 for site renewables and LZCT information.

## 2.0 Integrated CHP / Boiler Load for the Children's and Adult Acute Hospitals

### 2.1 Heating Load

Heating Load is 11,200kW based on:-

| | Floor area |
|---|---|
| Acute Adult | 104,500m² |
| Sick Children | 35,500m² |
| | 140,000m² |

### 2.2 Ventilation AHU Load

Assume average building floor height = 2.7m

Total calculated building volume 140000 x 2.7 = 378000m³

Ventilation Load is 8007kW based on building volume and 60% heat recovery. (1), (2)

The proposal shall be based on actual heights and a detailed ventilation proposal.

### 2.3 Cooling Load

The Cooling requirement shall be developed by the Contractor for the standard and max temp mandatory variant bids, all cooling shall be provided by the most efficient method including, absorption chillers, free cooling etc.

### 2.4 Hot Water Service Loads

Adult Acute Hospital is based on 1190 beds.

Children's Hospital is based on 245 beds.

Loads based on HTM 04-01 Part A.

Total DHW Load based on Plate Heat Exchangers = 5793kW

## 2.5 Integrated CHP / Boiler Sizing

| | | |
|---|---|---|
| Heating | 11,200kW | From 2.1 |
| AHU Loads | 8,007kW | From 2.2 |
| DHW | 5,793kW | From 2.3 |

25,000kW Total

Total estimated load 25,000kW ÷ 5 = 5000kW say 5000kW for boiler sizing purposes.

e.g. 5 duty and 1 standby (6 boilers required in total)

## 3.0 Integrated CHP / Boiler Load for the Retained and Future Estate

3.1 Combined Heating and Hot Water demand to meet the following requirements:-

| **Retained Estate** (4) | **Floor Area ($m^2$)** | **Estimated Load in KW** |
|---|---|---|
| Maternity | 11,704 | 1400 |
| Neonatal | 4,750 | 475 |
| PRDU | 1,345 | 160 |
| Neurology | 6,672 | 670 |
| Neuro surgical | 13,999 | 1400 |
| Spinal | 4,992 | 600 |
| Stepdown | 539 | 65 |
| Acute Medical Block | | 900 |
| Total | | 5670 |

| Proposed Estate (5) | **Floor Area ($m^2$)** | **Estimated Load in KW** |
|---|---|---|
| Labs | 17,000 | 1,700 |
| Education Building | 20,000 | 2,000 |
| Offices | 15,000 | 1,500 |
| Clinical Research | 5,000 | 500 |
| Total | | 5700 |

3.2 Integrated CHP / Boiler Sizing

| | |
|---|---|
| Retained Estate | 5 670kW |
| Proposed Estate | 5700kW |
| | 11,370kW Total |

Total estimated load 11,370kW ÷ 3 = 3790kW say 4000kW for boiler sizing purposes.

e.g. 3 duty and 1 standby (4 boilers required in total)

## 4.0 Heating Oil Storage

4.1 Energy Centre 1

Fuel based on 35 sec oil to last 7 days. (3)

Load based on serving Children's and Adult Acute Hospitals.

Total Load = 25MW as per overview of Site Energy/Plant solutions report.

Allow boilers to run for one week (7 days)

5 Boilers running on full load for a week based on 5000kW boiler fuel consumption @ 560l/hr = 560,000 litres

This quantity of storage shall be incorporated in a combined pool which shall be sized to allow the standby generators to operate for 200hours.

Two tanks commercial sizing 10m x 10m x 3m High = 300,000 litres each or equivalent shall be provided.

Also a third tank of similar size shall be provided for fuel management and serve the retained Hospital Estate.

One of the tanks shall be provided early for beneficial use by the Board during the Construction Works to allow removal of the existing site Vertical Oil Tanks.

The system shall include fill points, delivery points, delivery point transfer pump sets and controls.

4.2 Energy Centre 2

Fuel based on 35 sec Oil to last 7 days. (3)

Load as tabulated above

Total Load = 11.5MW.

Allow boilers to run for one week (7 days)

3 Boilers running on full load for a week based on 4000kW boiler fuel consumption @ 448 l/hr = 225,792 litres

This quantity of storage shall be incorporated in a combined pool which shall be sized to allow the standby generators to operate for 200hours.

Two tanks commercial sizing 10m x 7m x 3m High = 210,000 litres each or equivalent shall be provided.

The system shall include fill points, delivery points, delivery point transfer pump sets and controls.

## 5.0 Electrical Load

The main power shall be delivered to a new primary sub-station located on the Southern General Hospital site, it shall be rated to feed the full hospital campus with load allocated for future development as outlined below.

| Building | Estimated Load |
|---|---|
| Acute Adult | 6,792 kVA |
| Sick Children | 2,307 kVA |
| Laboratories | 2,380 kVA |
| Maternity | 585 kVA |
| Neonatal | 250 kVA |
| PRDU | 100 kVA |
| Neurology | 250 kVA |
| Neuro surgical | 700 kVA |
| Spinal | 250 kVA |
| Step down | 33 kVA |
| Acute Medical Block | 450 kVA |
| Education Building | 2,000 kVA |
| Offices | 1,500 kVA |
| Clinical Research | 500 kVA |
| Car Park Lifts | 20 kVA |
| Drainage systems | 20 kVA |
| Sub total | 18,137 kVA |
| 25% uplift (for Main Hospitals only) | |
| Total generating capacity | 20,500 kVA |

The load estimates for the new hospitals have been based on the design solution report figure of 48VA/m² which is based on Edinburgh Royal Infirmary, this has been crossed checked with the typical range of power densities within HTM 06-01 which indicate a range of 30W/m² - 65W/m².

The upper range (65W/m²) has been selected as noted below to allow for ongoing growth.

The Contractor shall provide an update on the loads in line with the design development.

| Building | Floor Area | Load @ 65VA/m² |
|---|---|---|
| Acute Adult | 104,500 m² | 6,792kVA |
| Sick Children | 35,500 m² | 2,307kVA |

## 6.0 Standby Power Load and Oil Storage

### 6.1 Generation

The standby switchgear and distribution infrastructure shall be rated to accommodate the new hospital buildings together with the full Southern General Campus Site including the estimated future buildings.

The standby power shall be delivered from the new energy centres which shall be located adjacent to the Laboratories facility and in the area presently occupied by the Morgue.

The initial energy centre shall be configured to accommodate generation capacity for the new hospital buildings together with an element of the retained capacity, the second energy centre shall be configured to accommodate generation capacity for the remainder of the retained facilities together with capacity for the future buildings estimated load as indicated below.

The Contractor shall provide a comprehensive design including HV works, general electrical, earthing, control, SCADA, ventilation, sound attenuation, fuel distribution, space planning and building integration for the full generation capacity spread across the two energy centres.

Replacement generation capacity for the second element of retained estate and new buildings will be provided on a phased basis by the Board.

| Building | Standby Integrated in the Contractor's new HV grid infrastructure | Generation incorporated in Energy Centre 1 | Space and services for Generation incorporated in Energy Centre 2 | Generation incorporated in local building |
|---|---|---|---|---|
| Acute Adult | ✓ | ✓ | × | × |
| Sick Children | ✓ | ✓ | × | × |
| Laboratories | ✓ | × | × | ✓ |
| Maternity | ✓ | ✓ | × | × |
| Neonatal | ✓ | ✓ | × | × |
| PRDU | ✓ | × | ✓ | × |
| Neurology | ✓ | × | ✓ | × |
| Neuro surgical | ✓ | × | ✓ | × |
| Spinal | ✓ | × | ✓ | × |
| Step down | ✓ | × | ✓ | × |
| Acute Medical Block | ✓ | × | ✓ | × |
| Education Building | ✓ | × | ✓ | × |
| Offices | ✓ | × | ✓ | × |
| Clinical Research | ✓ | × | ✓ | × |
| Car Park Lifts | ✓ | ✓ | × | × |
| Drainage systems | ✓ | ✓ | × | × |

Special consideration is required with possible integration of CHP and emergency generation. The Contractor is not prohibited from developing this but if proposed the developed system must not deviate from the high resilience and N+1 redundancy required for all elements of electrical distribution.

## 6.2 Generator Fuel Storage

6.2.1 Energy Centre 1

Generator fuel based on 35 sec Oil.

The volume of diesel fuel oil stored within the day tank and arranged for gravity feed of fuel oil to the engine should be no more than the greater of 750l or the equivalent of 10 hours' full-load (maximum capacity) running of the generating set.

In addition, a fuel oil main reserve for 200 hours full-load running for each standby generator set should be available on site. (A load factor may be applied to allow for plant redundancy.)

| | Fuel storage (based on 2MVA units) |
|---|---|
| Input to generator = | 423.5 litres per hour for one set at full load |
| 200 hours storage = | 84,700 litre of storage per set |
| 8 sets (allow 7 running) = | 592,900 litre storage |

This shall be provided in a combined pool with the heating back- up storage rather than duplicated on the basis that a limited storage capacity is acceptable if both gas and power incomers are unavailable simultaneously.

6.2.2 Energy Centre 2

Generator fuel based on 35 sec Oil.

The volume of diesel fuel oil stored within the day tank and arranged for gravity feed of fuel oil to the engine should be no more than the greater of 750l or the equivalent of 10 hours' full-load (maximum capacity) running of the generating set.

In addition, a fuel oil main reserve for 200 hours' full-load running for each standby generator set should be available on site. (A load factor may be applied to allow for plant redundancy.)

| | Fuel storage (based on 2MVA units) |
|---|---|
| Input to generator = | 423.5 litres per hour for one set at full load |
| 200 hours storage = | 84,700 litre of storage per set |
| 5 sets (allow 4 running) = | 338,800 litre storage |

This shall be provided in a combined pool with the heating back- up storage rather than duplicated on the basis that a limited storage capacity is acceptable if both gas and power incomers are unavailable simultaneously.

## 7.0 Water

### 7.1 Filtered Cold Water Storage

| | | |
|---|---|---|
| Adult Acute | 1109 Beds = | 1,084,602 litres |
| Children's | 245 Beds = | 144,550 litres |
| | | 1,229,152 litres |

Storage based on HTM 04-01 Part A.

Allow 1/3 of total to be stored locally within each building say basement and pumped up the building.

2/3 central storage within the Energy Centre = 811,240 litres

Water filtration plant and the associated break tank shall be provided within Energy Centre One and will feed the central storage tank facility which in turn, shall supply via a pumped main the local storage tanks within the basement of the respective buildings.

### 7.2 Renal Water

Water treatment plant and storage shall be provided to meet the renal demands as indicated in the SHTM's. Plant shall be resilient modular type with integrated redundancy to allow maintenance without loss of supply. Plant to be as close as possible to point of use.
Refer to Appendix M&E 6.

## 8.0 Steam Services

Steam shall be provided inline with clinical requirements for humidification (where required) and sterilisation from gas fired plant, with electrical back up for use only in the event of loss of gas supply. Plant shall be local to the point of use of resilient modular type with integrated redundancy to allow maintenance without loss of supply.

## 9.0 Medical Gases

The plant shall be sized to accommodate the Clinical requirements of the new hospitals.

**References**

(1) All areas assumed to have mechanical ventilation with an average value being utilized for an air change rate; this has been used to provide heating requirements for initial calculation purposes. (The works scheme shall be based on actual heights and a detailed ventilation proposal).

(2) Heat recovery allowed at 60%, this value could vary dependent on the type of heat recovery selected for the Air Handling Plant which will be driven by space constraints and specific plant selection.

(3) Boilers hours run is based on worst case scenario with all plant and equipment running at more or less full capacity over a week period.

(4) All retained estate loads are estimates for use in the contractors initial design, the Contractor shall include for a detailed load assessment to be carried out on each of the facilities and liaison with the Board during the detailed design stage to ensure that the proposals meet the full system requirements at the time of requirement.

(5) The proposed estate loads are estimates for use in the contractor's initial design. The Contractor shall include for a liaison with the Board during the detailed design stage to ensure that the proposals meet the full system requirements at the time of requirement.

**NHS Greater Glasgow and Clyde**

**New South Glasgow Hospitals (NSGH) Project**

# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME 2/1

## APPENDIX M&E.4
## SUSTAINABLE DESIGN CONSIDERATIONS

## CONTENTS

| | | Page No. |
|---|---|---|
| Section 1 | Introduction | 3 |
| Section 2 | General Obligations and Objectives | 4 |
| Section 3 | The Priorities for Low Carbon Design | 14 |
| Section 4 | Low Carbon Technologies | 34 |

## 1.0 Introduction

During the design development of the new hospital facilities various investigations, reports and discussions have taken place. The purpose of this section of the Employers Requirements is to summarise this information to assist the Contractor in addressing this key element of his design.

Given the nature of this subject the fact that it has to form a fundamental keystone of the contractor's proposals and is significantly influenced by the Building Design Solution. It is critical that the Contractor treat these notes as guidance only and provide bespoke solutions within his design solution.

The proposals shall be closely linked to the BREEAM excellent rating requirement, refer to paragraph 3.10.4 and the low carbon tracker which is provided under separate cover.

## 2.0 General Obligations and Objectives

The sustainability and low carbon designs are fundamental to the design quality evaluation of the project and bids will be scored significantly on these aspects. This section sets out the requirements.

A BREEAM "Excellent" is a fundamental requirement and achievement of the final rating, as defined in later sections, will be part of the building acceptance procedure. Furthermore, there is a requirement for a Low Carbon design process which will be monitored and evaluated by a Carbon Trust accredited consultant. There are both design and operational energy targets which are to be met as part of the building acceptance procedures.

The process for integrated design, calculation and modelling, disclosure and auditing is set out in this section and confirmation of acceptance of these procedures without qualification or condition is an explicit part of the tender evaluation.

Refer to the main contacts of Volume 2/1 and the associated appendices for Building and M&E Services.

It is the contractor's responsibility to provide commentary and clear proposals in the submission on any actual or perceived conflicts in requirements.

In general terms the contractor shall:

- Implement an Environmental Management System (EMS) in line with the principles of ISO 14001 accreditation in relation to the design, management construction materials procurement, supply chain management and site processes for this project
- Respect the local landscape and protect natural habitat and species taking due account of the UK Biodiversity Action Plan;
- Avoid sources of ionising and electromagnetic radiation and any design features associated with sick building syndrome;
- Develop and implement a Site Waste Management Plan (SWMP) in line with DEFRA and WRAP guidance
- Maximise the opportunity for waste minimisation, through design and in construction, following good practice guidelines.
- Maximise the opportunity for incorporating higher levels of recycled input into components, and for high waste recovery (reuse and recycling)
- Maximise efficient and effective removal and transport of waste;
- Adopt maintenance regimes which maintain optimum performance;
- Avoid the use of harmful building products and processes;
- Undertake integrated low carbon and passive design
- Explore the use of prefabricated elements to achieve good quality control, ease and speed of installation and flexibility for future use.

**The Contractor shall comply with the following NHS and related publications:**

- The Development of a Local Environmental Strategy in line with Sustainable Development in the NHS;
- Environmental Management Policy for NHS Scotland (SEHD) 2002; HDL (2006)21, and the documents referred to therein.
- Encode;SHTM 07-02
- Carbon / Energy Management in Healthcare
- BREEAM Healthcare. The following publication provide guidance in the approach to design and procurement and will be useful/essential in the low carbon design and BREEAM Environmental Purchasing in Practice guidance for organisations September 2002
- Good Corporate Citizen (Sustainable Development Corporation publication)Sustainable Development in the NHS
- "The Green Book" APPRAISAL AND EVALUATION IN CENTRAL GOVERNMENT Treasury Guidance LONDON: THE STATIONERY OFFICE
- The Role of the Physical Environment in the Hospital of the 21st Century: A Once-in-a-Lifetime Opportunity (a) Roger Ulrich*, Xiaobo Quan, Center for Health Systems and Design, College of Architecture, Texas A&M University Craig Zimring*, Anjali Joseph, Ruchi Choudhary, College of Architecture, Georgia Institute of Technology

## 2.1 Materials resources efficiency

NHS Greater Glasgow and Clyde is committed to improving the environmental performance of their construction projects. Designs and specifications should consider the environmental impact of all elements of the design including choice of materials. One important contribution to sustainability goals is the efficient use of finite natural resources, diverting waste from landfill. This can be achieved by meeting good practice levels of waste minimisation and management throughout the project in accordance with WRAP guidelines and by adopting the most significant cost-neutral opportunities to increase waste recovery. Opportunities should be investigated under two streams:

- Reused and recycled content
- Site construction waste management and minimisation

**Reused and Recycled Content**

To deliver measurable performance, the contractor should exceed a threshold outcome defined as follows: At least 10% of the total value of materials used in the construction project must be derived from recycled and re-used content in the products and materials selected.

The contractor should identify and implement the most effective cost-neutral opportunities (Quick Wins) to increase the value of materials deriving from recycled and re-used content, and quantify the improvement in the total recycled content above ‘baseline practice’ for the project. The contractor shall specifically investigate the use of demolition material resulting from existing structures on site to contribute and exceed this target.

Further definition of recycled content and the most common quick win opportunities can be obtained from WRAP published guidance. To assess the baseline recycled content level of the project and identify the quick wins, the WRAP Net Waste Tool should be utilised.

**Waste Minimisation and Management**

The Contractor is required to implement where possible cost-effective methods of good practice waste minimisation during the design of the project and thereafter during construction. As a minimum, the Contractor should:

- Identify appropriate methods of waste minimisation in design before detailed design commences and report to the Contract Manager on the economic and practical implications of adopting these methods during the development of the design.
- Agree with the Contract Manager which methods of waste minimisation to implement at the appropriate design stage and demonstrate how the methods have been incorporated into the design.
- Include a list of measures within the Site Waste Management Plan (see requirements below) to minimise waste generated from on-site operations (for example, damage, theft etc) and demonstrate how these measures have been implemented.

The Contractor is also required to meet specified minimum waste recovery rates for the waste streams with the largest cost-effective recovery potential (selected Quick Wins). The Contractor is required to identify and agree with the Contract Manager the key opportunities for Quick wins on the project and set minimum recovery rates to be achieved. Specifically, the Contractor's responsibilities (in association with his trade sub-contractors and waste management contractors where appropriate) shall:

- Identify, and continually review as the pre-construction design develops, the waste streams with the largest cost effective recovery potential and estimate likely recovery rates for each waste stream
- Agree with the Contract Manager before the commencement of construction those waste streams that will provide the most significant opportunities for cost-effective recovery (to be known as 'selected Quick Wins') and the minimum recovery rates to be adopted for the project
- Meet the agreed minimum recovery rates for the selected Quick Wins unless otherwise agreed in writing by the Client
- Measure waste arising during the works and compare with the minimum recovery rates set for the project and then report these findings to the Employer's Agent
- Appoint trade sub-contractors and waste management contractors with the same liability as under the Employer's Requirements to meet minimum recovery rates (where applicable) and to support the Contractor to measure, monitor and report actual waste arising during the works

To assist the effective delivery of the above requirements, the Contractor should develop and implement a Site Waste Management Plan (SWMP) to achieve good practice waste management on the project. Specific Contractor responsibilities will be to:

- Provide and agree a methodology with the Contract Manager before detailed design commences regarding how the SWMP will be developed and implemented with specific reference to the constraints of the project, the management of these constraints, their supply chain, programme of key steps and reviewing performance. This should take into account good practice guidance published by WRAP and other organisations;
- Develop the SWMP as the design progresses in accordance with the agreed methodology for completion prior to construction commencing. A copy of the completed SWMP should be provided to the Contract Manager prior to construction commencing
- Implement the SWMP during construction in accordance with the agreed methodology
- Ensure compliance of all appointed trade sub-contractors and waste management contractors with the legal requirements under the Duty of Care regulations and take all reasonable actions as appropriate for non-compliance.

The SWMP should be developed and implemented following the DEFRA and WRAP guidelines and incorporating the good practice measures above. Implementation of the SWMP can be facilitated through the use of the WRAP Template (Excel based freely available template) for SWMPs. The Contractor is free to use other tools or templates for implementing the SWMP.

Where relevant, the Contractor should employ a systematic approach to good practice in the recycling and re-use of locally available construction, demolition and excavation waste materials (on-site and from nearby sites) – for example, applying the methodology outlined in the Demolition Protocol (published by ICE, London Remade and Envirocentre).

Further guidance on recycled content, good practice waste management and minimisation and the SWMP can be obtained from WRAP and Envirowise.

## 2.2 Low Carbon Design – General Requirements

### 2.2.1 General Requirements

The contractor shall implement fully an integrated approach to low carbon design as contained in section 2.1. In summary this is as follows:

- Project plans to include requirements for low carbon design, energy targets and auditing at key stages.
- Set and record a design and operational energy target for each project.
- Undertake calculation and modelling of the target at key stages
- Cooperate with monitoring and review mechanisms for the design and operational energy target and note that failure to provide calculations and failure to meet targets are contractually significant.
- Use a set of ADB sheets as a model to set the project requirements and negotiate these with users. Use in conjunction with the overarching technical brief.

- Use a design monitoring tool such as a tracker to ensure the brief is being adopted.
- Use the modelling specification to ensure adequate reporting and consistency of results
- Confirm that the appointed team, team leader and individuals working on the project have a sufficient skill set and access to adequate software for the demands of the project.

## 2.3 Design Energy Targets

### 2.3.1 Design energy targets

1. The design energy target is an asset rating of no more than 40 as per Part L2A EPC classification this is required for BREEAM excellent and could lead to Design compliance with Scottish Building Regulations Section 6.1 and an approximate Scottish EPC Asset Rating of B.

2. The operational energy target is 80kgCO2/m2 per annum as measured at the incoming energy meters to the energy centre and taking into account the emissions from the actual performance of any CHP plant which may be installed when calculating and measuring electrical consumption.

3. This target relates to the new building, taking into account the efficiency of the central plant in the energy centre and district mains interconnecting the two. The seasonal efficiency used in the calculation must accurately reflect the chosen plant, the proportion and availability of low and zero carbon technology and the efficiency of the distribution mains. All these must be clearly reported and supported by manufacturer's details and designers modelling calculations.

4. The energy calculation shall be undertaken using a full dynamic model to level 5. See following section for modelling requirements.

5. Formal reporting is required at the following key points

    a. Façade development and 1:100 layouts – the comparative energy implications of different window sizes, glazing types, shading, natural ventilation solutions, passive cooling, daylighting etc should be considered and reported to the client. This is the most critical stage as once a scheme proceeds to detail design; the opportunity for iteration is lost. Architects must present façade and internal layout solutions which address energy implications and not just aesthetics and functionality. Note that the design programmes must allow enough time for this process. The calculation methodology would be full dynamic modelling of rooms and façade modelling

b. Early detail design/ full business case: once the façade is set and layouts are reasonably agreed, the full model should be built. The contractor should understand clearly that models will need to be revised and iterations undertaken. The detailed energy prediction must not be left until late in the detailed design to avoid additional work. Permission to proceed to detailed design will not be granted until the contractor can confirm that the stated design and operational energy target will be met. Note that if BREEAM excellent is required, confirmation from the assessor for the business case that the scheme is in line to achieve the rating will be unreliable without confirmation of the energy score.

c. Late detail design: the contractor must confirm through revision to the above model that the design meets the design and operational energy targets

d. Late construction – the as built model should be produced which will provide the final EPC and the operational target confirmed based on actual equipping.

6. Operational energy – at each of the above reporting stages, a check on the operational energy target should be calculated on the following basis as a minimum: Build up the likely energy use from the design targets. This needs a thorough understanding of the defaults in the NCM methodology. Once the building is modelled, the model shall be corrected for the actual zone usage as agreed during the competitive dialogue process and realistic and auditable allowances made for equipping. Any other variables to the design model to predict actual usage shall be declared and agreed with the client's auditor. The contractor is however free to propose alternative methodologies provided that they are likely to predict accurately actual energy use.

7. All calculations and models shall be open access and available at any reasonable time for evaluation by the client's auditor.

8. Training and awareness of energy issues relating to the building shall be given by the contractor to the building users and the maintenance staff – the format and content of this shall be established through the competitive dialogue process

9. Operational energy shall be measured and reported for every 3 months for 3 years from occupation of the building by the contractor with weather normalisation undertaken by reference to an agreed thermal model containing actual weather data for the year in question. Should operational energy be found to exceed predicted operational energy, then investigation and remedial action will be required to be undertaken by the contractor

10. The investigation shall consist of the following: a report shall be prepared consisting of monthly logs from each sub meter for 3 months which shall be compared with predicted usage to detect where excessive energy use is occurring. This shall be followed by a review meeting with the clients' auditor to discuss findings and agree corrective action.

11. If findings are not conclusive, further logs and reports shall be undertaken until a clear cause can be identified. If a clear cause cannot be found within 6 months of the start of the investigation, further investigation shall be undertaken which may include, but not be confined to thermographic imaging, data and environmental logging either by the BMS and/or external loggers, by behavioural auditing and monitoring of usage, manufacturer's reports and similar non intrusive methodologies.

12. If causation is behavioural, evidence shall be presented and the client will undertake training of staff and users.

13. If causation is due to building services systems, commissioning, building fabric or any other matter relating to design and construction of the facility, the contractor shall undertake remedial action including recommissioning, replacement and upgrading as may be required to reduce the energy consumption to the operational target, and log energy usage for at least 12 months to demonstrate that corrective action has been successful.

14. The design energy target is based on the National Calculation Methodology which includes standardised operational data. Hence further operational energy targets are also set which relate to actual usage of the hospital.

## 2.4 Operation Energy Targets

To be verified at design stage also and include all areas/volumes relative to the new facilities:

- 55 GJ/100 $m^3$

### 2.4.1 Modelling requirements

Modelling shall be undertaken at the stages required above for energy, thermal comfort and daylighting, complex ventilation solutions and facade development.

The following extract from CIBSEE AM11 provides a useful basis of expectation with respect to reporting of modelling results. The contractor shall:

1. Undertake frequent meetings with the client to determine modelling requirements.
2. While only relevant data should be presented, it is necessary for the modeller to be aware of a more detailed interpretation, e.g. to avoid the possibility of presenting peak temperatures occurring during an unoccupied period.
3. In the case of several design variants, clearly define the reference case against which parameter variations have been made.
4. Quantify where possible — e.g. number of hours of overheating, lux level contours for standard overcast sky.
5. Explain results — e.g. if a model change increases energy consumption, explain the causes.

6. Presentation: each report should have:

   (i) statement of objectives
   (ii) summary of main findings
   (iii) brief details of relevant capabilities of program used (with version number etc.)
   (iv) description of the model, including a description of how the model was formed and the principal operational characteristics (with reference to details in appendices)
   (v) details of the assumptions made in the model and results of sensitivity analyses where appropriate
   (vi) clear description of design variations tested and changes made
   (vii) graphical and tabular results (see examples in case studies in section 6 of CIBSE AM 11)
   (viii) Conclusions against stated objectives; outline pros and cons of design variations.

All the above must be reported at a point in the design process where changes to provide a more energy efficient design can still be undertaken without abortive design costs.

Methodology requirements:

The overarching requirement is that the results of modelling are appropriate for the stage of design, reliable and reproducible. The reporting required is above and the methodology, applicable to any form of dynamic modelling including CFD, is as follows. A more detailed methodology can also be found in CIBSE AM11 and IEA Annex 21 from which the following is a summary.

Requirements for modelling are as follows:

1. The process should use the same software and version of software throughout the process to enable comparison to be made. This should be explicitly stated in each report.

2. The objectives of the study should be defined and agreed.

3. The extent of modelling should be clearly defined and agreed in advance – it should be clear whether sample rooms, whole floors or whole buildings have been considered and whether individual zones, activities and systems have been incorporated.

4. All approximations and assumptions must be explicitly stated and peer reviewed. If the limitations of the program being used mean that assumptions and approximations will not yield a reliable outcome, the modelling should not proceed and alternative programmes with adequate capability should be selected.

5. Sensitivity analysis shall be undertaken. This shall include as a minimum consideration of different weather scenarios, changes to occupancy patterns and where appropriate, the sensitivity of key assumptions, simplifications and approximations.

6. A record shall be kept as output from the programme of all data input, and of all non alterable data. When iterations are undertaken, QA procedures shall be used to ensure that only the iterated factors are changed. Where outcome is critical, duplicate models shall be iterated to ensure consistency of results.

7. The architect and or engineer must know exactly what the building will be used for. Any special features which may influence the design or its performance (e.g. atria, pool, orientation, need for 100% fresh air ...) should be identified and agreed with the client. The level of thermal comfort should established and agreed with the client (e.g. room temperatures should not go below 18 OC in winter for longer than 2 hours at a time, or higher than 26 $^{o}$C in summer for more that 50 hours in total, but not on successive days, similar criteria for humidity, glare and level of lighting).

8. Each and every aspect of design, as defined in the modelling brief should be considered and defined (e.g. what is meant by overheating, what is the objective with respect to energy use etc.).

9. The iterations that should be considered should then be established and recorded – for example, increasing or decreasing % glazing, altering orientation, increasing mass, effect of different weather files etc.

10. The method of presentation should be agreed with the client – this may be graphical, 3D, 2D etc, but expectations should be managed and agreed in advance.

11. When interpreting the results, the output data must be clearly understood. For example definition of the time for which results are reported and, if appropriate, the way results are averaged over the reporting period must be clearly defined and understood. For example, the number of hours of overheat must be for occupied hours only.

12. Error checking shall be undertaken for larger and complex simulations. Errors of an order of magnitude can be trapped by using simple tests and range checking. For example, comparing the results of a steady state simplified calculation of the total heat loss of a building, with that of a dynamic program when used to emulate steady state may reveal order of magnitude errors in the input.

13. Comparison of results with those of previous similar projects would always help identify major errors. For example, building floor area entered as a separate input item could be checked against the sum of floor area of rooms within the building.

14. The qualifications, training and experience of the modeller and their peer reviewer should be appropriate of the simulations and programmes being used and these should be stated in each report.

### 2.4.2 Overarching technical specification for low carbon design

#### 2.4.2.1 General considerations

1. This section provides a statement of expectations and processes relating to achieving low carbon design. It is not intended to override any HTM or NHS publication, statutory standard, ISO or BS, and must be used with the professional judgement of architects and engineers. It does not endorse any product or system.

2. Designers and constructors must assume that compliance with the required performance will be demonstrated in operation. There will be post-completion certification of conformance with design objectives, and that compliance will be contractually significant.

3. The building must comply with all statutory requirements.

4. In all cases where advice is offered below, designers, constructors and operators shall satisfy themselves that the advice is relevant and appropriate, and is consistent with all their professional duties and statutory requirements.

5. Designers shall state all grant-aid, design support sources and tax-efficient arrangements they have accessed / intend to access in the design, construction and operation of this building.

6. Advice is given that design considerations should, wherever possible, favour simple and robust design solutions that can be reasonably be expected to survive in competent low carbon emissions operation for extended periods. Design approaches that depend on the long-term availability of specialist labour, equipment and materials are not preferred. It is appreciated that the simple and robust design solutions may not achieve the lowest possible achievable carbon emission during operation. The designers shall identify such situations, and prove that the proposed solution offers the lowest cost of ownership.

7. Note that where temperatures are referred to, these are operative temperatures as defined in CIBSE Guide A, except where there are direct quotations from HTM standards.

8. The responsibility remains with the contractor to ensure that the individuals in the team have the required level of competence to undertake the tasks to produce the desired outcome. If a shortfall is identified, then the client should be notified at the earliest opportunity.

## 3.0 The Priorities for Low Carbon Design

The priorities are broadly as follows in order of the least amount of capital expenditure for the most amount of carbon saved, although position in the list should not be seen as an absolute as importance will depend on clinical usage:

- Passive / demand items are focussed on reducing carbon demand and are the highest priority in considering strategy
- User expectations and requirements, including foreseeable changes in use / occupancy
- Building form and orientation, massing
- Function relationships and internal planning of clinical/non clinical spaces to ensure that areas which can benefit from daylighting and natural ventilation are position on the periphery
- Structure thermal properties, including exposed mass
- Architectural arrangements for maximising use of daylighting to displace artificial lighting
- Passive ventilation strategy
- Reduced Air Leakage
- Exposed Mass
- Glazing Spec
- Increased Shading
- Increased Insulation
- Controlling equipping loads ( this may occur earlier in the list for buildings with high equipment loads)
- Heat recovery ( this may occur earlier in the list for buildings with high fresh air requirements)
- Lighting Controls
- Building services controls
- Metering and monitoring

Overall site energy strategy and choice of central/ decentralised plant, CHP, cooling strategy.

Choice of distribution media
Solar Hot Water Generators
Local CHP
Other renewable energy sources

It is essential that each heading is considered from feasibility stage through to final design and action taken. The low carbon design tracker shall be used as a reporting tool through the design process and developed to encompass the construction and operational phases. Each item should be considered in terms of whole life cost and not just capital expenditure.

## 3.1 Methodology

The design approach to be adopted is:

- Target energy and water efficiency measures to reduce resource demand through best practice design and passive design strategies.
- Locally offset the minimised resource demand through effective supply from Low and Zero Carbon (LZC) technologies and water recycling.

### 3.1.1 Essential tasks

1. Project management structure – ensure this includes a project management tool for low carbon design and that the manager is tasked and reports to the project board regularly on progress
2. Programme – ensure this allows for modelling and reporting in time to modify the design to meet energy targets
3. Budget structure – allow report and modelling cost, whole life costing, cost for renewables if appropriate and sufficient cost for addressing as many of the low carbon factors above, noting that many may not increase the cost above conventional design if addressed early enough in the process
4. Targets/KPI's – set before appointing team and ensure team have adequate skills, expertise and enthusiasm.
5. Tools – use management tools such as trackers and ensure team have access to adequate WLC data and modelling tools. Ensure that WLC data is appropriate for task, There is serious concern that the majority of existing WLC data refers to single action / single benefit source data, that is not appropriate where sequencing of savings is involved when multiple benefits exist / seasonal aspects apply.
6. Key stage audits – set these at the outset
7. Measuring outcome – as above
8. Sustainability auditor – appoint/ second to each scheme.

## 3.2 Passive Design Strategies

Passive design strategies should be considered in order to reduce energy demand associated with cooling and mechanical ventilation by offsetting building cooling loads whilst proving fresh air for occupants.

Successful passive design relies on early coordination of the architectural design and building services solution. Typically openable windows equivalent to 5% of the gross internal floor area of a space could be required. This can be on one side if the space is less than 7m deep. For spaces between 7m-15m deep, the openable windows should be on opposite sides of the space and distributed evenly to promote cross-ventilation. For spaces greater than 15m deep an internal atrium is typically required to ensure adequate cross flow of air.

Facade performance and solar shading should also be considered to optimise thermal performance, reducing solar heat gain, while maintaining a good level of daylight and limiting the risk of overheating.

With regard to daylight the building façade should be analysed to aid the selection of an appropriate glazing type and the positioning of fenestration with the objective of maximising daylight penetration.

Where natural ventilation is proposed for clinical areas a Computational Flow Dynamic (CFD) model shall be provided to confirm projected operational performance.

## 3.3 Technical Considerations – minimum standards technical brief for low carbon design

### 3.3.1 Daylighting

1. At least 80% by floor area of the staff and public areas has an average daylight factor of 2% or more.

2. At least 80% by floor area of the occupied patient's areas (dayrooms, wards) has an average daylight factor of 3% or more.

3. The provision of daylight shall be designed in accordance with the guidance in CIBSE Lighting Guide 10 Daylighting and window design, BS8206 Part 2 and the BRE Site Layout Guide.

4. All electric lighting fittings to perimeter areas shall incorporate linked dimming to take full advantage of daylight

5. Transient and unoccupied areas such as stores, utility rooms etc. shall not be located on the perimeter of the building if there are internal occupied areas which could benefit from daylighting.

6. Clinical areas with controlled environmental conditions, e.g. operating theatres, delivery rooms or pathology where solar gain will increase the air-conditioning load should not normally be day lit as above but may benefit from a limited view of sky.

7. Visual comfort shall be in conformance with best practice identified in EN 12464.

8. The maximum solar gain from beam radiation, averaged over each occupied space, in May, June, July, August and September is not to exceed 25W/m2 at any time during occupied hours.

9. Designers shall identify surface reflectances for building fabric, fixtures and fittings that form the basis of their calculations that identify daylighting as the main source of lighting energy, and require these to be maintained during repair and refurbishment.

10. Designers are advised that they should give high priority in their design progress to the avoidance of 'blinds-down / lights-on' use of main spaces by occupants.

3.3.2 Artificial lighting

1. The most efficient light source should be chosen appropriate to the usage. Tungsten and tungsten halogen sources should not be used.

2. A DEER value within the values for level A should be achieved calculated in line with the Society of Light and Lighting Guide 2 following the procedure in section 1.2.2 of that document for at least the minimum areas stated.

3. Occupancy or presence controls should be used to intermittently occupied areas over 4m2 unless there are overriding health and safety concerns. Areas such as toilets, en-suites, internal corridors, ward kitchens etc. should incorporate for this type of control. Controls must be accurately positioned and of sufficient quality to avoid lighting going off when persons are present in the space. Lights must strike immediately to adequate levels.

4. Reduced levels of lighting to a specified minimum may be appropriate with presence controls to step up the lighting level on detection of presence in situations where there is a requirement for lighting at all times such as main ward corridors, hospital street etc.

5. Daylight dimming controls should be provided to all areas benefiting from adequate daylight, in conjunction with presence or occupancy controls where possible.

6. Time and/or photocell controls should be provided to all external lighting.

7. Areas should not be over lit – there needs to be a balance between standardisation of fittings across a scheme and choosing the most appropriate fitting for a particular area.

8. There is however scope for variation in lighting levels and colour to specific areas such as prescription writing and long stay patient areas to reduce the risk of errors and improve recovery and mental well being. For fuller detail refer to "Lighting and Colour for Hospital Design" ( Dalke, Littlefair, Loe)

9. Switching zones should enable sub areas in larger spaces to be controlled separately, for example sets of up to 4 workstations in open plan offices, serveries and dining areas, reception and waiting areas. Manual controls should be local to occupants where possible.

10. Visual comfort shall be in conformance with best practice identified in EN 12464.

11. Designers must explicitly identify the building's overall annual effective W/m2 for artificial lighting during working hours, taking full account of displacement of artificial lighting energy by daylight. (4 $W/m^2$ displacement shall be the maximum unless otherwise agreed.

12. Every opportunity shall be taken to use localised task lighting with lowered overall light level including switch able override to the presence detection on signal.

3.3.3 Heating during occupied hours (including circulation spaces)

1. The heating system (including but not necessarily limited to heating emitters and controls) shall not input paid-for heating energy to any occupied spaces that contribute to space temperatures to more than 2ºC above the desired inside temperature for more than a total of 20 minutes on any day.

2. If boilers are used as the source of energy for heating, then the total standing losses of the boilers and heating distribution system must not exceed 15% of annual heating energy consumption during occupied hours.

3. Heating energy calculations shall identify the energy (kWh/m2.year) required for the required occupancy related volumes of ventilation air, the extent of heat recovery (kWh/m2.year) on ventilation air, and identify the contribution of each source of internal gains (kWh/m2.year).

4. Designers shall identify the maximum fan power (if any) during occupied hours in Watts/litre.second, and the average annual fan power during occupied hours the heating season in Watts/litre.second. Designers should identify how the full benefits of variable speed control of fan volume are to be achieved.

5. Designers shall identify the peak energy consumption of pumps Watts/litre.second), and identify the annual pumping energy (kWh/m2.year). Designers are advised that they should identify how the full benefits of variable speed pumping are to be achieved.

3.3.4 Pre-heat energy and pre-heat rate of rise – intermittently occupied areas of buildings

1. Pre-heat energy should be minimised whenever possible by allowing internal gains to overheat the building the previous day's occupancy by up to 2ºC, and to use this stored heat to minimise or avoid the need for pre-heat energy.

2. Optimum start accuracy should achieve the desired inside temperature within 30 minutes of the start of occupancy for more than 60% of heating starts during the heating season.

3. The rate of rise of internal air temperature of the building and its contents, when unoccupied, under design conditions, must not be less than 0.3ºC per hour.

3.3.5 Air infiltration

1. The air infiltration maximum allowable infiltration rate shall not exceed 5m3/m2 of façade at 50Pa and testing shall be undertaken as required in the Scottish Technical Handbook 6 for projects where air tightness values have been specified which are lower than that which can be satisfied by robust detail methods

2. Designers using draught lobbies shall explicitly consider the separation between internal and external doors. Door separation and closing times must be arranged to minimise the possibility of both doors remaining open with single person passage.

3. In buildings with mechanical ventilation, inside to outside air pressure differences shall be adjusted such that the maximum air velocity though fully open main doors is less than an average of 0.2m/s under non-gusting wind conditions.

3.3.6 Hot Water Service

1. Fossil fuel based hot water service shall be achieved at a system efficiency that exceeds 50%. That is, heat in the hot water issuing at taps must be greater than 50% of the fuel input.

2. Electrically heated hot water boilers for occupant's use in making hot drinks should not have a standing loss exceeding 10W per occupant

3.3.7 Summertime overheat - design considerations

1. The use of mechanical cooling shall be avoided wherever possible. HTM 03-01 requires that “patient areas only should not exceed 28Cdb for more than 50 hours per annum” but also that “it can generally be assumed that for a naturally ventilated building, the internal temperature will be approximately 3 K above the external shade temperature. For a building with simple mechanical ventilation, the internal temperature can never be less than the external shade temperature and will invariably be higher. Where calculations indicate that internal temperatures will exceed the selected design for a period that exceeds the building design risk, methods of reducing temperature rise should be implemented. Options include:

    - reducing solar and casual gains;
    - the use of chilled beams or ceilings;
    - increasing ventilation rates; or
    - providing mechanical cooling.
    - In some situations it may be possible to alter the thermal mass of the structure to “move” the peak temperature event time so that it occurs outside of the occupancy period.”

2. From the above it can be concluded that a fully cooled building is not necessary to satisfy the HTM and that passive options must form part of the decision making process. A report on the options must be submitted at feasibility stage and enhanced at Stage C before decisions are made to fully mechanical cool any areas other than those listed in HTM 03-01 as requiring mechanical cooling

3. Calculations using appropriate building physics tools must be supplied. In line with BREEAM expectations, credit HEA10, full dynamic simulation is required at detailed design stage with an appropriate weather file for the area,

4. There should be differentiation between areas requiring cooling and areas which can be satisfied by either natural ventilation, mixed mode or mechanical ventilation. Where practically possible, even within a department, cooling should be provided only to the areas having a clinical need and all other areas supplied by other means.

5. Differentiation in system provision should also be made between areas which are continuously occupied, areas to which 24 hour access is required, but which may not be continuously occupied and areas which are intermittently occupied. For further information see sections 4 and 5 of HTM 07-02.

6. The onus is for the designers to be able to demonstrate numerically that the chosen solution is the most carbon efficient that will satisfy the application for each type of accommodation and to design the building accordingly. Reporting by exception is required to highlight to the client where compromise has to be made and to justify why it has been necessary.

7. Whilst infection control is paramount, and the requirements of HAI SCRIBE and HBN 30 must be adhered to, designers should note that there is a body of research which indicates that in low risk situations effective natural ventilation is very much more effective than mechanical ventilation which has not addressed fully reverse flow, failure and poor maintenance issues.

3.3.8 Natural ventilation

1. Where used, the strategy should be developed along with the building footprint. See section 4 of HTM 07-02 for a detailed treatment of the requirements.

2. Air velocities adjacent to occupants must not exceed 0.5m/s for natural ventilation

3. Where natural ventilation is proposed for clinical areas a Computational Flow Dynamic (CFD) model shall be provided to confirm projected operational performance.

3.3.9 Humidification and humidity control (requirement subject to discussion during competitive dialogue)

1. Note that HTM03-01 does not require humidification to any areas including operating theatres, except for specialized applications. Humidification and humidity control adds significantly to both capital and operational energy and maintenance costs and therefore, in line with the HTM, there should be a presumption against the provision unless a special need can be established.

2. The HTM does require however that provision for retrofit of humidification is made to operating theatre air handling units in terms of space and capped drainage. ( clause 3.14)

3. For most developments, this means that there is no longer a requirement to maintain a steam distribution network to serve steam humidifiers, unless required elsewhere for process loads such as sterilisers.

4. The HTM further states that in terms of full temperature and humidity control that “Room temperature and humidity sensors control the heater-battery, humidifier, cooling coil and a re-heater-battery in sequence to maintain a specific room condition regardless of the room load. This is very expensive in energy and can rarely be justified. In healthcare it is only likely to be considered for specialized research facilities.” ( clause 4.89)

5. For operating theatres, note that the HTM allows the supply air humidity to swing between 35% and 70% saturation ( clause 7.19) and the room humidity to swing uncontrolled between 35% and 60% saturation. This allows the most efficient mode of operation and coil sizing to be chosen.

6. All psychometric sizing and controls strategies should therefore take the above into consideration.

3.3.10 Energy recovery devices

1. Energy recovery devices should be fitted to all fresh air systems and all extract systems over and including 1m3/s operating for more than 12 hours /day and plant space allowances and location of supply and extract systems must be calculated to allow this provision by the most efficient means possible. Lack of space on new developments for this provision is not acceptable as a reason for failing to fit a suitable device and architects should make adequate provision for plant rooms and distribution ductwork.

2. HTM 03-01 gives minimum efficiencies for devices and suitable device applications.

3. Controls should allow for recovery of cooling as well as heating energy where applicable.

4. Process heat recovery shall be included where practical to reduce energy e.g. Clinical System Cooling, Specialist water treatment etc. The Contractor shall allow for all interfacing with the specialist and shall provide all heat recovery and interface plant.

3.3.11 Air-conditioning and ventilation systems and controls

1. Filtration standards should not be specified beyond that required by HTM03-01 as this adds maintenance cost and increased energy use. There should be a balance between the cost of the filter and the cost of energy in setting the maximum dirty filter resistances for the BMS alarms – this may vary depending on the motor rating and cost of replacement filters.

2. Note that HTM 03-01 does not specify outright belt driven fans – there are options for direct driven fans as long as provision for prevention of over-temperature by a thermister and lockout relay is made. When selecting a fan drive type, whole life costing should be applied taking into consideration the efficiency of the fan and motor selection and heat gain to the supply system as direct drive fans are often more efficient overall than belt driven, even taking into consideration the heat gain to the air.

3. Note that HTM03-01 does not require belted running standby fans except for life critical applications – see clause 4.61. This again reduces the energy consumed by the fan.

4. When comparing air handling units, total system pressure should be compared and preference given to the selection with the lowest total and lowest fan power as this will provide the lowest fan running costs over the life of the plant. There can be considerable variation between manufacturers due to coil selection and configuration of units

5. Frost/fog coils should, in accordance with HTM 03-01, be set to operate at minimum off coil temperatures to maximize heat recovery efficiency.

6. Humidifiers where fitted should be interlocked with cooling coils to prevent simultaneous operation. If there is no dehumidification function, heating and cooling coils should also be interlocked.

7. Local cooling systems should be interlocked with heating within the space to prevent simultaneous operation.

8. Systems incorporating mechanical cooling and ventilation systems providing a cooling function should be controlled such that simultaneous heating and cooling cannot take place when heating is provided by a separate system.

9. Air velocities adjacent to occupants must not exceed 0.25m/s for forced ventilation systems

10. Advice is given that ceiling level ventilation with substantive opening area within 150mm of ceiling level should be provided to minimise hot air trapped at ceiling level if natural ventilation is used. If the hot air is trapped at ceiling level, this will increase the internal environmental temperature.

11. For intermittent buildings only, if fans are used for night-time cooling, it is not expected that fan power should exceed 0.4W/litre.second, or that ventilation rates exceeding 10ach/hr be used. Noise from fans used for night-time cooling must not cause annoyance to occupants of neighbouring properties. Refer to planning guidance – increase generally less than 5db at boundary over existing night time level.

3.3.12 Electrical energy other than lighting

1. The ratio of electrical energy consumption in kW when un-occupied to kW when occupied (excludes pre-heat and essential loads) must be <7%.

2. High efficiency motors should always be specified for new developments.

3. When selecting transformers and selecting the location, consideration should be given to the transformer efficiency. Oil filled transformers, if a suitable location can be found away from buildings, are more efficient than dry transformers as well as being more compact and require less ventilation. Consideration of losses should be part of the evaluation.

4. Cable installations should be specified according to the guidance of British Standard 7450:199120, equivalent to IEC 1059:1991, 'Economic Optimisation of Power Cable Size', which gives useful guidance on the optimum costing of cable installations. This standard needs to be a requirement of management procurement policy and included in contractual documents in order to avoid the false economy of 'lowest first cost' attitudes. The standard points out that: 'Rather than minimising the initial cost only, the sum of the initial cost and the cost of losses over the economic life of the cable should be minimised.

For this latter condition a larger size of conductor than would be chosen based on minimum initial cost will lead to a lower power loss for the same current and will, when considered over its economic life, be much less expensive.'

3.3.13 Medical and Non medical equipment selection process

1. BREEAM credit Ene15 for non medical equipment shall be achieved.

2. For medical equipment, a schedule shall be prepared identifying any major energy consuming items ( >3kw heat rejection to plantrooms or occupied spaces and/or >10kw rated total energy input) For these items, tender schedules shall require an estimate of energy consumption per year or per cycle as applicable and preference shall be given to the product having the lowest energy consumption provided that the item's performance meets specified requirements.

3. For all equipment, priority must be given to the use of equipment that does not require close control of temperature and humidity.

3.3.14 Computer and other heat generating equipment

1. Provision must be made for direct extract of heat by duct from equipment cabinets in server and communications equipment rooms and where possible for imaging equipment cabinets.

2. Process equipment plantrooms such as sterilizers, reverse osmosis, renal etc should be located on external walls with provision for natural ventilation to remove heat. Mechanical cooling to such spaces must be avoided unless no viable alternative exists.

3. The design team should ensure that adjacent spaces do not suffer from unacceptable heat gain from any plant or equipment areas.

4. Any form of equipment likely to cause additional load to cooling or an unacceptable summertime temperature should be located in a ventilated or unoccupied separate space. This includes items such as photocopiers, chilled water dispensers, refrigerated cabinets etc all of which can reject heat into occupied spaces.

5. All process pipework likely to cause a heat gain to a plant room or occupied space should be insulated.

6. Equipment cabinets must be specified for direct extract from top of equipment cabinets.

7. Priority shall be given to free-cooling over mechanical cooling.

8. Computer and communication rooms shall have a PUE (Power Utilisation Efficiency) no more than 1.6.

9. Subject to fire, acoustics and infection control considerations, consideration should be given to heat recovery from equipment gains into occupied spaces during the heating season.

10. Note must be taken of recent papers from authoritative sources such as Intel, Sun, HP and Cisco that identify supply air temperatures in computer rooms without loss of reliability. Where permitted, external air may be the cooling medium for all but the hottest days.

3.3.15 Metering and monitoring

1. Metering shall be provided as required by BREEAM credits E2 and E3, but in addition a strategy shall be provided by the design team in collaboration with the site energy manager at the start of detail design to ensure that the metering provision not only accounts for the substantive energy uses but also provides cost centre information that is helpful to the client in controlling energy use in operation.

2. Metering shall include power, gas and cooling at all large scale medical equipment.

3. All Energy meters to report to the BMS with integrated target and actual consumption maps provided for each element and point of use.

3.3.16 Cooling Systems

1. If it is established as defined in preceding sections that there is a net cooling need that cannot be met by any combination of fresh air, night cooling, thermal mass alone, then some form of cooling system will need to be considered.

2. Water extracted from bore hole without further upgrading through heat pumps should be considered early in any scheme likely to require cooling as this will require comprehensive site investigation which should be undertaken at feasibility stage.

3. If this is proved not to be viable, ground linked, ground or water source heat pumps should be considered, with storage options to offset peak loads and take advantage of off peak tariffs. .

4. Absorption cooling linked to CHP is to be included in the life cycle cost review to ensure that it is careful costing against a realistic load profile for both cost and carbon savings to ensure that it sized and engineered correctly to provide a meaning full input into the low energy strategy.

5. Chilled water temperatures should be evaluated based on cooling alone unless there is a proven specialized system need for dehumidification.

6. Heat gains to chilled water mains must be calculated and minimized when calculating running loads. Externally run unshaded mains or mains run adjacent to hot services in unventilated spaces will not be considered acceptable.

7. Designers are expected to calculate and specify economic thickness of insulation and continuity of vapour barriers to all chilled services.

8. All the above should be considered as part of a detailed feasibility steady which will be required prior to any agreement to proceed based on conventional chiller system.

3.3.17 Energy profile of alternative products and systems

1. Where through ongoing value engineering alternative products or systems are being proposed, the Contractor and his design team must ensure that an equivalent or better whole life carbon performance will be achieved and should be prepared to commit to the client in writing that this is the case.

2. This applies not just too individual components but also to consequential effects for example, the effect a reduction in specification of glazing has on lighting, heating and cooling carbon emissions.

## 3.3 Building Form and Fabric

The building fabric should be considered as a passive method of limiting unwanted heat transfer. The construction materials and U-values should be selected on this basis. In addition the thermal mass of the structure should be considered as a possible heat sink to store energy which can then be released slowly over time in order to stabilise internal room temperatures and reduce heating and cooling demands.

The building air permeability should be reduced beyond maximum allowable levels in the Building Regulations, from 5 $m^3/h/m^2$ 3at 50Pa. This is to be subject to air pressure testing to demonstrate achievement at practical completion.

## 3.4 Energy Efficiency

The following measures should be considered for the hospital as a minimum in line with best practice building services design:

3.4.1 HVAC

- Where mechanical ventilation is required outdoor air rates to be 12 l/s/person and supplied via a variable flow system based on occupancy detection.
- Energy recovery on all exhaust air streams.

- Free cooling systems.
- High efficiency, modularised, variable flow, central plant providing water for heating and cooling.
- Thermal zoning with individual time and temperature controls.
- Direct cooling of equipment where possible.

3.4.2 Lighting

- T5, energy efficient lamps, with high frequency dimmable ballasts to supplement day lighting.
- Control of artificial lighting via user friendly manual and automatic control by means of photocell, time clocks, PIR, localised 'on/off' and dimmable switching.
- Efficient external lighting that switches off automatically; building access lighting to be a minimum of 50 lamps lumens/watt and car parks 70 lamps lumens/watt.

3.4.3 Potable Water

- Design risk assessments to be provided to back up any use of flow restrictors on sanitary ware.

- Shut off valves to toilet blocks to reduce potable water consumption.

3.4.4 Materials

- Insulation to have a Global Warming Potential (GWP) and Ozone Depleting Potential (ODP) of zero.

## 3.5 Low Energy HVAC

As noted above the use of comfort cooling should be avoided where possible. If required low energy options should be considered such as;

Chilled Beams/Chilled Ceilings (with suitable mitigation to avoid condensation risk)

Take advantage of higher chiller plant COP's due to the chilled water operating temperatures. A further advantage is the improved thermal comfort.

Low Energy Motors

Inverter Drives

Etc.

## 3.6 Displacement Ventilation

To again reduce air handling fan energy and take advantage of higher chiller plant COP's due to the chilled water operating temperatures. This system could lead to an improved internal environment quality as pollutants could be removed directly from the space without further mixing of air.

## 3.7 Low & Zero Carbon Technology

Feasibility studies are to carried out into the potential use of low and zero carbon technologies to reduce carbon emissions associated with the operation of the building. The following example technologies are to be considered;

- Solar Water Heating

  - to preheat domestic hot water.

- Ground Source Heat Pumps

  - to meet heating and cooling demands.

- Combined Heat & Power plant

  -to meet electrical demand, heating and cooling loads (absorption chiller)

- Biomass Boiler

  -alternative fuels to reduce carbon emissions

- Wind Power & Photovoltaics

  -renewable electricity generation

## 3.8 ADB sheet process relating to environmental conditions and low carbon design

### 3.8.1 General principles to apply to ADB sheets

The ADB sheets are a fundamental tool for briefing a design team and have considerable contractual significance in many cases. The environmental sheets in the set should bring together the requirements of the various SHTMs and confirm the overall technical brief for the scheme as well as incorporate any special requirements particular to the scheme. The standards ADBs may conflict with the technical specification requirements.

The contractor shall update the environmental section of the ADB sheets in line with current HTMs, CIBSE guides, in particular LG2, and address the following issues. A sample set will be made available during competitive dialogue.

1. Temperatures are, in general, stated as absolute values. This does not allow a range which can be beneficial when considering passive options.

2. Temperatures are often not defined for summertime - these need to be added.

3. The temperature measure is not defined – this should in general be operative temperature as defined in CIBSE guide A

4. Hours of operation of area and thus plant operating hours and hours for which casual gains are to be applied are not defined. Whilst this may be in the access statement, the actual usage of the room needs to be more closely defined for calculation rather than access purposes.

5. The environmental section of sheets is not up to date with latest HTMs or HBN's. It is understood from the administrator of the ADB sheet licenses that this is planned in the current year, but in the meantime for live projects, designers must bring the set into line.

6. There is no option to qualify whether an area should be naturally ventilated, mixed mode, or mechanically cooled – this should be explicitly stated and agreed with users and client's project manager.

7. Daylighting standard should be specified.

8. Occupancy is defined but not in all cases. It should be clear in all cases from the sheets what level of occupancy is to be assumed for the purposes of environmental calculations.

9. The quality of lighting and mode of control is not defined. General principles can be set but for frequently occurring or specialised rooms, more detail may be useful.

To address the above issues, the following is suggested.

1. State a range for summer temperatures in line with HTM 03-01, relevant HBN's and CIBSE guide A. This has been undertaken for the sample set

2. As above

3. A definition sheet has been provided.

4. Hours of plant operation and occupancy to be stated on each room environmental data sheet. See sample template.

5. This has been undertaken for temperatures and humidity which affect low carbon design for the sample set but needs to be undertaken for all other environmental data such as water, acoustics, fire etc.

6. This can be stated in the notes on the room environmental data sheet. See sample template.

7. This can be stated in the notes on the room environmental data sheet. See sample template.

8. For all sheets other than in transient spaces, state the number of occupants with the room name (as is normal for many spaces). If this is unrepresentative of normal occupancy, for example in a waiting area, where seats may be provided for a maximum, but average is lower, this can be qualified in the notes on the room environmental data sheet.

### 3.8.2 Definition sheet for use with Room Environmental Data ADB sheets

1. Hierarchy of documents relating to the environmental conditions shall be, in order of precedence: statutory standards, latest issue of HTMs, HBNs and any directives, advice or other documentation from the DoH or NHS, the overarching technical specification and finally ADB sheets. Should any conflict in requirements arise, it is the responsibility of contractor to make the client aware and provide best practice advice in the resolution of the requirements.

2. All temperatures stated are operative temperatures.

3. Where lighting levels are stated, refer also to the maximum point illuminance, UGR and position of measurement in table 1 of SLL lighting guide 2.

4. Where summertime temperatures are stated, the upper limit stated is not to be exceeded for more than 50 occupied hours. This does not imply that mechanical cooling is required unless all other means of reducing overheat are not viable. Where mechanical cooling is required, this should be stated explicitly. See clause 3.24 of HTM 03-01.

5. In some instances a range of temperatures is given over which the temperature can float. If this range is in italics, this is the range over which the temperature should be capable of being controlled in line with appendix 2 of HTM 03-01. Care should be taken in evaluating simultaneous plant loads in that the peak plant load is not likely to be the summation of the extremes of the stated range.

6. Unless humidity is stated, the humidity should be assumed to be uncontrolled. Humidity should only be specified where there is a specialised need - see HTM 03-01.

7. Filtration standards shall be based on appendix 2 of HTM03-01. Note that these are supply filtration standards. There may be specific environmental pollution issues or infection risk issues which require either extract filtration as well or increased supply filtration standards. These should be briefed specifically for areas affected.

## 3.9 BREEAM requirements

### 3.9.1 Process and general issues

The contractor shall undertake a BREEAM Healthcare assessment of the main hospital development. The client has employed a BREEAM Healthcare assessor to undertake monitoring of the assessment and assist the client in provision of client side information. The contractor shall however employ their own assessor to undertake the assessments through to final certification. All costs associated with this including all BREEAM QA fees, licensing, training and any other charges that BRE may levy in the course of the contract shall be included in the contract cost.

Where BREEAM Excellent is referred to, this shall mean the final certificate rating obtained following post construction review.

The requirement is to achieve a BREEAM excellent and the contractor shall ensure that the design, management, processes, coordination and execution of the works achieve this rating.

### 3.9.2 Resources, access and information

These requirements shall be read in conjunction with the full BREEAM for Healthcare 2008 manual which is freely available from the BREEAM website. The scheme shall be registered as a 2008 assessment, and the design stage assessment completed within 5 years of registration.

The main contractor shall provide all necessary resource, staff, materials etc to fulfil these obligations, including attendance to the client's assessor for periodic site visits and review meetings as may be requested by the client's Contract Manager and as may be required to satisfy the client's assessor that the process is being undertaken in a timely and satisfactory manner. Review meetings must be attended by the contractor's assessor and project manager. Progress reports, predicted and actual running scores shall be made available to the client's assessor as requested, and in any case not less than every three months.

The contractor shall make available to the client's assessor any evidence in used in support of the assessment on request and within 2 weeks of such a request being made.

The BREEAM certificates at design and post construction stage shall, on receipt be immediately issued as original documents to the client's project manager. 2 copies are required.

Access to the site shall be permitted at all reasonable times subject to safe access being possible to facilitate building/ site inspection and photographic. Site inductions & personal protection equipment should be provided for all building / site inspections, with complete access to all areas.

The contractor shall assist and be proactive in obtaining information from the client. The clients and their assessor will endeavour to provide all required information. Some client side credits may however not be possible to provide due to regional and organisational factors. The client side credits which are to be achieved shall be agreed during competitive dialogue. The remainder of the credits which are required for the excellent rating shall include a margin such that the achievement of the rating is not wholly dependent on the client side credits. This margin shall also be agreed during competitive dialogue.

The detailed requirements set out the contractor's responsibilities, however it is the contractors responsibility to ensure that the latest version of BREEAM Healthcare 2008 is used, which may vary these requirements and to ensure that all addendums, variations and process notes are incorporated in the assessment and reports.

### 3.9.3 Changes

Where changes have occurred since design stage assessment for whatever reason, the amended features should still comply with the BREEAM requirements.

It is required that no changes to any feature, design, process, material , supplier etc. which affects the BREEAM score shall be implemented unless the impact is fully disclosed to the Contract Manager and clients assessor and an updated score provided to demonstrate that the excellent rating has not been compromised.

### 3.9.4 Compulsory and Mandatory credits

The standard mandatory credits required for excellent ratings must be achieved. These are not specifically noted through the following text as BRE may vary these from time to time.

In addition, credits which may not be mandatory, but which contribute to low carbon design shall also be achieved. These are as follows:

Man 1 commissioning – 2 credits
Man 12 Whole life costing – 2 credits
At least one credit for Hea 1 Daylighting
Hea 7 - Potential for natural ventilation – 1 credit
Hea 10 - Thermal comfort – 1 credit
Ene 1 – CO2 emissions 6 credits ( these are mandatory for excellent rating)
Ene 2 – sub metering of substantial energy uses – 2 credits ( 1 credit mandatory for excellent rating)
Ene 3 – sub metering of areas – 1 credit
Ene 4 – external lighting – 1 credit
Ene 5 – LZC technologies – 2 credits, which includes for 10% of the total building energy demand to be met form a LZC source, unless otherwise instructed by client. ( 1 credit mandatory for excellent rating)
Ene 8 – Lifts – 2 credits
Ene 15 - provision of energy efficient equipment where part of the contract– 1 credit

All other credits are to be achieved at the discretion of the contractor and shall be evaluated against cost, benefit and clinical or operational need as required to achieve the excellent rating.

## 4.0 Low Carbon Technologies

### 4.1 Solar Water Heating

Solar hot water heating is considered potentially suitable for the development as there is year round domestic hot water demand, during daytime occupied hours, that can be meet without the need for gas or electrical plant.

Solar thermal panels could be roof mounted, ideally south facing at an angle between 30 º and 40 º, and could capture solar energy to generate domestic hot water.

The system comprises of; thermal panels, distribution pipework, pump and storage cylinder. A gas boosted standby system cold also be included to ensure supply and avoid legionella risk.

### 4.2 Ground Source Heat Pumps

Ground Source Heat Pumps (GSHP's) should be considered for the development to reduce the central plant heating and cooling loads. An underground network of piping could allow the earth to be used as a heat source/sink.

Energy recovered or removed from the earth could be upgraded via an electrically driven heat pump in order to generate useful water temperatures for both heating and cooling.

The heat pumps would be terminal and linked to the water loop or the heat pumps could be central and the water loop connected to terminal fan coil units...and/or....active beam system etc.

A closed loop system has been considered as a potential source. The closed loop system circulates water (or another fluid) through a system of buried pipework exchanging heat with the earth, the borehole field being located in the substantial landscape areas of the new development.

Geothermal Bore hole testing has been undertaken as part of the SI works and reference should be made to these results when undertaking evaluation of this potential heating/cooling source.

### 4.3 Co-generation/Tri-generation

Co-generation should be considered for the development to reduce the site $CO_2$ emissions. Co-generation is the production of electricity on site using a reciprocating gas engine combined with the effective use of the heat produced in the electricity generation process.

It is considered suitable for this application as the waste heat recovered can be used to meet the space heating and domestic hot water demand ...and/ offers the opportunity for the waste heat to be coupled with an absorption chiller, in tri-generation mode, to generate chilled water to meet the cooling demand.

Co-generation is a very efficient way of generating electricity, heat and cooling from natural gas, which has the lowest greenhouse gas co-efficient of the fossil fuels, a 15-40% energy saving is achieved compared with the separate production of electricity and heat.

The associated $CO_2$ emissions are further substantially reduced when bio-fuels are considered.

It should be noted that the current outline designs for the laboratory building consider the use of tri generation which could obviously be adopted elsewhere on site.

### 4.4 Biomass

Biomass has been considered for the development as an alternative fuel to gas for the boilers. Biomass fuel is typically either wood chips or wood pellets and as a replenishable source which absorbs $CO_2$ it is considered a carbon neutral fuel. Wood chips or wood pellets could be used in the boiler to directly generate hot water for space and domestic hot water heating.

Current investigations have suggested that the transport movement associated with biomass could impose some significant site traffic issues. As a consequence this solution has not been developed. However, the potential use of bio liquid fuel is a potential solution and should be evaluated.

### 4.5 Wind Power

Electricity generation via wind power could be considered for the development as a $CO_2$ free method of generation. A building mounted wind turbine is considered most appropriate due to development location...or a standalone wind turbine is considered most appropriate due to the development location.

Wind power is a very effective method of electricity generation and outputs range from Watts to Megawatt outputs. The rotation of the blades drives a generator either directly or via a gearbox using a DC to AC inverter to supply the development directly, charge batteries for future consumption or supply the grid.

Excess electrical consumption can be sold back to the grid which could improve the system payback or alternatively stored. A grid connection could be provided as back up as wind power is an intermittent supply.

The exemplar building form would appear to offer real opportunities for wind turbine usage, however we would draw attention to the Planning Condition 35 which refers to the requirements to comply with Aviation Authority Guidelines and the helipad requirements.

### 4.6 Photovoltaics

Electricity generation via Photovoltaics (PV) is considered a potential source for the development as a $CO_2$ free method of generation. Electricity could be generated from solar energy via semiconductor cells mounted on roof (and/ or) facade integrated. These could be ideally south facing at an angle between 30° and 40°.

Multiple PV connected modules could be required, with a maximum achievable efficiency of 15-18%. The DC output could be converted into an AC output through an inverter for direct use or to charge batteries. A grid connection could be provided as back up as it is not expected that the PV's could meet the whole building load.

## 4.7 Rainwater Collection

Rainwater collection should be considered for non clinical areas to offset potable water demands for toilet and urinal flushing. Rainwater collected from the roof of the development filtered and then stored in a tank potentially located in the main building basement.

The storage tank would be topped up with mains water when the collected rainwater cannot meet demand. The mains water top controlled by an electronic level indicator incorporating an overflow to the sewer during times of high rainfall.

The system can reduce potable water use and subsequent water and sewer charges.

| Section 8 | Scope of Works | 28 |
| Section 9 | Graphics | 29 |
| Section 10 | Interactive Support and Utilities Management | 32 |

## 1.0 Introduction

### 1.1 General

This document has been prepared as a benchmark to allow each contractor to formulate compliant BMS proposals and commence their system design based on the appropriate criteria.

The contractor shall provide a comprehensive specification and system proposal document for the BMS indicating the level of system integration proposed.

### 1.2 System

An independent Internet Protocol network shall be provided throughout the building to support communication, interaction, data transfer, and data retrieval from and between the various engineering systems that provide service to the buildings. The Building Management System shall be fully integrated with this network and shall provide control over the engineering plant and facilities to enable the management of maintenance and energy usage.

At this stage of the development, the following systems shall be fully compatible with or at the very least be provided with fully functional gateways to the engineering network. (Fully functional means the ability to graphically interrogate each system down to component level from the BMS GUIWS's):

- Heating, Ventilating and Air Conditioning systems
- Local Steam Generation Plant
- Sustainability Plant
- Chilled Water plant
- Heat Pumps
- Site Renewables
- Metering
- Standby Generation plant
- UPS and IPS
- MV and LV switchgear and transformers
- Fire Detection and Alarm
- Smoke Control and Dampers
- Access Control
- CCTV
- Intruder Detection
- Medical Gases
- Nurse Call
- Staff Alarms
- Pagers
- Medical Cabinet Alarms
- Lifts and Escalators

- Blood Fridge management & monitoring system.
- Emergency lighting management system including automatic testing and recording functions.
- General lighting controls, day light controls & presence detection.
- Room occupancy control where required
- Decontamination services RO plant
- Decontamination tracking system
- Decontamination AER cycle management system
- Main water supply, pressure monitoring status
- Sub-Systems indicated in section 4 below.
- Any other systems that would traditionally have been considered for inclusion in a BMS system

### 1.3 Changing Behaviour

The BMS shall provide and integrate technology to facilitate change in building occupant's behavior which is mandatory to reach the future energy targets.

Individual occupant room set point adjustment shall be provide for BREEAM credit HW.

Information shall be presented at department receptions, in ward staff bases and in single bed accommodation to provide a level of comfort control via temperature set point adjustment, this shall be matched with a presentation of the forecasted energy saving for each half degree of set point change.

The display will provide measurement of CO2 level, humidity, temperature and indicate if natural ventilation is available via opening of windows.

## 2.0 Engineering Network

The network shall comprise a series of hubs, provided to suit the building layout and wiring topology generally located in plant areas, linked to a core switch and server located in the FM Office within the Energy Centre. The network shall be totally independent of the building IT network save for an interface, which shall be engineered via the server.

Each hub shall comprise a switch which shall communicate with local field devices via Category 6A copper cable infrastructure and shall communicate with other hubs and the server via multi pair single mode blown fibres.

The contractor shall provide a fully functioning network, which shall operate entirely on its own or shall seamlessly form part of the wider hospital network if so required. In any case the network shall be fully equipped to enable access from a remote PC via the hospital IT network and via the World Wide Web.

The exact specification of core switches, switches and other “active” equipment shall be agreed at the time of order to take advantage of continual market development. Allowance shall be made to cover for expected developments in pricing and for ensuring that the selected equipment is fully compatible with the Hospital IT network to enable future integration if required. The Board’s advice shall be sought in this respect.

All of the above systems shall be configured to interface in compliance with the internet protocol.

The final wiring between the field devices and the Engineering hub shall be to the ratified Category 6A standard UTP cabling presented at RJ45 outlets. Before going to contract a further review of ratified standards shall be undertaken to assess whether a newer standard has been ratified and whether it is appropriate to adopt such newer standard. The structured cabling arrangement shall be configured according to the recommendations of the Health Guidance Note: “Structural Cabling for IT Systems”.

The installation shall be carried out by an authorised system house installer in order to ensure future compatibility with the Hospital IT network if required. The installer shall use only single supplier Premise Networks components connected together in a system as intended by the supplier. The complete installation shall be provided with the supplier’s manufacturer’s system warranty. The installation shall be carried out to ensure that the requirements of the warranty are met in all respects.

Engineering Hubs shall be located in plant areas on all floors to ensure that the 90 metre rule for the run out of the final circuit shall not be exceeded. The plant areas shall be provided with adequate passive ventilation.

The Engineering Hub cabinets shall be adequately sized to accommodate the required equipment with allowance for 25% future expansion. The cabinet shall be equipped with the necessary Category 6A patch panels to serve the area, the necessary fibre patch panel to connect to the core switch/server, the necessary hub switch and a 10 way power distribution socket outlet strip supported by a 2 kVA UPS with 10 minute standby capacity.

All Engineering hubs located in the building shall be meshed vertically with 7-chamber fibre optic tubing from the Core switch/server cabinet in the FM office within the Energy Centre.

The FM office shall be provided with adequate ventilation and cooling. The core switch/server cabinet shall be equipped as the Engineering hub cabinets and in addition shall include the core switch necessary to operate the network and interface it with the Hospital IT Network. The cabinet shall also include the server which shall be sized to store and run all necessary proprietary software associated with the connected systems, all necessary software to run the network, data storage for all associated systems, including, energy usage logs, plant usage logs, Access Control databases, CCTV image recordings, etc. The contractor shall review the load of the equipment in this cabinet and size the UPS to support this load with a 1 hour standby capacity.

A fully functional workstation, complete with all necessary peripherals including both A4 black and white printer and A3 colour printer shall be provided and located in the FM Office. This work station shall be configured as the master control station for the overall system.

Each Engineering hub shall be connected to the core switch/server cabinet via duplicate backbone single mode fibre optics blown into the tubes. (Single mode and blown fibre selected to ensure compatibility over the full site with the Boards network cabling). Fibre optics shall comply with EIA 568 Building Wiring Standard.

**Fibre Optic Installation**

The fibre network shall be configured in star topology from the core switch hubs.

Fibre optic tubing shall be flame retardant, low smoke and fume zero halogen standard and the installed fibres shall offer the following characteristics:

- Minimum band width 500 MHZ KM @t 1300 nm, 200 MHZ KM @ 850 nm
- Attenuation less than 3.2dB/KM @ 850 nm and 0.8 db/KIM @ 1300 nm
- Refractive index 1.495 @ 850 nm and 1.490 @ 1300 nm.

Fibre optics shall retain their initial specification performance over the range of temperature -10°C to +40°C for a minimum period of 25 years.

The minimum bending radius that any fibre optic shall be subjected to either during installation or when fully installed shall be 10 x the overall diameter of the tubing.

Different colours shall be used to distinguish BMS from ICT cabling.

All fibres shall be labelled at each end. The text format shall be agreed prior to the commencement of the installation.

A standard termination interface shall be used for fibre cabling.

Multi pair Single Mode Fibres shall be terminated using standard ST-11 duplex connectors on a 1U patch panel cassette. A 1U horizontal cable management bracket is to be installed underneath each patch panel.

Individual patch panels shall be supplied and installed for the termination of all fibre optic cables within the patch cabinets.

Every panel shall be equipped with a slide and tilt drawer that allows easy access to the inner patch panel during and after installation. The drawer shall be firmly locked into its closed position by two quick release nylon snap latches.

All patch panels shall be labelled and labels shall be fixed directly onto each outlet on the patch panel. The text format shall be agreed prior to the commencement of the installation.

## 3.0 BMS Standards

The building management system shall comply with the following: -

- The Building Regulations, including Section 6 Energy
- Health Technical Memorandum 2005
- NHS Model Engineering Specification C54
- The BMS shall have regard to SHTM 2005, and to the requirements of other SHTM's & HTM's including HTM 06-01, 06-02, 06-03, SHTM 2007, SHTM 2014, HTM 03-01, and SHTM 2027.
- EMC Directive 89/336/EEC

Functional guidance in relation to the works can be found in: -

- British/European Standards
- British Standard Codes of Practice
- CIBSE Guides / Codes – Commissioning /metering etc.
- BSRIA Publications
- BREEAM
- SPP6
- PAN 84

## 4.0 BMS Overview

The computer-based system shall provide Direct Digital Control (DDC) to control, monitor and provide historic data logs for the relevant equipment and processes. The BMS shall utilise a network of standalone DDC controllers associated with each equipment/plant system. Controllers shall communicate using an open communication protocol in accordance with ISO 16484-5 and CEN TC247 at management and automation levels. Use of open protocols shall also allow the integration of plant manufacturer's bespoke controllers/control strategies where applicable.

The BMS shall communicate with the existing system(s) within the estates department and must be fully compatible, allowing full access to view, edit and configure all parameters within the system. The contractor shall allow for an additional P.C front end for administration and programming. The front end shall connect to network controllers via the Engineering network. The front end shall be covered by the 1hr UPS back up for the Engineering Network server.

The BMS front end shall access real time data from the BMS network and have password security and allow users to view and edit all BMS values via user friendly colour graphic displays as well as receive alarms and logged data.

Network controllers shall be located in major plantrooms and key riser locations and connect to a field network of DDC controllers associated with each equipment/plant system. The network controllers shall also provide custom ASCII communication drivers for communication to third party systems and devices to provide a monitoring function via software interface in place of hardwired where appropriate.

Consideration shall be given to adopting a wireless field network for the DDC controllers. Such a wireless network would be based on the IEEE 802.15.4 standard and use a frequency range of 2.4GHz. Each network node shall function as a router and the mesh network shall have a proactive discovery function to constantly search for and remember optimal linkages, providing a diverse routing capability. The BMS contractor shall provide a wireless network graphical commissioning and maintenance tool, where network display screens graphically present the mesh network, all the devices in it and their connectivity levels. A facility to map the wireless network onto floor plans shall be provided to accurately reflect the location of each wireless node.

The DDC controllers shall also communicate on a 'peer to peer' network level with frequency inverters to allow full bi-directional data transfer to eliminate BMS point duplication and provide more efficient performance, monitoring, alarming and metering.

The BMS shall include the facility to monitor intelligent utilities meters via an industry standard protocol interface (e.g. Bacnet or Modbus), whereby all available metering information shall be available on the BMS.

Information shall be presented at department receptions, in ward staff bases and in single bed accommodation to provide a level of comfort control via temperature set point adjustment, this shall be matched with a presentation of the forecasted energy saving for each half degree of set point change.

The BMS shall generate escalating alarm screens when plant is run under manual control.

The BMS systems software must be fully integrated and interfacing with all major systems including: -

- Fire Detection and Alarm
- Smoke Damper Control System
- Local Steam Generating Plant
- Stair Pressurisation Systems
- Chillers and Heat Pumps
- Sustainability Plant
- Plug & Play' AHU Control Systems
- Boilers and Pumping Equipment
- Gas Boosters
- Boosted Potable Water Pumps
- Water Storage Tank Levels
- Water Storage Tank Temperatures
- Helipad Fire-fighting Systems
- Packaged HWS Generator Plant incorporating Solar Panels
- Water Filtration Plant
- Renal Water Plant
- Generators
- Meters
- Inverters
- MV/LV Electrical Switchgear
- Power Change Over Units
- Transformer Temperatures
- Fuel Storage Tank Levels and Fill Alarms
- Intruder Detection and Alarm
- Access Control
- Closed Circuit Television
- Nurse Call
- Medical Gas Alarms
- Sprinklers
- Gas Fire Extinguishing Systems
- IP Telephony
- Asset Location System
- Staff Alarms
- Staff Pagers
- Staff Voice Communication
- IPS
- UPS
- Site Renewables

- LZC systems
- EPC
- Nurse Base Information
- Water Storage
- Renal Water
- Isolation Room
- Surgeons Panels
- Water Storage and pressurisation equipment
- Water Distribution Leak Detection
- Energy Centre  Water Leak Detection
- Energy Centre  Fuel System Leak Detection
- Fuel Storage and pumping equipment.
- Automated Material Transfer Systems
- Pneumatic transfer systems
- Specialist AC systems
- Entertainment Systems
- Lifts
- Escalators
- Blood Fridge management &  monitoring system.
- Emergency lighting management system including automatic testing and recording functions.
- General lighting controls, day light controls & presence detection.
- Room occupancy control where required
- Decontamination services RO plant
- Decontamination tracking system
- Decontamination AER cycle management system
- Main water supply, pressure monitoring status
- Major Health Equipment

Integrated systems information shall be presented in a layered presentation format using standard layouts, symbols and colour schemes agreed with the client. The minimum level of functionality required for the integrated systems is shown in the table below: -

| **Integrated System** | **Indication** | **Graphic Interaction** |
|---|---|---|
| Fire Detection and Alarm | Addressable device status (normal, alarm, fault) for all devices. Fire panel fault, test, and override. | Monitor progress of fire over split screens with alarm history and ongoing mapped events, Isolate, Silence, evacuate, test, link to maintenance schedule |
| Smoke Damper Control System | Damper open/closed/fault status. Fully automated complete with reset facility.<br>Fireman's override switch status. | View status and alarms. link to maintenance schedule. |

| **Integrated System** | **Indication** | **Graphic Interaction** |
|---|---|---|
| Local Steam Generation Plant | Operating status and efficiency<br>Energy consumption<br>Alarms<br>Temperatures, flow switches etc. | View status and alarms. link to maintenance schedule |
| Stair Pressurisation | System inputs and operating status,<br>Alarms | Monitoring, link to maintenance schedule |
| Fireman's override | Switch status | Monitoring, link to maintenance schedule |
| Chillers and Heat Pumps | Operating status and efficiency<br>Energy consumption<br>Alarms<br>Temperatures, flow switches etc | Monitoring, Scheduling set point adjustment and link to maintenance schedule |
| Sustainability Plant | Operating status and efficiency<br>Energy consumption<br>Alarms<br>Temperatures, flow switches etc | Monitoring, Scheduling set point adjustment and link to maintenance schedule |
| 'Plug & Play' Air Handling Units with Integral Controls | Operating status and efficiency<br>Energy consumption<br>Alarms<br>Temperatures, flow switches etc<br>Pressure Regimes | Monitoring, Scheduling set point adjustment and link to maintenance schedule |
| Boilers and Pumping Equipment | Operating status and efficiency<br>Energy consumption<br>Alarms<br>Temperatures, flow switches etc | Monitoring, Scheduling set point adjustment and link to maintenance schedule |
| Boiler House | Laired presentation schedule, local steam generation plant. | Interface with PM5 compliant unmanned boiler house alarm system. |
| Gas Boosters | Operating conditions<br>Alarms | Monitoring, set point adjustment and link to maintenance schedule |
| Water Pumps | Operating conditions<br>Alarms | Monitoring, Scheduling set point adjustment and link to maintenance schedule |

| **Integrated System** | **Indication** | **Graphic Interaction** |
|---|---|---|
| Helipad Fire-fighting Systems | Status (normal, alarm, fault). Fire panel fault, test, and override. | View status and alarms. Link to maintenance schedule |
| Packaged HWS Generator Plant incorporating Solar Panels | Operating conditions i.e. temperature, flow rates<br>Pump Status<br>System Alarms<br>Power Output | Monitoring, Scheduling set point adjustment and link to maintenance schedule |
| Generators | Operating conditions<br>Alarms<br>Power Output | Monitoring, Scheduling, link to maintenance, link to plant reinstatement and load shedding |
| Meters | Metered data | Monitoring, link to Utilities Management software |
| Inverters | Operating status<br>Motor current consumption<br>Power consumption<br>Speed and frequency<br>Manual Override | Scheduling, link to maintenance, speed control, changeover with flying start and link to Utilities Management software |
| HV/LV Switchgear | ACB status/tripped<br>Bus Coupler status<br>Power consumption<br>Load profile information<br>Logged data<br>ASCO switch status<br>Fault and alarm conditions<br>UPS/IPS and battery status | Monitoring, link to Utilities Management, load management software and link to maintenance schedule |
| | Laired presentation schedule, HV & LV switch gear | Include voltage profile monitoring, alarm and trend recording. |
| Intruder Alarm | Alarm zone status (set/ unset/ fault/ alarm)<br>Alarm panel fault | Monitoring , arm/disarm zones<br>Adjust zone time schedules |

| Integrated System | Indication | Graphic Interaction |
|---|---|---|
| Access Control | Door status, forced entry, invalid attempt, antipassback violation, areas, personnel, reports, event log, personnel details. | Card allocation, enrolment, video badging, set access privileges, set areas, set time zones to doors personnel and areas. Link to maintenance schedule |
| CCTV | View live and recorded CCV images embedded within graphical displays. Matrix display with simultaneous playback from multiple cameras. | Camera/image selection, PTZ camera control, smart searching of selected footage. Link to maintenance schedule |
| Nurse Call | Alarm and fault | Monitoring. Link to maintenance schedule |
| Medical Gas Alarms | Alarm and fault | Mimic gas alarms, monitoring plant status, and local valve alarms link to maintenance schedule |
| Sprinklers | Valve and System Status | Monitoring.system opearation and faults, link to maintenance schedule |
| Gas Fire Extinguishing System | Operating Status | Monitoring.system opearation and faults, link to maintenance schedule |
| IP Telephony | Alarm and fault | Fault Monitoring |
| Asset Location System | Location via Mapping within 3m accuracy. | Location Monitoring via RFID, link to maintenance schedule |
| Staff Alarms | Operating Status<br>Fault | Monitoring, alarm annunciation, link to maintenance schedule |
| Staff Pagers | Operating Status<br>Fault | Fault monitoring, link to maintenance schedule |
| Staff Voice Communications | Operating Status<br>Fault | Fault monitoring, link to maintenance schedule |
| IPS | Operating Status<br>Alarm/Fault | Monitoring, link to maintenance schedule |
| UPS | Operating Status<br>On Battery/Fault | System status monitoring, link to maintenance schedule |

| Integrated System | Indication | Graphic Interaction |
|---|---|---|
| LZC Systems | Operating status<br>Power consumption<br>Energy provided | Monitoring, Scheduling set point adjustment and link to maintenance schedule |
| EPC | System summation and graphic display | Monitoring and remote display |
| Nurse Base Information | Electrical, Heat and Cooling Energy summation and graphic display | Monitoring, set point adjustment and local display |
| Department Information | Electrical, Heat and Cooling Energy summation and graphic display | Monitoring, set point adjustment and local display |
| Renal Water | Operating Status<br>Power and Water consumption<br>Fault | Active mimic of each system front end, monitoring and link to maintenance schedule |
| Isolation Room | Operating Status. Pressure differentials.<br>Power and Water consumption<br>Fault | System monitoring, display at entrance door, link to maintenance schedule |
| Surgeons Panels | Mimic of panel Indications. Clocks, lighting, IPS/UPS, mains power, generator power, UCV/HVAC status, Temperature, Humidity, air sampling, Medical gas alarms and AGS system indicators. | Active mimic of each surgeons panel. |
| Water Storage and pressurisation equipment | Operating status and efficiency<br>Energy consumption<br>Alarms<br>Temperatures, flow switches etc | System monitoring, scheduling and link to maintenance schedule |
| Water Distribution Leak Detection | Major leak detection in water and heating service Pipework from energy centre. | Monitoring. link to maintenance schedule |
| Energy Centre Water Leak Detection | Leak detection in water tank bunds within energy centre. | Monitoring. link to maintenance schedule |
| Energy Centre Fuel System Leak Detection | Leak detection in fuel tank bunds within energy centre. | Monitoring. link to maintenance schedule |
| Fuel Storage and pumping equipment. | Operating status, Fuel consumption, Fuel levels. Fill point and level alarms | System monitoring, scheduling and link to maintenance schedule |

| **Integrated System** | **Indication** | **Graphic Interaction** |
|---|---|---|
| Automated Material Transfer Systems | System healthy.<br>Power Supplies healthy | Operational monitoring. link to maintenance schedule |
| Pneumatic transfer systems | System healthy.<br>Power Supplies healthy | Monitoring. link to maintenance schedule |
| Specialist AC systems | Temperature, Humidity, plant status, fire status, leak detection environment alarms | Monitoring, Scheduling, set point adjustment and link to maintenance schedule |
| Entertainment Systems | System healthy.<br>Power Supplies healthy | Monitoring. link to maintenance schedule |
| Lifts | System healthy.<br>Power Supplies healthy | Monitoring. link to maintenance schedule |
| Escalators | System healthy.<br>Power Supplies healthy | Monitoring. link to maintenance schedule |
| ICT Server Rooms | Temperature, Humidity, plant status, Vesda status, leak detection environment alarms | Monitoring, Scheduling, set point adjustment and link to maintenance schedule |
| ICT Node Rooms | Temperature, plant status, Vesda status, leak detection environment alarms | Monitoring, Scheduling, set point adjustment and link to maintenance schedule |
| Blood Fridge management | Serial and volt free contacts | Monitoring and recording status & faults |
| Emergency lighting | System management | Automatic testing and recording functions. |
| General lighting controls | System management | Day light controls preset dimming and presence detection |
| Room occupancy control | System management | Monitoring and recording status outputting signals to room management systems |
| Decontamination services | System Monitoring | Monitoring and recording status & faults |
| Decontamination tracking | System Monitoring | Monitoring and recording status & faults |
| Main water supply | System Monitoring | Pressure monitoring and alarm annunciation |
| Major Health Equipment | Operating Status<br>Power consumption<br>Fault | Monitoring |

The system shall also contain facilities to incorporate asset protection software.

Certain levels of interaction are required between the above systems, particularly between intruder, access and CCTV where camera presets are required to respond to particular intruder alarms or access violation events, switching from low to high frame rate.

The integrated control platform shall reflect all system interactions within the graphical environment to display the relevant information on the same graphical display to provide a user friendly and intuitive format together with clear instructions where required.

Tenderers shall provide details, including project references for BMS integration and interfacing capabilities in accordance with the above requirements.

## 5.0 BMS Equipment and Facilities

The BMS equipment shall generally consist of the following: -

- Graphical User Interface Work Station – Front Ends (GUIWS) will be located within Estates Office, Fire Control Room & Energy Centre.
- Server
- Data Storage
- Portable User Interfaces (Laptops, PDA's, portable keypads etc)
- Network Controllers
- DDC Controllers housed in distributed control enclosures
- Frequency Inverters
- Motorised Control Valves and Damper Actuators
- Sensors, Switches and other field mounted control & monitoring devices
- Interactive behavior changing displays

### GUIWS

The graphical user interface Work Station shall provide the following facilities:

- Alarm annunciation, management, logging and reporting
- Plant operating status monitoring, logging and reporting
- Energy metering and monitoring
- Environmental conditions monitoring, logging and reporting
- Scheduling, adjustment and configuration.

Alarms shall be categorised depending on their criticality and at least 5 categories shall be available, with user defined routing and annunciation options for each alarm. Highly critical alarms shall be routed to a 24hr-manned position and the BMS shall have the facility to send alarms via SMS text message, email or to portable PDA.

A reports generation facility shall be provided whereby reports may be generated automatically at a scheduled time or triggered by an event. The reporting function shall also allow custom, user-defined report generation.

The BMS shall log energy consumption via the connected utility meters throughout the hospital. The BMS shall have the facility to export energy data to third party software to demonstrate the energy performance of the building in accordance with stipulated requirements.

### Server

The server shall be sized to store and run all necessary proprietary software associated with the connected systems, all necessary software to run the network, data storage for all associated systems, including, energy usage logs, plant usage logs, Access Control, CCTV etc.

**Storage**

The storage shall be sized to accommodate copies of all necessary proprietary software associated with the operation of the BMS and all interface systems together with all input data to allow access of system archive information for a period of 24 calendar months.

The storage shall be industry standard raid configuration with resilience and automatic redundancy.

Archive information shall include:
Energy usage logs, water usage logs, plant usage logs, plant alarm logs, zone temperature logs, zone humidity trend logs, access control databases, CCTV image recordings, etc.

**Portable User Interfaces**

Local interrogation and adjustment shall be carried out by portable user interfaces. Wireless connection shall provided in the main plantroom areas or otherwise via data connection at the local DDC controller or controls enclosure. Local adjustment and overrides shall be notified and logged at the G.U.I P.C. The BMS shall be designed generally to prevent unauthorised tampering and cases of manual override causing excess energy consumption.

**Network controllers**

Network controllers shall be as described in the overview above and shall be located at key locations throughout the hospital.

**DDC Controllers In Distributed Control Enclosures**

DDC controllers shall carry out the control and monitoring of plant and equipment as well as local metering and logging functions. The controllers shall be housed in control enclosures in a distributed configuration to suit the staged delivery and the off site fabrication and testing of the plant systems served. This shall comprise for example one enclosure per AHU and so on.

Each enclosure shall have a system Auto/Off selector switch, panel live and common fault indication lamps and local reset pushbutton.

DDC Controllers (with the exception of terminal control and monitoring only) shall incorporate three position manual override switches to allow selection of On, Off or Auto for each output state. These switches shall form an integral part of the controller and provide feedback to the BMS. In addition each analogue output shall be equipped with an override potentiometer to allow manual adjustment of the signal over it's full range, when the three position switch is set to the 'On' position.

Each distributed enclosure shall have space to cater for a 25% expansion in BMS points by means of the addition of appropriate plug in input/output modules.

**Frequency Inverters**

Frequency inverters shall be fed directly from section boards and mounted adjacent to the motors served to provide soft start, metering and operational performance monitoring capabilities via open protocol links to the BMS DDC controllers. All motor drives above 1.1Kw shall be provided with an inverter.

**Motorised Control Valves and Damper Actuators**

Motorised control valves and damper actuators shall be suitably selected and sized. Manual overrides, spring return and auxiliary switches for interlocking shall be provided where required. (System alarm to be generated and escalted when manual override is activated)

**Sensors, Switches and Field Devices**

Sensors, switches and field devices shall be connected to control enclosures and shall perform the control and monitoring functions listed in section 5. Where the BMS can derive accurate status information by intelligent means for example via protocol interface or intelligent alarming functions these shall be favoured to remove single point of failure.
Sensors shall be calibrated and maintenance to include corrections for drift and recalibration.

**Meters**

The BMS shall be linked to the various system meters and equipment drives to log and indicate energy usage throughout the Hospital and Energy Centre buildings including the following minimum requirements.

- Main Heating Systems fuel usage
- Secondary Heating Systems fuel usage
- Renewable source inputs
- Main Electrical consumption meters
- Main water consumption meters
- Main Cooling Systems power consumption meters
- Sub-metering of department power usage
- Sub-metering of department heating usage
- Sub-metering of department HWS usage
- Sub-metering of department cooling usage
- Sub-metering of high water usage department usage

The metering graphics shall be set up in parent-child configuration to map energy use from department layouts through building sectors to whole buildings and energy centre.

The metering shall also include all requirements for the Contractors targeted BREEAM credit.

**Automatic Monitoring and Targeting (AMT)**

The BMS shall be configured for Automatic Monitoring and Targeting with reporting to ensure efficient operation of the plant and systems especially during the commissioning and extended hand-over period.

The BMS shall also be interconnected to the Board's AMT system which is presently located within the site Clock Tower. The BMS software script shall be provided to ensure that all energy usage figures required for the AMT shall be available for use in the system.

**Power Autonomy and Emergency System Monitoring**

The BMS monitors all equipment and it is imperative that the information gathered is retained and is available in the event of loss of mains power.

All out stations, communications and network equipment shall be equipped with battery or UPS backup to provide one hour autonomy.

The main GUIWS and it's associated accessories, screens, and printer shall be equipped with a UPS backup to provide one hour autonomy.

The Contractor shall configure all elements of the system to allow monitoring of the emergency systems during all failure scenarios and this facility shall be demonstrated during the system Integration Testing. The Contractor shall carry out any modifications highlighted during the IST to ensure that the installed system provides full emergency system monitoring.

**Interactive Behavior Changing Displays**

Display units shall be provided at department receptions, in ward staff bases and in single bed accommodation to provide a level of comfort control via temperature set point adjustment, this shall be matched with a presentation of the forecasted energy saving for each half degree of set point change.

The display will provide measurement of CO2 level, humidity, temperature and indicate if natural ventilation is available via opening of windows.

Within single bedded accommodation the day lighting interface units shall be integrated in the display.

## 6.0 BMS System Control Strategies

The general design principal for this project is to provide local decentralised control panels to be purpose designed and integral with the 'stand-alone' plant and equipment and these shall be Form 4 wardrobe type. Generally, each major power consumer, e.g. Pumps, Fans etc. shall be supplied with their dedicated 'intelligent' invertor drive motors, to be used as the means of control and for direct interrogation of status, fault levels and energy consumption. These drives shall be powered by cables fed directly from section boards located in the respective plant rooms. All information abstracted from the invertors and other controllers shall be accessible via the BMS.

### MPHW/LPHW Systems

The MPHW/LPHW Plate Heat Exchangers have been specified as a 'Stand-alone' Package, manufactured off-site and delivered in sections where applicable on support skids ready to be mounted in position. The 'turnkey' systems shall incorporate all necessary power and controls wiring and accessories, pre-wired in the factory and field tested prior to shipping. The panel shall control and monitor associated pumps, pressurisation sets, system temperatures including primary steam and secondary circuit flow and return temperatures together with high / low temperature alarm limits.

As a minimum the BMS shall monitor faults, alarms, status, hours run, and energy consumption information, and shall include heating flow and return temperatures for each LPHW primary and secondary heating zone and circuit.

Hospital departments which are occupied on a part-day basis shall have a timed control of the appropriate heating zone and night setback.

Intermittently occupied areas within 24 hour areas departments shall be sub-zoned with controls and monitoring provided to match the usage profile.

Variable volume circuits shall be provided to control all secondary heating circuits, based on system demand.

The use of compensated circuits shall be employed where this feature assists the efficiency of a particular system operation and energy performance of the system.

Plant operation for out of hours occupation can be organised through an Estates Department making remote inputs as and when required.

**Hot Water Systems**

The Hot Water Generator have been specified as 'Stand-alone' Packages, manufactured off-site and delivered in sections where applicable on support skids ready to be mounted in position. The 'turnkey' systems shall incorporate all necessary power and controls wiring and accessories, pre-wired in the factory and field tested prior to shipping. The panel shall control and monitor associated pumps, pressurisation sets, system temperatures including non-storage plate heat exchangers, primary and secondary circuit Control, monitor and continuously record & trend flow and return temperatures as well as Circuit sentinel point automatic temperatures recording against time parameters limits as per parameters detailed in L8 ACoP.
The bidder shall also provide a cost alternative option utilising non invasive temperature measurement at each out let as per L8 ACoP thermal control regime requirements.

The controls will also integrate the Solar Water primary medium, controlled to maximise the free energy from the panels located at Level 11. The HWS dedicated plant management system shall connect to the BMS network and communicate operational and alarm information via open protocol.

The solar water heating shall be integrated with the renewables strategy.

**Cold Water Service**

The Bulk Cold Water Storage and water filtration plant system shall be located within the energy centre and locally within each building at Basement Level. The distribution pumping sets have been specified as 'Stand-alone' Packages, manufactured off-site and delivered in sections where applicable on support skids ready to be mounted in position. As a minimum the dedicated panels shall carry out the monitoring of the following:

- Status of all tanks (level indication)
- Efficient parallel sequence control of the delivery pumps.
- Logging of water consumption
- Status of pressurisation / booster units
- Temperature of stored water and incoming mains water
- Common fault status of water treatment plants
- Logging of filtration equipment status

The CWS dedicated plant management system shall connect to the BMS network and communicate operational and alarm information via open protocol.

Monitor temperature of cold stored water and alarm should the temperature of the water exceed 20 degrees Centigrade, trend & record bulk storage temperature as per parameters set out in L8 ACoP.

Circuit sentinel point automatic temperatures recording against time parameters limits as per parameters detailed in L8 ACoP.

The bidder shall also provide a cost alternative option utilising non invasive temperature measurement at each out let as per L8 ACoP thermal control regime requirements.

**Air Handing Plant**

The main air handling unit strategies adopted for the Hospital are as follows: - Theatre AHU's – Double-deck or single deck AHU to suit with individual temperature and humidity control per theatre, dedicated multizone units with pressure regime control via pressure stabilisers with heat pipe energy saving devices in winter and summer mode. Units are variable speed using invertor drive control with local control at Surgeon's Panel.

Isolation Room AHU's – Dedicated Single-deck AHU's with Individual temperature control heating and comfort cooling per suite, dedicated units with pressure regime control via pressure stabilisers complete with HEPA filter provision on the Lobby terminal supply unit. Units are variable speed using invertor drive control with local control within the Isolation Room. Isolation Room to have visible and audible alarms located at the entrance to the Lobby and duplicated at the Nurses Station. Alarms to indicate bedroom temperature deviation and pressure differential between bedroom and Isolation Lobby. The pressure alarm status shall be under the dictates of 'timed' inputs which represent the normal usage of the suite with respect to access to and from the Lobby and Bedroom, to minimise 'nuisance' alarms. The Extract Fan Unit shall be located at roof level or within the roof plantroom, power and BMS links shall be provided.

General HVAC – Air Handling units shall be provided with energy recovery devices in winter and summer mode. Units are variable speed using invertor drive control with summer humidity control, supplying air to systems to provide local comfort cooling (where required) and heating, using scheduled off-coil temperature. Areas off these systems requiring heating and cooling shall be temperature controlled via Active Chilled Beams.

The opening windows within the rooms with chilled beams installed, shall be provided with contacts, so as when the windows are open the chilled water control valve will close. This will ensure that the comfort cooling is not operational whilst the windows are open thus providing a saving energy by maximizing free cooling. This facility shall also be provided for heating control, whereby heating set point shall be set back while windows are open beyond trickle vent position.

All systems shall be full fresh air, with heat recovery where relevant and control scheduling to maximise free cooling when required.

Special individual room monitoring and logging facilities shall be provided for operating theatres and critical rooms and zones, which shall include temperature and humidity control where appropriate.

Heat Pipes shall be controlled to maximise efficiencies at all times, using air temperatures monitored across the system. Energy monitoring shall be calculated using flow rates abstracted from the Invertor drives and enthalpy detection to compare evaluate heat exchange between external air and room conditions. These values can be monitored either by means of proprietary enthalpy detectors or by calculation using temperature and humidity detectors.

The Air Handling Unit's dedicated plant management system shall connect to the BMS network and communicate operational and alarm information via open protocol.

**Chilled Water and Heat Pump Systems**

Sustainable cooling shall be used were possible with conventional chilling used as required as a top up and to provide system resilience, all lower carbon means of supplying cooling such as bore holes, piling systems and absorption chilling must be fully investigated and chosen if there is a carbon advantage over conventional cooling.

Chillers and Heat Pumps shall operate under the dictates of their own multiple chiller management controllers to ensure maximum efficiency is derived from the plant. The chiller management system shall connect to the BMS network and communicate operational and alarm information via open protocol. The BMS shall provide on/off enablement of the chiller management system and primary/secondary circulation pumps as well as controlled load shedding in the event of a single generator failure during a power outage. The BMS shall also log the chillers running time, energy use and calculated C.O.P.

Hospital departments that are only occupied on a part-day basis shall have a timed control of the appropriate chilled water zone.

Variable volume circuits shall be provided to control all secondary chilled water circuits, based on system demand.

Plant extended operation for out of hours occupation can be organised through an Estates Department making remote inputs as and when required.

Where cooling towers are put forward as part of the strategy these must be dry type.

**Medical and Surgical Air, Medical Gas and Vacuum Systems**

The BMS shall monitor the healthy and common fault status for all the medical gases and medical vacuum systems central plants.

**Standby Generators**

The standby diesel generators shall operate automatically under their own integral controls. The BMS shall monitor the status of each generator including the oil storage tanks and pumps, output (kW and cumulative kWh), voltage, frequency and oil consumption via protocol interface.

In the event of mains power failure, the BMS shall initially hold off all mechanical plant. When the standby generators have started up and restored power to the building electrical system, the standing load, comprising lighting and small power will be reconnected within 15 seconds. The standby generator control system will monitor this load and the start up performance of the engines and will give a signal as to when the engines are ready to accept further load up to their full rating. The BMS shall receive this signal from each engine and shall manage the reintroduction of mechanical plant loads up to the capacity of the available generators in accordance with an agreed priority schedule.

In order to manage power distribution availability in the event of subsequent generator failure the BMS shall monitor generator output and capacity versus the building's electrical load. This shall allow the BMS to instigate load shedding routines to manage non-essential chiller and AHU loads in the event of a single generator failure.

Facility to manually implement phased start up must be provided as a contingency in the event of control failure.

**Isolated Power Supplies (IPS)**

Isolated Power Supplies (IPS) shall be monitored for fault condition.

**Uninterruptible Power Supplies (UPS)**

Uninterruptible Power Supplies (UPS) shall be monitored for mains/battery status and fault condition.

## 7.0 BMS Detail Design

The BMS design shall be developed, incorporating levels of integration where appropriate, to meet the life cycle and environmental requirements of the project.

The following design activities shall be delivered in accordance with the methodology described within the contract.

### Key Principles

The following key principles shall apply: -

- Design shall comply with the relevant standards and any specific requirements of the specification.
- Design shall incorporate integration as deemed appropriate to the project following a detailed risk/benefit analysis involving all stakeholders.
- All aspects of the design shall be based on tried and tested solutions and shall incorporate industry standards throughout.
- Design shall be based on open protocols and incorporate future proofing as far as possible.
- Design shall be driven by commissioning, FM and energy considerations as well as cost and reliability.
- Design shall adopt best practice from other major UK hospital projects where this is considered appropriate for efficiency and standardisation and following a detailed risk/benefit analysis involving all stakeholders.
- All activities shall be coordinated with the contractors and consulting engineers.

### Detail Design Activities

The table below lists out the detail design activities: -

| | **Detail Design Activity** |
|---|---|
| 1. | Establish design criteria to include relevant standards, specifications and user requirements. |
| 2. | Set out the basis of the design, listing out performance criteria and design deliverables. |
| 3. | Establish generic plant system types for engineering development (e.g. AHU's , load centres etc). Confirm equipment standards for each system type (valve spec, control panel contents, electrical distribution and use of inverters etc). |
| 4. | Establish BMS software interfaces to M&E systems (chillers, electrical switchgear, metering, fire and smoke dampers etc). |

| | **Detail Design Activity** |
|---|---|
| 5. | Set up a database for design production, tracking and cost management. Set up suitable interface to the contractor's design, installation and commissioning programmes. |
| 6. | Work through generic system scope interfaces with consideration for off site fabrication, commissionability and maintainability. |
| 7. | Carry out GAP analysis on scope of works on a system-by-system basis in terms of procurement strategy to eliminate scope gaps and identify smart procurement possibilities. |
| 8. | Establish and agree Engineering Network standards, structure, LAN/WAN configuration, routing, network equipment and supervisory functions. Structure accommodate systems integration capabilities. |
| 9. | Confirm accreditation of network design in terms capacity and levels of redundancy. |
| 10. | Prepare metering strategy and schedules. |
| 11. | Check hydraulic zoning and prepare control valve schedule. |
| 12. | Prepare M&E plant electrical distribution schedules. |
| 13. | Establish terminal unit control scope and strategy. |
| 14. | Prepare BMS points schedules, metering strategy, equipment specifications and schedules, scope integration, management methodology and procurement plans. |
| 15. | Develop detailed system physical network architecture to include riser space allocation, installation and equipment protection requirements. |
| 16. | Establish the front end condition based monitoring; smart energy management and O&M integration. |
| 17. | Confirm compliance with cost plan following regular commercial reviews and value engineering workshops. |
| 18. | Establish software interfaces to other systems (Fire Alarm, Electrical, Generators, Nurse Call, Intruder, Access Control, CCTV, personal attack, etc). |
| 19. | Analyse content of potential systems to integrate onto common platform (Access, security, CCTV, lighting, fire, smoke damper control, nurse call, BMS etc). |

| | **Detail Design Activity** |
|---|---|
| 20. | Carry out risk/benefit analysis for each system integration and present to the team. |
| 21. | Develop design to include systems integration if required in conjunction with detailed methodology. |
| 22. | Provide interactive Asset Register for incorporation in an Estate wide system. |

**Methodology**

The contractor shall allocate two design support engineers dedicated to the project to carry out the detail design works. The engineers shall be present within the project offices when required to liaise with members of the team and likewise with the consulting engineers.

The engineers shall be of sufficient calibre to fully understand and incorporate the operational, availability and energy targets as well as the basic design and value engineering requirements of the project.

During the detail design support period the engineer shall proactively seek the information required to complete the detail design works via the appropriate document control system and otherwise through liaison with members of the team.

The contractor shall support the engineers where additional resource or technical support is required.

The engineers shall also act as the specialist representative within the whole design team to offer advice and support on technical and scope integration issues.

The detail design works shall be programmed to take place in the early part of the contract (typically the first 3 to 6 months depending on the extent of systems integration) in order to ensure sufficient time for procurement and implementation.

The contractor shall submit candidates for the role of design support engineer for approval by the Consulting Engineer prior to placing sub-contracts for the work.

The design support engineers shall remain available and fully involved throughout the procurement and implementation phases of the works and right through to system commissioning and handover.

Support engineers should be retained at least part time up to point where energy use is proven to be within operational targets- 2-3 years into full operation.

## 8.0 Scope of Works

The contractor shall provide the following equipment and services: -

- Detail Design works as detailed above.
- All power wiring and containment to mechanical plant from main distribution boards or section boards.
- All other power wiring and containment including lighting in packaged mechanical plant such as AHUs except main supply to section boards and distribution boards.
- All power and control wiring and containment (including local controls serving plant not controlled by the BMS – e.g. local extract fans) and all interlocks between plant and safety systems including automatic shut off valves in gas supplies.
- Power supply wiring/containment between local mechanical plant and fused spurs provided by the electrical contractor (including local fans, local heaters etc)
- All controls wiring and containment associated with input/output points detailed in the BMS point schedules.
- All communications network wiring including the IP communication Engineering Network (addressable energy meters, terminal controls etc)
- Design, manufacture, test, deliver, off load, position and install all local control panels, monitoring panels and all other controls enclosures.
- Size, select, supply and install all DDC controllers, sensors, switches, inverters, actuators necessary to form a complete and functioning system. Free issue valve bodies and immersion sensor pockets to Mechanical contractor for installation in pipework. Mechanical contractor to install copper pipework & fittings for liquid pressure devices.
- Head end hardware and software, including all protocol interfaces, systems integration software and web pages as required.
- Project Management, engineering, software and graphics configuration, installation, commissioning and handover of the system.
- Client training on site for a maximum of 6 staff for 5 days. Price list and course details to be provided for off site formal classroom training.
- System maintenance for the duration of the maintenance period following handover. (The period to be concluded as “Dialogue Issue”)
- System performance monitoring and optimisation, including seasonal commissioning during the maintenance period.

The contractor shall complete all necessary digital and analogue interfaces between the BMS and packaged plant as detailed in the point schedules, plant schedules, drawings and elsewhere in the specifications. Any apparent discrepancy between the specification, plant schedules and drawings shall be drawn to the attention of the contract administrator before or with the tender submission. Otherwise the contractor shall be deemed to have made the maximum allowance within his tender.

## 9.0 Graphics

A Graphical User Interface shall be provided at the Operator Workstation to enable the monitoring and adjustment of the BMS. The interface shall be capable of integrating and displaying real time information from other systems, namely:

- Fire Detection and Alarm
- Smoke Damper Control System
- Local Steam Generating Plant
- Stair Pressurisation Systems
- Chillers and Heat Pumps
- Sustainability Plant
- Plug & Play' AHU Control Systems
- Boilers and Pumping Equipment
- Gas Boosters
- Boosted Potable Water Pumps
- Water Storage Tank Levels
- Water Storage Tank Temperatures
- Helipad Fire-fighting Systems
- Packaged HWS Generator Plant incorporating Solar Panels
- Water Filtration Plant
- Renal Water Plant
- Generators
- Meters
- Inverters
- MV/LV Electrical Switchgear
- Power Change Over Units
- Transformer Temperatures
- Fuel Storage Tank Levels and Fill Alarms
- Intruder Detection and Alarm
- Access Control
- Closed Circuit Television
- Nurse Call
- Medical Gas Alarms
- Sprinklers
- Gas Fire Extinguishing Systems
- IP Telephony
- Asset Location System
- Staff Alarms
- Staff Pagers
- Staff Voice Communication
- IPS
- UPS
- Site Renewables
- LZC systems
- EPC
- Nurse Base Information
- Water Storage

- Renal Water
- Isolation Room
- Surgeons Panels
- Water Storage and pressurisation equipment
- Water Distribution Leak Detection
- Energy Centre  Water Leak Detection
- Energy Centre  Fuel System Leak Detection
- Fuel Storage and pumping equipment.
- Automated Material Transfer Systems
- Pneumatic transfer systems
- Specialist AC systems
- Entertainment Systems
- Lifts
- Escalators
- Blood Fridge management &  monitoring system.
- Emergency lighting management system including automatic testing and recording functions.
- General lighting controls, day light controls & presence detection.
- Room occupancy control where required
- Decontamination services RO plant
- Decontamination tracking system
- Decontamination AER cycle management system
- Main water supply, pressure monitoring status
- Major Health Equipment

In addition to the main graphical user interfaces the following portable devices shall be provided, one laptops and eight PDA's allowing system interrogation from any of the distributed controllers together with alarm annunciation..

All graphics shall be dynamic, forming part of a layered structure, which are consistent and provide a logical and intuitive navigation facility of the building's systems and show the following as a minimum: -

- HVAC plant temperatures, set points and status conditions.
- Ventilation System status
- Valve and damper control signal positions.
- Fire Safety System status
- Electrical System status
- Filter statuses
- Metered data
- Building plans
- Integrated systems information and facilities as previously described.

The GUI shall incorporate full graphics drawing and editing facilities to allow new graphics and changes to the structure of the graphics to be configured by the operator.

Links shall be provided from graphics to the electronic O&M manuals and associated asset register to assist fault finding and ordering of replacement components.

## 10.0 Interactive Support and Utilities Management

### Condition Based Monitoring

The BMS shall be linked to a condition based monitoring package capable of the following: -

- 24 hour alarm analysis
- Repeated alarm analysis
- Analysis of duration from alarm acknowledgement to clearance
- Analysis of unacknowledged alarm duration
- Hardware point alarm analysis
- Analysis of an alarm failure pattern
- Analysis of alarms regarding MTTR and MTBF
- Analysis of control loop performance and usage
- Analysis of optimiser performance at occupancy time
- Analysis of Terminal & BMS start-up and shut down times
- Analysis of user access to BMS
- Analysis of modified points and manual overrides on a per user basis
- Sensor calibration and avoidance of drift

The system shall automatically produce reports on the system performance in a user friendly, easily understood colour graphical format.

The site shall be linked to permanently manned 24/7 remote support centre, which shall carry out system performance analysis and recommend maintenance programmes in line with an agreed process of continuous improvement aimed at increasing plant availability and reducing energy consumption.

The remote support centre shall also carry out alarm acknowledgment and take action to correct the situation remotely where possible.

### Interactive Utilities Management

Smart utilities management software shall be provided, which has real time links to the utilities provider's billing system and can provide comparative analysis and profiling to check tariffs and charging with BMS metered data. Any invoice discrepancies can be highlighted and recovered by the client.

The submission shall expand on what constitutes a department and areas and what the breakdown of energy use in areas should be.

Profile analysis functions shall identify any abnormalities in energy consumption and report and alarm accordingly. Profiling shall be carried out by department and areas and by system as well as on a whole building basis. Links to plant operating logs and alarms shall be provided to assist investigation.

Load shaping reports shall be provided by department and areas, identifying peak demands, CO2 and carbon consumption.

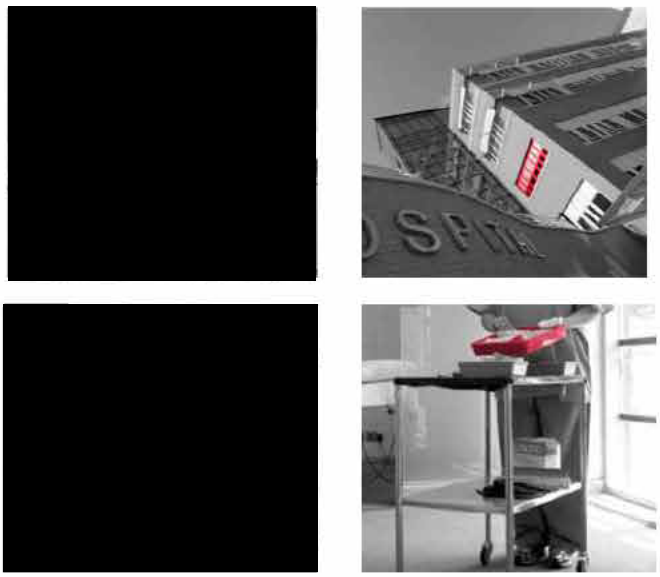
**NHS Greater Glasgow and Clyde**

**New South Glasgow Hospitals (NSGH) Project**

# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME 2/1

## APPENDIX M&E.6
## RENAL WATER



## CONTENTS

| | | Page No. |
|---|---|---|
| Section 1 | Introduction | 3 |
| Section 2 | Water Treatment System – Overview | 4 |
| Section 3 | Technical Specification | 7 |
| Section 4 | Installation | 10 |
| Section 5 | Other Requirements of the Proposal | 12 |
| Section 6 | Format of Proposal Submission | 13 |

## 1.0 Introduction

This document has been formatted in line with the M&E appendices, the core information is taken from SGH Renal Central Water Plant Specification Version 2.1 procedures produced by Mr S F Campbell 18 March 2009.

The installation of the pure water distribution loops from the central water plant (CWP) must be fully coordinated in advance of the works with the structural design of the building and all services to minimise pipe route lengths.

Water metering and energy metering shall be integrated with the BMS to highlight excessive consumption. Water meters shall be provided at all inlets to the water treatment plant. Energy meters shall be located at appropriate locations with the resilient networks to record and allow tabulation of all electrical and heat source inputs.

## 2.0 Water Treatment System – Overview

2.1 The water treatment plant(s) will be required to supply ultrapure water suitable for on-line haemodiafiltration treatments to various areas of Renal Inpatients, Outpatients, preparation areas and Renal Technology maintenance area.

2.2 Renal **Inpatient** areas may be required to provide urgent treatments **24 hours per day, seven days per week**.

2.3 Renal **Outpatient** areas require to provide treatments **24 hours per day, six days per week**

2.4 Provision must be made for Inpatient and Outpatient areas to allow a number of treatments to be carried out overnight while still allowing automatic systems to provide appropriate regimes of disinfection, softener regeneration and carbon filter bed backwash. The number of dialysis stations which will require to provide patient treatment during periods of operation of these automatic systems will be advised in a separate document.

2.5 Automatic disinfection systems will require to have manual override provision, accessible to clinical staff, to allow priority to clinical requirements. Unless duplexed, for example duty / standby configuration, automatic softener regeneration and carbon filter bed backwash systems also require similar override provision. The status of these automatic systems must be displayed on the indicator panels at the Nurses' station and in the Renal Technologists' maintenance room

2.6 The number of dialysis stations required and their distribution over the various dialysis, preparation and Renal Technology maintenance areas will be advised in a separate document.

2.7 The number of haemodialysis machines which will require to be in treatment mode at any one time in each dialysis area and in each maintenance area will be advised in a separate document.

2.8 The number of haemodialysis machines which will require to operate in "Integrated" heat disinfect mode at any one time in each dialysis area and in each maintenance area will be advised in a separate document.

2.9 The volume of water supplied to each haemodialysis machine must be sufficient to maintain service regardless of treatment type, machine type and manufacturer.

2.10 Each haemodialysis machine requires to be supplied with water between 2.0 bar and a maximum of 5.0 bar pressure at a flow rate of **1.5 litres/min at 4°C.**

The quality of the water must be such that all current forms of renal replacement therapy can be performed, including "On-Line Haemodiafiltration".

The water quality must meet all relevant standards and guidelines which may be current at the time of system design being submitted and should also take into account newly developing standards, e.g. :-

1) UK Renal Association, 4th edition, 2007 “Clinical Practice Guidelines for Haemodialysis” and any changes which are included in the 2009 Update of the guidelines.

2) **ISO Working Document 23500 -*"Guidance for the preparation and quality management of fluids for haemodialysis and related therapies".***

The existing Standards also include the Association for the Advancement of Medical Instrumentation (AAMI), European Pharmacopoeia and Water for Haemodialysis ISO13959 and were endorsed by the Association of Renal Technologists.

To maintain an acceptable standard of water quality, regular analysis should be performed. This should monitor both incoming raw water and treated water for all chemical contaminants, Endotoxin levels and Microbial count. A sterilisation and cleaning system must be in place to prevent or deal with any raised or unacceptable levels of contamination. A “State of the Art” disinfection system should be incorporated which can be programmed to run automatically to prevent such problems and operate without nursing or technical intervention.

The water treatment system must have a 100% redundancy built in and include duplication of components. There must be appropriate “Bypass” systems installed, with adequate protection to ensure dialysis can take place safely, in the event of a failure of any part of the system

The raw water supply system must have the capability to issue a progressive warning signal if and when there is a problem with the volume of the supply. Intermediate and low level alarm provision is the minimum requirement.

Each point of use must have a media supply panel, which will include water supply stop valve and 2 drain connections which discharge into a drain protected by an air gap.

All media supply panels installed in the **Outpatient** areas, including the ready use / out lobby points and the test stations within the Renal Technology Laboratory, require central concentrate delivery (CCD) facility. The number of CCD connections required per media panel will be advised in a separate document.

CCD connections are **not** required for media panels installed in the **Inpatient** areas.

The requirement for such facilities on the media panel as, for example, oxygen, suction, nurse-call, 13 amp power outlets, lighting and T.V./radio will be advised in a separate document.

The system must include, mounted on the media panel at point of use, the provision of Walther stainless steel self sealing couplings for every water, drain and CCD point. Couplings shall **not** be supplied with **knurled** finish but must be specified with **plain** finish for reasons of cleaning and infection control.

The specifications for the couplings which are mounted on the Haemodialysis (HD) machines are shown below and appropriate **mating** couplings must be supplied on the media panel.

| Coupling function | Coupling description for Haemodialysis [HD] machine | Coupling Part No. for HD machine | Quantity | Coupling Requirement for Media Panel |
|---|---|---|---|---|
| Dialysis Water | Female self sealing quick release 316 stainless steel coupling | SP006-0-WR510-01-2 | 1 off | Mating **male** coupling |
| Dialysis Effluent | Male self sealing quick release 316 stainless steel coupling | SP006-2-SL009-01-2 | 2 off | Mating **female** couplings |
| Dialysis Acid | Female self sealing quick release 316 stainless steel coupling | LV004-0-SL004-01-2 | 1 for each concentrate | Mating **male** coupling (s) |

The Reverse Osmosis water treatment equipment must be C.E. marked and identified as a Medical Device.

**3.0 Technical Specification**

3.1 **Pre-Treatment :** A direct potable water feed of an appropriate pressure and flow should be provided into the plant room(s) by others **but this is to be confirmed**.

A break tank with appropriate air gap, intermediate and low level alarms is required. The break tank will feed duplexed pressure-booster pumps of an appropriate size to pass water to a water softening system and carbon filter bed GAC column(s). The GAC columns must provide a minimum of 12 minutes empty bed contact time (EBCT).

Automatic systems are required to provide appropriate regimes of softener regeneration and carbon filter bed backwash overnight. Unless duplexed, for example duty / standby configuration, these automatic systems will require to have manual override provision, accessible to clinical staff, to allow priority to clinical requirements

3.1.1 **Break Tank:** Supply volume alarms initially when reaching 90% capacity, and finally an alarm if and when the supply approaches exhaustion, perhaps when reaching 20% capacity. These alarms will show at the Nurses' and Technologists' alarm indicator panels.

3.1.2 **Pumps:** Duty/Standby pressure booster pumps with appropriate overpressure control and dry run protection.

3.1.3 **Softener system:** Automatic timed regeneration. Supplied with brine storage tank, isolation valves and a bypass loop. Unless duplexed, for example duty / standby configuration, automatic regeneration system must have manual override provision, accessible to clinical staff, to allow priority to clinical requirements.

3.1.4 **GAC Bed:** A **"**Bed" should consist of a Granulated Activated Carbon bed, providing a minimum of 12 minutes EBCT. Carbon supplied must be acid-washed. The system must have automatic timer controlled backwash and rinse to drain system with sample point, depressurisation facility, drain down, post bed pressure gauges, isolating valves and a bypass loop. Unless duplexed, for example duty / standby configuration, automatic backwash system must have manual override provision, accessible to clinical staff, to allow priority to clinical requirements.

3.1.5 **Particle Filters:** Appropriately sized filters shall be fitted including protection of the R.O. units from carbon fines. Filter systems to incorporate depressurisation facility, post filter element pressure gauge, isolating valves and a bypass loop.

**3.2 R.O.Units:** The output from the pre-treatment system should feed double-pass R.O. units. The output from the R.O. units will be enough to feed all dialysis machines at points of use at a minimum flow of **1.5 litres** per minute at each outlet with appropriate pressure being maintained throughout the pure water distribution ring.

The system must provide ***ultrapure*** water as per the standards and guidelines referred to in Section 1.4 100 % redundancy of function within the R.O. units is required.

The output from the R.O. units shall have direct feed to the distribution ring without the use of pure water storage.

3.2.1 Double pass (**2** sets of R.O. membranes in series) R.O. system with a final output capable of simultaneously supplying all haemodialysis machines, each at a flow of **1.5 litres per minute at 4°C** at a pressure of between **2.0 and 5.0 bar**.

3.2.2 The normal microbiological quality of the water shall be ***ultrapure*** as per the standards and guidelines referred to in Section 1.4. For the purposes of this project the microbial count shall not exceed **0.1 colony forming units (CFU/ml)** and endotoxin levels should not exceed **0.03 IU/ml.**

3.2.3 The normal chemical quality of the water must, as an absolute minimum, meet the standards referred to in Section 1.4

3.2.4 100% redundancy. The failure of one R.O. unit, or one set of membranes / pumps / control circuits should be by-passable and still maintain *ultrapure* water quality at output rate as detailed in 2.2.1

3.2.5 All R.O. membranes and distribution ring must be automatically disinfected by heated water. The system will also provide “Integrated heat” disinfection of the haemodialysis machines.

3.2.6 R.O. membranes shall be supplied pre-conditioned to heat disinfection, to minimise any possible reduction of output rate due to effect of routine heat disinfection cycles. Subsequent supplies of replacement membranes shall also be supplied pre-conditioned.

3.2.7 The system should have means of automatically detecting leaks and taking appropriate action.

3.2.8 The system will be capable of being monitored and logged remotely by P.C. and appropriate software will be provided to the client.

3.2.9 Microbiological sample ports should be provided between the two sets of membranes and at the output and return of the distribution ring.

3.2.10 Provision of a heat disinfectable **0.2u** particle filter within the ***ultrapure*** circuit would be an advantage

3.2.11 The R.O. system must be **CE** marked and identified as a **medical device**.

3.3 **Distribution Ring:** The distribution ring will be of a material suitable for regular heat disinfection and will be installed according to the manufacturer's recommendations. Dead space and areas of low flows such as pipe joints shall be minimised. All points of use require to be supplied with media panels. Media panels must each incorporate **4** Earth Potential Equalisation points to match hospital standard.

3.3.1 Material for the distribution ring should be **PEX** (crosslink polyethylene). All joints are to be bead and crevice free where possible.

3.3.2 Microbiological sample ports should be provided at the output and return of the distribution ring. Where the distribution ring is lengthy a third sample port should be provided at the middle of the loop.

3.3.3 The distribution ring shall be suitably insulated and enclosed.

3.3.4 Where more than one distribution ring is installed, each point of use must be clearly labelled; identifying to which distribution ring it is connected.

3.3.5 Media panels shall have isolation valves at point of use to haemodialysis machines. These valves should be "zero static" type to minimise dead space.

3.3.6 Media panel Earth Potential Equalisation points will be **DIN42801** standard. Preferable type is **POAG-ID6.** The 4 points on each panel must be mounted closely together in a single group to provide, in effect, a single common earth point.

3.4 **Disinfection System:** The disinfection system must provide independently programmable automatic heat disinfection of the R.O. membranes and the distribution ring. The system will also provide "**Integrated heat disinfection**" of the haemodialysis machines. The system must also have automatic chemical disinfection system with automatic chemical pickup.

3.4.1 Independently programmable automatic heat disinfection of the R.O. membranes.

3.4.2 Independently programmable automatic heat disinfection of the distribution ring.

3.4.3 System to allow haemodialysis machines of any manufacture to draw the required volume of hot water from the system via the connection hoses to heat disinfect themselves during the overnight system disinfection.

3.4.4 The temperature in the distribution ring during heat disinfection must not be less than **85°C** at the return to the hot water supply.

3.4.5 Automatic disinfection system must have manual override provision, accessible to clinical staff, to allow priority to clinical requirements.

3.4.6 Programmable automatic chemical disinfection with automatic chemical pick-up.

3.5 **Indicator Panels:** System status and alarm indicator panels will be installed at the Nurses' station and in the Renal Technologists' maintenance room. Where more than one distribution ring is installed, the indicator panel must also identify individually when a particular loop is affected by any regime of disinfection, softener regeneration or carbon filter bed backwash.

3.6 **Other Components:** Any other components planned to be used must be included in the proposal.

3.7 **Heat Input:** The heat input shall be provided by the most energy efficient manner via the MTHW/LTHW system. Electric heating is acceptable as a back up.

**4.0 Installation**

4.1 The designers shall allocate sufficient plant spaces to allow all plant to be installed, maintained, serviced and replaced in line with the manufacturer's recommendations without amendment to the building fabric or general building services and ensure that all associated plant is located with secure lockable dedicated plant rooms.

4.2 For the bacteriological integrity of the pure water system it is important to avoid the possibility of any "Bio-film" formation within the CWP distribution loops. It is therefore important to keep the loops as short as practical and to eliminate unnecessary bends.

To ensure minimal runs it should be avoided running the loops within a ceiling cavity and taking it down and back up again for each point of use. This approach greatly increases the length of the loop and also introduces up to 4 additional bends for each point of use e.g. Inpatient areas could incur more than 300 additional unnecessary bends for 80 points of use.

4.4 Ideally the loops should be installed, as far as practical, as continuous horizontal pipe runs at the same height as the media panels. If the structural design of the building cannot accommodate this within the wall cavities then I would strongly advise that the loops should be trunked externally on the wall surfaces.

4.5 The client shall be provided with a set of data demonstrating the correct functioning of components and compliance of the system with the required standards before the first clinical use of the system. Test procedures and results should be traceable.

4.6 Two copies of the Operators and Technical Manuals must be provided to the Renal Technologist Section Manager at no extra cost.

4.7 The Contractor shall provide an asset register for the full system, this shall be in the same format and system architecture as that developed for the Building Services systems, but with a separate data base and front end.

The asset register shall be linked to the Renal Water System As Fitted drawings via MiCAD drawing mapping, the MiCAD should also integrate with the LMS to provide a fully integrated system complete with interfaces to the equipment tagging system.

4.8 The Contractor shall provide a full asset tagging system in accordance with the NHS Scotland (HFS) National asset management requirements.

All installed system components shall be asset tagged by the contractor, entered into the PPM system and linked to its full specification and maintenance schedule.

4.9 The Contractor shall provide, as part of the contract, a full PPM manual and system (computer based software package) for the Renal Water installation, this shall be in the same format and system architecture as that developed for the Building Services systems, but with a separate data base and front end.

The PPM system shall be compiled at an early date with time and input included for three iterations of comments and workshops with the Renal Department to ensure that the system meets the various requirements of the Hospital Technical Publications, Clinical Practice Guidelines for Haemodialysis, Clinical Services and Estate's Department. The system shall be fully linked to the As Fitted drawings via MiCAD drawing mapping, to provide a fully integrated system.

**5.0 Other Requirements of the Proposal**

5.1 The proposal must include any installation requirements.

5.1.1 Input flow/pressures

5.1.2 Electrical supply

5.1.3 Heat supply

5.1.4 Footprint and weight of equipment

5.1.5 Temperature control

5.1.6 Site access

5.1.7 Any other requirements not included above

5.2 Warranty details including typical response time for callouts.

5.3 After sales service support on-going contract options for the entire plant.

5.4 Technical training for 4 Renal Technologists must be included in the proposal. Training to enable full system monitoring and sampling for chlorine/chloramine, trace elements, microbiology and endotoxins and to enable in-house replacement of particulate filters, carbon and brine salts.

5.5 Contact details (for reference purposes) of two existing users of the system in the U.K.

5.6 Indicative delivery and installation times

## 6.0 Format of Proposal Submission

6.1 Every item within this document must be individually and fully addressed and referred to by the bullet numbering used.

6.2 It must be clearly stated for each item whether or not the offered specification completely complies with the stipulated requirements of this document.

6.3 Where it is stated for an item that the offered specification does not completely comply with the stipulated requirements of this document it should be made clear what, if anything, is being offered instead.

| | **Outpatients + Ready Use + Lab.** | **Inpatients** | **Critical Care Area** |
|---|---|---|---|
| **No. Points of Use** | 30 + 5+ 8 = 43 | 84 | 10 |
| **Max. no. simultaneous treatments** | 40 | 24 | 2 |
| **Max. no. simultaneous treatments overnight** | 15 | N/A | N/A |
| **Max. no. simultaneous "integrated" heat clean** | 22 (Sun – Fri)<br>43 (Sat) | Same as max. no. simultaneous treatments + 5 | Same as max. no simultaneous treatments |
| **No. Points with Central Concentrate Delivery (CCD)** | 43 | 0 | 0 |
| **No. CCD concentrates** | 1 | 0 | 0 |
| **Weekly volume of concentrate use** | Approx. 3,000 Litres | 0 | 0 |

**New South Glasgow Hospitals (NSGH) Project**

# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

## VOLUME 2/1

## APPENDIX U – BREEAM Design Guide

**Appendix U – Detailed BREEAM requirements**

This Appendix relates to the main hospital building, which will be procured through a Competitive Dialogue 2-stage Design & Build procurement process

The laboratory building will be procured through design novation following RIBA Design Stage G and will be a bespoke scheme

**General obligations and objectives**

The sustainability and low carbon design are fundamental to the design quality evaluation of the project and bids will be scored significantly on these aspects. This section sets out the guidance in relation to the detailed BREAAM requirements and processes and is intended to provide assistance to the bidders in the requirements necessary to achieve a BREEAM "Excellent" rating.

It will remain the sole responsibility of the bidder to appoint a qualified BREAAM Assessor to manage the processes, and produce the requisite documentation in support of the bid submission at the following stages;

Stage 1: Competitive Dialogue – produce initial BREAAM Target Scoring matrix and supporting documentation indicating how BREEAM "Excellent" rating to be achieved.

Stage 2: Design Development – produce revised/interim BREAAM Target Scoring matrix and supporting documentation indicating how BREEAM "Excellent" rating to be achieved.

Stage 3: Handover of Facility – provide BRE BREAAM certificate confirming BREEAM "Excellent" rating achieved.

For the avoidance of doubt, a BREEAM "Excellent" rating is required for the project as a whole.

A BREEAM "Excellent" rating is a fundamental Board requirement and achievement of the final rating as detailed above, will be part of the building acceptance procedure.

Furthermore, there is a requirement for a Low Carbon design process which will be monitored and evaluated by a Carbon Trust accredited consultant. There are both design and operational energy targets which are to be met as part of the building acceptance procedures. The process for integrated design, calculation and modelling, disclosure and auditing is set out in this section and confirmation of acceptance of these procedures without qualification or condition is an explicit part of the tender evaluation.

Note that this Appendix overlaps/interacts with the following sections of the Employers Requirements;

- Section 7 – Architectural Requirements
- Section 8, Building Services Requirements, with particular reference to Appendix M, M&E4 – Sustainability & Energy Targets
- Section 9 – Civil & Structural Engineering requirements

and it is the Contractors responsibility to provide commentary and clear proposals in the submission on any actual or perceived conflicts in requirements.

In general terms the contractor shall:

- Implement an Environmental Management System (EMS) in line with the principles of ISO 14001 accreditation in relation to the design, management construction materials procurement, supply chain management and site processes for this project
- Respect the local landscape and protect natural habitat and species taking due account of the UK Biodiversity Action Plan;
- Avoid sources of ionising and electromagnetic radiation and any design features associated with sick building syndrome;
- Develop and implement a Site Waste Management Plan (SWMP) in line with DEFRA and WRAP guidance
- Maximise the opportunity for waste minimisation, through design and in construction, following good practice guidelines.
- Maximise the opportunity for incorporating higher levels of recycled input into components, and for high waste recovery (reuse and recycling)
- Maximise efficient and effective removal and transport of waste;
- Adopt maintenance regimes which maintain optimum performance;
- Avoid the use of harmful building products and processes;
- Undertake integrated low carbon and passive design
- Explore the use of prefabricated elements to achieve good quality control, ease and speed of installation and flexibility for future use.

The Contractor shall comply with the following NHS and related publications:

- The Development of a Local Environmental Strategy in line with Sustainable Development in the NHS;
- Environmental Management Policy for NHS Scotland (SEHD) 2002; HDL(2006)21, and the documents referred to therein.
- Encode;SHTM 07-02
- Carbon / Energy Management in Healthcare
- BREEAM Healthcare. The following publication provides guidance in the approach to design and procurement and will be useful/essential in the low carbon design and BREEAM Environmental Purchasing in Practice guidance for organisations September 2002
- Good Corporate Citizen (Sustainable Development Corporation publication) - Sustainable Development in the NHS
- "The Green Book" APPRAISAL AND EVALUATION IN CENTRAL GOVERNMENT Treasury Guidance LONDON: THE STATIONERY OFFICE
- The Role of the Physical Environment in the Hospital of the 21st Century: A Once-in-a-Lifetime Opportunity (a) Roger Ulrich*, Xiaobo Quan, Center for Health Systems and Design, College of Architecture, Texas A&M University Craig Zimring*, Anjali Joseph, Ruchi Choudhary, College of Architecture, Georgia Institute of Technology

**Detailed BREEAM requirements**

The following is intended as advice for bidders in connection with the achievement of a BREAAM "Excellent" rating, however, as detailed above, it is the bidders responsibility to appoint a qualified/certified BREAAM Assessor to review and implement the necessary processes to enable "Excellent" rating to be achieved.

**Man 1 – Commissioning**

- Appoint an appropriate project team member(s) / specialist contractor to monitor and programme pre-commissioning, commissioning and, where necessary, re-commissioning on behalf of the client.

- Commissioning will be carried out in line with current Building Regulations and BSRIA/CIBSE guidelines, where applicable and should be included within the main programme of works, account for the commissioning programme, responsibilities and requirements.

- The services to the building will be deemed complex if the following are included and a specialist commissioning manager will be required.

    - Air conditioning
    - Mechanical ventilation, displacement ventilation, complex passive ventilation
    - Building management systems (BMS)
    - Renewable energy sources
    - Microbiological safety cabinets and fume cupboards
    - Cold storage enclosures and refrigeration plant

- The commissioning manager for complex systems must be a specialist contractor rather than a general sub-contractor.

- Where BMS is specified, the following commissioning procedures must be carried out:

    - Commissioning of air and water systems is carried out when all control devices are installed, wired and functional.

    - Commissioning results include physical measurements of room temperatures, off coil temperatures and other key parameters as appropriate.

    - The BMS/controls installation should be running in auto with satisfactory internal conditions prior to handover

    - All BMS schematics and graphics are fully installed and functional to user interface before handover

    - The occupier will be fully trained in the operation of the system.

- Where specified, all built-in cold storage and chilled rooms are commissioned in accordance with the requirements for refrigeration equipment as set out in the Carbon Trust publication GPG347 *Installation and commissioning of refrigeration systems*. All cold storage and chilled rooms over 20m2 meet the requirements of Section 9.1 of the Cold Store Code of Practice, Part 1.

- Where specified, fume cupboards and microbiological safety cabinets are installed and commissioned in accordance with the following standards:

- Fume cupboards in accordance with BS EN 14175-2
- Microbiological safety cabinets in accordance with BS EN 12469 (2000).

- Appointment(s) should also include the following seasonal commissioning responsibilities over a minimum 12 month period, once the building becomes occupied:

  Complex Systems – Specialist commissioning manager

  a. Testing of all building services under full load conditions, i.e. heating equipment in mid-winter, cooling/ventilation equipment in mid-summer, and under part load conditions (spring/autumn)

  b. Where applicable, testing should also be carried out during periods of extreme (high or low) occupancy

  c. Interviews with building occupants (where they are affected by the complex services) to identify problems or concerns regarding the effectiveness of the systems

  d. Re-commissioning of systems (following any work needed to serve revised loads), and incorporating any revisions in operating procedures into the O&M manuals.

  e. Where specialist building services systems such as fume cupboards, microbiological safety cabinets and a cold storage system are present then these systems must be included in the specialist commissioning agent's responsibilities.

- Evidence required for Design Stage:

  - Provide a copy of a letter or commissioning responsibilities schedule confirming the appointment of [or commitment to appoint]:
  - Design team member(s) as commissioning monitor and scope of their commissioning role.
  - Specialist commissioning manager and scope of their commissioning role.
  - Provide a copy of the specification clause stating/ confirming:
  - The standards and codes of practice to which commissioning procedures are to comply with.
  - The managing contractor's responsibilities with respect to this requirement. Or, Managing contractor's commissioning responsibilities.
  - The stages of the BMS/Controls commissioning procedures.
  - The scope of seasonal commissioning responsibilities/tasks.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  o Provide Commissioning records/reports confirming:

- Monitoring actions carried out by the nominated design team member.
- Specialist commissioning manager's actions/role.
- Commissioning procedures executed in compliance with relevant standards.
- BMS/controls commissioning activities were carried out in compliance with the commissioning schedule/specification clause.
- Commissioning procedures executed in compliance with relevant standards.

- Provide a copy of the programme highlighting; Commissioning, performance testing and handover period.
- Provide a copy of the seasonal commissioning schedule/programme or a copy of the letter of appointment of commissioning specialist and scope of their responsibilities.
- The commissioning programme should be available at least 3 months prior to completion. The commissioning record/ reports and the seasonal programme / schedule should be available in final versions at completion.

**Man 2 – Considerate Constructors**

- Demonstrate a commitment to comply with best practice site management principles by achieving a minimum score as required under the considerate constructor's scheme. It is the responsibility of the main contractor to register and manage onsite all aspects of the CCS scheme. See checklist A2 in appendix A.
- Provide a copy of the relevant section of the specification confirming:
  - A requirement to comply with the CCS
  - The minimum score to be achieved in each CCS section.
  - This should be available prior to work starting on site
- Provide the formal certification from CCS, once available but no later than the completion date.

**Man 3 – Construction site impact.**

- Refer to checklist A3 in Appendix A
  - Achieve requirements for up to 6 of the listed impacts plus temporary site timber as required
  - Evidence required – as checklist plus
  - Proof of contractor's EMAS/ISO14001
  - Proof of environmental purchasing policy
  - Provide site records demonstrating monitoring and recording of the following:
  - Site energy/CO2 consumption from site activities

- Site energy/CO2 consumption from deliveries & all transport to and from the site.
- Site water consumption
- Provide evidence of the targets set for water and energy consumption for the project.
- Provide copies of the documented procedures used on site for working to best practice pollution management guidelines. This will take the form of a letter confirming:
- Procedures for pollution management and mitigation were implemented
- Name/job title of individual responsible for monitoring and managing construction site impacts throughout the project.

- Evidence required for Design Stage:
  - Provide a copy of the relevant section from the main contract specification confirming:
  - Contractor's obligations in respect to each item on the checklist
  - Site timber will be sourced from suppliers capable of providing certification to the level required for the particular tier claimed.
  - All timber will come from a 'legal source' and is not on the CITES list*.
- All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide a copy of the certification document or Chain of Custody (CoC) certificate(s) for the site timber. Where any non-certified timber is used, written confirmation from the supplier(s) confirming that:
  - All timber comes from a legal source.
  - All timber species and sources used in the development are not listed on any of the CITES appendices for endangered or threatened species (Appendix I, II, or III*).
- All the above should include all activates arising from site activities and any site clearance, that should be required.
- It is the responsibility of the main contractor to manage onsite all aspects of the construction site impact and to provide all evidence above.
- Targets for energy consumption during the construction process should be set using DTI's Environmental KPI benchmarks.
- As a minimum, monitoring will include checking of all meters and displaying some form of graphical analysis in the site office to show consumption over the project duration and how actual consumption compares to the targets set. The site management team will nominate an individual who will be responsible for the monitoring and collection of data.

- A site monitoring system will be in place to monitor and record deliveries. A nominated site individual will be responsible for the monitoring and collection of data. This system will record:

    - The number of deliveries
    - The mode of transport
    - The km/miles travelled for all deliveries

- Further information on best practice policies in respect of air can be obtained from DTI/BRE publications 'Control of Dust from Construction and Demolition Activities' and Pollution Control Guide Parts 1-5 provide good practice guidelines on construction related pollution

- Further information on best practice policies in respect of water can be obtained from:

    - PPG 1 - General guide to the prevention of pollution. Environment Agency

    - PPG 5 - Works in, near or liable to affect watercourses. Environment Agency

    - PPG 6 - Working at demolition and construction sites. Environment Agency

  All information should be available in final versions at completion.

**Man 4 – Building user guide**

- Produce a simple guide that covers information relevant to the tenant/occupants and non- technical building manager on the operation and environmental performance of the building.

- Evidence required for Design Stage:

    - Provide a copy of the specification clause confirming:
    - Requirement to develop a Building User Guide
    - Scope of the Guide's contents.

  All design stage information should be available prior to work starting on site

- Evidence required for Post Construction Stage:

- Provide written confirmation that the guide has been distributed to the building's owner, tenant(s) or fit out contractor for completion.

- A draft copy of the user guide should be available to the BREEAM assessor 3 months prior to completion and a final version to be available to the BREEAM assessor at completion.

- The user guide contents should include all of the below:

    1. Building Services Information

    a. General User - Information on heating, cooling and ventilation in the building and how these can be adjusted, e.g. thermostat location and use, implications of covering heating outlets with files, bags etc., and use of lifts and security systems.

b. FM – As above, plus a non-technical summary of the operation and maintenance of the building systems (including BMS if installed) and an overview of controls.

2. Emergency Information

a. General User - Include information on the location of fire exits, muster points, alarm systems and fire fighting systems.

b. FM - As above, plus details of location and nature of emergency and firefighting systems, nearest emergency services, location of first aid equipment.

3. Energy & Environmental Strategy

This should give owners and occupiers information on energy-efficient features and strategies relating to the building, and also provide an overview of the reasons for their use, e.g. economic and environmental savings. Information could include:

a. General User – Information on the operation of innovative features such as automatic blinds, lighting systems etc., and guidance on the impacts of strategies covering window opening and the use of blinds, lighting and heating controls

b. FM - As above, plus information on airtightness and solar gain (e.g. the impact of leaving windows/doors open in an air conditioned office, or use of blinds in winter with respect to solar gain); energy targets and benchmarks for the building type, information on monitoring such as the metering and sub-metering strategy, and how to read, record and present meter readings.

4. Water Use

a. General User – details of water saving features and their use and benefits, e.g. aerating taps, low flush toilets, leak detection, metering etc.

b. FM – As above, plus details of main components (including controls) and operation.

Recommendations for system maintenance and its importance, e.g. risk of legionella.

5. Transport Facilities

a. General User – details of car-parking and cycling provision; local public transport information, maps and timetables; information on alternative methods of transport to the workplace, e.g. car sharing schemes; local ‘green’ transport facilities.

b. FM - As above, plus information on conditions of access, maintenance and appropriate use of car parking and cycling facilities, e.g. number of spaces provided.

6. Materials & Waste Policy

a. General User – Information on the location of recyclable materials storage areas and how to use them appropriately.

b. FM – As above, plus information on recycling, including recyclable building/office/fit out components, waste storage and disposal requirements;

examples of Waste Management Strategies and any cleaning/maintenance requirements for particular materials and finishes.

7. Re-fit/Re-arrangement Considerations

a. General User – an explanation of the impact of re-positioning of furniture, i.e. may cover grilles/outlets, implications of layout change, e.g. installation of screens, higher density occupation etc.

b. FM - As above, plus environmental recommendations for consideration in any refit. Relevant issues covered in BREEAM should be highlighted, e.g. the use of natural ventilation, use of Green Guide 'A' rated materials, reuse of other materials etc., the potential impact of increasing occupancy and any provision made in the original design to accommodate future changes.

8. Reporting Provision

a. General User – Contact details of FM/manager, maintenance team, and/or help desk facility; and details of any building user group if relevant.
b. FM – As above, plus contact details of suppliers/installers of equipment and services and their areas of responsibility for reporting any subsequent problems.

9. Training

Details of the proposed content and suggested suppliers of any training and/or demonstrations in the use of the building's services, features and facilities that will be needed. This could include:

a. General User - Training in the use of any innovative/energy saving features.

b. FM – As above, plus training in emergency procedures and setting up, adjusting, and fine tuning, the systems in the building.

10. Links & References

This should include links to other information including websites, publications and organisations. In particular, the 'Carbon Trust' programme should be referenced and links provided to its website and good practice guidance.

11. General

Where further technical detail may be required by the FM Team or manager there should be references to the appropriate sections in the Operation and Maintenance Manual.

**Man 6 – Consultation**

- Participate and contribute to any consultation process that may happen throughout the project.
- Allow to include for any protection of any parts of the building (or site) having historic or heritage value in accordance with independent advice from the relevant body that is highlighted at the consultation stage.
- Evidence required for Post Construction Stage:
    - Provide written and photographic evidence confirming:

- Existence/installation of identified features on marked-up design plan or in specification.

- Evidence should be available to the BREEAM assessor 3 months prior to completion

**Man 8 – Security**

- Allow to consult with and seek the advice of the local police Architectural Liaison Officer (ALO) or Crime Prevention Design Advisor (CPDA) on designing out the opportunity for crime, in accordance with the principles and guidance of Secured by Design.

- Consultation with the ALO/CPDA should occur during the Outline Proposals stage (RIBA stage C) or equivalent.

- Comply with any recommendations from the Architectural Liaison Officer (ALO) or Crime Prevention Design Advisor (CPDA) from the local police force at the design stage consultation that should effect construction phase.

- Allow access to any Architectural Liaison Officer (ALO) or Crime Prevention Design Advisor (CPDA) from the local police force that need to inspect the building/ site, including inductions, supervision if needed & PPE.

- The Secured by Design equivalent for parking facilities is the Safer Parking Scheme. In addition to designing in accordance with SBD principles, the parking facilities should be designed in accordance with the principles and guidance of the Safer Parking standards.

- Evidence required for Design Stage:

  - Provide correspondence from or a copy of the report/feedback from the ALO/CPDA confirming:

  - Scope of their advice/involvement

  - The stage of design in which their advice was sought

  - Summary of their recommendations

  - Provide a marked-up copy of the site/design plan(s) highlighting examples of:

  - The development conforming to ALO/CPDA recommendations and SBD principles and guidance.

  All design stage information should be available prior to work starting on site

- Evidence required for Post Construction Stage:

  - Provide correspondence from the ALO/CPDA confirming:

  - The as-built development or design complies with their recommendations. Or, a copy of the development's 'Secured by Design' certificate.

  All PCR stage information should be available in final versions at completion

**Man 11 – Ease of maintenance**

- The specifications for the building and the building services/systems and landscaping should consider ease and efficiency of maintenance in line with best practice.

- All items identified for each of the key procurement stages in the checklist '*design guide to maintainable buildings*', outlined in Appendix 2 A1 of CIBSE *guide to ownership, operation and maintenance of building services,* should be addressed.

- A critical appraisal shall be completed at the feasibility stage of building procurement, covering the maintenance implications for different design options. The appraisal must comply with the following:

    a. Service life planning in accordance with ISO 15686 *Buildings and constructed assets* - Service life planning Part 1

    b. HTM 2023 Access and accommodation for engineering services.

- A maintenance strategy shall be developed from the critical appraisal and formulated at the design stage. The maintenance strategy must cover the extent to which maintenance can be designed out and how support systems can be built into the specification to facilitate efficient and cost-effective operation and maintenance.

- The strategy must include an indication on how all major plant and equipment is to be removed and replaced within the design life of the building, including the access openings, lifting arrangement and route to and from the plant room at a delivery point.

- Where there is a management plan for the landscaping (for example, as defined in credit LUE 6 Long term impact on biodiversity), this shall be included in the maintenance strategy

- Evidence required for Design Stage:

- Provide a formal letter confirming:

    - The of use and compliance with the CIBSE checklist at the feasibility, outline proposal, system design and detailed design stages

    - A signed, dated and completed copy of the checklist for the relevant stages.

    - Indicative examples of how items on the checklist were addressed at each stage of design for the building.

    - Compliance of the appraisal with the relevant standard(s).

    - Provide a copy of the feasibility stage appraisal for the design options.

    - Provide a copy of the maintenance strategy (including the landscaping plan if appropriate).

      All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Confirmation of use and compliance with the CIBSE checklist preconstruction, construction and commissioning stages.

- Indicative examples of how items on the checklist were addressed at each stage for the building.

- Should any of the specified proposed products related to this credit be replace for a non specified product, it should comply fully with the performance specification and requirements originally approved. It is the reasonability of the organisation that proposed the change to prove that the new product meets the original specification or better and should allow 5 working days for approval by the relevant person.

- Provide preconstruction stage 3 months prior to completion, construction stage and commissioning stage at completion.

- If not already provided, provide a landscape maintenance plan (see also credit LUE6)

**Man 12 – Life cycle costing**

- Produce a Life Cycle Cost (LCC) analysis that has been carried out based on the proposals developed during RIBA Work Stages B/C (feasibility study/outline proposals), or equivalent.

- The Life Cycle Costs analysis based on the feasibility study proposals covers the following stages:
  a. Construction
  b. Operation - includes, as a minimum, utilities
  c. Maintenance - includes, as a minimum, planned maintenance, replacements and repairs, cleaning, management costs
  d. End of life

- The LCC analysis uses a study period of 25 or 30 (as applicable) **AND** 60 years, shown in real, discounted and non-discounted cash flow terms.

- The feasibility study demonstrates that at least two of the following issues have been analysed at a strategic and system level (as per figure 6, Different levels of analysis at different stages of the life cycle, ISO 15686-1), comparing alternative options:
  a. Structure
  b. Envelope
  c. Services
  d. Finishes

- The chosen solution is the one that best meets the performance requirements for the built asset.

- The option(s) with the lowest discounted LCC over the period is preferred, assuming that their selection results in at least one of the following:
  a. The lowest building energy consumption over the operational life span of the building (compared to other options/alternatives analysed)
  b. A reduction in maintenance requirement/frequency

c. Prolonged replacement intervals of services infrastructure/systems or building fabric

d. Dismantling and recycling or reuse of building components.

- The Life cycle cost analysis should be updated during RIBA Work Stages D/E (detailed/final proposals) or equivalent, as detailed above.
- The results of the feasibility study shall be implemented in the specification, design and final construction of the assessed building.
- Evidence required for Design Stage:
- Provide a copy of the feasibility stage LCC analysis, including the details of the cost consultant who has completed the analysis.
- Provide a formal letter from the design team or cost consultant confirming the preferred option.
- Provide an updated copy of the LCC analysis for the detailed and final design.
- A formal letter from the design team confirming:
    - The option(s) with the lowest discounted life cycle costs have been, or will be, implemented in the design and specification.
    - All design stage information should be available prior to work starting on site.
    - Evidence required for Post Construction Stage:
- Should any of the specified proposed products related to this credit be replace for a non-specified product, it should comply fully with the performance specification and requirements originally approved. It is the reasonability of the organisation that proposed the change to prove that the new product meets the original specification or better and provide LCC where necessary; they should allow 5 working days for approval by the relevant person.
- Should any changes occur provide an updated copy of the LCC analysis for the final design.
- All information should be available to the assessor as soon as approval for the change has been given by the relevant person and no later than completion.

**Man 13 – Good corporate citizen**

- During RIBA Stage K or equivalent, consult with design team and the client/senior management and staff representatives using the Good Corporate Citizen model, new building section.
- The development scores a minimum average of 6 under the Good Corporate Citizen model.
- The contractor must cooperate with the consultation process as detailed above during the entire project process.
- Evidence required for Design Stage:

- Provide a formal letter from the design team or letters of appointment confirming:
- Their commitment to consult with the relevant stakeholders using the Good Corporate Citizen model
- The minimum average score required.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide copies of agenda and minutes from the consultation meeting.
  - Provide a copy of the model output showing the score achieved.

All PCR stage information should be available in final versions at completion.

**Hea 1 – Daylighting**

- Design the building(s) and interior layouts so that at least 80% by floor area of occupied *staff* and *public areas* have an average daylight factor of 2% or more. And at least 80% by floor area of occupied *patient areas* (dayrooms, wards) and consulting rooms have an average daylight factor of 3% or more.
- The provision of daylight should be designed in accordance with the guidance in CIBSE Lighting Guide 10 Daylighting and window design, BS8206 Part 2 and the BRE Site Layout Guide.
- Where the compliance requirement specifies that 80% of office or other *occupied space* floor area must be adequately daylit, it refers to 80% of the total floor area of all the rooms that must be assessed i.e. the compliant area. If for example a development has 6 rooms that must be assessed, each 150m2 (total area 900m2) then 720m2 must comply with the requirements; this is equal to 4.8 rooms. The number of rooms that must comply must always be rounded up; therefore in this example, five rooms must meet the requirements to achieve the credit.
- For areas where borrowed light is used, calculations or results from appropriate lighting design software must be provided to demonstrate that such areas meet the BREEAM requirements (if contributing to the percentage of compliant area). Examples of borrowed light include: light shelves, clerestory glazing, sun pipes or internal translucent/transparent partitions (such as those using frosted glass).
- Clinical areas with controlled environmental conditions, e.g. operating theatres, delivery rooms or pathology can be excluded from the assessment of daylighting.
- Other than small health centres and GP surgeries it is expected that daylight modelling will be on software capable of producing average daylighting and uniformity ratios.
- All modelling should take into account surrounding buildings and any obstacles to daylighting, including overhanging structures and window reveals.
- Exemplary credit requirements:
  - At least 80% of the floor area (for the building spaces/room identified above in the standard requirements) will have an average daylight factor of 3% in multi-storey buildings and 4% in single-storey buildings.

- Evidence required for Design Stage:

  - Provide design plans for each floor in the building with each room/area appropriately labelled for use.

  - Provide daylight calculations from modelling confirming:

    - Building areas assessed
    - The daylighting variables/criterion measured
    - Average daylight factor for each area
    - Compliance with room depth criterion, uniformity ratio, view of sky (if required)
    - The daylight provision is in compliance with the relevant standards.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide at letter confirming that window specification, size and/or room layouts have not changed since the design stage assessment and appropriate 'As built' drawings.

  - Or, confirm full details of any changes that have been made, which should include design plans for each floor in the building with each room/area labelled for use, elevations & plans that show all windows size & location.

  - The organisation responsible for any changes is liable for any associated cost with recalculations.

  - All information should be available to the assessor as soon as approval for the change has been given by the relevant person and no later than completion.

**Hea 2 – View Out**

- Design the building(s) and interior layouts so that all workstations/benches and desks and at least 80% by floor area of public areas have an adequate view out.

- Design the building(s) and interior layouts so all *patient-occupied* spaces have an adequate view out.

- Areas of the building where there are, or will be, workstations/benches or desks for building users and relevant patient areas; this includes wards and dayrooms are within 7m distance of a wall with a window or permanent opening providing an *adequate view out*, where the window/opening is ≥20% of the total inside wall area

- The view out should ideally be through an external window providing a view of a landscape or buildings (rather than just the sky) at seated eye level (1.2 – 1.3m) in the *relevant building areas.* A view in to an internal courtyard or atrium will comply provided the distance from the opening to the back wall of the courtyard/atrium is at least 10m (therefore allowing enough distance for the eyes to refocus). The view cannot be an internal view across the room, as this is likely to become obstructed by partitions, filing cabinets etc.

- At least 80% by floor area of the following public spaces (excluding corridors and circulation) have an *adequate view* out:

  a. Waiting areas,
  b. Children's crèche,
  c. Café / dining / vending areas.

- For the above spaces to comply, any point within the space must be within 7m distance of a window or permanent opening providing a *view*. Where the room depth is greater than 7m, compliance is only possible where the percentage of window/opening is the same as or greater than the values in table 1.0 of BS 8206[2].

- In patient-occupied areas the distance between the wall with the window/opening and nearest external solid object (i.e. buildings, screens, walls/fences) is ≥10m.

- Roof lights and high level windows that do not provide an *adequate view out* do not meet the requirements.

- Evidence required for Design Stage:

  - Provide design plan and elevation showing:
  - All relevant building areas and room depths
  - Actual or notional workstations/desk layout
  - Window/open areas
  - Provide site plan showing, building location and proximity to external obstructions.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide As built drawings or a formal letter form the design team confirming, no changes have occurred since design stage; therefore design stage evidence demonstrates compliance post construction.

  All PCR stage information should be available in final versions at completion.

**Hea 3 – Glare control**

- Provide an occupant-controlled shading system (e.g. internal or external blinds) that is fitted to all windows, glazed doors and rooflights in areas with workstations/benches, desks and/or close work will be undertaken or visual aids used. This should also include 'bedded areas'.

- In all other *occupied areas* the potential for disabling glare has been designed out by one or more of the following measures:

  a. Brise-soleil
  b. Low eaves
  c. Bioclimatic design that provides shading from high level summer and low level winter sun.

- Evidence required for Design Stage:

  - Provide marked-up copy of the design plan(s) confirming, a description of the function of each of the building spaces.

  - Provide a copy of the relevant specification clause(s), window schedule or design plan confirming, Type of shading system(s) and control to be installed.

  - Marked-up copy of the design plan(s) demonstrating the design measures that limit glare in all other occupied areas.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  o Provide photographic evidence confirming installation of compliant glare control system.

  All PCR stage information should be available in final versions at completion.

**Hea 4 – High frequency lighting**

- Install high frequency ballasts are installed on all fluorescent and compact fluorescent lamps.

- Evidence required for Design Stage:

  o A copy of the specification clause or room data sheets confirming high frequency ballasts are installed.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  o Provide as built drawings or a formal letter confirming:

  o No changes have occurred since design stage; therefore design stage evidence demonstrates compliance post construction.

  o Any changes proposed to the original lighting specification on fluorescent and compact fluorescent lamps must be high frequency ballasts.

  The written confirmation of such should be available no later than completion.

**Hea 5 – Internal and external lighting levels**

- Illuminance (lux) levels in all internal areas of the building are specified in accordance with Part Two of the CIBSE Code for Lighting 2002 and its 2004 Addendum.

- For areas where computer screens are regularly used, the lighting design complies with CIBSE Lighting Guide 7 [2] sections 3.3, 4.6, 4.7, 4.8 and 4.9. This gives recommendations highlighting:

  a. Limits to the luminance of the luminaires, to avoid screen reflections. (Manufacturers' data for the luminaires should be sought to confirm this).

  b. For up-lighting, the recommendations refer to the luminance of the lit ceiling rather than the luminaire; a design team calculation is usually required to demonstrate this.

  c. Recommendations for direct lighting, ceiling illuminance, and average wall illuminance.

- Illuminance levels for lighting in all external areas within the *construction zone* are specified in accordance with CIBSE Lighting Guide 6, '*The outdoor environment*'.

- Evidence required for Design Stage:

  o Provide a copy of the specification or relevant room schedules confirming:

- The internal/external maintained illuminance levels.
- The standards that the illuminance levels are specified to.
- A formal written declaration of conformity from the relevant member of the design team confirming the maintained illuminance levels for each internal/external space are in compliance with the relevant Standard.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide a formal written declaration, or as built drawings/specification confirming:
  - Light fittings have been installed in compliance with the lighting specification.
  - No changes have occurred in the lighting specification used to demonstrate design stage compliance.
  - Where changes have occurred, a further declaration is required confirming that the revised lighting specification is in compliance with the BREEAM requirements. The organisation that proposes any changes from the lighting specification is responsible for confirming that the proposed lighting complying with the BREEAM requirements.

The written confirmation of such should be available no later than completion.

**Hea 6 – Lighting zones & controls**

- Allow to zone lighting control to allow for varying occupancy and/or uses within each space, appropriate to the usage of that space. In particular, lighting is zoned to allow separate user-control as follows:
  a. Wards/bedded areas: zoned lighting control for individual bed spaces and control for staff over groups of bed spaces
  b. Treatment areas, dayrooms, waiting areas: zoning of seating and activity areas and circulation space with controls accessible to staff
  c. Office and circulation spaces
  d. In office areas and consulting rooms, zones of no more than four workplaces
  e. Workstations adjacent to windows/atria and other building areas separately zoned and controlled
  f. Seminar and lecture rooms: zoned for presentation and audience areas
  g. Library spaces: separate zoning of stacks, reading and counter areas
  h. Auditoria: zoning of seating areas, circulation space and lectern area
  i. Dining, restaurant, café areas: separate zoning of servery and seating/dining areas

j. Retail: separate zoning of display and counter areas.

- Where the building consists entirely of small rooms/spaces (less than 40m2) which do not require any subdivision of lighting zones/control or meet the requirements by default.

- Evidence required for Design Stage:

  - Provide design plans for each floor of the building highlighting space arrangement and room type

  - Provide specification or design plans confirming:

  - Lighting zones

  - Location and scope of user-controls.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a formal written declaration, or as built drawings/specification confirming:

  - No changes have occurred since design stage; therefore, design stage evidence can be used to demonstrate compliance at post construction stage.

  - Where changes have occurred since design stage, the amended features should still comply with the BREEAM requirements. The organisation that proposes any changes from the lighting specification is responsible for confirming that the proposed lighting complying with the BREEAM requirements.

  The written confirmation of such should be available no later than completion.

**Hea 7 – Potential for natural ventilation**

- *Occupied spaces* of the building should be designed to be capable of providing fresh air entirely via a natural ventilation strategy, demonstrated via EITHER of the following:

- The *openable window area* in each *occupied space* is equivalent to 5% of the gross internal floor area of that room/floor plate. For room/floor plates between 7m-15m depth, the *openable window area* is on opposite sides and evenly distributed across the area to promote adequate cross-ventilation. OR

- The design demonstrates (by calculation, using ventilation design tool types recommended by CIBSE AM10 [2]) that the natural ventilation strategy provides adequate cross flow of air to maintain required thermal comfort conditions and ventilation rates.

- For a strategy which does not rely on *openable windows*, or which has *occupied spaces* with a plan depth greater than 15m, the design must demonstrate (by calculation in accordance with requirement 1b above) that the ventilation strategy can provide adequate cross flow of air to maintain the required thermal comfort conditions and ventilation rates.

- The strategy should be capable of providing at least two levels of user-control on the supply of fresh air to the *occupied space* with higher rates of ventilation achievable to

remove short term odours and/or prevent summertime overheating. This would typically be demonstrated by providing a large enough area of manually opening windows or powered window actuators. Any opening mechanisms must be easily accessible and provide adequate user-control over air flow rates to avoid draughts.

- The *openable window area* is defined as the geometric free ventilation area created when a ventilation opening, e.g. window, is open to its normal operational fully designed extent (i.e. this excludes open areas created when reversible windows are opened for cleaning etc). It is not the glazed area of a façade or the glazed area of the part of the window that is openable (unless it opens fully).

- Rooms or departments where control of ventilation is required for prevention of cross infection and/or controlled environmental conditions can be excluded from the definition of *occupied spaces*, including:

  - Operating theatres
  - Laser surgery unit
  - Operative imaging unit
  - Intensive treatment unit
  - Infectious diseases isolation unit
  - Wards housing immuno-compromised patients
  - Manufacturing pharmacy
  - Specialised imaging, X-ray and scanning unit
  - Pathology containment laboratories
  - Mortuary and dissection suite
  - Research laboratories and associated animal houses;
  - Sterilising and disinfecting unit (SDU)
  - Emerging treatment technologies including gene therapy and stem cell units.

- Areas immediately adjacent to the above are excluded if it can be demonstrated that reverse air flow would be likely with natural ventilation.

- Other excluded areas are:

  - Swimming/hydrotherapy pools
  - Corridors
  - Stairwells
  - Store rooms
  - Plant rooms
  - Catering and small staff kitchens
  - Toilets
  - Any other areas which require mechanical ventilation to satisfy building regulations or HTMs.

- Evidence required for Design Stage:

  - Provide design plans and elevations, specification or calculations confirming:

    - Ventilation strategy in each *occupied space*
    - The depth of the room
    - Gross internal floor area of each *occupied space*
    - The type of window/ventilator and total *openable area* or Manufacturers'/suppliers' literature
    - The location of openings
    - The type and degree of user-control.
    - Provide a copy of the results from the appropriate software modelling tool demonstrating compliance.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a formal written declaration, or as built drawings/specification confirming:

  - No changes have occurred since design stage; therefore, design stage evidence can be used to demonstrate compliance at post construction stage.

  - Where changes have occurred since design stage, the amended features should still comply with the BREEAM requirements. The organisation that proposes any changes from the specification is responsible for confirming that the proposed change complying with the BREEAM requirements.

  Provide written confirmation of such which should be available no later than completion.

**Hea 8 – Indoor air quality**

- Where the building is air-conditioned or mixed-mode the building's air intakes and exhausts are over 10m apart to minimise recirculation and intakes are over 20m from *sources of external pollution*.

- Where the building is naturally-ventilated all openable windows/ventilators are over 10m from *sources of external pollution*.

- The building should be designed to provide fresh air rates to dilute pollutants in accordance with the following good practice:

  a. In general office type areas fresh air is provided in accordance with the top of the range recommended in the British Council for Offices *"Guide to Best Practice in the Specification of Offices"* i.e. 12 litres per second per person.

  b. All clinical areas with controlled environmental conditions comply with HTM 03-01 "*Specialised ventilation for healthcare premises"*.

- Areas of the building subject to large and unpredictable or variable occupancy patterns such as Gyms or waiting rooms, have CO2 or air quality sensors specified and:

  a. In mechanically ventilated spaces, the sensor(s) are linked to the mechanical ventilation system and provide demand-controlled ventilation to the space.

  b. In naturally ventilated spaces, the sensors either have the ability to alert the building owner/manager when CO2 levels exceed the recommended set point, or are linked to controls with the ability to adjust the quantity of fresh air, i.e. automatic opening windows/roof vents.

- The distance requirement does not necessarily mean the plan distance, but the three dimensional distance around and over objects; e.g. on plan the air intakes may be less than 20m from a source of external pollution, but the intake may be on the roof of a 10 storey building and therefore over 20m from the source of pollution.

- Sources of external pollutions are:

  - Highways and the main access roads on the assessed site.
  - Car parks and delivery/vehicle waiting bays
  - Other building exhausts, including from building services plant industrial/agricultural processes
  - Vehicle pick-up/drop-off or waiting bays

- Service and access roads with restricted and infrequent access (for example roads used only for waste collection) are unlikely to represent a significant source of external pollution. These roads can therefore be excluded as sources of external pollution.

- Evidence required for Design Stage:

    - Provide a marked-up site plan highlighting:

        - Locations of intakes, extracts, openable windows, ventilators

        - Any existing or proposed sources of external pollution.

    - Provide calculations and/or performance specification requirements confirming:

        - The fresh air rate set for each space

        - That the fresh air rate can be met using the chosen strategy

        - The relevant standard(s) to which the design is in accordance.

    - Provide a copy of the design plans for the internal areas of the building and a copy of the relevant clause(s) of the specification confirming:

        - Air quality monitoring sensors

        - How these boost ventilation when set points are triggered.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - For a mechanically ventilated building, provide the commissioning manager's performance testing report confirming, the required fresh air rates are achieved.

- Provide as built drawings confirming:

    - Locations of intakes, extracts, openable windows, ventilators

    - Proximity of any sources of external pollution to the above.

- Provide as built drawings confirming installation of air quality sensors and the sensors boost ventilation when set points are triggered

  Provide all information drawings no later than completion.

**Hea 9 – Volatile Organic Compounds**

- All products below that are specified should meet the relevant standard for Volatile Organic Compound (VOC) emissions.

- Relevant products & standards are:

    - Wood panels, BS EN 13986:2002, Formaldehyde E1 Verify that regulated wood preservatives are absent and of the minimum content.

- Timber structures, BS EN 14080:2005, Formaldehyde E1
- Wood flooring, BS EN 14342:2005, Formaldehyde E1 Verify that regulated wood preservatives are absent and of the minimum content.
- Resilient, textile and laminated Floor coverings, BS EN 14041:2004, Formaldehyde E1 Verify that regulated wood preservatives are absent and of the minimum content.
- Suspended ceiling tiles, BS EN 13964:2004, Formaldehyde E1 No asbestos.
- Flooring adhesives, BS EN 13999-1:2007, Verify that carcinogenic or sensitising volatile substances are absent.
- Wall covering, BS EN 233:1999, BS EN 234:1989, BS EN 259:2001, BS EN 266:1992, Formaldehyde and Vinyl chloride monomer (VCM) release should be low and within the BS EN standard for the material. Verify that the migration of heavy metals and other toxic substances are within the BS EN standard for the material.
- Adhesive for hanging flexible wall covering, BS 3046:1981, No harmful substances and preservatives used should be of minimum toxicity.
- Decorative paints and varnishes, BS EN 13300:2001, VOC (organic solvent) content, requirement for Phase 2. Fungal and algal resistant.

  Testing requirement:
  1. BS EN 717-1:2004
  2. BS EN 13999-2:2007 - Volatile Organic Compounds (VOCs)
  3. BS EN 13999-3:2007 - Volatile aldehydes
  4. BS EN 13999-4:2007 - Volatile diisocyanates
  5. BS EN 12149:1997
  6. BS EN ISO 11890-2:2006

- Evidence required for Design Stage:
  - Provide a copy of the relevant specification clause confirming:
    - The VOC content of the relevant specified product types will comply with the standards specified above.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide for each relevant product, a formal letter from or copies of the manufacturer's literature confirming:
    - The standard(s) against which the product is tested
    - The VOC emissions achieved
    - The VOC emissions meet the required level.

- A draft copy of all information should be available to the BREEAM assessor 3 months prior to completion and a final version to be available to the BREEAM assessor at completion.

**Hea 10 – Thermal comfort**

- Thermal modelling should be carried out using software selected and applied in accordance with CIBSE AM11 "*Building Energy and Environmental Modelling*"

- The modelling should demonstrate that the building design and services strategy can deliver thermal comfort levels in *occupied spaces* in accordance with the requirements set out in HTM 03-01, Appendix 1. In particular, internal summer temperatures in patient areas do not exceed 28oC dry bulb for more than 50 hours per year as defined in HTM 03-01.

- The software used to carry out the simulation at the detailed design stage must provide *full dynamic thermal analysis*. For smaller and more basic building designs an alternative less complex means of analysis may be appropriate (such methodologies must still be selected and applied in accordance with CIBSE AM11).

- Evidence required for Design Stage:

  - Provide correspondence (e.g. letter, email or meeting minutes) from the design team confirming:

    - The name of the thermal comfort modelling software used.

    - The software has been selected and applied in accordance with CIBSE AM11.

    - Provide a copy of the results from the modelling demonstrating the internal temperatures in compliance with the relevant standards.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide formal written confirmation from the design team confirming:

    - No changes have occurred since design stage thermal comfort assessment was carried out; therefore design stage evidence demonstrates compliance at the post construction stage.

    - Or, where changes have occurred, provide an updated copy of the results from the modelling demonstrating the internal temperatures in compliance with the relevant standards.

  The written confirmation of such should be available no later than completion.

**Hea 11 – Thermal zoning**

- The heating/cooling system should be designed to allow occupant control of zoned areas within all *occupied spaces* in the building.

- The zoning should allows separate occupant control (within the *occupied space*) of each perimeter area (i.e. within 7m of each external wall) and the central zone (i.e. over 7m from the external walls).

- Where *long-lag systems* are specified, the system should be designed to service the base load only and a responsive secondary heating system and controls are provided, zoned in compliance with the above requirements.

- Exercise areas e.g. physiotherapy and hydrotherapy, can be considered to be single zoned spaces

- An occupied space is a room or space within the assessed building that is likely to be occupied for 30 minutes or more by a building user. The definition excludes areas where building users would not expect, or be expected, to control temperature in the space, including the following:

    a. Atria/association space
    b. Entrance halls/reception areas
    c. Circulation areas
    d. Storerooms

- Evidence required for Design Stage:

- Provide marked-up M&E drawings confirming:

    - Scope of the heating/cooling system
    - The type of user controls for the above systems
    - The scope of the controls i.e. control zone.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide photographic evidence confirming installation of user controls in each *occupied space*

    The written confirmation of such should be available no later than completion.

**Hea 12 – Microbial contamination**

- All *water systems* in the building should be designed in compliance with the measures outlined in the following standards:

    a. HTM 04-01 "The control of Legionella, hygiene, "safe" hot water, cold water and drinking water systems"

    b. Health and Safety Executive's "*Legionnaires' disease - The control of legionella bacteria in water systems*". Approved Code of Practice and guidance, 2008.

- Relevant water systems are:

    - Cooling towers
    - Evaporative condenser
    - Domestic hot and cold water systems
    - Other plant and systems containing water which is likely to exceed 20°C and which may release a spray or aerosol during operation or when being maintained, for example:
    - Humidifiers and air washers
    - Spa baths and pools
    - Car/bus washes
    - Wet scrubbers
    - Indoor fountains and water features.

- Evidence required for Design Stage:

    - Provide a copy of the relevant specification clause(s) confirming:

        - All types of water system in the building and on the assessed site.

- The standards to which all water systems in the building will be designed.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - For all water systems in the building, provide a formal letter of declaration of the relevant systems confirming:
    - The design and installed systems comply with the HSE's ACoP.
    - If relevant, any existing water systems comply with the HSE's ACoP.
- A draft copy of all information should be available to the BREEAM assessor 3 months prior to completion and a final version to be available to the BREEAM assessor at completion.

**Hea 13 – Acoustic performance**

- The indoor ambient noise levels and airborne and impact sound insulation levels should achieve the recommended performance benchmarks outlined in Health Technical Memorandum 08-01 Part A: Design and Construction Considerations.
- Allow for a suitable qualified acoustician to perform pre-completion acoustic testing in accordance with HTM 08-01 Part B: Validation and Verification to ensure that all relevant spaces (as built) achieve the performance standards required, and allow any required remedial works in spaces that do not meet the standards are completed prior to handover and occupation
- Suitably qualified acoustician: Those organisations or individuals having UKAS accreditation or accredited by a European equivalent of UKAS. The definition includes organisations or individuals registered to schemes that are UKAS accredited, or equivalent, to ensure consistency and technical competence in sound testing. At the time of writing the Association of Noise Consultants (ANC) Registration Scheme is in the process of obtaining UKAS accreditation and can be deemed to comply with this requirement until advised otherwise.

Measurement/calculation procedures

- The following procedures must be followed by the acoustician when measuring or calculating the levels required to demonstrate compliance with this BREEAM issue (see also compliance note above on measurement procedures):
  - Noise from both internal sources (e.g. mechanical ventilation systems, plant noise) and external sources (e.g. traffic noise transmitted via the building façade) should be included, and, where windows are openable as part of the ventilation strategy, these should be assumed to be open for the purposes of calculations and open for measurements.
  - Noise from occupants and office equipment (e.g. computers) should not be included in the measurements.
  - Measurements should be made in at least four rooms in which noise levels can be expected to be greatest either because they are on the noisiest façade or because they are on a naturally ventilated façade.

- Where different ventilation strategies are used, measurements should be conducted in rooms utilising each strategy. Otherwise, measurements should be made in rooms on the noisiest façade.
- *T* in *L*Aeq,*T* is taken as the duration of the normal working day (typically 8 hours between 09.00 and 17.00).
- Measurements need not be made over a period of 8 hours if a shorter measurement period can be used. In this case, measurements should be made when external noise levels are representative of normal conditions throughout the day.
- Measurement periods shorter than 5 minutes should not be used.
- Measurements should be taken in a minimum of 3 locations in rooms at a height of 1.2 m above the floor level and at least 1 m away from any surface.

- Evidence required for Design Stage:
  - Provide a copy of the design plan for each level of the building with each room/area clearly labelled.
- Provide a copy of the acoustician's calculations confirming:
  - The specific performances standards achieved for each room/area
  - The standards comply with the levels required in HTM 08-01.
- Provide evidence that the acoustician is suitably qualified.
- Provide a programme of pre-completion acoustic testing by a *suitably qualified acoustician* that shall be commissioned.
- Where rooms/areas do not comply with the required levels, provide evidence of appropriate remedial works shall be actioned and completed.
- All design stage information should be available prior to work starting on site.
- Evidence required for Post Construction Stage:
  - Provide copies of acoustic field test report/results confirming:
    - The required performance levels have been achieved for each room/area of the completed building.
    - Where relevant, any remedial work/actions required to meet the performance standards.
    - Provide evidence, such as a formal letter from the acoustician or their test report confirming that they meet BREEAM's definition of a *suitably qualified acoustician*.
- Provide a formal letter confirming:
  - Any and all required remedial works have been carried out in accordance with the acoustician's recommendations.

  The written confirmation of such should be available no later than completion.

**Hea 15 – Outdoor Spaces**

- Allow for within the building(s) design outside space that:

  a. Is of adequate size

  b. Is accessible via safe pedestrian routes to all potential users of the building, regardless of age, disability or gender (as per Approved Document Part M)

  c. Is either an outdoor landscaped area, balcony or terrace

  d. Provides the building users with an external area that is private and not susceptible to disturbance from sources of noise e.g. building services, car parks, delivery areas

  e. Provides appropriate seating and areas that allows building users to gather and socialise.

  f. In the case of buildings with a crèche/nursery and in mental health facilities, the outdoor space is secure (with supervised access only) and of adequate size to allow a reasonable proportion of the staff and patients to sit outside.

- Adequate sized spaces provide enough amenity for the predicted number of building users during coffee/lunch breaks, or for other activities where such a space would be of use.

- Evidence required for Design Stage:

  - Provide a proposed site plan highlighting:
  - The design and layout of the outdoor amenity area.
  - The provision of seating
  - The accessibility of the space from the assessed building
  - Any potential sources of noise

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming the provision of a compliant outdoor space.

- Provide all information no later than completion.

**Hea 19 – Arts in Health**

- Allow to appoint an art co-ordinator for this specific project. Consult with the trust to determine the appropriate person for the role, this maybe someone from the trust or an outside specialist art consultant

- Allow to produce an art policy and an art strategy that is prepared for the development at the feasibility stage i.e. RIBA stage B (or equivalent) and endorsed by the senior management level.

- The policy and strategy must address the following:

  a. Enhancing the healthcare environment
  b. Building relationships with the local community
  c. Building relationships with patients and their families

d. Relieving patient and family anxiety by contributing to treatment or recovery areas, e.g. post-operative areas, paediatric units, etc.
e. Greening the healthcare environment with inclusion of living plants (where appropriate)
f. Training generating creative opportunities for staff.

- The arts co-ordinator must:
  - Hold a relevant qualification in an arts or a related subject.
  - Have at least two years of relevant experience. Such experience should be related to the application of arts in a social context. Examples could be voluntary or paid work within healthcare or educational environments, or with ethnic minority, disabled, elderly or young communities.
- Evidence required for Design Stage:
  - Provide copies of correspondence from the design team or Trust confirming the name and qualifications of the appointed arts co-ordinator.
  - Provide a copy of the Trust arts policy and strategy.
- All design stage information should be available prior to work starting on site.

**Ene 1 – Reduction of CO2 emissions**

- Allow to supply and provide a copy of the EPC output from the *approved software* for the assessed building at the design stage and the *accredited energy assessor's* name and accreditation number
- Allow to supply and provide a copy of the final registered EPC from the *approved software* for the constructed building*.
- For buildings assessed in Scotland, allow to provide a copy of the EPC Output from the *approved software* demonstrating the building's CO2 Index.
- Provide the *accredited energy assessor's* name and accreditation number.
- *The final rating must account for any changes to the specification during construction; and the measured air leakage rate, ductwork leakage and fan performances (as required by Building Regulations).
- Accredited energy assessor: An individual trained and qualified to use *approved software* and produce EPC ratings for non-domestic buildings who are members of an accredited scheme. A register of non-domestic *accredited energy assessors* can be found here: https://www.ndepcregister.com/
- The design stage EPC and associated documents should be available before work starts on site. The final EPC and associated documents should be available no later than completion.

**Ene 2 – Sub-metering of substantial energy uses.**

- Provide and install separate *accessible energy sub-meters*, labelled with the end energy consuming use, are provided for the following systems (where present):

a. Space Heating
b. Domestic Hot Water

c. Humidification
d. Cooling
e. Fans (major)
f. Lighting
g. Small Power (lighting and small power can be on the same sub-meter where supplies are taken at each floor/department).

- Other major energy-consuming items where appropriate for example: swimming or hydrotherapy pools, kitchen plant, cold storage plant, laboratory plant, sterile services equipment or transportation systems (e.g. lifts & escalators).

- All energy sub-meters are connected to a Building Management System (BMS) or other automated control system, e.g. outstations linked to a central PC, for the monitoring of energy consumption.

- The energy meters must be located in an area of the building that allows for easy access to facilitate regular monitoring and readings by the buildings staff and facilities manager. Typically this will be the plant room, main distribution room or control room (where BMS is installed)

- Where the building uses a modular system and the rated input power of the lead boiler is less than the figure in table 1, but greater than 10kW (see additional information), sub-metering of the lead boiler is still required.

**Table 1: Size of plant for which separate metering would be required [1]**

| Plant Item | Rated input power (kW) |
|---|---|
| Boiler installation comprising one or more boilers or CHP plant feeding a common distribution circuit | 50 |
| Chiller installations comprising one or more chiller units feeding a common distribution circuit | 20 |
| Electric humidifiers | 10 |
| Motor control centres providing power to fans and pumps | 10 |
| Final electrical distribution boards | 50 |

- Evidence required for Design Stage:

- Provide specification document or technical drawings confirming:

  - Energy-consuming systems and their rated outputs

  - Metering arrangements for each system, type and location of meter specified.

  - If applicable, scope of BMS and its energy-monitoring capability.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming location and labelling/function of the individual sub-meters or BMS.

- Provide all information no later than completion.

**Ene 3 - Sub metering of high energy load and tenancy areas**

- Allow to supply and install *accessible* sub-meters covering the *energy supply* to all tenanted, or in the case of single occupancy buildings, *relevant function areas or departments* within the building/unit.

- The meters are labelled with the end energy consuming use.

- All energy sub-meters should be connected to a Building Management System (BMS) or other automated control device, e.g. outstations linked to a central PC, for the monitoring of energy consumption.

- Relevant function areas/ departments include:

  - Operating department
  - X-ray department
  - Radiotherapy department
  - Pathology department
  - Dialysis department
  - Medical physics
  - Mortuary and post-mortem department
  - Rehabilitation, when including hydrotherapy pools
  - Central Sterile Supplies Department (or equivalent)
  - Process areas, e.g. commercial-scale kitchens and laundries
  - IT rooms
  - Pharmacy department
  - Laboratories
  - Tenancy areas.

- Evidence required for Design Stage:

  - Provide marked-up drawings and site plan detailing:
    - Building areas by department/function and/or tenancy
    - Location of meters.
  - Provide specification document or technical drawings confirming:
    - Metering arrangements for each department/function and/or tenancy area
    - Type of meter specified.
  - Provide specification document or technical drawings confirming:
    - Scope of BMS or other automated control system and its energy monitoring capability.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming location and function of the individual sub-meters or BMS.

- Provide all information no later than completion.

**Ene 4 – External lighting**

- Where provided all external light fittings for the building, access ways and pathways have a luminous efficacy of at least 50 lamp lumens/circuitWatt when the lamp has a colour rendering index (Ra) greater than or equal to 60. Or 60 lamp Lumens / circuitWatt when the lamp has a colour rendering index (Ra) less than 60.

- All external light fittings to car parking areas, associated roads and floodlighting has a luminous efficacy of at least 70 lamp lumens/circuit Watt when the lamp has a colour rendering index (Ra) greater than or equal to 60. Or 80 lamp Lumens / circuitWatts when the lamp has a colour rendering index (Ra) less than 60.

- All external light fittings for signs and uplighting have a luminous efficacy of at least 60 lamp lumens/circuitWatt when the lamp wattage is greater than or equal to 25W. Or 50 lamp lumens/circuitWatt when the lamp wattage is less than 25W.

- External light fittings are controlled through a time switch, or daylight sensor, to prevent operation during daylight hours. Daylight sensor override on a manually switched lighting circuit is acceptable.

- Decorative lighting and floodlighting are not be exempt from the above requirements.

- Evidence required for Design Stage:

  - Provide marked-up site plan and building elevations showing:
  - Location and purpose of all external lighting fittings.
  - Provide lighting specification or lighting designer's calculations confirming:
  - Lamp lumens/circuit watt for each type of fitting as well as the colour rendering index Ra (where appropriate)
  - External lighting control strategy

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide as built drawings of site plan and building elevations showing:

    - Location and purpose of all external lighting fittings.

    - Provide as built lighting specification confirming:

    - Lamp lumens/circuit watt for each type of fitting as well as the colour rendering index Ra (where appropriate)

    - Provide as built external lighting control strategy.

- Provide manufacturers' literature confirming:

  - Technical spec for the installed external light fittings.

- Where changes have occurred, a further declaration is required confirming that the revised lighting specification is in compliance with the BREEAM requirements. The organisation that proposes any changes from the lighting specification is responsible for confirming that the proposed lighting complying with the BREEAM requirements.

- All PRC drawings and specifications should be available no later than completion.

**Ene 5 – Low or zero carbon technologies**

- Allow to provide a feasibility study considering local (*on-site* and/or *near site*) low or zero carbon (LZC) technologies and implement the results.

- The feasibility study has been carried out at RIBA stage C (outline proposals) or
- equivalent procurement stage.

- Achieve at least one credit for a compliant report and implementation of the results plus as may be specified elsewhere further credits for achieving the following contribution to total energy demand: 10% (1 Credit) / 15% (2 Credits) / 20% (3 Credits) reduction in the building's CO2 emissions as a result of the installation of a feasible local LZC technology.

- The feasibility study should be carried out by an *energy specialist* to establish the most appropriate local (on-site or near-site) LZC energy source for the building/development. This study covers as a minimum:

    a. Energy generated from LZC energy source per year
    b. Payback
    c. Land use
    d. Local planning requirements
    e. Noise
    f. Feasibility of exporting heat/electricity from the system
    g. Life cycle cost/lifecycle impact of the potential specification in terms of carbon emissions
    h. Any available grants
    i. All technologies appropriate to the site and energy demand of the development.
    j. Reasons for excluding other technologies.

- Technologies recognised by the Department for Business Enterprise and Regulatory Reform (BERR) Low Carbon Buildings Programme (LCBP) may be considered as part of a low or zero carbon emissions solution. The following list details the technologies recognised by the BERR, LCBP at the time of going to print:

- Solar

    - Solar hot water
    - Photovoltaics

- Water

    - Small scale hydro power
    - Tidal power
    - Wave power

- Wind

    - Wind turbines

- Biomass

    - Biomass single room heaters/stoves
    - Biomass boilers
    - Biomass community heating schemes

- Combined Heat and Power (CHP) for use with the following fuels:

  - Biomass
  - Natural gas
  - Sewerage gas and other biogases
  - CHP systems must meet the threshold criteria for good quality CHP as set by DEFRA's CHPQA programme[4].
  - Community heating, including utilising waste heat from processes such as large scale power generation where the majority of heating comes from waste heat (see also compliance notes below).

- Heat Pumps

  - Ground source heat pumps
  - Water source heat pumps
  - Geothermal heating systems
  - Air source heat pumps
  - For heat pumps to comply, the heat source (ground or water) must be from a renewable source, for example soil, outside air, ground water, or a river.

- Other

  - Fuel cells using hydrogen generated from any of the above 'renewable' sources

- Provide figures used for calculations of the percentage carbon reduction provided by LZC technology are based on the output from *approved energy modelling software*.

- 'Local' does not have to mean *on-site* and community schemes (near site) can be used as means of demonstrating compliance.

- Any electricity from an *onsite* LZC energy source that is exported to the grid may be included in the calculations as if it were used within the building.

- Energy Specialist: An individual who has acquired substantial expertise or a recognised qualification for undertaking assessments, designs and installations of low or zero carbon solutions in the commercial buildings sector; and is not professionally connected to a single low or zero carbon technology or manufacturer.

- Life Cycle Costs: the total cost of a building or its parts throughout its life, including the costs of planning, design, acquisition, operations, maintenance and disposal, less any residual value, in terms of carbon emissions.

- Life cycle impact: this is the requirement to look at the carbon balance of each technology over its whole life. Encouraging people to not just the savings or emissions over its operational life but also the savings or emissions over the whole life of the technology (from 'cradle to grave'), therefore reflecting the fact that different technologies have different life spans.

- Payback period: the period of time needed for a financial return on an investment to equal the sum of the original investment

- Evidence required for Design Stage:

  - Provide a copy of the feasibility study report.

  - Provide a letter from the energy specialist confirming:

    - Compliance with the definition of an energy specialist

    - The timing of the feasibility report within the plan of works

- Provide marked-up design plan or specification confirming:
  - Proposed installation of LZC energy technology.
  - Provide manufacturer's technical data and details or calculations stating the carbon savings as a result of the installed LZC technology.
- Provide a copy of the report produced by the *approved energy modelling software* illustrating;
- The name of the approved software used to carry out the modelling
- Confirmation of the expertise and experience of the individual carrying out the modelling
- Total CO2 emissions for the assessed building (without LZC energy technology).
- And Calculations/outputs from the manufacturer, supplier, engineer or *approved software* confirming:
- Total carbon savings as a result of the installed LZC technology.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide as built drawings and photographic evidence confirming:
    - Installation of LZC technology.
    - Where there have been changes to the proposed design or LZC technology specification, a copy of the as built report produced by the Building Regulations-compliant energy model confirming the same data as outlined at the design stage.

All PCR drawings and specifications should be available no later than completion.

**Ene 8 – Lifts**

- Allow for and provide an analysis of transport demand and patterns for the building has been carried out by the design team to determine the optimum number and size of lifts and *counterbalancing ratio* on the basis of anticipated passenger demand.
- Analysis the energy consumption for at least two types of lift or lift strategy 'fit for purpose' has been estimated and the system with the lowest energy consumption specified.
- Of the following energy-efficient features, the three that offer the greatest potential energy saving are specified:
  a. The lifts operate in a stand-by mode during off-peak and idle periods. For example the power side of the lift controller and other auxiliary equipment such as lift car lighting and ventilation fan switch off when the lift is not in motion.
  b. Where lift motors use a drive controller capable of variable-speed, variable-voltage, variable-frequency control of the drive motor.

c. The lift has a regenerative unit so that energy generated by the lift (due to running up empty and down full) is returned back to the grid or used elsewhere on site.

d. The lift car uses energy-efficient lighting and display lighting (>60 Lumens/watt or fittings that consume less than 5W e.g. LEDS).

- Evidence required for Design Stage:

  - Provide a copy of the relevant report or documentation detailing the analysis undertaken and findings/recommendations and a copy of the lift specification.

  - All design stage information should be available prior to work starting on site.

  - Evidence required for Post Construction Stage:

  - Provide confirmation that the lifts that have been specified have been installed and no changes have occurred.

  All PCR drawings and specifications should be available no later than completion.

**Ene 15 - Provision of energy efficient equipment**

- Where specified as being provided by the contractor, the following equipment has been procured in accordance with OGC's Sustainability Mandatory Standards – Quick Wins and ECG72: *Energy consumption in hospitals*.

  a. Office equipment
  b. White goods
  c. Supplementary electric heating
  d. Small powered equipment.

- The procurement of *Large scale equipment* (where present) and sets of electrical equipment (where numbering more than 50) has been informed and selected by life cycle costing analysis in accordance with EnCO2de, Chapter 3.0 [1].

- For each piece of equipment at least two options '*fit for purpose'* have been analysed and the option(s) specified are those that demonstrate better performance in terms of:

  a. Direct running costs
  b. Indirect running costs and additional administration costs
  c. Cost of disposal
  d. Spending to save
  e. Recyclability
  f. Improved manageability
  g. Energy performance
  h. Reduced harmful emissions to the atmosphere
  i. Improved services, comfort and productivity.

- White goods: Domestic appliances such as washing machines, fridges and freezers, tumble dryers etc. This also includes smaller equipment such as kettles, toasters, electric cookers etc.

- Small powered equipment: Includes staff and patients' vending machines, TV and music systems, air-movement fans, etc.

- Evidence required for Design Stage:

- Provide a copy of the relevant clause from the specification or the occupying stakeholders compliant Environmental Procurement Policy. Or provide a formal letter from the project team confirming the specific undertaking.

- Provide the scoring matrices for selection of equipment indicating that energy performance is a consideration (10% or greater weighting) in the selection decision-making process.

- Provide equipment documentation showing schedules of performance which are to be completed by each equipment supplier.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a formal letter confirming
  - Makes and models of equipment installed.
  - The procurement of equipment based on lowest LCC
  - The installation of equipment selected in accordance with the policy and LCC study.

  All PCR drawings and specifications should be available no later than completion.

**Ene 16 - CHP Community Energy**

- Allow for and provide a study that is carried out to explore the feasibility of:

  a. Connecting the building to an existing local community CHP system or source of waste heat or power, or,

  b. Specifying a building/site CHP system or source of waste heat or power with the potential to export excess heat or power via a local community energy scheme.

- Where the scope exists to specify a CHP system or make use of an existing system or source of waste energy, the feasibility study covers as a minimum:

  a. Economic appraisal, including as a minimum simple payback period, annual capital, operating and maintenance expenditures and annual revenues from the sale of heat and electricity (where applicable)

  b. Local planning requirements / initiatives

  c. Expected net energy yield per annum of the proposed system

  d. Life cycle impact of the proposed system in terms of carbon emissions.

- Evidence required for Design Stage:

  - Provide a copy of the feasibility study.

  All design stage information should be available prior to work starting on site.

**Tra 1 – Provision of public transport**

- Evidence required for Design Stage:

- Provide scale map / site plans highlighting the location of the building and all public transport nodes in proximity of the buildings main entrance.
- Provide timetables for each service at each public transport node considered.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide information as above, but updated to latest relevant information.

All PCR information should be available no later than completion.

**Tra 2 – Proximity to amenities**

- Evidence required for Design Stage:
  - Provide marked-up site plan or map highlighting:
    - Location of assessed building
    - Location and type of amenities :

      a. Grocery shop and/or food outlet.
      b. Post box.
      c. Cash machine.
      d. Pharmacy)
  - The route to the amenities
  - Plan/map scale
- Where the amenities do not currently exist, but are due to be developed, provide a letter confirming:
  - The location and type of amenities to be provided
  - The timescale for development of the amenities.

All design stage information should be available prior to work starting on site.

**Tra 3 – Cyclist facilities**

- Supply and install covered, secure and well-lit cycle storage facilities for all *building users*.
- The number of *compliant cycle storage spaces* provided is as follows:

  a. 10% of *building users* up to 500 PLUS
  b. 7% for *building users* in the range of 501 – 1000 PLUS
  c. 5% for *building users* over 1000

AND

- Buildings designed for outpatients only:

  d. 1 *compliant cycle storage space* provided for every two consulting rooms, subject to a minimum of 4 compliant cycle storage spaces.

OR

- Buildings designed for inpatients:

  e. 1 *compliant cycle storage space* provided for every 10 beds, subject to a minimum of 4 compliant cycle storage spaces.

- Also at least two of the following *compliant facilities* must be provided for the *building users*:

  a. Compliant showers
  b. Compliant changing facilities and lockers for clothes
  c. Compliant drying space for wet clothes
  d. Compliant cycle storage space:
  e. Compliant cycle storage facilities are those that meet the following:

  - The space is covered overhead and protected from the rain.
  - The covered area and the cycle racks are set in or fixed to a permanent structure (building or hardstanding) and allow both the wheel and frame to be locked securely (e.g. Sheffield type). Or racks are located in a locked structure fixed to or part of a permanent structure with CCTV surveillance.
  - There is a minimum distance of 1.0m between cycle racks, where the racks allow for two-sided parking, and 0.8m for one-sided parking to enable bikes to be easily stored and accessed.
  - Racks positioned in a circular array are spaced in accordance with the guidance in the New Metric Handbook [5].
  - There is a minimum distance from any obstruction e.g. wall (located either to the side of the stand or in front of it) of 300mm for single sided use and 900mm for double-sided use.
  - Adequate lighting is provided in accordance with BS5489 Part 1 – *Lighting of roads and amenity areas*.
  - The facilities are in a prominent site location that is viewable from the building.
  - The majority of the cycle racks are within 100m of a building entrance (ideally within 50m).

- Non compliant cycle racks:

  - These types of cycle storage devices do not comply:
  - Hooks and wall attachments
  - Single wheel (butterfly) bike rack holders (these racks provide less security and can cause damage to bike wheels).

- Compliant showers:

  - One shower must be provided for every 10 cycle storage spaces and both male and female users catered for i.e. either separate showers within shared gender-specific facilities or single shower cubicles and changing space for mixed use. The showers can be available for others to use in addition to cyclists.

- Changing facilities & lockers:

- Changing facilities and locker requirements;
  - For each shower provided, there is a minimum of 1m2 of changing space adjacent to the shower(s) with hooks for hanging clothes.
  - The number of lockers is at least equal to the number of cycle spaces provided.
  - Lockers are either in or adjacent to compliant changing rooms. Where the changing space is a cubicle the locker(s) must not be located within the cubicle.
  - Each locker is at least 900mm X 300mm X 450mm, or a locker with dimensions that provide an equivalent volume of storage space.
  - Both male and female users are catered for i.e. either gender specific, shared facilities or single changing cubicles in mixed use areas.
  - Toilet/shower cubicles do not count as changing facilities.

- Compliant drying space:
  - The drying space (for wet clothes) must be a specially designed and designated space with adequate heating/ventilation. A plant room is not a compliant drying space.
  - Minimum number of facilities:
  - Where more than the minimum number of compliant cycle spaces is provided, it is not necessary to also provide more than the minimum number of showers/lockers/changing facilities.
  - Sites in city centre locations can reduce by 50% the requirements for *compliant cycle spaces* where at least three of the available BREEAM credits for provision of public transport (T1) have been awarded.
  - Sites in rural locations can reduce by 50% the requirements for *compliant cycle spaces* where the average building user commuting distances are likely to be greater than 10 miles. A rural location is one where the site is on land clearly not within or on an urban boundary; this includes village locations and green field sites.

- Evidence required for Design Stage:
  - Provide site plan, design drawings and/or a copy of the specification confirming:
  - Provide the location of the cycle storage facilities
  - The number of cycle spaces provided
  - The type, dimensions and layout of cycle racks
  - The materials and construction specified for the facility.
  - The lighting for the facility is in accordance with BS5489 Part 1.
  - Building occupancy or, where relevant, net lettable/floor area.

- Provide design drawings or a copy of the specification confirming:

- Number of showers
- Changing room
- Secure locker locations, dimensions and numbers
- Drying space

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming the installation of the compliant facilities.

All PCR information should be available no later than completion.

**Tra 4 – Pedestrian and cyclist safety**

- Where external site areas form part of the assessed site and these areas contain vehicle access roads, parking and/or pedestrian access to the building, adequate cycle lanes and pedestrian pathways must be provided.

- Cycle access requirements:

  - The cycle lanes have been designed and constructed in accordance with the guidance in the National Cycle Network "*Guidelines and Practical Details – issue 2*", Sustrans[1] and the relevant parts of Appendix VI *NCN Design and Construction Checklist*

  - The cycle lanes and pedestrian paths meet the following minimum width dimensions:

    a. Where pedestrian and cycle routes are shared the minimum total width of the combined path is 3.0m

    b. Where the cycle lane is segregated from both the pedestrian route and carriageway the minimum width of the cycle path is 2.0m and the minimum width of the pedestrian path is 1.5m

    c. Where the cycle route forms a part of the carriageway, the minimum width of the lane is 1.5m

- Minimum widths should not be regarded as the design target, where possible best practice as detailed in the Sustrans[1] and DfT[2] guidance must be aimed for.

- Cycle lanes provide direct access to any cycle storage facilities provided on the site, without the need to deviate from the cycle path and, if relevant, connect to offsite cycle paths where these run adjacent to the development's boundary.

- Pedestrian access requirement:

  - Onsite footpaths connect to public footpaths off site, providing access to local transport nodes and other offsite amenities (where present).

  - Where provided, drop-off areas are designed off the access road and provide direct access to pedestrian pathways/areas, therefore avoiding the need for the pedestrian to cross vehicle access routes.

- Where dedicated pedestrian crossing of a vehicle access route is provided, the road is raised to the pavement level (i.e. the pavement is not lowered to road level).
- For larger developments with a high number of public users/visitors, pedestrian pathways must be signposted to other local amenities off site, including public transport nodes.

- Combined cyclists and pedestrian access requirements:
  - Delivery areas are not accessed through parking areas and do not cross or share pedestrian and cyclist routes and other outside amenity areas accessible to building users and general public.
  - Lighting design of pedestrian pathways and cycle paths on site are in compliance with CIBSE Lighting Guide 6, 1992 (LG6)[6] and BS5489 Part 1[5].

  NCN Design and Construction checklist can be downloaded from:
  http://www.sustrans.org.uk/webfiles/guidelines/appendix.pdf

- Evidence required for Design Stage:
  - Provide a scaled proposed site plan, specification and/or design details highlighting all necessary features and dimensions.
  - Provide a copy of the specification or scaled proposed site plan confirming:
  - Cycle routes have been or will be designed in accordance with the best practice guidance [1]
  - Provide a signed and dated copy of the *NCN Design and Construction Checklist* from the design/project team (or completed by the assessor using design information).
  - Provide a copy of the specification, site plan and/or manufacturer's technical details confirming the external lighting design strategy.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
  - Provide as built site plan and design details.
  - Provide a signed and dated post construction copy of the *NCN Design and Construction Checklist* from the project team.

  The written confirmation of such should be available no later than completion.

**Tra 5 – Travel plan**

- Co-operate with and implement any relevant outcomes from the travel plan that will developed as part of the feasibility and design stages which considers all types of travel relevant to the building type and *users.*

**Tra 6 – Maximum car parking capacity**

- Design Car parking facilities to meet the following requirements:

- Buildings designed for inpatients e.g. acute, teaching, specialist, mental health hospitals

- The maximum number of parking spaces provided must not be greater than the total of the following:

  a. One parking space for every four staff. PLUS
  b. One parking space for every four beds. PLUS
  c. Two parking spaces for each consulting, examination, treatment, therapy room and A&E cubicle PLUS
  d. One parking space for every two staff residential beds.

- Disabled, mother & baby & motorbike spaces:

  - Parking spaces for these building users can be excluded from the assessment of this issue provided these spaces are dedicated for this use and they are sized accordingly with the appropriate signage/markings.

- Car share spaces:

  - Car share spaces can be excluded from the assessment provided these spaces are dedicated for this use with the appropriate signage and the future building occupier confirms they have an enforceable car share policy. A copy of the policy and related documentation must be provided.

- Evidence required for Design Stage:

  - Provide a site plan or copy of the specification confirming number and type of parking spaces provided for the building.

  - Provide relevant documentation or correspondence from the design team or client confirming:

    - The maximum number of staff using the building during a typical shift
    - The number of patients' and residential beds
    - The number of consulting, examination, treatment, therapy room and A&E cubicle rooms.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide confirmation there has been no changes since the design stage assessment, or where changes have occurred, what they are in terms of design stage evidence.

  All PCR information should be available no later than completion.

**Tra 7 – Travel information point**

- Design in, supply and install a real-time public transport information system, where all patients, all staff and visitors/community users can access up-todate public transport information and plan their journey.

- The system must be in a publicly accessible area with adequate signage at its point of use and throughout appropriate areas of the development indicating its purpose and location/existence.

- Location of 'Travel Information Point'

- The information point does not necessarily have to be situated internally. If sited externally however, it must be covered, in an area that is readily accessible to building users and within close proximity of the main entrance or pedestrian routes to and from local public transport nodes, parking areas and the main building entrance.

- Real time passenger information system: An electronic system that provides up-to-date, i.e. real time, information on local public transport service(s). Primarily how close the service is running to time and when it is due at a node/interchange and, potentially, incidents that affect service operations, platform changes etc.

- Evidence required for Design Stage:

    - Provide design plan and/or a copy of the relevant specification clause(s) confirming:

        - Location and scope of the travel information point/facility

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide confirmation there has been no changes since the design stage assessment, or where changes have occurred, what they are in terms of design stage evidence.

    All PCR information should be available no later than completion.

**Tra 8 – Deliveries and manoeuvring**

- Parking and turning areas are designed for simple manoeuvring according to the type of delivery vehicle likely to access the site, thus avoiding the need for repeated shunting.

- There is a separate parking area for waiting goods vehicles, away from the manoeuvring area and staff/visitor car parking.

- Delivery areas are not accessed through parking areas and do not cross or share pedestrian and cyclist routes and other outside amenity areas accessible to building users and general public.

- There is a dedicated space for the storage of refuse skips and pallets away from the delivery vehicle manoeuvring area and staff/visitor car parking.

- Evidence required for Design Stage:

- Provide proposed site plan clearly showing:

    - Manoeuvring area

    - Delivery vehicle waiting area

    - Designated area for skips/pallets

- Provide appropriate documentation or correspondence from the design team confirming:

    - Likely vehicle delivery type that will access the development.

    - Predicted frequency of deliveries

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide confirmation there has been no changes since the design stage assessment, or where changes have occurred, what they are in terms of design stage evidence.

All PCR information should be available no later than completion.

**Wat 1 – Water Consumption**

- All WCs should have an effective flush volume of 4 litres or less, or 4.5 litres and fitted with a *delayed action inlet valve* and, where specified:
- Dual flush toilets have guidance or symbols instructing the user on the appropriate operation of the flushing device. This can be provided on the flush control buttons, cistern, or nearby for a group of cisterns.
- The flushing control is suitable for people with frail hands or activated by electronic sensors.
- All showers, where specified, should have a measured flow rate that does not exceed 9 litres per minute for a water pressure of 0.3MPa, assuming a delivered water temperature of 37ºC.
- All urinals should be either:

  - Fitted with individual presence detectors that operate the flushing control after each use. Or,
  - be ultra low flush or waterless urinals.

- All baths have a capacity of 100 litres to the overflow and each bath is fitted with a device that automatically stops the flow from the taps when the bath's maximum capacity is reached.
- Taps have a maximum flow rate less than 6 litres/min for a water pressure of 0.3MPa and are one of the following types:

  - Timed automatic shut-off taps e.g. push taps
  - Electronic sensor taps.

- This requirement does not apply to 'scrub' facilities in clinical areas, cleaners' taps, kitchen and external taps or other instances where such fittings would be inappropriate for medical/health-related reasons (such instances must be justified by the design team)
- Delayed action inlet valve: Devices that prevent water entering the WC cistern until it has completely emptied, enabling a precise volume of water to be discharged independent of water pressure.
- Effective flush volume: The volume of water needed to clear the toilet pan and transport any content far enough to avoid blocking the drain.

- Dual Flush Cisterns: Devices that have the facility to provide lower flush volume for liquids and higher flush volume for solids and paper.

- Calculating the effective flushing volume of dual flush toilets: For dual flush WCs the ratio *full flush:reduced flush* is taken to be 1:3 for non-domestic buildings. The effective flush volume can therefore be calculated as follows, using a 6/4 litre dual flush volume WC: ((6 Litre*1) + (4 Litre*3))/4 = 4.5 Litre effective flushing volume

- Evidence required for Design Stage:

  - Provide a copy of the relevant section of the M&E specification and/or manufacturer's details confirming technical specification for sanitary fittings (flow rate) and controls to be installed.

  - Provide design plan showing the location within the building of the sanitary facilities.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographs evidence confirming the type and amount of fittings and controls installed.

  - Provide the manufacturer's/installer's details for installed fittings/controls confirming:

    - Their technical specification

  The written confirmation of such should be available no later than completion.

**Wat 2 – Water Meter**

- Supply and install a water meter on the mains water supply to each building; this includes instances where water is supplied via a borehole or other private source.

- The water meter has a pulsed output to enable connection to a Building Management System (BMS) for the monitoring of water consumption.

- If there is a swimming pool on site within the scope of the assessment, the building housing it must be covered by a separate meter in accordance with the above requirements. The changing facilities (including showers, toilets etc) housed in this building should also be covered by this meter.

- Where water supply to the building is supplemented by a supply from a separate cold water tank, the supply from the tank should be separately metered.

- Exemplary Credit:

  - Provide and install sub meters to allow individual water-consuming plant or building areas to be monitored such as cooling towers, car washes, catering areas, etc. If the building does not have any major water consuming plant this exemplar credit is not available.

  - Each sub meter has a pulsed output to enable connection to a Building Management System (BMS) for the monitoring of water consumption.

- In addition to the above, for sites with multiple department's e.g. large health centres or acute hospitals, separate pulsed sub meters are fitted on the supply to the following areas where present:

    a. Staff and public areas
    b. Clinical areas and wards
    c. Letting areas: On the water supply to each tenant unit
    d. Laundries
    e. Main production kitchen
    f. Hydrotherapy pools
    g. Laboratories
    h. CSSD/HSDU, pathology, pharmacy, mortuary and any other major process water user.

- Evidence required for Design Stage:
    - Provide a copy of the specification clause confirming:
        - The specification and type of water meter(s).
        - Where relevant, connection of the meter to an existing BMS.
    - Provide design plan(s) showing:
        - Location of the water meter(s) in each assessed building/unit.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
    - Provide as built drawings confirming:
        - The location of the water meter(s).
    - Provide manufacturer's details confirming:
        - The specification of a pulsed output on the installed meter(s).

The written confirmation of such should be available no later than completion.

**Wat 3 – Major leak detection**

- Supply and install a leak detection system capable of detecting major leaks on the water supply. The system must cover all mains water supply between and within the building and the site boundary.
    - The leak detection system should be:

        a. Audible when activated

        b. Activated when the flow of water passes through the water meter/data logger at a flow rate above a pre-set minimum for a pre-set period of time

        c. Able to identify different flow and therefore leakage rates, e.g. continuous, high and/or low level, over set time periods

        d. Programmable to suit the owner/occupiers' water consumption requirements

e. Where applicable, designed to avoid false alarms caused by normal operation of large water-consuming plant such as chillers.

- The equipment installed must have the flexibility to distinguish between different flow rates to enable it to be programmed to suit the owner/occupier's usage patterns.

- Evidence required for Design Stage:

  - Provide a copy of the specification clause confirming the scope and performance requirements of leak detection system.

  - Provide manufacturer's details confirming the technical specification the specified systems.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide written confirmation & photographic evidence confirming:

    a) The installation and operation of the leak detection system.

    b) The pre-set variables of the system for triggering the alarm and the flexibility of the building occupier to vary these.

  The written confirmation of such should be available no later than completion.

**Wat 4 – Sanitary supply shut-off**

- Supply and install solenoid valves on the water supply to each toilet area in the building and the flow of water through that supply that are controlled by a link to either:

  - Infra-red movement detectors within each toilet facility, or,
  - Sensors or switches placed at or on entry doors to each facility.

  The requirements of above do not apply to toilet facilities in clinical areas.

- Solenoid valve: An electrically operated shut-off device that controls the flow of water in pipes.

- Evidence required for Design Stage:

  - Provide a copy of the specification clause confirming:

    - The specification of shut-off valves
    - The controls for the shut-off valves.

  - Provide a design plan showing:

    - The location of the toilet facilities.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming the location and installation of proximity detection controls.

- Provide as built drawings showing the specification of shut-off valves

All PCR information should be available no later than completion.

**Wat 5 – Water recycling**

- Design and implement one of the following water recycling strategies:

  1. Where a rainwater collection tank has been installed and the tank is sized to collect at least 50% of EITHER:

  a. The total predicted rainwater run-off from the roof catchment area for the *defined period of collection*. OR

  b. The rainwater run-off required to meet the total predicted flushing demand for the *defined period of collection*.

  2. Waste water from wash hand basins and showers is collected from ≥80% of fittings and recycled to meet part (minimum of 10%) or the total of WC/urinal flushing demand within the building(s).

  3. A combination of waste water and rainwater collection that meets at least 50% of EITHER:

  a. The total predicted toilet and urinal flushing demand for the *defined period of collection* OR

  b. The total predicted toilet and urinal flushing demand for the *defined period of collection* and (where specified) irrigation of planting and landscaping.

- Run-off from paved areas: Run-off from paved areas can also be collected and included in the calculation. Where the run-off is collected from part roof, part paved areas; the total catchment area must be at least equivalent to the plan area of the roof.

- Toilet facilities in clinical areas can be excluded from the assessment of this issue where the use of recycled water for flushing is deemed by the client unfeasible on the grounds that it presents a risk to patient health.

- Total predicted flushing demand can be estimated by the design team on the basis of the following variables:

  a. Number of building users (staff and visitors)
  b. Effective flush volume of WCs/urinals
  c. Estimated number* of WC/urinal uses per person per day (multiplied by the defined period of collection)

  * For staff use, unless other data is available, assume 1.3 WC uses per person per day and 2 urinal uses per person per day (assume that only 50% of the building occupants will use urinals).

- Calculating compliance: The following formula can be used to calculate the volume of collectable rainwater for the assessed building's catchment area for the defined period of collection:

  Σ (ARF x C x Rco-ef x Fco-ef x Dcol)
  Where:
  ARF = Annual rainfall for the site location (mm)
  C = Rainwater catchment area (m2)

Rco-ef = Run-off co-efficient
Fco-ef = Filter co-efficient.
Dcol = Defined period of collection: 18 days/365 days = 0.05

Annual rainfall: The local EA, SEPA, EHS office or the Met Office should be able to supply rainfall data.

- Run-off co-efficient: A coefficient is used to adjust the tank size calculation to allow for the fact that not every drop of rain that falls within the catchment area will be collected by the tank. Drainage co-efficient is dependent on the type of roof specified for the building, flat roofs having a lower co-efficient. Below are some typical co-efficient factors:

| Roof type | Run-off co-efficient |
|---|---|
| Pitched roof tiles | 0.75 - 0.9 |
| Flat roof smooth tiles | 0.5 |
| Flat roof with gravel layer | 0.4 – 0.5 |

- Filter co-efficient: Not all the water that drains from the roof down the gutters will reach the holding tank; the filter co-efficient accounts for this. Most manufacturers/installers of systems will recommend a filter co-efficient of 90% i.e. 0.9.

- Drainage and filter co-efficiencies can be found in CIRIA guidance [2], though these should be in the design team's sizing calculations.

- Evidence required for Design Stage:

  - Provide a copy of the specification clause confirming:

    - Type of collection system specified.
    - WC, urinal, taps and shower specification (where appropriate).

  - Provide design team calculations for the *defined period of collection* demonstrating (where appropriate):

    - Rainwater yield for the catchment area (mm)
    - Predicted WC/urinal flushing demand
    - Estimated potential for waste water collection from taps/showers.
    - Size (litres) of the rainwater/greywater collection tank specified.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming the installation of the collection system.

- Where changes have occurred since design stage specification, provide a revised copy of the technical specification and sizing calculations for the installed system.

- This should include a copy of the specification confirming:

  - Type of collection system specified.

  - WC, urinal, taps and shower specification (where appropriate).

- Calculations for the *defined period of collection* demonstrating (where appropriate):

- Rainwater yield for the catchment area (mm)
- Predicted WC/urinal flushing demand
- Estimated potential for waste water collection from taps/showers.
- Size (litres) of the rainwater/greywater collection tank specified.

- The written confirmation of such should be available no later than completion.

**Wat 6 – Irrigation systems**

- Where the irrigation method is specified for internal or external planting and/or landscaping it should comply with one of the following:

  a. Drip feed subsurface irrigation that incorporates soil moisture sensors. The irrigation control should be zoned to permit variable irrigation to different planting assemblages.

  b. Reclaimed water from a rainwater or greywater system.

  c. External landscaping and planting that relies solely on precipitation, during all seasons of the year.

  d. The only planting specified is restricted to species that thrive in hot and dry conditions.

  e. Where no dedicated, mains-supplied irrigation systems (including pop-up sprinklers and hoses) are specified and planting will rely solely on manual watering by building occupier or landlord.

- Where a sub surface drip feed irrigation system is installed for external areas, a rainstat must also be installed to prevent automatic irrigation of the planting and the landscape during periods of rainfall.

- Evidence required for Design Stage:

  - Provide an irrigation strategy for the site.

  - Provide proposed site plan, marked up to illustrate the scope of the irrigation specified and one of the following:

- A copy of the specification clause confirming:

  Type of irrigation system and controls.
  Or
  Manufacturer's information detailing:
  The technical details of the specified system

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming:

    - The implementation of the proposed strategy.
    - If relevant, the installation of the specified system.

  All PCR information should be available no later than completion.

**Mat 1 – Materials specification (major building elements)**

- All major building/finishing elements should be specified to achieve an A+, A or B rating as defined by the *Green Guide to Specification.*

  - Major building/finishing elements are:

    - External Walls
    - Windows
    - Roof
    - Upper Floor Slabs
    - Internal Walls
    - Floor Finishes / Coverings

- Using the Green Guide to Specification: The Green Guide categorises ratings by building type and element. When using the Green Guide online, (www.thegreenguide.org.uk), the main page asks the user to select a building type. To obtain the appropriate ratings for the assessed building elements, select the corresponding building type for this BREEAM scheme.

- Whilst exact matches in specifications are not always found, it should be possible to identify a similar specification and use its rating

- Evidence required for Design Stage:

  - Provide specification confirming:

    - A detailed description of each applicable element and its constituent materials.

  - Provide design drawings or specification detailing:

    - Location and area (m2) of each applicable element.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide as built drawings / calculations detailing:

    - Location and area (m2) of each applicable element.

- Provide written of any changes to the design stage specification.

The as build drawings and any written confirmation should be available no later than completion.

**Mat 2 – Hard landscaping and boundary protection**

- All to provide at least 80% (by area) of the combined area of external hard landscaping and boundary protection specifications that achieves an A or A+ rating, as defined by the *Green Guide to Specification*.

- Using the Green Guide to Specification: The Green Guide categorises ratings by building type and element. When using the Green Guide online, (www.thegreenguide.org.uk), the main page asks the user to select a building type. To obtain the appropriate ratings for the assessed building elements, select the corresponding building type for this BREEAM scheme.

- Whilst exact matches in specifications are not always found, it should be possible to identify a similar specification and use its rating

- Any existing or specified natural boundary protection (such as hedging or other living barrier) should be awarded with an A+ rating for the purposes of this analysis.

- Access/approach roads and designated vehicle manoeuvring areas should be excluded from the calculations.

- Evidence required for Design Stage:

  - Provide specification confirming:

    - A detailed description of each applicable element and its constituent materials.

  - Provide design drawings or specification detailing:

    - Location and area (m2) of each applicable element.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide as built drawings / calculations detailing:

    - Location and area (m2) of each applicable element.

  - Provide written of any changes to the design stage specification.

The as build drawings and any written confirmation should be available no later than completion.

**Mat 5 – Responsible sourcing of materials**

- 80% of the following building elements should be responsibly sourced:

  a. Structural Frame
  b. Ground floor
  c. Upper floors (including separating floors)
  d. Roof
  e. External walls
  f. Internal walls
  g. Foundation/substructure
  h. Staircase

- Additionally 100% of any timber must be legally sourced and is not included on the CITES list.

- At least 80% of the following applicable materials comprising the building elements must be responsibly sourced:

  a. Brick (including clay tiles and other ceramics)

  b. Resin-based composites and materials, including GRP and polymeric render

  c. Concrete (including in-situ and pre-cast concrete, blocks, tiles, mortars, cementious renders etc.)

d. Glass

e. Plastics and rubbers (including EPDM, TPO, PVC and VET roofing membranes including polymeric renders)

f. Metals (steel, aluminium etc.)

g. Dressed or building stone including slate

h. Timber and wood panel (including MDF, chipboard and Cement Bonded Particleboard)

i. Plasterboard and plaster

j. Bituminous materials, such as roofing membranes and asphalt

k. Other mineral-based materials, including fibre cement and calcium silicate

l. Products with recycled content

- Insulation materials, fixings, adhesives and additives are excluded from these calculations.

- Materials reused in-situ can be excluded from the assessment. Reused materials specified for the development e.g. recycled aggregates are considered equivalent to materials covered by certification schemes that fall within tier 1 of table 1.

- CITES (Convention on International Trade in Endangered Species) Appendices I and II of the CITES list illustrate species of timber that are protected outright. Appendix III of the CITES list illustrates species that are protected in at least one country. If a timber species used in the development is on Appendix III it can be included as part of the assessment as long as the timber is not obtained from the country(ies) seeking to protect this species

- Exemplary level requirements:

    - Where, in addition to the above requirements, 95% of the applicable materials, comprised within the applicable building elements, have been responsibly sourced.

**Table 1: Tier Levels and Requirements**

| Tier level | Issue assessed | Points available per element | Evidence / measure assessed | Examples of compliant schemes |
|---|---|---|---|---|
| 1 | Legality & responsible sourcing | 3 | Certification scheme | FSC, CSA, SFI with CoC, PEFC, Reused Materials |
| 2 | Legality & responsible sourcing | 2 | Certification scheme | There are currently no schemes allocated to this tier. |
| 3 | Legality & responsible sourcing | 1.5 | Certification scheme/ EMS | Timber: MTCC, Verified,, SGS, TFT |
| | | | | Other materials: Certified EMS for the Key Process and *Supply Chain*. |
| | | | | Recycled Materials with certified EMS for the *Key Process* |
| 4 | Legality & responsible sourcing | 1 | Certification scheme/EMS | Certified EMS for key process stage. |

Note:
Where any timber is used, it must be legally sourced. Where evidence cannot be provided to demonstrate legal sourcing for any element, no points can be awarded for the Responsible Sourcing Issue.

Where new in situ concrete (not existing concrete) is used, certification of the manufacture of the cement as the primary process, extraction of the aggregate and limestone used to make the cement as well as supply chain processes to be provided.

* "Verified" is the name of a scheme produced by SmartWood.

**Table 2: EMS Requirements**

| Material | Key Process | Supply chain processes |
|---|---|---|
| Brick (including clay tiles and other ceramics) | Product Manufacture | Clay Extraction |
| Resin-based composites and materials (including GRP and polymeric render) | Composite product manufacture | Glass fibre production<br>Polymer production |
| In situ Concrete (including ready mix and cemetitious mortars and renders) | Ready mixed concrete plant | Cement production<br>Aggregate extraction and production |
| Precast concrete and other concrete products (including blocks, cladding, precast flooring, concrete or cementitious roof tiles) | Concrete product manufacture | Cement production<br>Aggregate extraction and production |
| Glass | Glass production | Sand extraction<br>Soda Ash production or extraction |
| Plastics and rubbers (including polymeric renders, EPDM, TPO, PVC and VET roofing membranes) | Plastic/rubber product manufacture | Main polymer production |
| Metals (steel, aluminium etc) | Metal Product manufacture - e.g. cladding production, steel section production | Metal production:<br>Steel: Electric arc furnace or Basic oxygen furnace process,<br>Aluminium, ingot production,<br>Copper: ingot or cathode production. |
| Dressed or building stone (including slate) | Stone product manufacture | Stone extraction |
| Plasterboard and plaster | Plasterboard or plaster manufacture | Gypsum extraction<br>Synthetic gypsum (from flue gas desulphurisation) by default (recycled content) |
| Virgin timber | Timber from certified sources | Timber from certified sources |
| Cement Bonded Particle Board | Due to the significant cement content, in addition to requiring timber certification, the key supply chain process must also be considered to obtain the relevant tier for timber certification. Production of Cement Bonded Particleboard | Cement production<br>Timber from certified sources |
| Wood panel products such as Oriented Strand Board, plywood, chipboard/particle board, etc.) | Wood panel products, including those with recycled content, can only use the Timber Certification route | |
| Bituminous materials, such as roofing membranes and asphalt | Product manufacture | Bitumen production<br>Aggregate extraction and production |
| Other mineral-based materials, including fibre cement and calcium silicate | Product manufacture | Cement production<br>lime production<br>other mineral extraction and production |
| Products with 100% recycled content | Product manufacture | Recycled input by default |
| Products with lower % of recycled content | Product manufacture | Supply chain process/processes for any virgin material in the relevant product type above.<br>Recycled input by default |
| Any other product | Key processes is likely to be product manufacture | 1 or 2 main inputs with significant production or extraction impacts should be identified |
| Excluded products: insulation materials, fixings, adhesives, additives | N/A | N/A |

- Timber and Environmental Management Schemes (EMS)
    - Where an Environmental management scheme is used to assess products made from recycled timber, 100% of the timber content must be recycled or sourced from one of the recognised timber certification schemes in Table 1. A timber product with 50% recycled timber and 50% legally sourced timber will not comply with the criteria.
- Chain of Custody
    - This is a process used to maintain and document the chronological history of the evidence/path for products from forests to consumers. Wood must be tracked from the certified forest to the finished product. All the steps, from transporting wood from the forest to a sawmill, until it reaches the customer, must maintain

adequate inventory control systems that allow for separation and identification of the certified product. Chain-of-custody certification ensures that a facility has procedures in place to track wood from certified forests and avoid confusing it with non-certified wood. Chain-of-custody is established and audited according to relevant forest certification systems rules.

- Evidence required for Design Stage:
    - Provide design plan and/or specification confirming:
    - The location of elements and materials specified
    - Details of the materials specified.
- For materials certified through the EMS route, provide a letter of intent from the design team confirming:
    - The relevant materials shall be sourced from suppliers who can provide an EMS certificate (or equivalent) for the process and/or extraction stages of their product.
- For certified timber, provide letter of intent from the design team confirming:
    - The timber shall be sourced from suppliers capable of providing certification to the level required for the particular tier claimed.
- Provide written confirmation confirming that:
    - All timber will come from a ‘legal source’ and one not on the CITES list*.
    - Or in the case of Appendix III of the CITES list, it has not been sourced from the country seeking to protect this species as listed in Appendix III.

    All design stage information should be available prior to work starting on site.
- Evidence required for Post Construction Stage:
    - Provide as built drawings or as built specifications confirming that the building has been constructed in accordance with the design stage drawings/specifications.
    - Provide copies of purchase orders or receipts or certificate/letter of conformity for all applicable materials, including those recycled or reused.
    - Provide delivery notes for all appropriate elements that are being assessed.
    - Provide EMS certificate (or equivalent) from the manufacturers at the process stage
    - OR
    - Signed letter from the manufacturers at the process stage confirming EMS (or equivalent) certification details.
    - Provide a copy of the certification document or Chain of Custody (CoC) certificate(s) and Delivery notes for all appropriate elements, showing the certifications type and CoC number.
- Where any non-certified timber is used, provide written confirmation from the supplier(s) confirming that:
    - All timber comes from a legal source.

- All timber species and sources used in the development are not listed on any of the CITES appendices for endangered or threatened species (Appendix I, II, or III*).

- Or in the case of Appendix III of the CITES list, it has not been sourced from the country seeking to protect this species as listed in Appendix III.

- For any materials changed from the design stage specification that have been certified through the EMS route any one of the following must be provided as appropriate:

  - Copy of the ISO 14001 certificate.
  - Copy of the EMAS certificate.
  - For *Small* companies, (see *Relevant Definitions*) confirmation that the company EMS is structured in compliance with BS 8555 2003 (or equivalent) and the EMS has completed phase audits one to four as outlined in BS 8555. This evidence can be found from company documentation demonstrating the process and typical outputs from phase four audits such as an EMS manual/paperwork and guidance to staff. Where independent certification exists to demonstrate these phases, it can be used as evidence.

  - Where there has been a change in the design stage specification provide the relevant volumes and/ or percentages of materials for each element that differs.

  The as built drawings and any written confirmation should be available no later than completion.

**Mat 6 – Insulation**

- All thermal insulation used in the building elements listed below should be specified from the *Green Guide to Specification* and should be rated A+, A or B.

- 80% of the thermal insulation used in the building elements listed below should also be responsibly sourced.

- Any new insulation specified for use within the following building elements must be included:

  - External walls
  - Ground floor
  - Roof
  - Building services

**Table 3: EMS requirements for insulation products**

| Material | Key Process | Supply chain processes |
|---|---|---|
| Foam Insulation | Insulation manufacture | Principal Polymer production, e.g. Polystyrene, MDI , Phenolic resin or equivalent |
| Stone wool, glass & cellular glass made using < 50% recycled input | Product manufacture | Any quarried or mined mineral over 20% of input |
| Wool | Product manufacture | Wool Scouring |
| Products using > 50% recycled content except those using timber | Product manufacture | Recycled content by default |
| Timber-based insulation materials including those using recycled timber | Product manufacture | Recycled timber by default, all other timber from one of the recognised timber certification schemes in Table 1. |
| Other renewable-based insulation materials using agricultural by-products (e.g. straw) | Product manufacture | By-product manufacture by default |
| Any other product | Product manufacture | 1 or 2 main inputs with significant production or extraction impacts should be identified |

- Evidence required for Design Stage:

    - Provide marked-up design plan/elevations and/or a copy of the specification confirming:
    - The location of insulating materials.
    - The area (m2) and thickness (m) or volume (m3) of insulation specified.

    - Provide manufacturer's technical details confirming:
    - Thickness and thermal conductivity of the insulating materials specified.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide as built drawings and, where relevant, written confirmation of any changes to the materials specification.

    The as build drawings and any written confirmation should be available no later than completion.

**Mat 7 - Designing for robustness**

- Identify and provide suitable durability and protection measures or design features have been specified to prevent damage to the vulnerable parts of these building areas from such traffic, (where vehicular, trolley and pedestrian movement occur). This must include, but not be limited to:

    a. Protection from the effects of high pedestrian traffic in main entrances, public areas and thoroughfares (corridors, lifts, stairs, doors etc).

    b. Protection against any internal vehicular/trolley movement within 1m of the internal building fabric in storage, delivery, corridor and kitchen areas.

    c. Protection against, or prevention from, any potential vehicular collision where vehicular parking and manoeuvring occurs within 1m of the external building façade for all car parking areas and within 2m for all delivery areas.

- Suitable durability measures – Suitable durability and protection measures to vulnerable parts of the building can include:

    - Bollards/barriers/raised kerbs to delivery and vehicle drop-off areas
    - Robust external wall construction, up to 2m high
    - Corridor walls specified to Severe Duty (SD) as per BS 5234-2.
    - Protection rails to walls of corridors
    - Kick plates/impact protection (from trolleys etc) on doors
    - Hard-wearing and easily washable floor finishes in heavily used circulation areas (i.e. main entrance, corridors, public areas etc)
    - Corridor walls specified to Severe Duty (SD) as per BS 5234-2 and HTM 56 – Partitions (as applicable).

- Vehicle Impact Protection:

    - Any vehicle impact protection measures specified must be positioned at an adequate distance from the building to protect the fabric from impact from any vehicle with a measurable overhang of the body from the wheel track, in particular for any goods delivery areas.

- In vehicle movement areas only; where the specification of external robust wall construction is specified to comply with the credit, additional protection must be provided to ensure against potential damage to the robust façade from vehicle movement, i.e. specifying bollards or protection rails.

- Public / Common Areas:

  - Consideration should be given to materials specification in public/common areas (especially public waiting areas and toilet areas) to provide protection against potential malicious or physical abuse in as far as it is possible.

  - Evidence required for Design Stage:
  - Provide design drawings marked up to illustrate the vulnerable areas/parts of the building.

  - Provide design drawings and/or specification confirming the durability measures specified.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide photographic evidence confirming:
  - Vulnerable areas of the building
  - The durability measures in-situ.

  All PCR information should be available no later than completion.

**Wst 1 – Construction site waste manageme**nt

- Provide a copy of the SWMP summary datasheets or equivalent monitoring records/report confirming:

  - The total waste arising for the development.
  - Comparison of the total waste arising against the benchmark
  - Quantities of waste by groupings
  - Where required, the amount and proportion of waste arising that was reused, recycled and landfilled
  - Custody/application/destination of reused/recycled materials.

- Where non-hazardous construction waste generated by the building's construction phase (Excluding demolition and excavation waste) meets or exceeds the following resource efficiency benchmarks:

| BREEAM credits | Amount of waste generated per 100m² (gross internal floor area) | |
|---|---|---|
| | m³ | tonnes |
| One credit | 13.0 - 16.6 | 6.6 - 8.5 |
| Two credits | 9.2 – 12.9 | 4.7 - 6.5 |
| Three credits | <9.2 | <4.7 |

* Volume (m3) is actual volume of waste (not bulk volume)

- A Site Waste Management Plan (SWMP) shall be provided which contains:

a. The target benchmark for resource efficiency i.e. m3 of waste per 100m2 or tonnes of waste per 100m2
b. Procedures and commitments for minimising non-hazardous waste in line with the benchmark

c. Procedures for minimising hazardous wasted. Procedures for monitoring, measuring and reporting hazardous and non-hazardous site waste

d. Procedures for sorting, reusing and recycling construction waste into defined waste groups either on site or through a licensed external contractor

e. The name or job title of the individual responsible for implementing the above.

- New build, Refurbishment and Fit Out only projects:

  1. At least 75% by weight or 65% by volume of non-hazardous construction waste generated by the project has been diverted from landfill and either:
  a. Reused on site (in-situ or for new applications)
  b. Reused on other sites
  c. Salvaged/reclaimed for reuse
  d. Returned to the supplier via a 'take-back' scheme
  e. Recovered from site by an approved waste management contractor and recycled.
  2. For demolition projects, in addition to the above requirement for construction-related waste, 90% by weight or 80% by volume of non-hazardous demolition waste has been diverted from landfill.
  3. Waste materials will be sorted into separate key waste groups (according to the waste streams generated by the scope of the works) either onsite or offsite through a licensed contractor for recovery.

- Exemplary Credit:

  - Where at least 90% by weight (80% by volume) of non-hazardous construction waste and 95% of demolition waste by weight (85% by volume) (if applicable) generated by the build has been diverted from landfill and complies with the above information.

- Best Practice SWMP: Best practice (site waste management) is a combination of commitments to:

  a. design out waste
  b. reduce waste generated on site
  c. develop and implement procedures to sort and reuse/recycle construction waste on and off site (as applicable).
  d. follow guidance from:

  · DEFRA (Department of Environment, Food and Rural Affairs)
  · BRE (Building Research Establishment)
  · Envirowise
  · WRAP (Waste & Resources Action Programme)

**Table 1: Construction waste groups**

| European Waste Catalogue) | Key Group | Examples |
|---|---|---|
| 170102 | Bricks | Bricks |
| 170101 | Concrete | Pipes, kerb stones, paving slabs, concrete rubble, precast and in situ |
| 170604 | Insulation | Glass fibre, mineral wool, foamed plastic |
| 1501 | Packaging | Paint pots, pallets, cardboard, cable drums, wrapping bands, polythene sheets |
| 170201 | Timber | Softwood, hardwood, boards products such as plywood, chipboard, medium density fibreboard (MDF) |
| 1602 | Electrical and electronic equipment | Electrical & electronic TVs, fridges, air-conditioning units, lamps equipment |
| 200301 | Canteen/office | Office waste, canteen waste, vegetation |
| 1301 | Oils | Hydraulic oil, engine oil, lubricating oil |
| 1703 | Asphalt and tar | Bitumen, coal tars, asphalt |
| 170103 | Tiles and ceramics | Ceramic tiles, clay roof tiles, ceramic, sanitaryware |
| 1701 | Inert | Mixed rubble/excavation material, glass |
| 1704 | Metals | Radiators, cables, wires, bars, sheet |
| 170802 | Gypsum | Plasterboard, render, plaster, cement, fibre cement sheets, mortar |
| 170203 | Plastics | Pipes, cladding, frames, non-packaging sheet |
| 200307 | Furniture | Tables, chairs, desks, sofas |
| 1705 | Soils | Soils, clays, sand; gravel, natural stone |
| Most relevant EWC | Liquids | Non-hazardous paints, thinners, timber treatments |
| Most relevant EWC | Hazardous | Defined in the Hazardous Waste List (HWL) of the European Waste Catalogue (EWC) |
| Most relevant EWC | Floor coverings (soft) | Carpets, vinyl flooring |
| Most relevant EWC | Architectural Features | Roof tiles, reclaimed bricks, fireplaces |
| 170904 (Mixed) | Mixed/ other | Efforts should be made to categorise waste into the above categories wherever possible |

- Evidence required for Design Stage:

    - Provide a copy of the compliant Site Waste Management Plan containing the appropriate benchmarks, commitments and procedures.
    - Provide where relevant, a copy of the predemolition/ pre-refurbishment audit.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide a copy of the SWMP summary datasheets or equivalent monitoring records/report confirming:
    - The total waste arising for the development.
    - Comparison of the total waste arising against the benchmark
    - Quantities of waste by groupings
    - Where required, the amount and proportion of waste arising that was reused, recycled and landfilled
    - Custody/application/destination of reused/recycled materials.

    The written confirmation and documentation should be available no later than completion.

**Wst 2 – Recycled aggregates**

- The amount of recycled and secondary aggregate specified is over 25% (by weight or volume) of the total *high-grade* aggregate uses for the building. Such aggregates can be EITHER:

  a. Obtained on site OR
  b. Obtained from waste processing site(s) within a 30km radius of the site; the source will be principally from construction, demolition and excavation waste (CD&E) – this includes road plannings OR
  c. Secondary aggregates obtained from a non-construction post-consumer or post-industrial by-product source.

- Recognised non-construction post-consumer or post-industrial by-products include:

  - China clay waste
  - Slate overburden
  - Pulverised Fuel Ash (PFA)
  - Ground Granulated Blast Furnace Slag (GGBFS)
  - Air-cooled blast furnace slag
  - Steel slag
  - Furnace bottom ash (FBA)
  - Incinerator bottom ash
  - Foundry sands
  - Recycled glass
  - Recycled plastic
  - Tyres
  - Spent oil shale
  - Colliery spoil
  - Municipal Solid Waste Treatment Residues

- High Grade aggregate uses are considered to be:

  - Bound

    Structural frame;
    Floor slabs including ground floor slabs;
    Bitumen or hydraulically bound base, binder, and surface courses for paved areas and roads.

  - Unbound

    Asphalt-based or similar road surfaces
    Granular fill and capping
    Pipe bedding
    Sub bases/building foundations
    Gravel landscaping.

- Crushed masonry used as fill material for general landscaping is not considered to be *high grade.* This practice is now common place on construction sites due to landfill costs.

- Pre-consumer waste stream: Waste material generated during manufacturing processes. Excluded is reutilisation of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it.

- Post-consumer waste stream: Waste material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.

- Recycled aggregates: are those derived from reprocessing materials previously used in construction, e.g. crushed concrete or masonry from construction and demolition waste material.

- Secondary aggregates: By-products of industrial processes that can be processed to produce secondary aggregates. Secondary Aggregates are sub-divided into manufactured and natural, depending on their source.

- Evidence required for Design Stage:

    - Provide a copy of the relevant specification or contract clause confirming:
    - Recycled and secondary aggregate use requirements for the project.

- Provide a letter from confirming:

    - The source of recycled/secondary aggregates
    - The amount and quality required can be obtained from this source.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Allow for and provide structural engineers calculations demonstrating the weight/volume of:
    - Total high grade aggregate used.
    - Total recycled and secondary aggregates used.

    - Provide delivery notes for all recycled and secondary aggregates confirming:
    - Source of recycled/secondary aggregate.

    - And a letter or email from the aggregate/ concrete supplier confirming that:
    - The aggregate supplied and used was from a recycled/secondary source
    - Source of recycled/secondary aggregate.

    The written confirmation and documentation should be available no later than completion.

**Wst 3 - Recyclable waste storage**

- Design and provide a dedicated storage space to cater for recyclable materials generated by the building during occupation, compliant with the following:

    a. Compliant with HTM 07-01: Safe management of healthcare waste

    b. Clearly labelled for recycling

    c. Located within a dedicated centralised waste management unit or alternatively within easy reach of the assessed building(s) (e.g. less than 20m away from an appropriate building entrance)

    d. In a location with good vehicular access to facilitate collections.

- The size of the space allocated must be adequate to store the likely volume of recyclable materials generated by the building's occupants/operation. Whilst a fixed area cannot always be given, the following must be complied with as a minimum:

    a. At least 2m2 per 1000m2 of net floor area for buildings <5000m2

b. A minimum of 10m2 for buildings ≥5000 m2

c. An additional 2m2 per 1000m2 of net floor area where catering is provided (up to an additional minimum of 10m2 ≥5000m2).

- The area for recyclable materials storage must be provided in addition to areas and facilities provided for dealing with general waste and other waste management facilities, e.g. compactors and balers.

- Where the facilities are situated internally, vehicular gate heights/widths and manoeuvring and loading space must be sized correctly to ensure ease of access for vehicles collecting recyclable materials.

- Consideration must also be given to any other types of vehicle requiring access to this area, e.g. Lorries for roll on/off containers.

- Evidence required for Design Stage:

    - Provide marked-up building/site plan and/or copy of the specification confirming:
    - The location of the dedicated recyclable storage area
    - Storage area for general waste
    - The area (m2) of the storage space(s)
    - Description of the labelling.

- Provide a letter from the design team confirming that Facilities have been designed in compliance with HTM 07-01

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide photographic evidence confirming:
    - The location, size and capacity of the storage provision
    - Labelling of the dedicated facilities.

- Provide a letter from the design team confirming Facilities have been constructed in accordance with the HTM 07-01 compliant design.

  The information at PCR stage should be available no later than completion.

**Wst 4 - Compactor / Baler**

- Supply and install a static waste compactor or baler is installed and situated in a service area or dedicated waste management space. With at least one water outlet for each waste sorting and/or storing facility.

- Evidence required for Design Stage:

    - Provide marked-up design plan and/or a copy of the specification confirming:
    - Provision of waste compactor/baler
    - Location and size of space for waste compactor/baler
    - Water outlet

    - Provide manufacturer/supplier literature confirming
    - The type of compactor/baler specified.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

- Provide written / photographic evidence confirming:

    - The installation of the compactor/baler (or space for installation for speculative developments)
    - Installation of a water outlet
    - The location, size and capacity of the recyclable storage provision (as required for compliance with WST 3)

    The information at PCR stage should be available no later than completion.

**Wst 5 – Composting**

- Design, supply and install a vessel is installed on site for composting suitable food waste resulting from the building's daily operation and use.

- There is adequate space for storing segregated food waste and composted organic material and provide at least one water outlet for cleaning in and around the facility.

- OR

- Where there are space or access limitations on site:
- There is a dedicated segregated space for storing compostable food waste prior to collection and delivery to an alternative composting facility and at least one water outlet is provided for cleaning in and around the facility.

- No requirements are set on the type of vessel or storage capacity required as this will be determined by the end user and predicted volumes of organic compostable waste. The assessor should be satisfied that, within reason, the installation is adequate for the size of development, bearing in mind the likely quantity of organic waste that will be produced by the development.

- Evidence required for Design Stage:

    - Provide marked-up design plan and/or a copy of the specification confirming:
    - Specification of composting vessel
    - Location and size of space for vessel and storage of waste/compost
    - Provision of the water outlet.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide written / photographic evidence confirming:
    - The installation of the vessel
    - The provision of adequate storage space/facilities
    - Installation of a water outlet
    - If appropriate, provide a letter from the occupier or service provider confirming:
    - Location of the off-site facility where compostable material will be delivered.
    - The procedure and frequency for collecting the compostable material.

    The information at PCR stage should be available no later than completion.

**LE1 – Reuse of land**

- Where the proposed site has been previously developed and only where feasible, design the building(s) so that at least 75% of the proposed development's footprint is on an area

of the land which has previously been *developed* for use by industrial, commercial or domestic purposes in the last 50 years.

- Proposed Development: Is defined as the area of any building, hard landscaping, car park and access roads that fall within the boundary of the proposed site.

- Previously Developed Land: For the purposes of this credit, BREEAM uses the definition from Planning Policy Statement 3 which defines previously developed land as that which is or was occupied by a permanent structure, including the curtilage of the developed land and any associated fixed surface infrastructure.

- The definition includes defence buildings

- The definition excludes:

  a. Land that is or has been occupied by agricultural or forestry buildings.
  b. Land that has been developed for minerals extraction or waste disposal by landfill purposes where provision for restoration has been made through development control procedures.
  c. Land in built-up areas such as parks, recreation grounds and allotments which, although may feature paths, pavilions and other buildings, have not been previously developed.
  d. Land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape in the process of time (to the extent that it can reasonably be considered as part of the natural surroundings).

- Scottish Planning Policy Guidance (SPPG) 3: Housing. Available from the Scottish Government's website: http://www.scotland.gov.uk/Publications/2003/02/16499/18894

- Evidence required for Design Stage:

  - Provide existing site plan, report or site photographs confirming:
  - Previous land use.
  - Area (m2) of previous land use.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide as built drawings confirming:
  - The footprint or orientation of the developed area has not altered from that confirmed in the design stage evidence.
  - Where alteration has occurred the % must be re-calculated using 'as built' plans.

  The information at PCR stage should be available no later than completion.

**LE2 – Contaminated land**

- Where the proposed site has been defined as contaminated allow to provide adequate remedial steps have been taken to decontaminate the site prior to construction.

- The site is deemed to be *significantly contaminated* as confirmed by a contaminated land specialist's site investigation, risk assessment and appraisal identifying:

  a. the degree of contamination
  b. the contaminant sources/types

c. the options for remediating sources of pollution which present an unacceptable risk to the site

- Health and Safety-related decontamination: Contaminated land that has been decontaminated solely for health and safety reasons (rather than for the specific purpose of redevelopment) does not comply.
- Asbestos: Where the only decontamination required is for the removal of asbestos within an existing building fabric, this cannot be classified as contaminated land. However, where asbestos is found to be present in the ground this will be classed as contamination for the purposes of assessing this credit.

- Contaminant: Is defined as any solid, liquid or gaseous material in, or on the ground to be covered by the building, which is classed as a hazard and therefore presents an unacceptable risk to human health and the environment. The definition also includes land significantly infested by *non-native invasive plant species*

- Non-native invasive plant species: Are non-indigenous species that adversely affect the habitats they invade economically, environmentally or ecologically. For the purposes of BREEAM this currently includes Japanese Knotweed and Giant Hogweed only. Further information on the control and disposal and how this fits into the legislative framework relating to such species can be obtained from DEFRA.

- Pollution Linkages: A relevant pollutant linkage is one that has been identified during the risk assessment stage as representing unacceptable risks to human health or the environment.

- Evidence required for Design Stage:

    - Allow for and provide a copy of the specialist's land contamination report confirming:
    - The degree, type and sources of site contamination.
    - The options for remediating the site.

    - Provide existing site plan(s) showing:
    - Location of areas contaminated and to be remediated in relation to any proposed development.

    - Provide a letter from confirming:
    - The remediation strategy for the site.
    - Summary details of the implementation plan.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Allow for and provide a copy of the verification report confirming:
    - Description of remedial works undertaken.
    - Description of relevant *pollution linkages* addressed*.

    - This may not be applicable where the contaminant is a non-native invasive plant species.

    The report and documentation should be available no later than completion.

**LE3 – Ecological Value of site AND Protection of ecological features**

- If the site is defined as 'land of low ecological value' allow for and provide a an ecological assessment report, based on a site survey by a *suitably qualified ecologist* who should identified the land as being of 'low ecological value' within.

- If the site is not defined as 'land of low ecological value' all existing features of ecological value surrounding the *construction zone* and site boundary area are adequately protected from damage during clearance, site preparation and construction activities as listed below:
- Trees of over 100 mm trunk diameter, and/or of significant ecological value, are protected by barriers. Barriers must prohibit construction works in the area between itself and the tree trunk. Minimum distance between tree trunk and barriers must be either the distance of branch spread or half tree height, whichever is the greater.

- In all cases trees must be protected from direct impact and from severance or asphyxiation of the roots.

- Hedges and natural areas requiring protection must either have barriers erected and be protected, or, when remote from site works or storage areas, be protected with a prohibition of construction activity in their vicinity.

- Watercourses and wetland areas are to be protected by cut-off ditches and site drainage to prevent run-off to natural watercourses (as this may cause pollution, silting or erosion)

- In all cases, the contractor is required to construct ecological protection prior to any preliminary site construction or preparation works (e.g. clearing of the site or erection of temporary site facilities).

- The suitably qualified ecologist must base their findings on data collected from a site visit conducted at appropriate time(s) of the year, when different plant and animal species are evident. The content of the Ecology Report is to be representative of the existing site's ecology prior to the commencement of initial site preparation works (i.e. before RIBA stage K, Operations On Site).

- No features of ecological value have can be removed as part of site.

- For sites that have been cleared more than five years ago, the ecological value of the site would be its present ecological value, on the basis that in the intervening five years, ecological features would have started to re-establish themselves and therefore act as an indicator of the site's ecological value. For sites that have been cleared less than five years before assessment, a suitably qualified ecologist should make an estimation of the site's ecological value immediately prior to clearance on the basis of available desktop information (including aerial photography) and the landscape type/area surrounding the site.

- Suitably qualified ecologist (SQE**)**: An individual achieving all the following items can be considered to be "suitably qualified" for the purposes of a BREEAM assessment:

  1. Holds a degree or equivalent qualification (e.g. N/SVQ level 5) in ecology or a related subject.

  2. Is a practising ecologist, with a minimum of three years relevant experience (within the last five years). Such experience must clearly demonstrate a practical understanding of factors affecting ecology in relation to construction and the built environment; including, acting in an advisory capacity to provide recommendations for ecological protection, enhancement and mitigation measures. Examples of relevant experience are: ecological impact assessments; Phase 1 and 2 habitat surveys and habitat restoration.

  3. Is covered by a professional code of conduct and subject to peer review.

- Peer review: Is defined as the process employed by a professional body to demonstrate that potential or current full members maintain a standard of knowledge and experience required to ensure compliance with a code of conduct and professional ethics.

- Full members of the following organisations, who meet the above requirements, are deemed suitably qualified ecologists for the purposes of BREEAM:

  Association of Wildlife Trust Consultancies (AWTC)
  Chartered Institution of Water and Environmental Management (CIWEM)
  Institute of Ecology and Environmental Management (IEEM)
  Institute of Environmental Management and Assessment (IEMA)
  Landscape Institute (LI)

Evidence required for Design Stage:

- Provide a completed copy of checklist A4 signed and dated by the client, their representative or a design team member e.g. architect. Please see BREEAM Healthcare 2008 for checklist.
- And provide one of the following:
- A plan and/or site photographs of the existing site highlighting any ecological features, or,
- Allow for and provide a copy of the ecologist's report containing:
- Confirmation that the land within the construction zone is of low ecological value.
- A description of any ecological features within the site or on the site boundary.
- Date(s) of site survey(s).
- Provide a completed, signed copy of sections A and B of checklist A6 'Guidance for relating ecology reports to BREEAM' to confirm the ecologist's professional status. Please see BREEAM Healthcare 2008 for checklist. Or,
- Allow for and provide a copy of the ecologist's report containing the information in sections A and B from the above.

- Provide a copy of the relevant section of the contract specification confirming:

  - Requirement to protect all identified features of ecological value.
  - Scope of protection measures required.
  - Protection measures implemented prior to commencement of site activities.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Allow for and provide a suitably qualified ecologist's letter / report confirming:
  - The boundary of the site and the construction zone has not been altered.
  - Where applicable, all existing ecological features still remain.
  - Allow for compliance, including protection for features, with any recommendations from the design stage report.

  The report and documentation should be available no later than completion.

**LE4 – Mitigating ecological impact**

- Allow for a *suitably qualified ecologist* to be appointed to produce a report based on a site survey, they should confirm the following:

  a. Actual plot/habitat types that define the landscape of the assessed site in its existing pre-developed state and proposed state
  b. Area (m2) of each plot/habitat type
  c. Number of plant species found within each plot type

- The building(s) and proposed site should create minimal (equal to or greater than minus nine plant species) or no negative change to the site's existing ecological value.

- Completing Ecology Calculator 1: First, define the landscape type (based on the typology of the surrounding sites, table 1). This category is unlikely to change through the development, although it may in some cases, e.g. when a disused site is developed as part of a master plan for a large multiuse or multi-building development/regeneration project.

- Then, define and calculate the area (m2) of each vegetation-plot type (table 2) and building or hard landscaped area, both before and after development, for the site.

- Once the data is entered, the Ecology Calculator 1 will indicate the indicative change in ecological value. The result must be used to award the credits.

- Number of plant species: BREEAM measures ecological value using number of plant species the plant species figures for each land type are programmed into the Ecology Calculator tool 1. These figures are based on national figures from the Countryside Survey prepared for the Digest of Environmental Statistics (see table 3).

- Wildlife garden planting: In the 'change of ecological value' table (table 3), 'garden planting (typical)' and 'wildlife garden planting' will always record a score of zero, unless a suitably qualified ecologist has been appointed: whereby they will make the distinction between 'typical' and 'wildlife' garden planting species and record 'actual' species numbers.

- Derelict Sites: The ecological value of derelict sites is time dependent (table 3); a linear scale has been used to determine intermediate values between zero ecological value at 1 year from dereliction/demolition to a value at 30 years based on marginal upland figures. This presents a worst case figure which can be amended on the advice of a suitably qualified ecologist.

- Assessment of a single development on a larger site: Where the assessment is of a single building that forms part of a larger site development and the landscaping and ecological features form a common part of the whole site, for the purpose of assessing this credit the plot types and areas for the entire site must be used.

  Please see BREEAM Healthcare 2008 for further information.

**Table 1: General Landscape Types**

| | |
|---|---|
| **Pastoral** | Mainly grasslands. |
| **Arable** | Land dominated by cereals and other arable crops, as well as intensively managed grasslands. |
| **Marginal Upland** | Areas which are on the periphery of the uplands, and which are dominated by mixtures of low intensity agriculture, forestry and semi-natural vegetation. |
| **Upland** | Land generally above a height suitable for mechanised farming and frequently dominated by semi-natural vegetation. |
| **Building & Derelict Land** | Land currently or previously occupied by buildings. |
| **Urban Mosaic** | A complex mix of habitats located within cities, towns, or villages, which will include; buildings, hard standing, pockets of disused land and scrub, and areas of managed green spaces, such as gardens, allotments, and parkland. Parklands can be characterised as being accessible to the public and will usually be fairly intensively managed spaces, consisting of a matrix of grassland (grazed or mown) with scattered trees at various densities and areas of dense planting.<br>This landscape type is to be used only when no other landscape type in the table is more appropriate / predominates. |

**Table 2: Vegetation Plot Types**

| | |
|---|---|
| **Crops/weeds** | Mostly highly disturbed vegetation of arable fields and their boundaries; includes cereal and vegetable crops. |
| **Tall grassland/herb** | Typical vegetation of overgrown lowland field boundaries, ditches and roadside verges. |
| **Fertile grass** | The bulk of agriculturally improved grasslands, intensive pasture and silage crops; but also includes mown areas of improved grasslands for recreational and amenity purposes, as well as re-sown roadside verges. |
| **Infertile grass** | A diverse group of semi-improved and semi-natural grasslands; includes acidic to basic, wet to dry grasslands, and tall-herb vegetation mainly present in the lowlands; often found on stream sides and roadside verges. |
| **Lowland wooded** | Includes wooded vegetation of hedges and broadleaved woods in the lowlands. |
| **Upland wooded** | A varied group of acidic vegetation types usually associated with upland woods, including: semi-natural woodland; conifer plantations; bracken and wooded streamsides. |
| **Moorland grass/mosaic** | Typically grazed moorland vegetation, including extensive upland acidic and peaty grassland, and species-rich but very localised flushes. |
| **Heath/bog** | Mostly heather moorland, blanket bog and montane heath, but also lowland heath and raised bog. |
| **Wildlife garden planting** | Garden planting that uses native species and/or those that have a known attraction or benefit to local fauna, based on the advice of a suitably qualified ecologist. |

**Table 3: Number of plant species by plot for different landscape types**

| | Landscape Types | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **Types of Plot** | **Arable** | **Pastural** | **Marginal Upland** | **Upland** | **Existing Building/Hard Landscaped Areas** | **Urban Mosaic** | **Derelict Land <1 Years** | **Derelict Land < 10 Years** | **Derelict Land < 20 Years** | **Derelict Land <= 30 Years** |
| Crop Weeds | 5.4 | 8.3 | - | - | - | - | - | - | - | - |
| Tall Grassland/Herb | 12.7 | 15.0 | - | - | - | 17.6 | 0 | 6.3 | 15.8 | 21.1 |
| Fertile Grassland | 11.6 | 12.7 | 15.3 | - | - | 11.6 | 0 | 4.6 | 11.5 | 15.3 |
| Infertile Grassland | 17.1 | 17.6 | 21.1 | - | - | 17.6 | 0 | 6.3 | 15.8 | 21.1 |
| Lowland Wooded | 12.9 | 12.5 | - | - | 0 | 13.8 | - | - | - | - |
| Upland Wooded | - | 12.7 | 13.8 | 20.4 | 0 | 13.8 | - | - | - | - |
| Moorland Grass/Mosaic | - | 2.0 | 20.4 | 21.0 | - | - | - | - | - | - |
| Heath/Bog | - | - | 14.3 | 20.0 | - | - | - | - | - | - |
| Hard Landscaping | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Buildings | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Garden Planting (typical) | - | - | - | - | 0 | 0 | 0 | 0 | 0 | 0 |
| Wildlife Garden Planting* | - | - | - | - | 0 | 0 | 0 | 0 | 0 | 0 |

- Insufficient data to produce national averages, as not all vegetation plot types are found in all landscaped types.
* Only where the rule concerning wildlife garden planting in table 2.0 has been met can actual species values be used.

- Calculating the change and increase in ecological value:
    - BREEAM calculates the change in ecological value by comparing the diversity (number and area) of plant species on the site pre and post construction. The ecological value of the site is expressed as an area-weighted average of plant species for the site's landscape type. This enables BREEAM to use this as an indicator of the proposed development's impact on the site's existing ecological value.

- A simple example of the calculation is outlined below:
    - Calculate the ecological value of a previously developed existing site:
    - A 2065m2 existing site consists of the following types of land:
    - 1865 m2 hard landscaping = 0 species
    - 200m2 urban mosaic - infertile grassland = 17.6 species (Table 3.0).
    - The ecological value of the existing site is calculated as follows, for each plot type;
    - · Number of species on plot type x plot type area as % of total area.
    - Therefore, for our example site:
    - Hard landscaping: {(0 species x (1865m2/2065m2)} = 0 species
    - urban mosaic-infertile grassland: {(17.6 species x (200m2/2065m2)} = 1.70 species
    - Ecological value of the existing site = 0 + 1.70 = 1.70 species

    - 2. Calculate the ecological value of the proposed site:
    - The 2065m2 post-construction site consists of the following types of land:
    - 1375m2 of building = 0 species.
    - 550m2 of hard landscaping = 0 species
    - 140 m2 has remained as urban mosaic-infertile grassland = 17.6 species
    - The ecological value of the proposed site is as follows:
    - Building: {(0 species x (1375m2/2065m2)} = 0 species
    - Hard landscaping: {(0 species x (550m2/2065m2)} = 0 species
    - Urban mosaic-infertile grassland: {(17.6 species x (140m2/2065m2)} = 1.19 species
    - Ecological value of the proposed site = 0 + 0 + 1.19 = 1.19 species
    - The ecological impact is the difference between the two ecological values:
    - Change in ecological value: 1.19 – 1.70 = - 0.51 species
    - Therefore, for this example 1 credit is achieved.

- Evidence required for Design Stage:
    - Provide the plot type(s) and areas (m2) that define the landscape of the assessed site, in its existing pre-developed state and proposed state
    - Provide Existing and proposed site plans and, if required, maps and aerial photographs confirming:
    - Landscape and vegetation plot types
    - Area (m2) of vegetation plot types
    - Provide a copy of the suitably qualified ecologist's report confirming prior to and after the development:
    - Landscape and vegetation plot types
    - Area (m2) of vegetation plot types
    - Provide a copy of the ecology report containing the information outlined in checklist A6.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

- Allow for and provide a suitably qualified ecologist's building/site inspection confirming:
- Post construction vegetation plot types and areas are in accordance with design stage evidence.

The report and documentation should be available no later than completion.

**LE5 – Enhancing site ecology**

- Allow for and provide a report from a *suitably qualified ecologist* (SQE) on enhancing and protecting the ecology of the site:
    - The SQE provides an Ecology Report with appropriate *recommendations* for protection and enhancement of the site's ecology.
    - The report is based on a site visit/survey by the SQE prior to the commencement of initial site preparation works.
- The general *recommendations* of the Ecology Report for enhancement and protection of site ecology should be implemented.
- The *recommendations* of the Ecology Report for enhancement and protection of site ecology should be implemented, and the *suitably qualified ecologist* confirms that this will result in an increase in ecological value of the site up to (but not including) 6 species. (2 credits)
- The *recommendations* of the Ecology Report for enhancement and protection of site ecology have been implemented, and the suitably qualified ecologist confirms that this will result in an increase in ecological value of the site of 6 species or greater.
- The increase in plant species has been calculated using Ecology calculator 2, using actual species numbers. Please see BREEAM Healthcare 2008 for calculator. (3 credits)
- Timing of Ecologist Report: It is recommended that the suitably qualified ecologist is appointed to carry out site surveys of existing site ecology, on which their report is based, or to provide verification where the report is prepared by others, at the feasibility stage (RIBA Stage B or equivalent) in order to facilitate and maximise potential ecological enhancement.
- General recommendations: 'General' recommendations for enhancing and protecting the ecological value of the site are to include, and go beyond, compliance requirements for all current EU and UK legislation relating to protected species and habitats.
- These 'general' recommendations may include ecological recommendations as detailed in the definitions.
- Guidance for ecologists and assessors: Please refer to Checklist A6 – Relating ecology reports to BREEAM, section D for assistance in assessing and interpreting the requirements of this credit.
- Ecological recommendations are defined as measures adopted to enhance the ecology of the site, which may include:
    - The planting of native species or those with a known attraction or benefit to local wildlife

- The adoption of horticultural good practice (e.g. no, or low, use of residual pesticides)

- The installation of bird, bat and/or insect boxes at appropriate locations on the site

- Development of a full Biodiversity Management Plan including avoiding clearance/works at key times of the year (e.g. breeding seasons)

- The proper integration, design and maintenance of SUDs and Green Roofs, community orchards etc.

- Only native floral species or those with a known attraction or benefit to local wildlife can be considered for the purpose of enhancing the ecological value of the site.

- Native species: Only native floral/plant species and those with a known attraction or benefit to local fauna can be considered for the purpose of increasing the number of species on site, as well as general enhancement.

- Evidence required for Design Stage:

    - Provide a copy of the ecologist's report containing:

    - Details and scope of the site survey.
    - Information as outlined in checklist A6 – Relating ecology reports to BREEAM.
    - Or
    - Provide a copy of the ecologist's report containing a completed, signed copy of checklist A6.
    - Provide a proposed site plan highlighting implementation of the ecologist enhancement recommendations.

    - One of the following:
    - A copy of the relevant section of the specification requiring the main contractor to implement the SQE's recommendations for protection and enhancement
    - A letter from the client or design team member confirming:
    - · That the specification shall require the main contractor to implement the ecologist's recommendations.
    - Evidence as outlined above, confirming compliance with the first credit.
    - Provide a copy of the SQE's report containing the information outlined in checklist A6 – Relating ecology reports to BREEAM.
    - Or
    - Provide a copy of the SQE's report containing a completed, signed copy of checklist A6.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - For large mixed-use/multi-building developments, where the whole site has not been completed and ecological enhancements have not been added, or where features are being added at a later date in an appropriate planting season:
    - Provide a copy of a letter confirming when the planting will be complete.
    - This must be within 18 months from completion of the development.

    The report and documentation should be available no later than completion.

**LE6 – Long term impact on biodiversity**

- Allow for and provide a suitably qualified ecologist's letter / report confirming:

    - That all relevant UK and EU legislation relating to protection and enhancement of ecology has been complied with during the design and construction process.
    - Allow for and provide a landscape and habitat management plan, appropriate to the site, covering at least the first five years after project completion. This is to be handed over to the building occupants and includes:

    - Management of any protected features on site
    - Management of any new, existing or enhanced habitats
    - A reference to the current or future site level or local Biodiversity Action Plan.

- Allow to implement 2 (1 credit) / 4 (2 credits) of the following requirements:

    1. The contractor nominates a 'Biodiversity Champion' with the authority to influence site activities and ensure that detrimental impacts on site biodiversity are minimised in line with the recommendations of a suitably qualified ecologist.

    2. The contractor trains the site workforce on how to protect site ecology during the project. Specific training should be carried out for the entire site workforce to ensure they are aware of how to avoid damaging site ecology. Training should be based on the findings and recommendations for protection of ecological features highlighted within a report prepared by a suitably qualified ecologist.

    3. The contractor records actions taken to protect biodiversity and monitor their effectiveness throughout key stages of construction. The requirement commits the contractor to make such records available where publicly requested.

    4. Where a new ecologically valuable habitat, appropriate to the local area, is created. This includes habitat that supports nationally, regionally or locally important biodiversity, and/or which is nationally, regionally or locally important itself; including any habitat listed in the UK Biodiversity Action Plan (UK BAP), Local Biodiversity Action Plan (LBAP), those protected within statutory sites (e.g. SSSIs), or those within non-statutory sites identified in local plans.

    5. Where flora and/or fauna habitats exist on site, the contractor programmes site works to minimise disturbance to wildlife. For example, site preparation, ground works, and landscaping have been, or will be, scheduled at an appropriate time of year to minimise disturbance to wildlife. Timing of works may have a significant impact on, for example, breeding birds, flowering plants, seed germination, amphibians etc. Actions such as phased clearance of vegetation may help to mitigate ecological impacts. This additional requirement will be achieved where a clear plan has been produced detailing how activities will be timed to avoid any impact on site biodiversity in line with the recommendations of a suitably qualified ecologist.

    - Biodiversity Champion: A Biodiversity Champion does not have to be an ecologist or ecological expert but must have sufficient authority and time on site to influence activities and ensure that they have minimal detrimental impact on biodiversity.

    - Local biodiversity expertise: Local biodiversity expertise should be sought at, or before, the design stage to help identify species of local biodiversity importance on site. It is likely that their recommendations will draw on the Local Biodiversity Action Plan (LBAP) where one exists.

    - The site and surrounding areas: The steps taken in the above requirements will depend on the nature of the site, e.g. urban sites, and the surrounding areas. It is likely that either all, or none, of the optional items will apply. Where the optional items and the mandatory item 3, the management plan, are deemed, in writing,

by the appointed suitably qualified ecologist not to be applicable, all credits can be awarded. Mandatory items 1 and 2 must be met in all instances. This is likely to be the case in the majority of assessments in central town/city areas which have a high proportion of surrounding and existing development and no existing external landscaped areas within the boundary of the assessed site.

- Evidence required for Design Stage: Provide The SQE report or letter confirming:
    - That they were appointed prior to commencement of activities on site.
    - All relevant UK and EU legislations will be complied with.
    - Provide a copy of ecology report containing the information outlined in checklist A6
    - Provide a copy of the site management plan.

    Requirement 1:

    - Provide a letter from the contractor confirming:
    - The appointment of the biodiversity champion and their job title.
    - Their on site role and responsibilities.

    Requirement 2:

    - Training schedule or letter of confirmation from the contractor committing to provide relevant training

    Requirement 3:

    - Provide a letter from the contractor confirming:
    - Monitoring and reporting requirements for the development.
    - The records will be publicly available if and when requested.

    Requirement 4:

    - Provide a copy of the proposed site plan highlighting the new ecologically valuable habitat.
    - Provide a SQE's report or letter confirming that the habitat supports the relevant biodiversity action plan(s)

    Requirement 5:

    - Provide the SQE's report or letter confirming:
    - Wildlife on site that needs to be accounted for in programming works.
    - Actions required with respect to programming site works to minimise disturbance.
    - Provide a copy of the contractor's main programme of works.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:
    - Provide a copy of the site's landscape and habitat management plan.

    Requirement 1:

    - Provide a copy of the relevant sections of the site log book, highlighting:
    - Details of any action/events taken by the biodiversity champion.
    - If no actions required/taken, this should be confirmed in the log book.

    Requirement 2:

    - Provide a record of training undertaken by the site workforce confirming:
    - Who delivered & developed the training
    - The scope of the training delivered.

    Requirement 3:

    - A copy of the relevant sections of the site log book, highlighting:
    - Records of monitoring and actions taken to protect biodiversity.
    - Records and outcome of any requests to view such information.

    Requirement 4:

    - Allow for and provide SQE's site inspection report and photographic evidence confirming the existence of the proposed habitat

    Requirement 5:

    - Provide a letter from the SQE, or a copy of their report confirming:
    - Site works executed in a manner that minimised disturbance to wildlife in accordance with their recommendations.

    All PCR information and documentation should be available no later than completion.

**Pol1 – Refrigerant GWP - Building services**

- The building should be designed with no refrigerants, or where refrigerants are used within the building services they have a global warming potential (GWP) less than 5.
- The credit can be awarded where the total refrigerant charge used in the building services is less than 5kg.
- Where GWP data for the specified refrigerant is not available, the credit cannot be awarded on a default basis.
- Refrigerants specified in plant used for integral cold storage purposes should not be assessed under this credit.
- Global Warming Potential: GWP is defined as the potential for global warming that a chemical has relative to 1 unit of carbon dioxide, the primary greenhouse gas. In determining the GWP of the blowing agent, the Intergovernmental Panel on Climate

Change (IPCC) methodology using a 100-year Integrated Time Horizon (or ITH) should be applied.

- Ozone Depleting Potential: ODP is the ratio of the relative amount of degradation to the ozone layer caused by a particular substance relative to the calculated depletion for the reference gas CFC 11 (ODP = 1.0). The ODP of the refrigerants is not assessed under this credit and there is no link between GWP and ODP.

- Refrigerant: there are three main make-ups of refrigerants:

  - Hydrogenated Fluorocarbon Refrigerants (HFCs) are made up of hydrogen, fluorine, and carbon. Because they do not use a chlorine atom (which is used in most refrigerants) they are known to be one of the least damaging to our ozone.
  - Hydrogenated Chlorofluorocarbon Refrigerants (HCFCs) are made up of hydrogen, chlorine, fluorine, and carbon. These refrigerants contain minimal amounts of chlorine; they are not as detrimental to the environment as some other refrigerants.
  - Chlorofluorocarbon Refrigerants (CFCs) contain chlorine, fluorine and carbon. These refrigerants carry high amounts of chlorine so they are known for being the most hazardous to the ozone layer.

- Table of refrigerants and their Global Warming Potentials: table 1.0 includes available substances which are capable of acting as refrigerants. Many are not currently used as such and some have been phased out and withdrawn from the market.

**Table 1 Refrigerant GWP**

| Refrigerant type | GWP | Refrigerant type | GWP |
|---|---|---|---|
| R11 (CFC-11) * | 4000 | R32 (HCFC-32) * | 580 |
| R12 (CFC-12) * | 8500 | R407C (HFC-407) | 1600 |
| R113 (CFC-113) * | 5000 | R152a (HFC-152a) | 140 |
| R114 (CFC-114) * | 9300 | R404A (HFC blend) | 3800 |
| R115 (CFC-115)* | 9300 | R410A (HFC blend) | 1900 |
| R125 (HFC-125) | 3200 | R413A (HFC blend) | 1770 |
| Halon-1211 | N/A | R417A (HFC blend) | 1950 |
| Halon-1301 | 5600 | R500 (CFC/HFC) * | 6300 |
| Halon-2402 | N/A | R502 (HCFC/CFC) * | 5600 |
| Ammonia | 0 | R507 (HFC azeotrope) | 3800 |
| R22 (HCFC-22) * | 1700 | R290 (HC290 propane) | 3 |
| R123 (HCFC-123) * | 93 | R600 (HC600 butane) | 3 |
| R134a(HFC-134a) | 1300 | R600a (HC600a isobutane) | 3 |
| R124 (HCFC-124) * | 480 | R290/R170(HC290/HC170) | 3 |
| R141b (HCFC-141b) * | 630 | R1270 (HC1270 propene) | 3 |
| R142b (HCFC-142b) * | 2000 | R143a (HFC-143a) | 4400 |

N/A indicates that there is insufficient data available to give a GWP value.

- All CFC/HCFC refrigerants (marked *) have an ODP > 0 and as such are illegal for new installations. Existing equipment may continue to use them at present. The use of CFCs and HCFCs as refrigerants has been addressed under the Montreal protocols. Phase out programmes have been agreed resulting in these substances no longer being used as refrigerants in all new build and most existing situations. The industry's favoured replacements are currently HFCs which are often potent global warming contributors.

- Whilst it is currently still legal to have an existing system that uses refrigerants with an ozone depleting potential, it is now illegal to top up with CFCs (either new or recycled refrigerant). It will be illegal to top up with new HCFCs from 2010, and it will be illegal to top up with recycled/recovered HCFCs from 2015.

- Hydrocarbons and ammonia-based refrigerants have low or zero GWP and are therefore preferred long-term options. These are now widely available and are valid

alternatives to HFCs in all buildings, provided health and safety issues are fully addressed.

- Evidence required for Design Stage:

  - Provide a copy of the specification clause confirming either:
  - Absence of refrigerant in the development OR
  - Type(s) of refrigerant to be used.
  - Provide manufacturer's information confirming:
  - GWP of each refrigerant.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a letter confirming:
  - The refrigerant type specified remained unchanged.
  - Or where the refrigerant(s) have been changed.
  - Provide a letter confirming:
  - The type of refrigerants(s) used.
  - Manufactures information confirming GWP of each refrigerant

  The report and documentation should be available no later than completion.

**Pol 2 – Preventing refrigerant leaks**

- If no refrigerants have specified in the development please provide written conformation of such including the relevant specifications.

- If refrigerants have specified in the development the following requirements and evidence required should be implemented.

- Systems using refrigerants are contained in a moderately air tight enclosure (or a mechanically ventilated plant room), and a refrigerant leak detection system is installed covering high-risk parts of the plant.

OR

- An automatic permanent refrigerant leak detection system is specified, which is NOT based on the principle of detecting or measuring the concentration of refrigerant in air.

- The automatic shutdown and pump down of refrigerant occurs on the detection of high concentrations of refrigerant in the plant room/enclosure. For the majority of cases only systems in mechanically ventilated/moderately air tight plant rooms (or enclosures) comply.

- Automatic pump-down to either a separate storage tank or into the heat exchanger is acceptable but only where automatic isolation valves are fitted to contain the refrigerant once fully pumped down.

- The alarm threshold that triggers automatic pump down is set to a maximum of 2000ppm (0.2%), but lower levels can be set. The credit cannot be awarded for manual systems.

- This credit is applied in instances where any type of refrigerant is present, i.e. even if the ozone depleting potential (ODP) of the refrigerant is zero and the global warming potential (GWP) is less than 5.

- The credit can be awarded by default where a solid refrigerant is used.

- High-risk parts of refrigeration plant typically include the pipe work and compressor. Evaporator or condenser coils can be omitted from the coverage of the system.

- Moderately airtight enclosure: this can be defined as an enclosure that does not produce a draught or significant fresh air ingress that would dilute any leaked refrigerant gas (dilution may prevent detection).

- Refrigerant Leak Detection: a permanently installed multi-point sensing system; this may be aspirated or have multiple sensor heads linked to a central alarm unit or BMS. Various sensor types are available including infra-red, semi-conductor or electro-chemical. Please see below for further guidance on the coverage of refrigerant leak detection systems.

- Refrigerant Recovery: The process of removing refrigerant from a system and storing it in an airtight container.

- Leak detection systems/devices

    - Handheld detectors (which include semi-conductor and corona discharge types) do not comply with BREEAM requirements.

    - Corona discharge detectors are not suitable where flammable refrigerants are used, or in potentially explosive atmospheres.

    - Indicator dyes: these consist of fluorescent or coloured dyes added to the refrigerant to show leakage sites. The use of the dye should be approved by the compressor manufacturer. Some compressor manufacturers do not approve the use of indicator dyes, in which case either an alternative type of equipment should be used, or an alternative type of leak detection specified.

    - Halide torch detectors: this type of detection is only appropriate for chlorine-based substances such as CFCs and HCFCs, and should not be used in areas where naked flames are prohibited. Compounds which do not contain chlorine, e.g. HFCs, cannot be detected by this method.When awarding this credit in instances where these detectors are in use, the assessor should confirm that the refrigerant is chlorine based.

    - Electronic leak detectors: these must be designed to detect a certain type of, or multiple types of, refrigerant, i.e. CFC, HFC, HCFC, etc.

    - Standing hold test: systems based on monitoring pressure drops within the pipe work are not necessarily compliant with the BREEAM requirements. There are natural fluctuations to the pressure of the refrigerant due to changes in volume and temperature of the system, and to the ambient temperature of the surroundings. Low pressure and high pressure switches, which are standard equipment on refrigerant plant, are therefore not sufficient to award the credit. Other methods exist, such as pressurising the system with a high pressure, dry nitrogen gas for a period of time and then identify whether or not the pressure drops during this time. However, this requires systems to be shut down for a period of time (usually overnight or longer).

    - Systems NOT based on the principle of detecting or measuring the concentration of refrigerant in air: Such systems (for example based on sensing the presence of refrigerant vapour in liquid-carrying pipes) are now commercially available.

- Refrigerant pump down

- The specification of automatic refrigerant pump down can further limit potential losses and damage to the environment and have subsequent economic benefits to the building owner. Under the United Kingdom 1990 Environmental Protection Act unwanted refrigerant and refrigerating system oil are classified as either controlled or hazardous waste. Not only is it an offence to discharge them to the environment, but there are procedures regarding transport, storage, transfer of ownership and ultimate disposal. Article 16 of EC regulation 2037/2000 specifies that used CFCs and HCFCs must be recovered for destruction or recycling/reclamation.

- Evidence required for Design Stage:

    - Provide a copy of the specification clause or letter from the M&E engineer confirming:
    - Type of leak detection system(s).
    - Scope of the system(s)
    - Where relevant, containment strategy for such equipment.
    - Provide a copy of the specification clause or letter from the M&E engineer confirming:
    - Type, scope and operation of automatic refrigerant recovery equipment
    - Details of the plant room enclosure where the refrigeration plant is installed
    - Alarm threshold for triggering automatic pump down.

    All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

    - Provide written and photographic evidence confirming:
    - Installation of leak detection system(s)
    - Installation of automatic refrigerant recovery equipment
    - Pre-set threshold level for automatic pump down.

    The report and documentation should be available no later than completion.

**Pol3 – Refrigerant GWP – Cold storage**

- All refrigerant types used in cold storage systems have a global warming potential (GWP) of less than 5.

- The requirement applies to refrigerants used in systems integral to the building, including where specified:

    a. Cold storage enclosures.
    b. Cold store services including: Chilled water pipework, refrigerant pipework and ductwork etc
    c. Fixed cold or chilled storage cabinets
    d. Fixed cold drink coolers.

- The scope of the credit excludes domestic-scale refrigeration equipment and small ‘plug-in’ chillers and therefore plant not integral to the building.

- For developments where the tenant or end use function is known and cold food storage is not required, then this credit does not need to be assessed.

- Evidence required for Design Stage:

    - A marked-up design plan highlighting the cold food storage areas/plant in the building.

- A copy of the specification clause confirming either:
- Type(s) of refrigerant to be used.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a letter from the design team/developer confirming:
  - The refrigerant type specified remained unchanged. Or,
  - Where a change occurred, provide written confirmation from the design team confirming:
  - Type of refrigerant(s) used.
  - Provide manufacturer's information confirming:
  - GWP of each refrigerant.

  The written confirmation should be available no later than completion.

**Pol4 – NOx emissions from heating sources**

- The dry NOx emissions from delivered space heating energy should be ≤100 mg/kWh (at 0% excess O2). (One credit) / ≤70 mg/kWh (at 0% excess O2). (Two Credits)/ ≤40 mg/kWh (at 0% excess O2) and emissions from delivered water heating energy are 100 mg/kWh or less (at 0% excess O2). (Three Credits)

- The emissions should be estimated under normal operating conditions (not standby).
- Grid electricity: Where some of the building's space heating is fuelled by electricity from the National Grid, however small the incidence is on the overall consumption, the credits will not be achievable as power stations emit NOx at an average rate of approximately 1200 mg/kWh.

- Whilst Biomass systems are recognised as low carbon systems, they can produce a significant amount of NOX and so may not achieve this credit; however they can score highly in the Energy section of BREEAM. Biomass systems are also recognised as reducing the impact of fossil fuel depletion by employing a renewable combustion fuel source.

- Dry NOx Levels: the NOx emissions (mg/kWh) resulting from the combustion of a fuel at 0% excess oxygen levels.

- Evidence required for Design Stage:

  - Provide a copy of the specification clause confirming:
  - Type of heating system(s) installed.
  - Provide for each system specified, a letter, email or literature from the manufacturer(s) confirming:
  - Dry NOx emissions rate in mg/kWh.
  - If more than one system is providing heat, provide design team calculations confirming:
  - The average NOx emission rate.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a letter confirming:
  - The heating system& water heating plant specified remained unchanged.

The written confirmation should be available no later than completion.

**Pol5 – Flood risk**

- Where the assessed development is situated in a flood zone that is defined as having a low annual probability of flooding, a site specific Flood Risk Assessment (FRA) confirms that there is a low risk of flooding from all sources must be commissioned.

- Where the assessed development is situated in a flood zone that is defined as having a medium or high annual probability of flooding, the following applies:

- A site specific Flood Risk Assessment (FRA) confirms to the satisfaction of the local authority and statutory body that the development is appropriately flood resilient and resistant from all sources of flooding

- The ground level of the building, and access to it and the site, are designed (or zoned) so they are at least 600mm above the design flood level of the flood zone in which the assessed development is located

- For both cases of flood zone risk attenuation measures are to be specified to ensure that the peak rate of run-off from the site to the watercourses (natural or municipal) is no greater for the developed site than it was for the pre-development site. This should comply with the Interim Code of Practice for Sustainable Drainage systems (SUDS) (CIRIA, 2004), or for at least a 1 year and 100 year return period event with a 6 hour duration.

- And the capacity of the attenuation measures must include an allowance for climate change; this should be made in accordance with current best practice

- If the development is in Zone 1, the FRA must demonstrate that there is low risk of flooding from the following sources:

    - Fluvial (rivers)
    - Tidal
    - Surface water: sheet run-off from adjacent land (urban or rural)
    - Groundwater: most common in low-lying areas underlain by permeable rock (aquifers)
    - Sewers: combined, foul or surface water sewers.

- The Environment Agency flood map and associated information is intended for guidance, and cannot provide details for individual properties. In addition the EA map only covers the likelihood of flooding from the rivers or sea and not all sources of flooding (listed above). EA flood maps cannot therefore be used as evidence to demonstrate compliance with the requirements of this credit.

- Pre-existing flood defences: In an area protected by existing flood defences (designed to withstand a certain magnitude of flooding) the appropriate number of credits can be awarded where the defences reduce the risk to ‘low’ or ‘medium’ and the following conditions are met:

    1. The development is not located in an area where new flood defences have to be, or have been, constructed to minimise the risk of flooding to the site and its locality purely for the purpose of the development and/or its wider master plan

    2. The development is located on a previously developed land (as defined by the criteria in BREEAM credit LE1 Re-use of land) and the appropriate statutory body confirm that, as a result of the existing defences, the risk of a flood event occurring is

reduced to low or medium (as appropriate to the credit levels set in BREEAM). If firm confirmation is not provided then the credit cannot be awarded.

3. The relevant agency confirms that, as a result of such defences, the risk of a flood event occurring is reduced to low or medium risk.

- A statutory body's local/regional office may be able to provide more information on existing defences in the area in which the assessed development is located.

- 600mm threshold: It is accepted that, for buildings located in a medium flood zone, areas of the car park and site access may be allowed to flood and therefore fall below the 600mm threshold. In such cases the credit is still achievable provided safe access to the site and the ground floor of the building can be maintained (i.e. they are 600mm above the design flood level) to ensure the building/site does not become an 'island' in the event of a flood.

- Where the development has been permitted and the ground levels of the topography/infrastructure immediately adjacent to the site fall below the 600mm threshold, the credit can still be awarded, provided there are no other practical solutions for access to the site above this level and the assessed building, and access to it, meets the credit requirements. As much of the external site area as possible (or as required by an appropriate statutory body) should be designed at or above the threshold

- Effectiveness of the water runoff attenuation measures: To ensure effective operation of the water run-off attenuation measures, the facilities must discharge half their volume within 24-48 hours (unless advised otherwise by a statutory body) of the storm event in readiness for any subsequent storm inflow.

- Calculating peak rate of run-off: References [14] and [15] contain guidance on calculating the peak flow rate and determining the design flooding frequency. The assessor is not required to perform any calculation as this should be provided by the design team to demonstrate that they have sized the attenuation facilities to store the relevant volume of storm water necessary to achieve the credit.

- Discharge to the sea or estuaries: If all run-off is discharged directly from the site to either the sea, the foreshore, estuaries covered by a shoreline management plan or designated wildlife/SSSI areas (as part of habitat management) then the credit can be awarded without the need to specify additional attenuation measures.

- More stringent requirements: Where the local authority (or other statutory body) requires a greater attenuation than the percentages above, and/or a more onerous design flooding frequency than that recommended in BS EN752-4, then the higher requirements must be met in order to achieve the credit.

- Recommendations from an appropriate statutory body: None of the credits can be awarded where the assessed development has proceeded against the recommendation of the statutory body on the basis that the flooding implications are too great.

- Appropriate Consultant: A consultant with qualifications and experience relevant to the calculation of surface water run-off and design SUDS and flood prevention measures. Where complex flooding calculations and prevention measures are required, this must be a specialist hydrological engineer.

- Flood risk assessment: a study to assess the risk of a site flooding, and to assess the impact that any changes or development on the site will have on *flood risk* on the site and elsewhere. A Flood Risk Assessment should be prepared according to good practice guidance as outlined in Development and Flood Risk: A practice guide companion to PPS 25, available from www.communities.gov.uk

- Hard surfaces: these include roofs, car parks, access roads, pavements, delivery/service yards and external hard landscaping. Footpaths less than 1.5m wide which have free drainage to soft landscaped areas on both sides may be excluded.

- **SUDS** - sustainable drainage systems or sustainable (urban) drainage systems: a sequence of management practices and control structures designed to drain surface water in a more sustainable fashion than some conventional techniques. SUDS devices include:

    - · Holding ponds
    - · Swales
    - · Reed beds
    - · Permeable paving - in areas where local geological and hydrological conditions allow this to function, e.g. block paved surface on permeable sub-base over gravel bed to store the water and allow it to seep into the soil. For less permeable soils, the gravel layer might be deeper and the water taken to a soakaway although this is not an option in some areas.
    - · Local or centralised soakaways either as full systems or as 'overflow' or 'holding' systems, in areas where local geological and hydrological conditions allow them to function.
    - · Run-off from roofs collected as a part of a rainwater harvesting system.
    - · Run-off from roofs directed to a local soakaway or other holding facility such as tanks, ponds, swales etc.
    - · Green roofs.

- Flood zones are defined in the relevant planning, policy and technical guidance documents for each country in the UK: PPS25 (England), TAN15 (Wales), SPP7 (Scotland), PPS15 (N. Ireland). Please refer to references [18] and [19] to find indicative flood maps in England, Wales and Scotland. However, PPS15 does not categorise flood risk zones and there are no similar publicly available flood maps covering Northern Ireland. Assessments in NI will therefore need to rely on site-specific flood risk assessments, or other relevant date/surveys, to determine the extent of flood risk for a specific development, and use the same definitions as those outlined for England (table below). The Northern Ireland Department of Environment or Rivers Agency may offer further advice or recommendations in this respect (references [20] and [21]).

- Whilst the definitions of flood zones and probabilities of flooding are generally the same throughout the UK, there are some differences. The definitions are outlined in the table below.

| Definition | England | Wales | Scotland |
|---|---|---|---|
| Low annual probability of flooding | **Zone 1**<br>Less than 1 in 1000 chance of river and sea flooding (<0.1%) | **Zone A**<br>Considered to be at little or no risk<br>**Zone B**<br>If site levels are greater than the flood levels used to define adjacent extreme flood outline. | **Little or no risk area**<br>As defined for England |
| Medium annual probability of flooding | **Zone 2**<br>Between 1 in 100 and 1 in 1000 chance of river | **Zone B**<br>If site levels are not greater than the flood | **Low to medium risk area**<br>Watercourse, tidal or |

| Definition | England | Wales | Scotland |
|---|---|---|---|
| | flooding (1% – 0.1%) and between a 1 in 200 and 1 in 1000 chance of sea flooding (0.5% – 0.1%). | levels used to define adjacent extreme flood outline.<br>**Zone C**<br>Equal to or greater* than 0.1% (river, tidal or coastal flooding).<br><br>* For the purposes of BREEAM assume upper probability of flooding no greater than that specified for England. | coastal flooding in the range 0.1% – 0.5% (1:1000 – 1:200). |
| High annual probability of flooding | **Zone 3a High Probability**<br>1 in 100 or greater chance of river flooding(>1%) and a 1 in 200 or greater chance of flooding from the sea (>0.5%).<br><br>**Zone 3b The Functional Floodplain**<br>Land where water has to flow or be stored in times of flood. | **Zone C1 & C2**<br>* For the purposes of BREEAM assume the same lower and upper probability of flooding as that specified for England. | **Medium to high risk areas**<br>Annual probability of watercourse, tidal or coastal flooding: greater than 0.5% (1:200) |

- Evidence required for Design Stage:

- Provide a copy of a flood map or flood risk assessment confirming:
- Flood zone or annual probability of flooding in the site location.

- Where appropriate, provide correspondence from the appropriate statutory body confirming:
- Reduced annual probability of flooding due to existing flood defences.

- Provide a copy of the Flood Risk Assessment

- Provide site plans/sections confirming:

  - The design flood level for the site
  - The design ground level(s) for all developed areas of the site.
  - Safe access and escape routes

- For SUDS Credit:

  - Provide site plans and a copy of the specification or consultants report confirming:
  - Type and storage volume (l) of the water run-off attenuation measures
  - Total area of hard surfaces (m2)
  - Peak flow rate (l/s) for the design storm event
  - Additional allowance for climate change designed in to the system.

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide formal written correspondence from the design team confirming:
  - The FRA has not changed or required updating in the intervening period.

- Provide 'As built' site plans/sections confirming:
- The design flood level for the site
- The design ground level(s) for all developed areas of the site.
- Safe access and escape routes

- For SUDS Credit:

  - Provide written and photographic evidence confirming:
  - Installation of water run-off attenuation measures
  - No changes to the evidence provided at the interim 'design' assessment stage.
  - Provide a letter from the design team or main contractor confirming:
  - No changes to the specification.
  - Where changes have occurred, provide copies of as-built designs and calculations must be provided.

  The as build drawings and any written confirmation should be available no later than completion.

**Pol6 – Minimising watercourse pollution**

- Allow for and install a Sustainable Drainage Systems (SUDs) or source control systems such as permeable surfaces or infiltration trenches where run-off drains are in areas with a relatively low risk source of watercourse pollution.

- Allow for and install oil/petrol separators (or equivalent system) in surface water drainage systems, where there is a high risk of contamination or spillage of substances such as petrol and oil

- Allow for and install water pollution prevention systems that has been designed and detailed in accordance with the recommendations of Pollution Prevention Guideline 3 and where applicable the SUDS manual.

- Provide a comprehensive and up-to-date drainage plan of the site will be made available for the building/site occupiers.

- Where the building has chemical/liquid gas storage areas the following must also be allowed for:

- Shut-off valves fitted to the site drainage system to prevent the escape of chemicals to natural watercourses (in the event of a spillage or bunding failure).

- All external storage and delivery areas designed and detailed in accordance with the recommendations of the UK Environment Agency's *Pollution Prevention Pays Guidance* and PPG25 *Hospitals and Healthcare establishments*

- Areas that are a source of pollution: For the purpose of this credit an area that presents a risk of watercourse pollution includes vehicle manoeuvring areas, car parks, waste disposal facilities, delivery and storage facilities or plant areas.

- Areas where oil separators are required: The following site areas (where present) require oil separators in surface water drainage systems:

  - Car parks larger than 800m2 or with 50 or more parking spaces
  - Smaller car parks discharging to a sensitive environment
  - Areas where goods vehicles are parked or manoeuvred
  - Vehicle maintenance areas
  - Roads
  - Industrial sites where oil is stored or used

- Refuelling facilities

- SUDS and oil interception: In some instances, where the risk of contamination is infrequent and potential spills will be small, oil interceptors may not be required if appropriately designed Sustainable Urban Drainage systems are specified.

- Roof plant: Roof top plant space must be considered where there is a risk from substances such as petrol or oil. Refrigerants are not assessed under this credit, as the only risk of pollution is to air and not the watercourse.

- Drainage plan: A comprehensive and up-to-date drainage plan of the site, which accurately identifies all drains, must be produced and handed over to the new occupier. If there is no in-house expertise to do this, a reputable drainage company should be used.

- Types of Oil Separator:

  Class 1 Separators: These are designed to achieve a concentration of less than 5mg/l oil under standard test conditions. They should be used when the separator is required to remove very small oil droplets, such as those arising from car park run-off.

  Class 2 Separators: These are designed to achieve a concentration of less than 100mg/l oil under standard test conditions. They are suitable for dealing with discharges where a lower quality requirement applies and/or for trapping large spillages.

  Both classes can be produced as ‘full retention’ or ‘by pass’ separators:

- Full retention separators treat the flow that can be delivered by the drainage system, which is normally equivalent to the flow generated by a rainfall intensity of 50mm/hr.

- Bypass separators fully treat all flows generated by rainfall rates of up to 5mm/hr. Flows above this rate are allowed to bypass the separator. These separators are used when it is an acceptable risk not to provide full treatment for high flows.

- Evidence required for Design Stage:

  - Provide marked-up proposed site plan highlighting Low and high risk areas of the site.

  - Provide a copy of the specification or design plan confirming Type of pollution control systems specified.

- Provide a letter from the design team confirming:

  - All water pollution prevention systems designed in accordance with PPG3 and the SUDS manual (where appropriate)
  - Outlining indicative examples of compliance with PPG3 and the SUDS manual
  - A copy of the drainage plan shall be produced and handed over to the building occupier.

- Provide a copy of the specification or site plan confirming Installation of shut-off valves and system type.

- A letter from the design team confirming:

  - Design of all external storage and delivery areas is in compliance with relevant Pollution Prevention Guidance
  - Outlining indicative examples of compliance with the PPG.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide a letter confirming:
  - Installation of systems in accordance with compliant design.
  - No changes to the evidence provided at the interim 'design' stage assessment.
  - Provide evidence confirming:
  - Existence of the drainage plan in the building's O&M manual/file.
  - Provide evidence confirming:
  - Installation of shut-off valves.
  - Provide a letter from the design team or main contractor confirming:
  - Installation of systems in accordance with compliant design.
  - No changes to the evidence provided at the interim 'design' stage assessment.

  The as build drawings and any written confirmation should be available no later than completion.

**Pol7 – Reduction of night time light pollution**

- The external lighting strategy should be designed in compliance with Table 1 (and its accompanying notes) of the ILE Guidance notes for the reduction of obtrusive light, 2005, (see additional information below - Buildings located in Scotland must also refer to the Compliance Notes below for additional requirements).

- All external lighting (except for safety and security lighting) should be able to be automatically switched off between 2300hrs and 0700hrs. This can be achieved by providing a timer for all external lighting set to the appropriate hours.

- If safety or security lighting is provided and will be used between 2300hrs and 0700hrs, this part of the lighting system complies with the lower levels of lighting recommended during these hours in Table 1 of the ILE's Guidance notes, for example by using an automatic switch to reduce the lighting levels at 2300 or earlier.

- Buildings located in Scotland:

  - In addition to the requirements above, building's located in Scotland must comply with the light pollution requirements in the guidance note "*Controlling Light Pollution and Reducing Lighting Energy Consumption*"[5]. This can be demonstrated via completion of the checklists in Annexes B and C of this document by a relevant member of the design team.
  - All Illuminated advertisements, where specified, must be designed in compliance with ILE Technical Report 5 – *The Brightness of Illuminated Advertisements*.
  - Safety lights: Flush stud lights used for safety purposes in vehicle manoeuvring areas may be excluded from the assessment.
    Where essential lighting is provided between 2300 and 0700, i.e. for 24-hour operating buildings, the system is able to automatically switch to the lower levels of lighting recommended in the ILE Guidance notes for lighting during these hours (or provide these lower levels at all times).

- Evidence required for Design Stage:

  - Provide a marked-up copy of the site plan showing:
  - Areas of the building and site that will be externally lit
  - Any nearby properties.

- Provide a copy of the specification clause requiring, or external lighting design confirming:
- The external lighting design in compliance with Table 1 of the ILE Guidance notes
- Controls for all external lighting.
- Illuminated advertisements designed in compliance with ILE Technical Report 5 (if relevant).
- In the case of the external lighting design, the M&E engineer or lighting designer must provide indicative examples of where and how the strategy complies with the requirements.

All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide written or photographic evidence confirming:
  - Cut-off luminaires, if provided, have been angled to limit spill light to potentially obtrusive directions.
  - External lighting controls
  - Provide a letter confirming:
  - Installation of systems in accordance with compliant design.
  - No changes to the evidence provided at the interim 'design' stage assessment.

  The written confirmation should be available no later than completion.

**Pol8 – Noise attenuation**

- If there are, or will be, existing *noise-sensitive areas or buildings* within 800m radius of the assessed development the following requirements should be implemented.

- Allow for and provide a noise impact assessment in compliance with BS 4142:1997 that has been carried out and the following noise levels measured/determined:

a. Existing background noise levels at the nearest or most exposed noise-sensitive development to the proposed development; or at a location where background conditions can be argued to be similar.

b. The rating noise level resulting from the proposed noise-source. This can be based upon reference to similar installations or sites, or determined by calculation.

- The noise impact assessment must be carried out by a suitably qualified acoustic consultant holding a recognised acoustic qualification and membership of an appropriate professional body. The primary professional body for acoustics in the UK is the Institute of Acoustics

- The rating level of the noise source(s) from the site/building should be equivalent to or less than the background noise level

- Where the rating level of the noise source(s) from the site/building is greater than the background noise level, measures should be installed to attenuate the noise at its source to a level where it will comply with the above.

- Noise sensitive area: landscapes or buildings where the occupiers are likely to be sensitive to noise created by the new plant installed in the assessed building, including:

  - Residential areas
  - Hospitals, health centres, care homes, doctor's surgeries etc.
  - Schools, colleges and other teaching establishments.
  - Libraries
  - Places of worship

- Wildlife areas, historic landscapes, parks and gardens.
- Located in an area of Outstanding natural beauty or near a Site of Special Scientific Interest (SSSI).

- Evidence required for Design Stage:

  - Provide a site plan highlighting:
  - All existing and proposed noise sensitive buildings local to, and within, the site boundary
  - Proposed sources of noise from the new development
  - Distance (m) from these buildings to the assessed development.
  - Provide a copy of the acoustician's report and the acoustician's qualifications and professional status.
  - Provide the acoustician's report with recommendations for noise attenuation measures.
  - Provide a marked-up design plan highlighting the specification of the acoustician's attenuation measures

  All design stage information should be available prior to work starting on site.

- Evidence required for Post Construction Stage:

  - Provide written and photographic evidence confirming:
  - All noise-sensitive buildings local to, and within, the site boundary · Proposed noise sources within the development
  - Distances (m) from these buildings to the assessed development.
  - Allow for and provide a copy of the acoustician's report with measurements based on installed and operating plant.
  - Provide a formal letter from the acoustician confirming that all specified attenuation measures have been installed to the required standard.
  - Where relevant, allow for any remedial work/actions required to meet the performance standards of BS4142:1997.

  The report and documentation should be available no later than completion.

Appendix A
Checklists

| BREEAM Healthcare 2008 |
|---|
| Management |
| Checklist A1 – Considerate Constructors |

| Minimum BREEAM Standards | | | | | |
|---|---|---|---|---|---|
| Rating Level | P | G | VG | E | O |
| Min. credits to achieve rating | - | - | - | 1 | 2 |

For each of the eight sections (below) the *Considerate Constructors Scheme* awards a score on a scale of 0 to 5 (with half points). The score achieved or required must be entered into boxes 1-8 below i.e. EITHER 0; 0.5; 1; 1.5; 2.0; 2.5; 3.0; 3.5; 4.0; 4.5; OR 5.0.

- When a firm commitment is made to achieve certification under the Considerate Constructors Scheme without reference to particular scores, a score of 3 should be entered in each of the boxes 1-8 below. This gives a total score of 24 in box 9 below and subsequently one credit can be awarded.
- When a firm commitment is made to require the constructor to achieve certification AND a score greater than 3 is required in one or more sections, the scores required should be added in boxes 1 to 8 below and totalled accordingly.

| | | | |
|---|---|---|---|
| **Considerate Section** | Score achieved | | 1 |
| **Environmentally Aware Section** | Score achieved | | 2 |
| **Site Cleanliness Section** | Score achieved | | 3 |
| **Good Neighbour Section** | Score achieved | | 4 |
| **Respectful Section** | Score achieved | | 5 |
| **Safe Section** | Score achieved | | 6 |
| **Responsible Section** | Score achieved | | 7 |
| **Accountable Section** | Score achieved | | 8 |
| **TOTAL Considerate Constructors Score** | (sum of 1-8) | | **9** |

| | |
|---|---|
| Total CC score achieved is less than 24 | 0 credits |
| Total CC score is between 24 to 31.5 incl. | 1 credit |
| Total CC score is between 32 and 35.5 incl. | 2 credits |
| Total CC score is greater than ≥36 | 2 + Innovation credit |

**Assessor to award credits based on committed CCS Score and above table** 10

|---|
| Management |
| Checklist A3 – Construction Site Impacts |

| Minimum BREEAM Standards | | | | | |
|---|---|---|---|---|---|
| Rating Level | P | G | VG | E | O |
| Min. credits to achieve rating | - | - | - | - | - |

| a. Monitor, report and set targets for $CO_2$ production of energy use arising from site activities | | |
|---|---|---|
| **Compliance requirement** | **Tick** | **Evidence/Reference** |
| Monthly measurements of energy use will be/has been recorded and displayed on site. | | |
| Appropriate target levels* of energy consumption will be/were set and displayed (targets could be annual, monthly, or project targets). | | |
| As a minimum, monitoring will/did include checking the meters and displaying some form of graphical analysis in the site office to show consumption over the project duration and how actual consumption compares to the targets set. | | |
| The design/site management team will/did nominate an individual who will be responsible for the monitoring and collection of data. | | |
| Notes:<br>• Targets for energy consumption during the construction process should be set using DTI's Environmental KPI benchmarks. These documents do not specify targets but facilitate projects in setting appropriate targets (see references section of main credit for further details).<br>• BREEAM does not require targets to be met but is encouraging the process of setting, monitoring and reporting against targets. | | |
| **b. Monitor and report $CO_2$ or energy arising from commercial transport to and from the site** | | |
| **Compliance requirement** | **Tick** | **Evidence/Reference** |
| A site monitoring system will be/was in place to monitor and record deliveries*. This system will/did record:<br>• The number of deliveries<br>• The mode of transport<br>• The km/miles travelled for all deliveries | | |
| If the design team or contractor confirms that the project is aiming to achieve the "Construction Site Transport" 'measures for traffic movements and distances' (published April 2003, see references) then this aspect has been achieved automatically. The information obtained for this item can also be used to satisfy the DTI's Environmental KPI on transport. | | |

| BREEAM Healthcare 2008 |
|---|
| Management |
| Checklist A3 – Construction Site Impacts |

| Minimum BREEAM Standards | | | | | |
|---|---|---|---|---|---|
| Rating Level | P | G | VG | E | O |
| Min. credits to achieve rating | - | - | - | - | - |

| | | |
|---|---|---|
| The design/site management team will/did nominate an individual responsible for the monitoring and collection of data. | | |

Notes:

- Where the delivery is specifically for the site, a figure of total distance travelled should be used, i.e. a round trip (from the point of origin, to the site and back to the point of origin).
- Where the delivery to the site is part of a multiple delivery route, the recorded figure for distance travelled should be the distance travelled to the site (from the previous delivery), plus the distance to the next delivery or return.
- This information can then be used to estimate a total figure for kg of $CO_2$ for the project. BREEAM does not require this information to be converted to $CO_2$ but the information must be made available to the senior project and site management staff/suppliers to establish benchmarks and aid future decision-making towards improving site and transport efficiency. If the project team wishes to convert this information into $CO_2$ emissions there are tables provided at the end of this checklist which can be used to do this.

**c. Monitor, report and set targets for water consumption arising from site activities**

| Compliance requirement | Tick | Evidence/Reference |
|---|---|---|
| Monthly measurements of water consumption will be/were recorded and displayed on site. | | |
| Appropriate target* levels of water consumption will be/were set and displayed (targets could be annual, monthly or project targets). | | |
| As a minimum, monitoring will/did include checking the meters and displaying some form of graphical analysis in the site office to show consumption over the project duration and how actual consumption compares to targets set. | | |
| The design/site management team will/did nominate an individual responsible for the monitoring and collection of data. | | |

Notes:

- Targets for water consumption during the construction process should be set using DTI's Environmental KPI benchmarks. These documents do not specify targets but facilitate projects in setting appropriate targets (see References and Further Information for details).
- BREEAM does not require targets to be met but is encouraging the process of setting, monitoring and reporting targets.

| f. A main contractor with an environmental materials policy | | |
|---|---|---|
| **Compliance requirement** | **Tick** | **Evidence/Reference** |
| The main contractor operates an environmental materials policy, used for sourcing of construction materials to be utilised on site. The policy should cover/promote the following:<br>• Use of local materials (where possible)<br>• Use of responsibly sourced materials<br>• Re use of materials<br>• Use of materials with a high recycled content<br>• Waste minimisation and recycling<br>• Use of non-toxic materials & refrigerants with a high global warming potential<br>• Use of materials with a low embodied impact<br>• Use of durable materials | | |
| Post construction: indicative examples have been provided to demonstrate the policy in action. | | |
| **g. A main contractor that operates an Environmental Management System*** | | |
| **Compliance requirement** | **Tick** | **Evidence/Reference** |
| The main contractor operates an Environmental Management System covering their main operations. The EMS must be either:<br>• Third party certified, to ISO14001/EMAS or equivalent standard. OR<br>• The structure of the EMS is in compliance with British Standard 8555 2003 and has reached phase four of the implementation stage, 'implementation and operation of the environmental management system', and completed phase audits one to four, as defined in BS8555. | | |

* Please note: it is a requirement of BREEAM Healthcare that this measure is achieved as a condition of awarding any of the available credits for this BREEAM issue.

| h. 80% of site timber is reclaimed, re-used or responsibly sourced | | |
|---|---|---|
| **Compliance requirement** | **Tick** | **Evidence/Reference** |
| 80% of timber used during construction, including formwork, site hoardings and other temporary site timber used for the purpose of facilitating construction, will be/was procured from sustainably managed sources, independently certified by one of the top two levels as set out in the Responsible Sourcing of Materials Issues (BREEAM credit Mat 5) in the Materials section of this document. | | |
| Additionally 100% of all site timber will be/was legally sourced. | | |
| Notes:<br>• Re-used timber from off site can be counted as equivalent but re-usable formwork only complies if it meets the above criteria.<br>• This credit can be awarded where all the timber used is reclaimed timber. | | |

**NOTE TO ASSESSORS**

This list is included for information, you are not expected to evaluate whether a scheme complies with this criteria. All new schemes claiming to meet the criteria listed below will be evaluated by BRE, and will be included in the list of compliant schemes where appropriate.

**Table 3 - Features of a top tier (1) comparable certification scheme**

**Standard setting**

When setting standards for a materials certification scheme the following should be addressed in order to be considered comparable to Tier 1/2 of this credit.

- The scheme must include a third party chain of custody certification scheme covering all stages of the product throughout the supply chain
- The scheme must verify that all local and national legislative requirements are met.
- The process for policy and standards development is transparent, clear and accessible.
- The scheme is independent and standards are developed in a way which balances the interests of all stakeholders. This should be done through a rigorous consultation process which makes best use of the stakeholder knowledge, methodically and comprehensively considering all feedback and after such consideration, aims to implement all feasible stakeholder suggestions
- The scheme is inclusive, striving to involve all interested people and groups in the development of the scheme's policies and standards.
- Monitoring and assessment must be integral to the scheme and conducted appropriate to the scale and intensity of the industry/ materials assessed by the scheme. This requirement is likely to be fulfilled by the incorporation of an EMS such as ISO14001 or BS8555 for SME's.
- The scheme should contain principles by which the scheme should be governed. These should be specific to industry/materials but should also be composed of the fundamental issues related to the environment. These issues should focus on specific practices associated with sourcing virgin and other materials.
- The scheme should assess that initiatives are in place to ensure continuous performance and environmental improvement.
- The scheme should provide for small to medium sized business as well as larger

| Min. credits to achieve rating | - | - | - | - | - |

businesses. SME's grouping together to achieve group certification should be an option. This could, for example, take place on a regional or other relevant basis.

- The scheme should include a mechanism to revise the standard within a defined, suitable time frame to ensure that the current knowledge or upcoming robust scientific or other professional evidence can be incorporated (in good time) into the standard as an update. It should ensure that all updates are well adapted to the local/regional and/or global conditions.

- The scheme should also aim to consider social and economic aspects widening the scope to sustainability under the umbrella of a Corporate Social Responsibility (CSR). This is in line with the future aims of BREEAM and could be assessed within the credit in the future.

**NOTE**: The scheme may be generic for the materials industries or specific for individual materials sectors.

**Differences between Tier 1&2**

Tiers 1 and 2 follow the standard setting process outline above, however there are differences in the rigour of the two schemes which is why they fall into two different categories. These are outlined below:

1. The top tier category schemes comprehensively address a consultation process with local community. This is done at source via a management company, as the focus is on sustainable project management at source.

2. The top tier category must have no reservations/uncertainty/pending charge or indictment identified by any professional bodies in the relevant materials sectors.

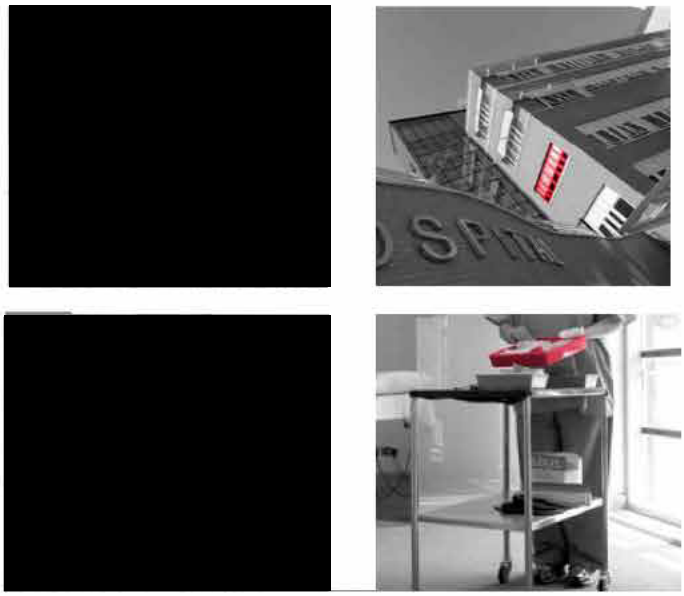
# INVITATION TO PARTICIPATE IN COMPETITIVE DIALOGUE

# VOLUME THREE

# BID DELIVERABLES AND EVALUATION



**Contents**

**1.0 Introduction**

**2.0 Selection Procedure and Evaluation Criteria**

**3.0 Bid Deliverables**

**4.0 Submission of Bids**

**Appendices**

**Appendix A Bid Deliverables**

**Appendix B Qualitative Scoring Schedule**

**Appendix C Legal Evaluation**

**Appendix D Certificates**

## 1.0 Introduction

This Volume of the ITPB sets out the Bid Deliverable Requirements and the Bid Evaluation Process.

## 1.0 Selection Procedure and Evaluation Criteria

### 2.1 Introduction

The Tender Return Date is for submissions relating to this Project is 11 September 2009. In terms of the Public Contracts (Scotland) Regulations 2006 (as amended), which implement EU directives into UK law, the Board will award the contract on the basis of the most economically advantageous Bid.

The Board must be satisfied that the proposed solution offers value for money and meets the Board's affordability criteria and minimum requirements for the Project. This will be determined by reference to the bid submission requirements in the Appendix A of Volume 3 of this ITPD and the evaluation criteria set out in Section 2.3. Having undertaken a detailed pricing analysis of the exemplar design, the Board has produced a "should cost" figure for the Project of £590M. The Board believes that this is a robust target for the pricing of the Project and expects bids to be received which meet or better this price. This figure has provided the basis for the Board's budget allocation for design, construction and risk.

Separately, the Board has an affordability ceiling of £621M and reserves the right to reject any bid submission that exceeds this figure

### 2.2 Evaluation Team

A team composed of individuals with relevant knowledge and expertise will carry out the evaluation of technical and commercial submissions. The Evaluation Team will comprise relevant individuals from the Board, Technical, Legal and Financial Advisors, and representatives from the Board. A Team Leader shall be appointed to co-ordinate the review of the bid submissions under the following sections:-

- Design Group
- Site Logistics Group
- Commercial Group

### 2.3 Evaluation Methodology

The bid evaluation process is outlined as follows:-

- *Stage 1 - Compliance & Completeness Review*

Each bid submissions will be subject to an initial compliance and completeness review. This initial review will not involve a qualitative assessment of a Bidder’s proposals but will simply check whether or not the submission requirements of the ITPD have been satisfied. Any omissions will be notified to the Team Leader via a Compliance & Completeness Review Schedule and forwarded to the Project Director. All requests for missing information will be made to Bidders from the Project Director and requested information should be provided within 7 days of request.

The Financial Evaluation Team will undertake a high level review of the priced bids and any bid above the maximum affordability threshold may be discarded at this initial stage.

At this stage the Board reserves the right to either reject any non-compliant or substantially incomplete Bids or request further information from the Bidder to address any such non-compliance or shortcomings with the Bid.

- *Stage 2 – Bid Evaluation*

In order to determine the bid that represents the Most Economically Advantageous Tender, each bid will be subject to the following process:-

1. A detailed scoring evaluation will be undertaken in accordance with the Bid Evaluation Schedule included in Appendix B and the scoring matrix below to determine the Qualitative Score. Further detail on the Board's approach to the evaluation of the Bidders' responses on the draft Contract and ancillary matters is set out in Appendix [C].

| Scores | Value | Description |
|---|---|---|
| Excellent | 9 - 10 | Performs significantly well on all key factors and offers substantial additional benefits |
| Good | 7 - 8 | Performs well on all key factors and offers some additional benefits |
| Adequate | 5 - 6 | Passes thresholds on all key factors but offers few additional benefits |
| Poor | 3 - 4 | Fails to meet threshold on some key factors |
| Very Poor | 2 | Fails to meet threshold on majority of key factors |
| Unacceptable | 1 | Fails to meet threshold on all key factors |

2. Pricing evaluation will then be carried out, based on price / risk scenario modelling to assess the most likely final outturn price to the Board. This process aims to evaluate the true cost of the bids to the Board and reflect a comparable risk position between bids. The expected outturn price will be determined based on cost modelling of bid submissions with the assessed impact of Board retained risk. Modelling will consider scenarios to establish the expected outturn price by reference to the bidders price submissions, priced risk registers for contractor accepted risk and board retained risk, and the pain / gain ratios.

3. A Value for Money / Most Economically Advantageous Tender assessment will follow, the outcome of which will be determined by dividing the Qualitative Score by the expected outturn price (MEAT Score).

   The outcome of the calculation performed in accordance with Paragraph 3, above, will identify a provisional combined ranking of the tenders assessed. The MEAT Score for each bidder must achieve a minimum overall level [as determined with reference to the Board's indicative MEAT Score, which is calculated by dividing baseline requirements of Volume 3 Employer Requirements by the "should cost" figure in Section 2.1], i.e. 400.

   There will then be a final meeting of the evaluation team to agree that the provisional ranking is robust. The outcome of this meeting will form the basis of a recommendation to the Board as to which tender is the most economically advantageous. Subject to Board approval, the Contract will be awarded to the Bidder who submits this tender.

As part of the evaluation process the Board reserve the right to convene meetings with the Bidders in order to clarify any part of the bidders submission where the proposals are considered to be unclear.

The Board also reserve the right to request the bidders to attend an Interview / Presentation in order that the Bidder can fully explain his design proposals, management procedures, construction methodology, and any other matter considered relevant to the Board. The Interview / Presentation will not form part of the bid evaluation process

## 2.0 Bid Deliverables

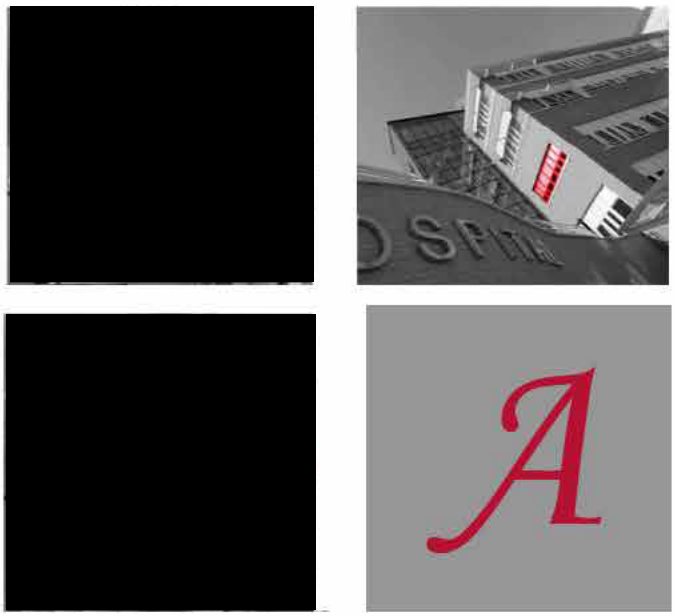
The bid deliverables to be submitted by bidders for are set out in Appendix A

## 3.0 Submission of Bids

The format of the bid submissions shall be as follows:-

- Separate volumes or sections for each of the Bid Deliverable categories identified in Appendix A
- Front Cover for each Volume noting
  - New South Glasgow Hospitals Project
  - Volume Nr & Bid Deliverables Sections
  - Bidder Name & Logo
- General text minimum font size 10pt
- A4 or A3 paper size
- Each page to have Header with – New South Glasgow Hospitals Project & Bidders Name (no Company logo)
- Each page to have Footer with – Volume Nr and Page Nr
- 2 or 4 hole punch Lever Arch Folders
- A1 Drawings folded and contained in plastic folders within appropriate volume

# Appendix A Bid Deliverables



**NEC3 CONDITIONS OF CONTRACT - CONTRACT DATA PART 2 – DATA POROVDED BY THE CONTRACTOR**

The Bidders tender submission require to be a full and comprehensive response to the Works Information (Employers requirements) clearly demonstrating compliance, and as a minimum requires the following information to be submitted.

| Section | Submission | Checklist |
|---|---|---|
| **1.0 Accommodation Schedule** | | |
| 1.1 | Net Area – room by room, including all ducts, pipe boxing and service zones | |
| 1.2 | Circulation area | |
| 1.3 | Communication & plant space area | |
| 1.4 | Total Gross Floor Area | |
| **2.0 Drawing Information** | | |
| 2.1 | 1:500 scale Masterplan proposals, indicating the following information:-<br>▪ Communication routes into and out of the site & buildings for<br>o Vehicles<br>• Public transport (Buses & fastlink)<br>• Private cars<br>• Taxis<br>• Ambulances<br>• Services Vehicles<br>• Cycles<br>o Pedestrians<br>• Patients<br>• Visitors<br>• Staff<br>▪ Planning restrictions affecting the development and modifications to highways, response to specific local authority planning requirements<br>▪ Orientation of buildings and relationship to other buildings and infrastructure on the site<br>▪ Hard & soft landscaping proposals<br>▪ Car Parking arrangements with distribution of spaces and use identified<br>▪ Areas of differing Carriageway Construction<br>▪ Road, footway and cycle way geometry<br>▪ Indicative Signalised layouts at external roads<br>▪ Main access points to buildings (existing & proposed)<br>▪ Major service routes<br>▪ Response to the surrounding and wider urban context<br>▪ Phasing plans / temporary works plans for the implementation of roads and drainage infrastructure | |
| 2.2 | 1:500 departmental relationship drawings for all levels indicating functional relationships & main circulation routes | |
| 2.3 | 1:200 departmental layouts (minimum 11nr) indicating the following information:-<br>▪ Room adjacencies<br>▪ Circulation layouts<br>▪ Corridor widths | |

| | | |
|---|---|---|
| | ▪ Door widths<br>▪ Communication routes / wayfinding<br>▪ Entrances<br>▪ Egresses | |
| 2.4 | 1:200 departmental drawing for Accident & Emergency Department,<br>▪ floor finishes<br>▪ ceiling finishes<br>▪ wall finishes<br>▪ door types & ironmongery<br>▪ wall protection<br>▪ Lighting proposals<br>▪ CCTV locations<br>▪ door entry locations | |
| 2.5 | 1:200 departmental drawing for Adult Theatres Department, fully annotated to indicate :-<br>▪ floor finishes<br>▪ ceiling finishes<br>▪ wall finishes<br>▪ door types & ironmongery<br>▪ wall protection<br>▪ Lighting proposals<br>▪ CCTV locations<br>▪ door entry locations | |
| 2.6 | 1:200 departmental drawing for Adult Ward, fully annotated to indicate<br>▪ floor finishes<br>▪ ceiling finishes<br>▪ wall finishes<br>▪ door types & ironmongery<br>▪ wall protection<br>▪ Lighting proposals<br>▪ CCTV locations<br>▪ door entry locations | |
| 2.7 | 1:200 departmental drawing for Childrens Ward, fully annotated to indicate<br>▪ floor finishes<br>▪ ceiling finishes<br>▪ wall finishes<br>▪ door types & ironmongery<br>▪ wall protection<br>▪ Lighting proposals<br>▪ CCTV locations<br>▪ door entry locations | |
| 2.8 | 1:200 departmental drawing for Childrens A&E Department fully annotated to indicate<br>▪ floor finishes<br>▪ ceiling finishes<br>▪ wall finishes<br>▪ door types & ironmongery<br>▪ wall protection<br>▪ Lighting proposals<br>▪ CCTV locations<br>▪ door entry locations | |

| | | |
|---|---|---|
| 2.9 | 1:50 room layout and wall elevations fully developed for the rooms included as part of the Employers Requirements indicating:-<br>▪ room size and useable floor space<br>▪ room shape and compliance with ergonomic data and minimum critical dimensions<br>▪ room elevations<br>▪ reflected ceiling plans<br>▪ access points / locations of doors and windows<br>▪ location of utilities, engineering and specialist services<br>▪ location of equipment | |
| 2.10 | 1:500 Fire Strategy drawings & Fire Strategy Report indicating the following information:-<br>▪ Strategic plans, highlighting evacuation strategies and staff implications in the event of fire<br>▪ Specialist Fire Engineer's Report providing a clear understanding or risk and protection measures<br>▪ Outline of princiles adopted underlying approach to fire safety indicating compliance with Employers Requirements, NHS Firecode and Technical Standards | |
| 2.11 | 1:200 Elevations – incorporating external signage proposals | |
| 2.12 | 1:200 Roof plan indicating the following<br>▪ Form<br>▪ Materials<br>▪ Helipad proposals | |
| 2.13 | 1:200 Exemplar sections indicating the following:-<br>▪ Floor to floor heights<br>▪ Floor to ceiling heights<br>▪ Architectural vision – space, height, form, composition, scale, character and use of materials<br>▪ Consideration of patient environment – natural light, views etc | |
| 2.14 | 3D images / perspective (internal & external) indicating the following:-<br>▪ Architectural vision – space, height, form, composition, scale, character and use of materials | |
| 2.15 | Hospital Main Entrance / atrium / public space proposals / visuals | |
| 2.16 | 1:500 site hard & soft landscaping proposals indicating:-<br>▪ Soft landscaping strategy<br>▪ Hard landscaping strategy<br>▪ Car Parking arrangements with distribution of spaces and use identified<br>▪ Areas of differing Carriageway Construction<br>▪ Road, footway and cycle way geometry<br>▪ Indicative Signalised layouts at external roads<br>▪ Retention / protection of existing trees<br>▪ Incorporation of art<br>▪ Special features<br>▪ Courtyards | |
| 2.17 | Typical Sections and details to appropriate scale showing:-<br>Carriageway Construction<br>Footway / Cycleway Construction | |

| | | |
|---|---|---|
| 2.18 | 1:1250 (or greater) plans showing :-<br>▪ Drainage provision in support of SUDS and Drainage Strategy | |
| 2.19 | 1:500 scale plans showing:-<br>▪ Layout of roads and buildings<br>▪ Layout of sewers, outfalls, underground storage, and SUDS features | |
| 2.20 | Finishes Schedule for 10 Nr Departments (other than those identified above for detailed 1:200 drawing submissions) and key circulation & communication routes, and main entrances | |
| 2.21 | Door & ironmongery Schedule for 10 Nr Departments (other than those identified above for detailed 1:200 drawing submissions) and key circulation & communication routes, and main entrances | |
| 2.22 | Outline design drawings demonstrating structural philosophy and should include as a minimum:<br>▪ Foundations: Typical layout and detail of proposed solution<br>▪ Basement: Outline construction detail; plan of slabs, sections of retaining walls<br>▪ Ground level slab: Typical layout and details<br>▪ Podium level floor: Typical layout and details, transfer structures<br>▪ Ward level floors: Typical plan layout indicating slab and supporting structure, (columns, beams), core layout (stability elements)<br>▪ Roof level: Typical layout indicating structure, including helipad (Acute Adults & Childrens) | |
| 2.23 | 1:200 Energy Centre Services Layout and Plant Room locations | |
| 2.24 | Schematic for Main Services incoming routes and distribution from Energy Centre to Main Hospital Building – tunnel cross sections | |
| 2.25 | MTHW Schematic | |
| 2.26 | LTHW Schematic | |
| 2.27 | Hot & Cold Water Services Schematic | |
| 2.28 | Filtered Water Schematic | |
| 2.29 | Renal Water Schematic | |
| 2.30 | Medical gases schematic | |
| 2.40 | Sprinklers schematic | |
| 2.41 | Fire alarm & damper controls schematic | |
| 2.42 | BMS schematic | |
| 2.43 | MV Power Schematic | |
| 2.44 | LV Schematic | |
| 2.45 | Air supply schematic, including additional sketches for Theatre supply | |
| 2.46 | Air extract schematic, including additional sketches for Theatre supply | |
| 2.47 | Air Treatment Schematic (cooling), including additional sketches for Theatre supply | |
| **3.0 Design Strategy** | | |
| 3.1 | Architectural design strategy | |
| 3.2 | Wayfinding strategy | |

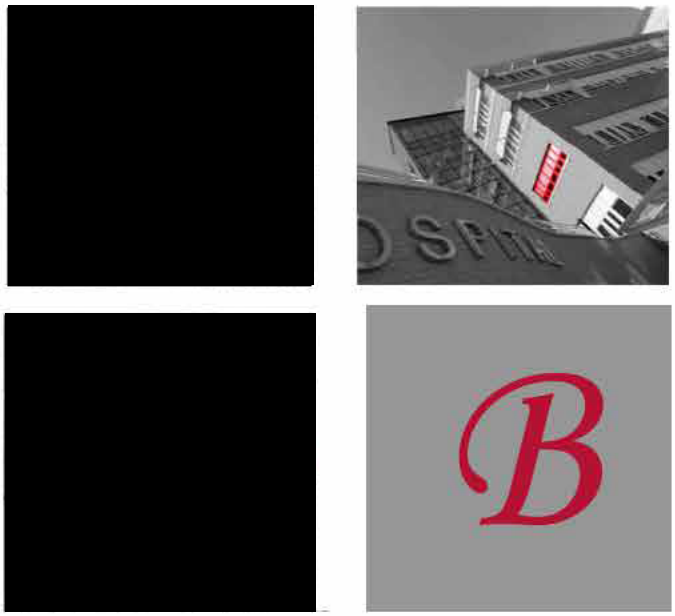
| | | |
|---|---|---|
| 3.3 | Arts Strategy | |
| 3.4 | Acoustic Report indicating the following information:-<br>▪ Specialist Acoustic Engineer's report providing a clear demonstration of compliance with HTM 08-01<br>▪ Outline principles adopted underlying bidder approach to acoustics with particular regard to issues around items such as rooftop helipad, atrium etc | |
| 3.5 | Structural Engineering design strategy | |
| 3.6 | Main incoming utilities design / connection strategy | |
| 3.7 | Water Services & Drainage design strategy | |
| 3.8 | Heating design strategy | |
| 3.9 | Ventilation & air treatment design strategy, including statements on odour control from adjacent sewage works | |
| 3.10 | Mains power distribution design strategy | |
| 3.11 | Sub-mains power distribution design strategy | |
| 3.12 | Lighting design strategy, including reference to energy and aesthetics to improve patient experience | |
| 3.13 | Lift Engineering design strategy | |
| 3.14 | Communication design strategy | |
| 3.15 | Protective systems design strategy | |
| 3.16 | Medical gases design strategy | |
| 3.17 | Pneumatic tube system design strategy | |
| 3.18 | Fire engineering design strategy | |
| 3.19 | Plant room design strategy | |
| 3.20 | Energy strategy including approach to renewables, sustainability | |
| 3.21 | BREEAM scoring schedule | |
| 3.22 | Helipad M&E services design strategy | |
| 3.23 | Maintenance & major plant and equipment replacement strategy | |
| 3.24 | Building Services Commissioning, Handover, Training strategy | |
| 3.25 | Drainage strategy including:-<br>▪ Methodology for Addressing the requirements of the Hydraulic Assessment and Flood Risk assessment as scoped out on the Drainage Impact Assessment and Strategy Report<br>▪ SUDS and Drainage Strategy statement which recognises the requirements as outlined in the Drainage Impact and Strategy Report | |
| 3.26 | Structural Design Strategy which should include:-<br>▪ Outline description demonstrating understanding of: topography, geology, soil conditions, contamination, ground water, history, services<br>▪ Demonstrate outline principles or design including, general description, stability, joints, floors, vertical structure, foundations, stairs and ramps, retaining walls, earthworks, slope stability, drainage, external works etc.<br>▪ Design Standards and Sources of Reference (Codes of Practice and Standards) | |
| **4.0 Specifications** | | |
| 4.1 | Substructure | |
| 4.2 | Frame | |
| 4.3 | Upper Floors | |

| | | |
|---|---|---|
| 4.4 | Roof Structure | |
| 4.5 | Roof coverings | |
| 4.6 | Roof drainage | |
| 4.7 | Roof lights | |
| 4.8 | Stair structure | |
| 4.9 | Stair finishes | |
| 4.10 | Stair balustrades & handrails | |
| 4.11 | External walls | |
| 4.12 | Windows | |
| 4.13 | External doors | |
| 4.14 | Internal walls and partitions | |
| 4.15 | Internal doors | |
| 4.16 | Wall finishes | |
| 4.17 | Floor finishes | |
| 4.18 | Ceiling finishes | |
| 4.19 | Fittings, fixtures & furniture | |
| 4.20 | Soft furnishings | |
| 4.21 | Works of Art | |
| 4.22 | Equipment | |
| 4.23 | Sanitary appliances | |
| 4.24 | Services equipment | |
| 4.25 | Disposal installations | |
| 4.26 | Mains Water installations | |
| 4.27 | Cold water services | |
| 4.28 | Hot water services | |
| 4.29 | Steam & condensate | |
| 4.30 | Heat source | |
| 4.31 | Space heating | |
| 4.32 | Space cooling | |
| 4.33 | Ventilating system | |
| 4.34 | Electric source & mains | |
| 4.35 | Electric power supplies | |
| 4.36 | Electric lighting & fittings | |
| 4.37 | Gas installations | |
| 4.38 | Lift installations | |
| 4.39 | Sprinkler installations | |
| 4.40 | Fire-fighting installations | |
| 4.41 | Lightning protection | |
| 4.42 | Communication installations | |
| 4.43 | Special installations– Renal Water, Filtered Water | |
| 4.44 | Special installations – Building management System | |
| 4.45 | Special installations– Pneumatic tube system | |
| 4.46 | Roads, car parks, pavements, cycle paths | |
| 4.47 | Soft landscaping | |
| 4.48 | Site enclosure | |
| 4.49 | External fittings & furniture | |
| 4.50 | Drainage | |
| 4.51 | Water Mains | |
| 4.52 | Fire Mains | |
| 4.53 | Heating Mains | |
| 4.54 | Gas mains | |
| 4.55 | Electric mains | |
| 4.56 | Site Lighting | |

| | | |
|---|---|---|
| 4.57 | Minor building works | |
| **5.0 Component / Product & Manufacturer Schedule** | | |
| 5.1 | Boilers | |
| 5.2 | Calorifiers | |
| 5.3 | Pumps | |
| 5.4 | Switchgear | |
| 5.5 | AHU's | |
| 5.6 | Fans | |
| 5.7 | Internal Doors | |
| 5.8 | Ironmongery | |
| 5.9 | External doors & screens | |
| 5.10 | Roof Coverings | |
| 5.11 | Cladding / Curtain Walling / Windows | |
| 5.12 | Vinyl Flooring | |
| 5.13 | Carpet | |
| 5.14 | Ceiling systems | |
| **6.0 Equipment Schedule** | | |
| 6.1 | Proposed Equipment Schedule | |
| **7.0 HTM / SHTM Compliance Statement** | | |
| 7.1 | Confirm compliance with required HTM's and state how compliance is being achieved | |
| **8.0 ADB Compliance Statement** | | |
| 8.1 | Confirm compliance with requirements of ADB sheets issued | |
| **9.0 Programme** | | |
| 9.1 | Master programme | |
| 9.2 | Stage 1 Laboratory sub-programme | |
| 9.3 | Stage 2 FBC Stage sub-programme | |
| 9.4 | Stage 3 Construction stage sub-programme | |
| **10.0 Project / Site Management** | | |
| 10.1 | Project Execution Plan comprising:- | |
| | ▪ Management structure | |
| | ▪ Management Staff – key personnel & structure | |
| | ▪ Design Staff - key personnel & structure | |
| | ▪ Temporary Accommodation & Welfare | |
| | ▪ Logistics | |
| | ▪ Traffic Management | |
| | ▪ Car Parking | |
| | ▪ Staff Movement | |
| | ▪ Site Security | |
| | ▪ Site Safety, including Construction Phase Health & Safety Plan | |
| | ▪ Site interfaces | |
| | ▪ Waste management | |
| | ▪ Community engagement | |
| **11.0 Contract Conditions** | | |
| 11.1 | A detailed and full mark-up of the Draft Contract; An electronic version, capable of being read in Microsoft Word 2000, of the Draft Contract;<br>Details of any of the proposed conditions contained in the | |

| | | |
|---|---|---|
| | Draft Contract that the Bidder is not prepared to accept and the reasoning behind the Bidder's position; | |
| 11.2 | Details of any of the proposed conditions contained in the Draft Contract that the Bidder is not prepared to accept and the reasoning behind the Bidder's position; | |
| 11.3 | A letter of support from the Bidders' insurers or other form of evidence demonstrating that the Board's expectations relative to insurance cover will be met. | |
| 11.4 | Performance Bond | |
| 11.5 | Performance Damages | |
| 11.6 | Collateral Warranties | |
| **12.0 Financial** | | |
| 12.1 | Statement on Commercial proposals, operation of Target Pricing, Open Book audit | |
| 12.2 | Target & Maximum Price Proposals<br>▪ Overall Project<br>▪ Stage 1 New Labs<br>▪ Stage 2 FBC Design<br>▪ Stage 3 Design & Construction New Hospitals | |
| 12.3 | Detailed Elemental Cost Plan, comprising elemental summary with supporting detail comprising work items, approximate quantities, rates etc<br>▪ Stage 1 New Labs<br>▪ Stage 2 FBC Design<br>▪ Stage 3 Design & Construction New Hospitals<br>▪ Stage 3A Hard & Soft Landscaping Completion | |
| 12.4 | Priced Activity Schedules & Supporting Monthly Cashflows<br>▪ Overall Project<br>▪ Stage 1 New Labs<br>▪ Stage 2 FBC Design<br>▪ Stage 3 Design & Construction New Hospitals<br>▪ Stage 3A Hard & Soft Landscaping Completion | |
| 12.5 | Payment proposals | |
| 12.6 | Priced Risk Register & Risk Allocation<br>▪ Stage 1 New Labs<br>▪ Stage 2 FBC Design<br>▪ Stage 3 Design & Construction New Hospitals<br>▪ Stage 3A Hard & Soft Landscaping Completion | |
| 12.7 | Incentivisation Proposals Pain / Gain<br>▪ Stage 1 New Labs<br>▪ Stage 2 FBC Design<br>▪ Stage 3 Design & Construction New Hospitals & Stage 3A Hard & Soft Landscaping Completion | |
| 12.8 | Whole Life Cycle Cost Estimate for 30 year period detailing, replacement costs & timescales, planned & preventative maintenance, energy usage including:-<br>▪ Overall Project Summary<br>▪ Stage 1 New Labs<br>▪ Stage 3 Construction New Hospitals<br>▪ Stage 3A Hard & Soft Landscaping Completion<br>Energy costs assumptions should be clearly stated | |

# Appendix B Qualitative Scoring Schedule



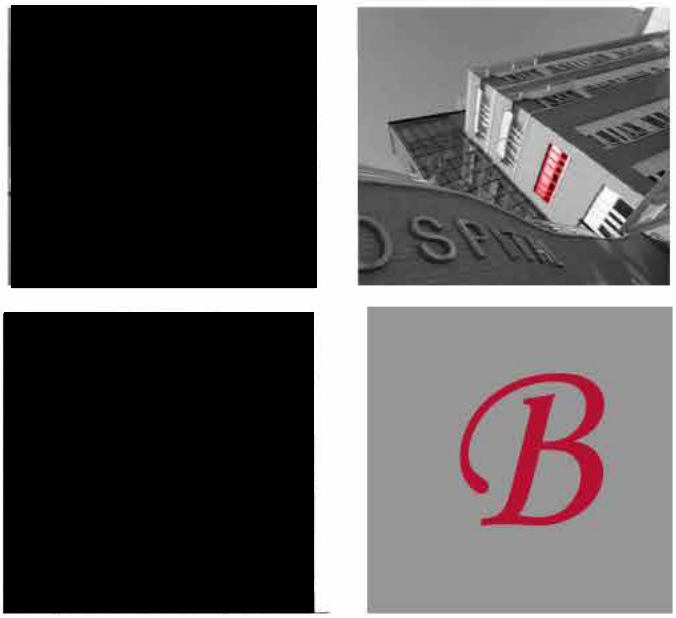
| ITPD Evaluation Criteria | Individual Weighting | Technical Weighting |
|---|---|---|
| **DESIGN** | **550** | **50** |
| | | |
| ***Space*** | **20** | |
| The design should achieve appropriate clinical space standards as required by the ITPD Schedule of | 10 | |
| | | |
| The circulation, communication & plant space should be adequate and optimised | 10 | |
| | | |
| ***Drawing information:-*** | **250** | |
| 1:500 scale Masterplan proposals | 30 | |
| 1:500 departmental relationship drawings for all levels indicating functional relationships & main | 50 | |
| 1:200 departmental layouts reflect the required space standards and functionality | 45 | |
| 1:200 departmental drawing for Adult Theatres Department, fully Annotated | 10 | |
| 1:200 departmental drawing for Adult Ward, fully annotated | 10 | |
| 1:200 departmental drawing for Childrens Ward, fully annotated | 10 | |
| 1:200 departmental drawing for Childrens A&E, fully annotated | 10 | |
| 1:50 room layout and wall elevations fully developed | 10 | |
| 1:200 Elevations – incorporating external signage proposals | 5 | |
| 1:200 Exemplar sections | 5 | |
| 3D images / perspective (internal & external) indicating the following:- | | |
| ▪ Architectural vision – space, height, form, composition, scale, character and use of materials | | |
| ▪ Hospital Main Entrance / atrium / public space proposals / visuals | 20 | |
| 1:500 site hard & soft landscaping proposals indicating:- | | |
| ▪ Soft landscaping strategy | | |
| ▪ Hard landscaping strategy | | |
| ▪ Car Parking arrangements with distribution of spaces and use identified | | |
| ▪ Areas of differing Carriageway Construction | | |
| ▪ Road, footway and cycle way geometry | | |
| ▪ Indicative Signalised layouts at external roads | | |
| ▪ Retention / protection of existing trees | | |
| ▪ Incorporation of art | | |
| ▪ Special features | | |
| ▪ Courtyards | 10 | |
| Finishes Schedule for X Departments and key circulation & communication routes, and main entrances | 10 | |
| Door & ironmongery Schedule for X Departments key circulation & communication routes, and main | 10 | |
| Roof level: Typical layout indicating structure, including helipad (Acute Adults & Childrens) | 5 | |
| Architectural design strategy statement in support of drawing information | 5 | |
| Wayfinding strategy | 5 | |
| | | |

| ITPD Evaluation Criteria | Individual Weighting | Technical Weighting |
|---|---|---|
| ***Design Strategy*** | **155** | |
| Acoustic Strategy & Report | 5 | |
| Arts Strategy | 5 | |
| Fire engineering design strategy including drawings | 5 | |
| Structural Engineering design strategy including outline design drawings demonstrating structural | 5 | |
| Drainage design strategy including 1:1250 (or greater) plans showing drainage provision in support of | | |
| ▪ Layout of roads and buildings | | |
| Layout of sewers, outfalls, underground storage, and SUDS features | 5 | |
| Main incoming utilities design / connection strategy including Schematic for Main Services distribution | 5 | |
| Water Services Strategy including Hot & Cold Water Services Schematic, Filtered Water Schematic and | 5 | |
| Heating design strategy including MTHW Schematic & LTHW Schematic | 10 | |
| Ventilation & air treatment design strategy including Schematic drawings | 10 | |
| Mains and Sub-mains power distribution design strategy including MV Power Schematic and LV Power | 10 | |
| Lighting design strategy | 10 | |
| Lift Engineering design strategy | 10 | |
| Communication design strategy | 5 | |
| Protective systems design strategy including Sprinklers schematic and Fire alarm & damper controls | 5 | |
| Medical gases design strategy including schematic drawings | 5 | |
| Pneumatic tube system design strategy including schematic drawings | 5 | |
| Plant room design strategy | 5 | |
| Control systems including BMS schematic | 5 | |
| Helipad M&E services design strategy | 5 | |
| Maintenance & major plant replacement strategy | 35 | |
| | | |
| ***Sustainability*** | **75** | |
| Sustainable design statement | 25 | |
| BREEAM scoring schedule | 25 | |
| Energy strategy including approach to renewables, sustainability | 25 | |
| | | |
| ***AEDET Review*** | **50** | |
| Overall AEDET review score | 50 | |
| **Design Score** | **550** | **50** |

| ITPD Evaluation Criteria | Individual Weighting | Technical Weighting |
|---|---|---|
| **DELIVERABILITY AND APPROACH** | **275** | **30** |
| **Project management:** | **90** | |
| Structure & approach | 20 | |
| Site Management Team; | 5 | |
| Design Team; | 5 | |
| Community Engagement | 60 | |
| **Construction Approach:** | **20** | |
| There should be minimal impact on service delivery; | 10 | |
| The construction exploits any innovation benefits from standardisation and prefabrication; | 10 | |
| **Site Management:** | **80** | |
| Temporary Accommodation proposals | 15 | |
| Logistics proposals | 10 | |
| Traffic management | 10 | |
| Car Parking | 10 | |
| Staff Movement | 5 | |
| Site Security & Safety | 10 | |
| Site interfaces | 10 | |
| Waste Management | 10 | |
| **Programme:** | **40** | |
| Master programme | 5 | |
| Stage 1 Laboratory programme | 10 | |
| Stage 2 FBC sub programme | 10 | |
| Stage 3 Construction programme | 10 | |
| Stage 3A Hard & landscaping completion programme | 5 | |
| | | |
| **Commissioning & Handover** | **45** | |
| | | |
| ▪ Commissioning plans, including Building Services testing & commissioning | 15 | |
| ▪ Handover process | 15 | |
| ▪ Extended defects requirement | 15 | |
| | | |
| **Logistics Score** | **275** | **30** |

| ITPD Evaluation Criteria | Individual Weighting | Commercial Weighting |
|---|---|---|
| **COMMERCIAL** | **175** | **20** |
| | | |
| **Contract:** | **25** | |
| Compliance with Contract Conditions | 5 | |
| Insurances | 5 | |
| Performance Bond | 10 | |
| Collateral Warranties | 5 | |
| | | |
| **Pricing** | **150** | |
| Statement on Commercial proposals, operation of Target Pricing, Open Book audit | 5 | |
| Target / Maximum Price assessment | 20 | |
| Priced Risk Register & Risk Allocation | 55 | |
| Stage 1 Laboratory Design & Construction detailed elemental cost & resource plans | 5 | |
| Stage 1 Laboratory Design & Construction Priced Activity Schedules, Cashflow & Payment Proposals | 5 | |
| Stage 2 FBC Stage Priced Activity Schedules including supporting detailed costed resource plan, | 10 | |
| Stage 3 Adult / Childrens / Site Works Design & Construction detailed elemental cost & resource plans | 5 | |
| Stage 3 Adult / Childrens / Site Works Design & Construction Priced Activity Schedules, Cashflow & | 5 | |
| Project Whole Life Cycle Cost Plan | 40 | |
| | | |
| **Total Commercial Score** | **175** | **20** |

# Appendix C Legal Evaluation



**Purpose of Legal Evaluation**

The legal evaluation has two primary functions:

- to give comfort as to deliverability - demonstrated by the robustness of the legal submission and mark-up of the draft Contract and a constructive approach to resolving complex issues; and
- to better inform the financial or technical evaluations.

**Legal Evaluation Criteria**

(i) The legal evaluation will focus on the detailed mark-up of the draft Contract including the schedules, Appendices, Contract Data Part 1 and Contract Data part two (together, the "Contract Documents") submitted by the Bidders.

(ii) Bidder's responses to the Contract Documents will be evaluated in accordance with the following criteria (of equal importance):-

- the extent to which the Bidder has accepted the conditions set out in the Contract Documents and the extent to which the Bidder has provided detailed comments on the Contract Documents and a constructive approach to issues which it does not accept;
- the extent to which the Bidder demonstrates that it understands and accepts the risks inherent in the Project and the extent to which the Bidder's qualifications (if any) to risk allocation position set out in the Contract Documents are acceptable to the Board; and
- the sufficiency of Bidder's insurance proposals.

**How the Legal Evaluation will be conducted**

Firstly, the legal evaluation team will evaluate the individual responses against the legal evaluation criteria.

Thereafter, the legal evaluation team will produce a detailed commentary on the mark-up of the Contract Documents which will allow the legal evaluation team to:

- inform the technical and financial evaluation teams of any amendment to the Contract Documents which will have an impact on the price/risk profile or service being offered;
- identify any deficiencies in the legal submission which they consider should be brought to the attention of the Bidder prior to completion of the evaluation to give the Bidder an opportunity to clarify and ensure that tenders are compliant from a legal submission point of view(recognising the constraints on the degree of clarifications that might be requested under the Competitive Dialogue process);
- clearly identify any commercial issues which in the view of the legal evaluation team should be clarified with tenderers prior to appointment of Preferred Bidder. Clarification will be required when the Bidder 's position is not clear; and
- score the legal submissions taking all of the above into account, in accordance with the evaluation scoring matrix set out elsewhere in this ITPD.

**Legal Evaluation Report**

The legal evaluation team will complete a comprehensive legal report for each of the tenders evaluated.

Each legal report will contain the following:

- a summary of the legal submission including confirmation that the legal submissions were compliant;
- a summary of the quality of the responses in the legal submission against the legal evaluation criteria set out in this ITPD;
- a detailed commercial commentary on the mark-up of the Contract Documents which will identify:
    - the points considered relevant to the financial evaluation (which will have already been passed to the financial evaluation team);
    - the points relevant to the technical evaluation (which will have been passed to the technical evaluation team);
    - a list of key commercial issues which, in the legal evaluation team's view, should be addressed/developed prior Contract Award (as appropriate).

In addition, at an early stage in the process, the legal evaluation team will have identified any deficiencies in the legal submission which they consider should be brought to the attention of the tenderer prior to completion of the evaluation to give the Bidder an opportunity to clarify and ensure that tenders are compliant from a legal submission point of view.

The legal evaluation team will also rank the Bids according to the quality of their responses against the legal evaluation criteria.

**Bidder mark-up to the Contract Documents**

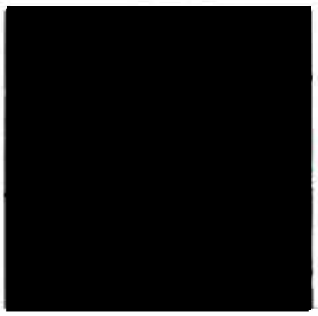
Legal submissions will be assessed on how thorough and constructive the Bidder's responses are. The key concern here is to satisfy ourselves that if a particular Bid is selected on the basis of the overall evaluation, that selection is made on a full understanding of their position on **all** commercial issues and on the basis of us being confident that they have thought through the implications of all commercial aspects of their Bid.

Where contract conditions are not acceptable to Bidders, weight will be given to responses which represent constructive alternatives rather than simple rejections.

**Conclusion**

The key issue in the tender evaluation to meet the “most economically advantageous” test remains identifying the compliant affordable Bid which offers the Board the best balance between price and quality. Much of the legal evaluation therefore focuses on assisting that process by identifying issues which are relevant to the overall evaluation but which are expressed by the Bidder through the legal submission documents.

# Appendix D Certificates



**Part 1 – Confidentiality Agreement**

Name of bidder:

We undertake that we shall keep confidential and will not use for our own purposes or reveal to any person, firm or company the information contained in or sent with the ITPD issued by the Board in relation to the Project or which is made available in connection with any further enquiries in relation to that Project (the "Information Provided") unless we obtain in each case the prior written consent of the Board. Such consent shall not be required where the Information Provided is:

(i) disclosed on a "need to know" basis to such of our directors, officers, employees or advisers who are directly involved with the preparation of bids on our behalf provided that we shall inform each person to whom the Information Provided is made aware of the confidential nature of the Information Provided and the obligations under this Confidentiality Agreement and has given an undertaking at the time of receipt of the Information Provided to keep such information confidential;

(ii) in the public domain or shall come into the public domain otherwise than by breach of this undertaking or any other undertaking;

(iii) made available to us by a third party who is entitled to divulge such information and who is not under any obligation of confidentiality in respect of such disclosure; or

(iv) required to be disclosed by any applicable law provided that the party disclosing the information shall notify the Board of the information to be disclosed (and of the circumstances in which the disclosure is alleged to be required) as early as reasonably possible before such disclosure must be made and shall take all reasonable action to avoid and limit such disclosure.

We undertake at the request of the Board that we shall immediately return to the Board all Information Provided and all and any copies or any part thereof including any information derived or produced partly or wholly from the Information Provided which is in a tangible form. If any such information is not in a tangible form, the bidder shall destroy or permanently erase that information and all and any copies or part thereof including any information derived or produced partly or wholly from the Information Provided.

Without prejudice to any other rights or remedies which the Board may have, the bidder acknowledges and agrees that (a) damages would not be an adequate remedy for any breach by the bidder of the provisions of this undertaking and (b) the Board shall be entitled to the remedies of interdict and other relief for any threatened or actual breach of this undertaking.

Signed for and on behalf of [**bidder**] by [**name of signatory and nature of authority to sign**] and [**name of signatory and nature of authority to sign**] on the day of 2009.

……...

……...

NOTE: (i) Where the bidder is a company, to be signed by two directors or by a director and the secretary of the company, such persons being duly authorised for that purpose.
(ii) Where the bidder is a consortium yet to be established as a company, to be signed by persons duly authorised by each of the prospective members of the consortium.

**Part 2 – Certificate of Non-Canvassing**

Name of bidder:

We hereby undertake that we have not (nor will we in the future):

1. Committed any offence under the Prevention of Corruption Acts 1889 to 1916; or

2. Contacted any other officer of the Board about any aspect of the Project, except as authorised by the ITPD, including (but without limitation) for the purposes of discussing the possible transfer to the employment of the Bidder of such officer for the purpose of the Project or for soliciting information in connection with the Project; or

3. Offered any inducement, fee or reward to any member or officer of the Board or any person acting as an advisor for the Board or in connection with the project; or

4. Canvassed any of the persons referred to in paragraph 3 above in connection with the Project.

In this Certificate the word "person" includes any persons and any body or association, corporate or unincorporate and "agreement" or "arrangement" include any such transactions, whether formal or informal, legally binding or not.

Signed for and on behalf of [bidder] by [name of signatory and nature of authority to sign] and [name of signatory and nature of authority to sign] on the day of 2009.

……...

……...

NOTE: (i) Where the bidder is a company, to be signed by two directors or by a director and the secretary of the company, such persons being duly authorised for that purpose.
(ii) Where the bidder is a consortium yet to be established as a company, to be signed by persons duly authorised by each of the prospective members of the consortium**.**

**Part 3 – Certificate of Non-Collusion**

Name of bidder:

We certify that we will submit a bona fide bid and that we have not adjusted and will not adjust our bid in agreement or by arrangement with any other person.

We also certify that we have not done and we undertake not to do at any time during the competition any of the following acts:

1. Entered into any agreement with any other person with the aim of preventing bids being made or as to the fixing or adjusting of the amount of any bid or the conditions on which any bid is made;

2. Caused or induced any person to enter into such an agreement as is mentioned in paragraph 1., above, or to inform us of the amount or the approximate amount of any rival bid for the Project; or

3. Informed any other person, other than the person calling for this bid, of the amount or the approximate amount of our bid, except where the disclosure, in confidence, of the amount of the bid was necessary to obtain quotations necessary for the preparation of the bid, for insurance, for performance bonds and/or contract guarantee bonds or for professional advice required or the preparation of the bid; or

4. Offered or agreed to pay or give any sum of money, inducement or valuable consideration directly or indirectly to any person for doing or having done or causing or having cause to be done in relation to any other bid or proposed bid for the works any act or omission; or

5. Canvassed any other persons referred to in paragraph 1., above, in connection with the project.

We also undertake not to procure the doing of any of the acts mentioned in paragraphs 1 to 5 above before the hour and date specified for the return of the bid nor (in the event of the bid being accepted) shall we do so while the resulting contract continues in force between us (or our successors in title) and the Board.

In this Certificate, the word “person” includes any persons and any body or association, corporate or unincorporate, and “agreement” or “arrangement” include any such transactions, whether formal or informal, legally binding or not.

Signed for and on behalf of [**bidder**] by [**name of signatory and nature of authority to sign**] and [**name of signatory and nature of authority to sign**] on the day of 2009.

……

... ……..

NOTE: (i) Where the bidder is a company, to be signed by two directors or by a director and the secretary of the company, such persons being duly authorised for that purpose.
(ii) Where the bidder is a consortium yet to be established as a company, to be signed by persons duly authorised by each of the prospective members of the consortium.

**SUBMISSION RESPONSE:**
The architectural specifications have been grouped into one document to ensure ease of cross-referencing; the Sections covered by this document are listed above.

This specification is written as an outline performance specification applicable for the Invitation to Participate in Competitive Dialogue (ITPD) Stage. It covers the design intent of architectural items and materials. These items will be subject to fabrication and installation requirements and in some cases will require testing to ensure performance requirements are met. The Specification has been divided into 2 main Sections; 2.0 External Outline Specification, and 3.0 Internal Outline Specification.

## 2.0 EXTERNAL OUTLINE SPECIFICATION

| SECTION | MATERIAL/DESCRIPTION |
|---|---|
| 2.1 | There are several different types of Cladding which are proposed on the New South Glasgow Hospitals Project; below is a brief description of the location of where they are used, and outline specification of each type. The Cladding Type descriptions have been separated for clarity into the Tower, Podium, Children's Hospital, Plant Rooms and Energy Centre. |
| 2.1(i) | **TOWER:**<br>**Cladding Types**<br><br>**Unitised Cladding Capless Structurally Bonded Glazed Spandrel System**<br>A fully glazed sleek envelope with a capless frame detail to the mullions and transoms of the Ward Tower. Each corner of the tower 'wing' is curved to continue the wrap-around effect of the façade and to express the flexibility of the ward form and internal clinical functionality.<br><br>The 'vision' panels consist of double glazed units, with laminated/toughened high performance glass to all facades. These are fixed glazed full height panels to the inpatient bedrooms, with an adjacent side parallel opening panel, held-open on a 100mm restrictor.<br><br>The frames will be hung from the face of the floor slabs utilising Halfen insets/mild steel galvanised brackets. Each frame size is approximately 1500mm wide x 4000mm high and will be polyester powder coated. |
| 2.1(ii) | Vertical coloured caps at intervals provide the DNA stranding pattern to the tower, with a continuous pressed profiled metal shadow detail applied to every second floor to express the horizontal layers. |
| 2.2 | **Soffit Cladding**<br>Insulated pressed metal soffits to the underside of podium and tower generally. |
| 2.2(i) | **PODIUM:**<br>**Cladding Types**<br><br>**Structurally bonded glazing system**<br>Fully glazed frameless curtain walling will form the main entrance draught lobby.<br><br>Clear silicone joints to the glass panels and stainless-steel spider fittings fixed to a stainless steel support structure behind.<br><br>Manifestation will be provided as required. |
| 2.2(ii) | **Stick curtain walling capped system**<br>The Main Entrance double height façade will be a stick curtain walling system consisting of alternating standard sized panels to emulate DNA strand patterning.<br><br>Department entrances, feature corners/areas and the interstitial floor horizontal light slots to the west and east façades will consist of standard sized curtain walling modules. |
| 2.2(iii) | **Column Cladding**<br>Insulated polyester powder coated pre-formed cladding to podium curtain walling detail. |
| 2.2(iv) | **Compressed fibre cement rainscreen cladding on structural framing system**<br>Podium cladding generally to the first and second floor levels with full-height vertical glazed window panel slots. The two levels will be separated visually by a pressed profiled metal shadow detail to emphasise the different podium layers. 3 standard sized panels will be alternated to emulate DNA strand patterning. Refer to separate section for structural framing. |
| 2.2(v) | **High pressure laminate rainscreen cladding on structural framing system**<br>Feature coloured cladding panels typically to the main entrance element. Refer to separate section for structural framing. |
| 2.2(vi) | **External facing blockwork on structural framing system**<br>Podium cladding generally to all ground floor areas. This will provide a solid, durable, low maintenance base in addition to a visual link with the cladding proposals on the Laboratory/FM Building. Stack-bonded, including feature vertical bands to department entrances. Refer to separate section for blockwork/ masonry. Refer to separate section for structural framing. |

A49342285

GH56265_D_4_NP_V4.indb 3 10/9/09 01:41:19

Brookfield

**2.2(vii)**

**External insulated render on structural framing system**
Podium cladding generally to all internal courtyards, to the OPD Block and various feature elements. Refer to separate section for Render. Refer to separate section for structural framing.

**2.3**

**LINK BRIDGES TO MATERNITY & NEUROLOGY:**
**Cladding Types**

**Compressed fibre cement rainscreen cladding**
Generally vertical compressed cement rainscreen cladding, on a structural framing system. Intermittent slot windows will be provided to the ramped elements of the bridges, with full height vertical-fritted glazing panels to the landing areas and bridge entrances.

Aluminium flashings will be chased into the existing buildings to provide a weather-tight detail. These will be slip-jointed to the bridge cladding to allow for the structural movement differentials.

**2.4**

**CHILDREN'S HOSPITAL:**
**Cladding Types**

The Children's Hospital has been designed to ensure that it provides the integrated clinical model where required, but maintains its own building typology and architectural language/form to distinguish it from the main Adult Hospital.

**2.4(i)**

**Main Entrance Block**
The Main Entrance is framed with a feature arch which forms a multi-level wrap-around element. This consists of pre-patinated copper rainscreen cladding on a structural framing system, which also provides a material reference to the Laboratory Building located on the opposite side of the Entrance Plaza. Various sized port-holes provide views inside and outside towards the Entrance Plaza and Central Park beyond.

A combination of stick curtain walling and feature coloured high pressure laminate rainscreen cladding on structural framing system provide the background external wall to the main entrance element, with structurally bonded frameless glazing forming the entrance lobby surrounds. Refer to separate section for structural framing.

The ground and first floor West Elevation consists of a stick curtain walling and will have alternating standard sized panels to emulate DNA strand patterning. This glazed element will provide a visual interaction with the Children's Park, in addition to clear views from the main entrance into the building and through the atrium.

**2.4(ii)**

**Ground Floor**
External facing block stack-bonded on a structural framing system, with punched windows where required. This will provide a solid, durable, low maintenance base and a visual link with the cladding proposals on the Laboratory/FM Building. The window types will be more irregularly positioned and sized than the Adult's (NSGH) building to provide a visually more playful interaction for the Children.

**2.4(iii)**

**First, Second and Third Floors**
Generally insulated through-colour render on a structural framing system with horizontal slot window bands and coloured aluminium infill panels.

**2.4(iv)**

**Fourth Floor**
Stick curtain walling with composite insulated aluminium cladding infill panels. Aluminium micro-rib panels with 'top hat' vertical joints generally to plant room areas with aluminium louvres as required.

**2.4(v)**

**Feature Stair Tower**
This element will be generally insulated through-colour render on a structural framing system with full height vertical-fritted glazing panels to the landing areas.

**2.5**

**PLANT ROOMS & ENERGY CENTRE:**
**Cladding Types**

**Metal wall cladding system incorporating louvres**
Aluminium micro-rib panels with 'top hat' vertical joints generally to plant room walls. Continuous horizontal louvre band to tower and children's roof plant areas, louvres to podium plant as required.

The third floor level 'interstitial' plant level will consist of aluminium and louvre panels with feature horizontal fins to the main entrance 'wing'. The cladding panel sizes are to match the setting-out module sizes of stick curtain walling system.

**2.6**

**PERFORMANCE REQUIREMENTS FOR CLADDING/ CURTAIN WALLING TYPES:**

A49342285
GH56265_D_4_NP_V4.indb 4 10/9/09 01:41:19

Brookfield

The cladding system, once installed, must achieve a noise reduction from outside to inside and prevent flanking transmission at the slab edge and mullions in line with the Acoustic Report.

The system will be designed to transmit all loads safely back to the primary structure in accordance with BS 6399-Part 2.

The cladding will perform to the requirements of Section 6 of the Building (Scotland) Regulations 2004, with an average U-value of 1.1 W/m²K.
(Note: the values for thermal transmittance are subject to the overall energy modelling of the complete building to achieve the project brief stipulation of an 'excellent' BREEAM rating).

Weather-tightness to meet the requirements in BS 6375-1. Condensation will not form on the inside face of the atrium glazing or within double-glazed units using environmental design conditions in the range -7ºC to +30ºC with relative humidity of 60%.

The external and internal faces of the cladding will be classified as a Class O surface for spread of flame when tested in accordance with BS 476 Parts 6 & 7. All gaps between the cladding and the slab edge shall be filled with a non-combustible material to achieve the appropriate fire separation (permeability, integrity & insulation).

Glazing to ground floor areas of levels of cladding system and curtain walling to be designed to safety requirement in the BS 6262.

Windows in curtain walling will have 100mm restrictors in Clinical areas as required in the SHTMs. Refer to window section.

**2.7** **EXTERNAL INSULATED RENDER:**

External insulated render is utilised generally as a cladding material to the internal façades of the podium courtyards and the upper levels of the Children's Hospital.

Textures and colours to be in accordance with the external elevations.

Accessories to be provided include pre-painted aluminium stop beads, corner trims and base rails including at all junctions with differing materials and stop beads/shadow gaps between areas of different coloured renders

**PERFORMANCE REQUIREMENTS :**
Polymer modified/polymeric thin coat render system incorporating a synthetic finish to meet the requirements of BS EN 13914-1:2005.

Design wind loads shall be calculated in accordance with BS 6399-2:1997
A minimum U-value of 0.35 W/m²K shall be achieved. (Note: the values for thermal transmittance are subject to the overall energy modelling of the complete building to achieve the project brief stipulation of an 'excellent' BREEAM rating).

**2.8** **EXTERNAL BLOCKWORK AND MASONRY:**

Generally to the ground floor podium, including feature vertical bands to department entrances.

Blockwork masonry facing units are to comply with BS EN 771-4:2003 'Specification for masonry units – Part 4: Autoclaved aerated concrete masonry units'

**PERFORMANCE REQUIREMENTS:**
All blockwork masonry units are to be classified as non-combustible and Class O Spread of Flame.

Average compressive strength is to comply with BS EN 772-1:2000 depending on the particular application

Masonry mortar types are to comply with BS EN 998-2:2003

Lintels are to comply with BS EN 845-2:2003

Wall accessories are to comply with BS EN 845-1:2003

Moisture content is to be measured in accord with BS EN 12664:2001

Bond is to be stack-bond. Vertical joints in face work are to be filled and to be of even widths, plumbed at every fifth cross joint. Blocks to be laid on full beds.

A49342285
GH56265_D_4_NP_V4.indb 5
10/9/09 01:41:20

Brookfield

A range of different thicknesses and strengths will be required. Restraint connections to primary & secondary structural steelwork will be provided as required.

**2.8(i)** **Facing Brick Plinth**

Engineering blue brick plinth generally to full perimeter of ground floor.

**2.9** **WINDOWS AND DOORS:**

**2.9(i)** **Window Types**
Powder coated aluminium framed hung or parallel opening windows. Openings to be restricted; with 100mm restricting devices.

Any fire rated windows to be steel framed fixed lights.

Manifestations will be applied to all full height glazing to meet Building (Scotland) Regulations.

**PERFORMANCE REQUIREMENTS:**
Safety glazing used to glazing to low level areas in accordance with BS 6262.

**2.9(ii)** **Door Types**
Main entrance doors will be fully glazed with powder coated aluminium frames to match with adjacent cladding system.

Automatic sliding doors will be provided to the Adult Main Entrance, the Adult Emergency Centre Entrances (Ambulance and Walking Wounded), the Children's Main Entrance and Children's Emergency Centre Entrances (Ambulance and Walking Wounded) and the Acute Assessment Entrance.

All service and fire escape doors will be manufactured from solid core material.

Doors to incorporate privacy film where required to sensitive rooms.

**PERFORMANCE REQUIREMENTS:**
Safety glazing used to glazing to low level areas in accordance with BS 6262.

Manifestations will be applied to all full height glazed doors to meet Building (Scotland) Regulations.

**2.10** **STRUCTURAL FRAMING SYSTEM:**

Structural steel framing ('Metsec' or equivalent) for the external walls generally to the podium areas and the Children's Hospital.

Cold rolled components to be manufactured from pre-hot dipped galvanised steel to BS EN 10326:2004.

All studs, joists, tracks and accessories shall be of a type, size & gauge and shall be set out to satisfy structural calculations.

**PERFORMANCE REQUIREMENTS:**
Structural capabilities of all sections are to be calculated in accordance with BS 5950.
Provide adequate support for all podium elevation treatments (stick curtain walling, compressed fibre cement rain screen cladding, high pressure laminate rainscreen cladding, insulated render, facing masonry etc) and suitable framing to all window and louvre openings and service terminations etc

Interfaces with the primary structural steel frame, ground bearing & composite floor slabs (including structural movement joints) and with elements of external glazing.

All loading capabilities are to be calculated in accordance with BS 6399.

All secondary supports for all elements to be fixed externally to the cladding and for all internal fixtures and fittings fixed to the internal linings.

The complete external wall system shall provide minimum U-values for thermal transmittance of 0.35 W/m²K. (Note: the values for thermal transmittance are subject to the overall energy modelling of the complete building to achieve the project brief stipulation of an 'excellent' BREEAM rating).

The complete external wall system shall meet the requirements of the Fire Strategy and shall be classified as a Class O surface when tested in accordance with BS 476 Parts 6 & 7 1997

A49342285
GH56265_D_4_NP_V4.indb 6 10/9/09 01:41:21

Brookfield

**2.11** **SINGLE PLY MEMBRANE ROOF:**

Single layer polymeric sheet roof covering system generally to plantrooms, the Energy Centre and selected podium areas to be supported generally by cold-rolled steel purlins on a structural metal deck substrate.

**PERFORMANCE REQUIREMENTS:**
The proposed roofing membrane is to be lacquered reinforced PVC or equivalent, colour light grey, minimum thickness 1.2mm (the gauge of the sheet will suit the specific structural loading requirements and spans). The membrane will be mechanically adhered with thermally broken fasteners. Sheets are to be overlapped a minimum of 120mm to cover fasteners and pressure plates, and will be heat welded using either hand welding or an automatic welding machine.

Insulation varies dependent on location to either plantroom or hospital accommodation. Plantroom roof insulation to achieve 0.6 W/M2K and hospital accommodation roof 0.25W/M2K. Insulation will have no ozone depletion potential and be non-combustible.
(Note: the values for thermal transmittance are subject to the overall energy modelling of the complete building to achieve the project brief stipulation of an 'excellent' BREEAM rating).

Gutters to allow walking-in, min. 600mm wide, to facilitate the maintenance and cleaning of the roofs from the cat ladder access points.

All services penetrations through the roofing system will include trimming sections to the purlin support system to frame up the openings where required, and welded penetration soakers will be provided as appropriate.

All vapour control barriers to prevent interstitial condensation and will be sealed with butyl rubber tape and securely sealed around all penetrations.

The pitch of the roofs varies according to the location and architectural design intent; the minimum falls will be appropriate to the roofing membrane.

An integral non penetrative guided type fall arrest system will be provided using a fixed length lanyard of 3m allowing access to all areas of the roof.

Wind, snow & other loadings to be transferred safely back to the main structure in accordance with BS 6399

**2.12** **LIQUID APPLIED MEMBRANE ROOF:**

Generally applied to all flat roofs.
Examples of locations; towers and podium flat roofs.

**PERFORMANCE REQUIREMENTS:**
Liquid applied roofing membrane system to be laid directly onto the structural deck without the use of screeds.

Ensure weather tightness at all junctions with cladding, atrium, and penetrations etc including thermal insulation preventing cold bridging.

Includes sealing and weathering around all services penetrations ensuring continuity of insulation.

Pitch pockets/upstands to be provided for as required for the weathering of all elements to be fixed to the roofs.

Precast concrete paving slabs to be provided for as required to personnel/plant access & fire-escape routes.

Round washed shingle to be provided as ballast in areas without paving.

Roof incl. ballast to be designed to accommodate wind, snow or other uplift or combination of gust loads and transfer them safely.

Movement joint detail to incorporate concrete up-stand and flashing.

Thermal insulation to be provided in build up. Insulation varies dependent on location to either plantroom or hospital accommodation. Plantroom roof insulation to achieve 0.6 W/M2K and hospital accommodation roof 0.25W/M2K. Insulation will have no ozone depletion potential and be non-combustible.
(Note: the values for thermal transmittance are subject to the overall energy modelling of the complete building to achieve the project brief stipulation of an 'excellent' BREEAM rating).

Brookfield

**2.13** **SEDUM ROOF:**

Sedum roof to selected podium roof areas.

(refer to the Landscape Architect's Specification for further details)

**2.14** **RAINWATER GOODS:**

(refer to the M&E Specification for further details)

**2.15** **ENTRANCE CANOPIES:**

**NSGH (Adult) Hospital Main Entrance**
The aluminium soffit to the underside of the second floor tower 'Entrance Wing' and the 'lid' to Main Entrance double height façade will provide the building with its canopy.

Lower height glazed canopies are provided for the bus drop-off zone to the Main Entrance. These will incorporate caps in single direction and structural silicone jointed glazing. Painted steel columns and polyester powder-coated aluminium framing will be utilised to support the glazed elements. Coloured feature lighting will be provided to the underside of the canopies.

**NCH (Children's) Hospital Main Entrance**
A high-level glazed entrance canopy suspended from the feature arch forms the Children's Hospital Main Entrance, and incorporates aluminium flashings into the external wall.

Lower height glazed canopies are provided for the bus drop-off zone to the Main Entrance. These will incorporate caps in single direction and structural silicone jointed glazing. Painted steel columns and polyester powder-coated aluminium framing will be utilised to support the glazed elements. Coloured feature lighting will be provided to the underside of the canopies.

**NSGH (Adult) Emergency Department Entrance**
The aluminium soffit to the underside of the first floor combined forms the canopy to both the Ambulance and Walking Wounded Entrances. This will incorporate feature downlights.

**NCH (Children's) Emergency Department Entrance**
The aluminium soffit to the underside of the first floor combined with a structural single fritted glazed cantilevered canopy form the canopies to both the Ambulance and Walking Wounded Entrances. This will incorporate aluminium flashings into the external wall and feature downlights.

**PERFORMANCE REQUIREMENTS:**
External entrance canopies are to meet the recommendations of CIRIA publication 'Guidance on glazing at height' document ref. C632 and CWCT Technical Update no. 10 'Use of glass overhead'.

**2.16** **ETFE ATRIA ROOFS:**

**NSGH (Adult) Hospital Atrium**
The atrium ETFE roof will sit above the twelfth floor level plant, allowing the tower bridge and its support pods to float below.

The roof covering will consist of triple-layer ETFE air-filled pillows fixed to aluminium extrusions. The ETFE is to include fritting of a pattern to be agreed at the next stage.

Pillows made up of ETFE layers as follows:

I) Top layer: standard printed
II) Middle layer: clear
III) Bottom layer: clear

The vertical faces will be used to provide natural ventilation, and will consist of a lower fixed ETFE panel (up to a minimum height of 1100mm to prevent risk of falling), and a higher opening ETFE vent panel. The vents are to also be able to be opened automatically by remote activation to provide ventilation in hot weather. When the vents are opened they should not let rain into the atria,

The atrium structure will be circular painted steel trusses.

**Solar performance**
The ETFE is to provide an equivalent performance to High Performance Glass; 66/33 (i.e. 66% light transmission and 33% total solar heat transmission) to prevent overheating of the atria and to comply with the values for thermal transmittance required to meet the overall energy modelling of the complete building, and to achieve the project brief stipulation of an 'excellent'

A49342285
GH56265_D_4_NP_V4.indb 8 10/9/09 01:41:22

Brookfield

BREEAM rating.

**NCH (Children's) Hospital Atrium**
The atrium ETFE roof will sit at the fourth floor level below the plant roof, and will undulate to form a wave.

The roof covering will consist of triple-layer ETFE air-filled pillows fixed to aluminium extrusions. The ETFE is to include fritting of a pattern to be agreed at the next stage.

Pillows made up of ETFE layers as follows:

I) Top layer: standard printed
II) Middle layer: clear
III) Bottom layer: clear

The vertical faces will be used to provide natural ventilation, and will consist of a lower fixed ETFE panel (up to a minimum height of 1100mm to prevent risk of falling), and a higher opening ETFE vent panel. The vents are to also be able to be opened automatically by remote activation to provide ventilation in hot weather. When the vents are opened they should not let rain into the atria,

The atrium structure will be circular painted steel trusses.

**Solar performance**
The ETFE is to provide an equivalent performance to High Performance Glass; 66/33 (i.e. 66% light transmission and 33% total solar heat transmission) to prevent overheating of the atria and to comply with the values for thermal transmittance required to meet the overall energy modelling of the complete building, and to achieve the project brief stipulation of an 'excellent' BREEAM rating.

**2.17** **ROOFLIGHTS:**

To the Children's Chapel Roof, Children's Hospital Lightwells and the Adults' Hospital Main Entrance roof above the restaurant.

These will consist of powder coated aluminium framed double glazed units.

**PERFORMANCE REQUIREMENTS:**
The glazed rooflights are to meet the recommendations of CIRIA publication 'Guidance on glazing at height' document ref. C632 and CWCT Technical Update no. 10 'Use of glass overhead'.

**2.18.** **EXTERNAL METALWORK:**

**2.18(i)** **Feature Roof Terrace Areas**
Stainless steel handrails (2xheights) and supports with galvanised steel perforated powder coated infill panels to the Children's areas.

Stainless steel handrails and supports with stainless steel infill cables generally to the Adult areas.

**2.18(ii)** **Service Access Metal Work**
Galvanised and zinc-coated free-standing Key-Clamp System steel guard rails generally to plant access areas to the Energy centre.

GH56265_D_4_NP_V4.indb 10 10/9/09 01:41:24

Brookfield

**D: 600x600mm Mineral Fibre Tiles**
Imperforate and jointed membrane with exposed grid system, normal humidity and Class 0 surface spread of flame (**SHTM 60 Category 4**)
**E: 600x600mm Mineral Fibre Tiles**
Jointed membrane with exposed grid system, normal humidity and Class 1 surface spread of flame (**SHTM 60 Category 4 & 6**)

**F: 600x1200mm Suspended Mineral Tile Plank System with perimeter plasterboard margin detail**
Imperforate and jointed membrane with exposed grid system, normal humidity and Class 0 surface spread of flame (**SHTM 60 Category 4**)

**G: 300x1200mm Suspended Mineral Tile Plank System with perimeter plasterboard margin detail**
Imperforate and jointed membrane with exposed grid system, normal humidity and Class 0 surface spread of flame (**SHTM 60 Category 4**)

**H: Suspended Fabric Stretch Ceiling System with Backlights (Art Opportunity)**
Class 0 surface spread of flame.

**FEATURES:**
Ceiling features will be incorporated with the following criteria;

**A: Plasterboard Bulkhead – Reception Desks and Staff bases**
A plasterboard bulkhead is to sit above all department reception desks and staff bases.

The bulkhead is to match the shape of the desk beneath.

The bulkheads are to be co-ordinated with the overall lighting strategy.

**B: Plasterboard Bulkhead – Selected feature Waiting Areas**
The bulkheads are to be co-ordinated with the overall lighting strategy.

The bulkhead is to match the shape and dimensions of the waiting area zone below.

**C: Plasterboard Bulkhead – Lift Lobbies A, B, F.**
A plasterboard bulkhead is to sit above lifts in main public lift lobbies. Overall width/ diameter of the bulkhead to span the full width of lift core structure to create interest and demarcate the lift area.

The bulkheads are to be co-ordinated with the overall lighting strategy.

**D: Plasterboard Margin to Hospital Streets and Department Corridors**
The general mineral tile plank system to hospital streets and department corridors will include side feature infill plasterboard panels of varying dimensions to fit between plank and wall.

**E: Plasterboard Ceiling – Department Entrances**
A smooth plasterboard ceiling is proposed for certain entrances into departments. The ceilings may also include feature soffits and are to be co-ordinated with the overall lighting strategy.

### 3.3. Internal Fire Escape Stairs

Treads to be formed from precast concrete to accept vinyl sheet flooring finish.

Guarding (balustrade infill panels) to be ppc perforated mild steel sheet.

Handrails and uprights to be painted mild steel; handrails and to comply with the requirements of Building (Scotland) Regulations and BS 8300 with regard to size, shape, texture and colour.

Children's Hospital to have additional lower handrail at 600mm.

All fire escape stairs have been designed to suit mattress evacuation with clear shaft sizes extending up to the plantroom floor levels. Physical separation of the stair flights will be provided at ground floor level where the stairs serve the basement FM tunnel.

Risers and going of each step to be consistent within flights; rises are not to be open.

A49342285
GH56265_D_4_NP_V4.indb 11
10/9/09 01:41:25

Brookfield

**3.4. Atrium Feature And General Balustrades**

**NSGH (Adult) Hospital Atrium**
To the First floor Restaurant. Timber plywood fins between 1375 – 2450mm height with glass infill panels with stainless steel patch fittings and stainless steel handrails to comply with the requirements of Building (Scotland) Regulations and BS 8300 with regard to size, shape, texture and colour.

To the Upper Level Balconies and Bridge Links. Extruded aluminium twin uprights with double offset panel holders to support toughened glass infill panels. Natural hardwood or stainless steel handrail to comply with the requirements of Building (Scotland) Regulations and BS 8300 with regard to size, shape, texture and colour.

**NCH (Children's) Hospital Atrium**
To the Upper Level Balconies and Bridge Links. Extruded aluminium twin uprights with double offset panel holders to support toughened glass infill panels. Natural hardwood or stainless steel top handrail and lower handrail at 600mm.to comply with the requirements of Building (Scotland) Regulations and BS 8300 with regard to size, shape, texture and colour.

Glazing generally is to comply with BS 6262: part 4:1994 'code of practice for glazing for buildings. Safety related to human impact' and Building (Scotland) Regulations.

**3.5. Doors And Shutters**

**GENERAL DESIGN**

The proposed Doorset sizes comply with the Table of Doors in Section 7.5.1 of the Employer's Requirements. The Door Grades have been specified as solid-core construction and to meet SHTM 58 Internal Doorsets. These are generally Heavy Duty Doorset Grades, with Medium Duty specified to administration areas and associated WC's. Severe Duty Doorset Grades will be required to Hospital Streets generally, and specific stores if required.

The effective clear width of door leaves generally to meet the requirements of BS 8300:2001 'design of buildings and their approaches to meet the needs of disabled people – code of practice (amd 15617)' and Building (Scotland) Regulations.

The design of internal door-sets is generally to meet the requirements of Building (Scotland) Regulations, BS 8300:2001 'design of buildings and their approaches to meet the needs of disabled people – code of practice (amd 15617)' and the applicable sections of the disability discrimination act 1995.

**Minimum periods of fire resistance**
The internal doorsets have been designed to meet the required fire-protection performance. The Fire Ratings of the Doors have been specified to meet SHTM 81 (version 3) Fire precautions in new hospitals, HTM 05-01 to 03 Firecode – Fire safety in the NHS, and to co-ordinate with the Fire Strategy Drawings and Fire Strategy Report in Volume [2], Section [2.10].

**Radiation Protection**
Radiation Protection and the requirements for lead-lining and Radiofrequency shielding to doors will be provided to meet the Board's Radiation Protection Adviser's requirements.

**Acoustic performance**
The Acoustic Ratings of the Doors have been specified to meet SHTM 2045 (Parts1 to 4) Acoustics and HTM 08-01, and to co-ordinate with the Acoustic Report in Volume [3], Section [3.40].

**Glazing performance**
Vision panels incorporating glazing and hardwood beads are to meet the specified period of fire resistance from BS 476: part 22: 1987. Safety glazing is to comply with BS 6262: part 4 and Building (Scotland) Regulations.

The Vision Panel Type Strategy has been developed in response to Volume 2/1: Employer's Requirements (Hospitals) - Section 7.5 Doors, Volume 2.1 Appendix E: ADB Room Data Sheets. The size of vision panels has been allocated according to the functional requirements of each room type. Large full height vision panels are provided to all Inpatient Bedrooms to ensure maximum visibility is maintained. Half height vision panels are provided where the function of the room requires an element of privacy/security. Standard full height vision panels are provided generally to all staff administration offices, meeting rooms, staff rest/beverage rooms, all rooms associated with being places of work, generally to the public areas (such as the atria) and to all corridors to

A49342285
GH56265_D_4_NP_V4.indb 12 10/9/09 01:41:25

Brookfield

ensure DDA compliance.

The vision panels to the Children's Hospital doors have been designed with their own identity in response to Volume 2/1: Employer's Requirements (Hospitals) - Section 7.5.5 bb.

The design of vision-panels is to satisfy the varying requirements for observation, safety and privacy. The Privacy Requirements for the door glazing has been developed in response to Volume 2/1: Employer's Requirements (Hospitals) - Section 7.5 Doors, Volume 2.1 Appendix E: ADB Room Data Sheets. Where a door is noted in the Schedule as being **'obscurable'**, within 'patient sensitive' areas, this equates to a vistamatic type vision panel with interstitial blinds. Other rooms not noted may additionally require privacy; it is assumed that this can be provided by other means such as a curtain, blinds (external) or obscurable film.

**Protection**
The Door Protection has been specified to ensure compliance with SHTM 59 Protection. The final Protection Strategy may be adjusted following consultation with the Board/FM provider to ensure that a strategic approach is undertaken, utilising the 'minimum' quantity of protective devices to ensure the Hospitals do not appear over-protected and institutional, and thus improving the quality of the interior environment.

**Finishes**
All doors, except plantroom and some FM rooms will be laminated or veneered with solid hardwood lippings.

All plant room doors and some FM doors will be pre-finished door-sets for painting.

All finishes to natural timber to suit the particular environment and ease of maintenance/infection control.

**SHUTTERS**
Where required these will be powder coated aluminium or steel if fire-rated.

## 3.6. Ironmongery

**GENERAL DESIGN**

Internal door-sets including all architectural ironmongery will be designed to meet the required fire-protection performance standards.

The design of all architectural ironmongery to internal door-sets is generally to meet the requirements of Building (Scotland) Regulations, BS 8300:2001 'design of buildings and their approaches to meet the needs of disabled people – code of practice (amd 15617)' and the applicable sections of the Disability Discrimination Act 1995.

Door closers to be incorporated to internal door-sets shall be carefully selected to meet the requirements of Building (Scotland) Regulations.

With the exception of doors to patient bedrooms and doors which are kept locked shut, fire-doors are to be fitted with self-closing devices. Closers to fire-doors shall meet the requirements of BS EN 1154 category of use 4 to close a door from up to 180 degrees. In accordance with the association of building hardware manufacturers code of practice 'hardware for timber fire and escape doors'.

Electromagnetic hold-open devices will be required on a number of swing doors on main circulation routes and department entrances.

Lever assemblies generally shall be non-sprung and manufactured to meet the requirements of BS EN 1906.

Bolts generally shall be of a high-quality, lever action, flush-type manufactured to suit the requirements of BS EN 12051.

Suitable door stops of concealed fixing types will be provided with robust holders matching other ironmongery on the door and rubber inserts which are easily replaceable using simple tools.

**FINISHES**

Finishes to stainless steel components shall be no. 4 satin for BS EN 1670 class 4 corrosion resistance.

**CUBICLES AND VANITY UNITS**
Fittings and ironmongery to be aluminium with polyester powder finish of colour contrasting with door surface.

A49342285
GH56265_D_4_NP_V4.indb 13
10/9/09 01:41:26

Brookfield

**3.7. Glazed screens**

**TYPES**

Aluminium polyester powder coated or varnished timber frames. Where fire resistance is required the frame will be required to be steel or timber.

**PERFORMANCE**

Glazing within compartment walls should have the same period of fire resistance to meet the SHTM and Building (Scotland) Regulations.

Glazing generally is to comply with BS 6262: part 4:1994 'code of practice for glazing for buildings. Safety related to human impact' and Building (Scotland) Regulations.

Safety glazing generally is to comply with BS 6206:1981 'specification for impact performance requirements for flat safety glass and safety plastics for use in buildings' (reprinted, incorporating amendment no's 1, 2, 3, 4 and 5)'

The design of manifestations to be applied to internal glazed screens will meet the requirements of the Building (Scotland) Regulations

**3.8. Protection**

**GENERAL DESIGN**

The Wall Protection has been specified to ensure compliance with SHTM 59 Protection. The final Protection Strategy may be adjusted following consultation with the Board/FM provider to ensure that a strategic approach is undertaken, utilising the 'minimum' quantity of protective devices to ensure the Hospitals do not appear over-protected and institutional, and thus improving the quality of the interior environment.

**PROTECTIVE DEVICES**

**Handrails**
Mid-height rails, 100mm to 200mm deep, usually mounted about 1000mm above floor level. Fixed with a gap between rail and wall: they may also serve as a crash rail.

**Crash Rails**
Mid-or low-height rails, 200mm to 250mm deep, usually mounted from 200mm to 1000mm above floor level, singly or in banks of two or three; they may be fixed directly to walls or with a gap between rail and wall face.

**Buffer Rails**
Mid-or low-height rails, 75mm to 100mm deep, usually mounted from 200mm to 1000mm above floor level, singly or in two or three: they may also be fixed vertically to protect the opening edges of doors and as bed locators.

**Corner Guards**
50mm to 100mm in each dimension, usually fixed from top of skirting to about 1000mm but sometimes up to 2100mm above the floor level.

Trolleys with four wheels can be kept away from walls by low level crash rail, or kerbs/skirting.

All materials shall be those which are not prone to splinter or produce sharp edges or snags.

**Bed Locators**
Located as the 1:50 layouts.

**Other Areas**
In other special areas, such as operating theatres, hygiene considerations may take precedence over the above Design Philosophy. Rails may be omitted in favour of overall durable, washable finishes.

**DOORS**
**Kick Plates**
In general public circulation areas for pedestrian traffic kick plates will be provided to corridor side of the door. In highly pedestrian trafficked areas kick plates will be provided to both sides of door.

**Buffer Rails/Part And Full Height Protection**
Additional protection will be provided where required to comply with SHTM 69.

**3.9. Fixtures and fittings**

**TYPES**
Fixed pieces of joinery furniture are covered by the following groups;

**Reception desks**
Refer to separate section below

**Fixed cupboards benching and worktops generally**

A49342285
GH56265_D_4_NP_V4.indb 14 10/9/09 01:41:27

Brookfield

Laminate on MDF carcass. Laminate lipped shelving on adjustable steel brackets. Post formed laminate worktops.

**Shelving**
Melamine faced lipped chipboard shelving on adjustable steel brackets generally with stops as required.

**Blinds**
Roller blinds to be provided where patient privacy is required and solar glare control to offices.

**Raked seating to lecture theatre/Medicinema**
This will be a specialist framing system incorporating handrails.

**A: Fixed cupboards, benching and worktops generally**

**Fixed storage components (SHTM 63)**
Fixed storage components consist of either base units located under worktops or upper storage units attached to the wall. Carcasses are to be MDF with melamine faced finish. Sloping tops are required to the top of the wall units for infection control issues.

All storage components shall comply in general with the requirements of BS 4875. Storage components fall into the categories listed below.

For dimensions: height, length and depth of worktop, refer to the loaded equipment drawings and Room Data Sheets (see section Volume 2/Section 2.9).

**General worktops and workbenches (SHTM 63)**
Worktops/workbenches under this section refer to generic worktops only and do not include counters to reception desk / staff bases or specialist workbenches such as carpenters, engineers, dental, welding and casting workbenches.

Worktops are to be plastic laminate faced to all with a common profile that is compatible between abutting components of differing materials. Lippings and edge details to match the colour and material of the overall finish.

Worktops are to be solid end capped.

**Laminate faced worktops:**
To be constructed from highly durable, 0.9mm post forming grade laminate and bonded onto either MDF or moisture resistant particle board core. Where worktops are made up of more than one piece a precise factory made joint will be made. They will be factory finished and have laminated faced ends. The front edges are to be rolled.

**Stainless steel faced worktops:**
Stainless steel worktops are either dished and may include a 50mm upstand or integrated splash back panel where specified. Where worktops include sink bowls, drainers, hoppers and taps reference will be made to SHTM 64 – 'Sanitary Assemblies' for size and location of sink bowls, details of taps, traps etc. Stainless steel worktops, with or without sinks or hoppers will be fitted with an earthing terminal.

**Leg supports to worktops:**
Leg supports will be in accordance with the nominal heights outlined in SHTM 63 'fitted storage system, 920mm or 720/740mm to the underside of the worktop, with the facility for vertical adjustment and for the incorporation of a floor anchoring device. Refer to Equipment plans / elevations /Room Data Sheets for dimensions.

**Generic worktop supports are outlined below:**
Single leg support: powder coated leg, 30mm diameter with plastic insert at the bottom. Leg attached by steel plate to underside of worktop.

Cantilevered leg: powder coated leg, 25mm box section fixed to wall and worktop, resting on floor with adjustable foot. Plastic insert to the bottom of the foot.

Carcass units fixed back to partitions / walls may be used to support worktops and side cheeks. Knock out panels will be incorporated to accommodate service runs.

**B : Shelving**

For exact dimensions: height, length and depth of shelving and coordination with other equipment, windows and doors.

Shelving to include slatted horizontal adjustable, plastic coated, sloping, plinth mounted.

**Laminate faced shelving:**
Laminate faced MDF shelves attached to wall with brackets.

Brookfield

**Stainless steel shelving:**
Attached to walls on brackets.

**C : Tracks for cubicle curtains (SHTM 66)**

For exact dimensions: height, length and depth of tracks and coordination with other equipment, windows, screens and doors.

Cubicle curtain tracks will be provided in wards, treatment examination rooms and single bedrooms generally. According to SHTM 66 each cubicle curtain track system should comprise:

Gliders or runners will be designed to enable attachment of curtains by hooks or buttons and a device which will facilitate the loading or unloading of curtains from the track.

The system must not contain material capable of supporting the growth of bacteria, fungi etc.

The track height of suspended installations will normally be 2100mm (subject to coordination with equipment drawings / Room Data Sheets).

The suspended track must be restrained to prevent horizontal movement.

**D : Pharmacy Aseptic Suite**

To be agreed following release of the Board's brief at the next stage.

**E : Fixed feature seating**

Fixed seating is to be located in the main entrance atrium and the children's atrium and both the emergency department waiting areas. The seats are to be made of polypropylene and wood. Circular combined seating units fixed to a circular floor mounted beam of varying diameters. Seats in combined units to be different colours. They will have integrated arm rests and tables.

**3.10. Reception Desks / Staff Bases**

For 3D visual images refer to the Wayfinding Strategy in Volume 3; Section 3.2.

**CONSTRUCTION**

Desk type 1 to be constructed as a steel box section for greater impact resistance, desk type 2 and 3 to have a soft wood construction. All desks to have steel L shaped leg supports powder coated to selected RAL colour. Desk legs must be set back and allow for a free run of space beneath desk for storage units.

Desks where indicated are to have a lowered work surface extending 1500mm along and 750mm high to allow for disabled access from both sides of the desk. The lowered surface will also include a knee recess of at least 500mm deep.

Where desks are situated behind partitions and are accessible via a hatch or window (for example the cash office) disabled access will be accommodated.

**Desk Type 1A – Reception Desk; Main Adult Atrium:**

The desk is to have wood veneer to the facade with back lit polyester/resin art panel inserted around the curved front. Images and natural textures are to be encapsulated into the resin such as grass and leaves.

Jointless homogenous acrylic polymer (Corian) in a neutral colour to worktops and drawer/cupboard fronts with rounded edges. Routed port holes for cable management to be inserted into desk top.

Integral trunking to underside of desk.

Pigeon hole storage to be integrated into the desk, all ironmongery to be stainless steel, contrasting with surround. Lockable computer storage to be supplied with suited key.

Glass writing shelf to be raised on stainless steel fin supports 1100mm from floor.

1500mm wide wheelchair access will be provided with 500mm deep knee recess in line with requirements of BS 8300.

Stainless steel laminate recessed kick plate.

**Desk Type 1B– Reception Desk; Children's Atrium:**

The overall desk structure is to be an irregular ellipse

A49342285
GH56265_D_4_NP_V4.indb 16 10/9/09 01:41:28

Brookfield

shape with varying heights, widths and thicknesses. The desk will have smooth worktops, lockable storage, electrical services and lighting and patient accessible writing shelves and DDA recesses integrated within it. The desk will be clad in a smooth, seamless high gloss finish such as corian, fibreglass or resin. The shape will be irregular and will need to be of a specialist design specific to the project. The worktops are to be made of the same material as the cladding.

Certain parts of the cladding will be translucent and able to filter light from within. The desk will therefore require an internal light source such as cold cathode or LED lighting.

Certain sections of the desk will have interactive play panels inserted for children to play with. These will include lights and moving parts.

There may be the need for kick space heaters to be installed under the desk to supply extra heat for the staff. This is subject to an assessment of heating level s nearer the time.

**Desk Type 2 – Reception Desk, Department Reception:**

Wood veneer to facade of desk and storage/drawer fronts, ironmongery to be stainless steel contrasting with surround. Coloured laminate panel/strip to desk façade.

Integral trunking to underside of desk.

Worktops to be inlaid with vinyl set in 20mm from desk edge, 25mm thick bullnosed or champhered hard wood to front edge of desk top. Routed port holes for cable management to be inserted into desk top.

350mm wide glass writing shelf to be on stainless steel fin supports.

**3.11. Soft Furnishings**

1500mm wide wheelchair access with knee recess, stainless steel laminate to recessed kick plate.

**Desk Type 3 – Staff Base, General Department:**

Wood veneer to facade of desk and storage/drawer fronts, ironmongery to be stainless steel, contrasting with surround.

Coloured laminate panel/strip to desk façade.

Integral trunking to underside of desk.

Worktops to be inlaid with vinyl set in 20mm from desk edge, 25mm thick bullnosed or chamfered hard wood to front edge of desk top. Routed port holes for cable management to be inserted into desk top.

350mm wide writing shelf to be made of joint less homogenous acrylic polymer (Corian) and supported on stainless steel fin supports.

1500mm wide wheelchair access with knee recess to be installed where indicated.

Stainless steel and laminate to recessed kick plate.

Soft furnishing used within the scheme will be selected and a suitable strategy fully developed in conjunction with the Hospital board. All soft furnishings used will comply with the requirements of SHTM87 and the performance requirements in turn comply with BS5852 in line with the Fire Safety Regulations 1988. All curtain fabric used should comply will comply with BS 5867 in addition to the standard fire compliances for soft furnishing.

**3.12. Equipment**

All Hospital Equipment is categorised using the NHS standards for Group 1 – contractor supplied; Group 2 – Hospital Board free issue/supplied fixed by Contractor and Group 3 – loose items. The full equipment lists items have been specified and priced as the Equipment Schedule issued by the Board; refer to Volume 6.0/Section 6.1. However the exemplar Generic rooms have been loaded according with the brief requirements. These are listed and shown in Volume 2 Section 2.9.

**3.13. Sanitary Appliances**

**General:**
Sanitary installations comply with the requirements of current legislation including relevant parts of Building (Scotland) Regulations, provisions of the disability discrimination act and other instruments whether referred to in this specification or not.

A49342285

GH56265_D_4_NP_V4.indb 17 10/9/09 01:41:29

Brookfield

Where sanitary fittings abut worktops/walls/panels it is essential that they are neatly finished and sealed with a suitable sealant in an approved colour (usually white/clear). In general sanitary ware is to be provided in vitreous china finish. Where applicable it may be required or acceptable to look at either stainless steel, fireclay or cast resin materials for sanitary ware.

**Sanitary Appliances:**
All selected sanitary appliances are to be from approved manufacturers and these should be able to provide the necessary documentation to provide evidence of ceramic industry certification limited and relevant agreement certification where applicable.

**Cubicles and Vanity units:**
Generally it is preferable for all cubicles and vanity units to be selected from a compatible manufactured range of products which allow for manageable maintenance and replacement strategies over the life of the building.

**Integrated Plumbing System:**
Generally it is preferable for the integrated plumbing system to be selected from a manufactured range of products which allow for manageable maintenance and replacement strategies over the life of the building.

Where sanitary appliances are required to have an IPS system, it is required that the IPS unit be provided with the necessary taps, traps and fixings to allow for the anticipated use of the selected sanitary item. The IPS systems are to comply with the requirements SHTM64 and SHTM68 Appendix B for cleaning criteria to accessible panels.

The system is to be metal framed pre-plumbed system with high pressure laminate faced MDF or WBP plywood fixed and removable access panels, heavy duty rated, suitable for hospital use involving humid condition and frequent exposure to cold and hot water. Vertical panel edges to be post formed. Panels should be capable of withstanding frequent cleaning, general knocks and abrasion in use. They should be capable of being easily cleaned to aesthetic and clinical standards.

**Performance Standards and Tests**:
Appendix A to SHTM 64 contains the requirement that duct and panel assemblies should comply generally with the requirements of BS 8131 1989. British standard code of practice for accommodation of building services in ducts and BS 1186 1990 parts 1 and 2. Timber for and workmanship in joinery.

Appendix B contains summary of test procedures for panels.

**3.14. Finishes**

The Finishes proposals have been developed in response to Volume 2/1: Employer's Requirements (Hospitals) - Section 7.9 Finishes, Volume 2.1 Appendix E: ADB Room Data Sheets and to ensure compliance with the appropriate SHTMs. These are performance related finishes types and include options for Art Opportunities. The colours will be developed during the next stage of the project as part of the integrated Interior Design, Wayfinding and Arts Strategy.

**FLOORS FINISHES:**
The Floor Finishes Strategy has been developed in response to Volume 2/1: Employer's Requirements (Hospitals) - Section 7.9 Finishes, Volume 2.1 Appendix E: ADB Room Data Sheets and to ensure compliance with SHTM 61 Flooring. These are performance related finishes types. Colours will be developed during the next stage of the project as part of the integrated Interior Design, Wayfinding and Arts Strategy. A List of the proposed Floor Finishes Types is listed below;

**A**: Terrazzo/ceramic tiled flooring with matching skirting tile (100mm high) – four standard colours .
**B**: Homogenous vinyl sheet flooring with coved hot seam welded skirting (100mm) and joints. Flooring to achieve a BREEAM Class 'A' certification.
**C:** Heavy-Duty slip resistant vinyl sheet flooring with coved hot seam welded skirting (100mm) and joints. Flooring to achieve a BREEAM Class 'A' certification.
**D** Heavy duty extra slip resistant vinyl sheet flooring.
**E:** Extra slip resistant sheet flooring for bare foot wet areas with coved hot seam welded skirting (100mm) and joints. Flooring to achieve a BREEAM Class 'A' certification.
**F:** Decorative wood effect vinyl sheet flooring with hot seam welded joints and coved hot seam welded skirting (100mm) and joints. Flooring to achieve a BREEAM Class 'A' certification.
**G:** Static dissipative vinyl sheet flooring with coved hot seam welded skirting (100mm) and joints. Flooring to achieve a BREEAM Class 'A' certification.
**H:** Soft cushioned vinyl sheet flooring for children's play areas with coved hot seam welded skirting and joints.

A49342285
GH56265_D_4_NP_V4.indb 18 10/9/09 01:41:30

Brookfield

**J:** Heavy contract tufted carpet tiles, 100% synthetic yarn, anti static with hard wood timber skirting.
**K:** Solid hardwood timber flooring with lacquer finish and hardwood timber skirting
**L:** Specialist timber sprung flooring with batten support system for activity and impact spaces (gymnasiums), with hardwood timber skirting
**M:** Heavy (Severe Duty) traffic entrance matting – Main Entrances
**N:** Heavy (Heavy Duty) traffic entrance matting – General Entrances
**P:** Acrylic emulsion floor sealer
**Q**: Heavy duty epoxy floor

All safety flooring to be in accordance with the relevant slip resistance standards of the British Pendulum / TRRL Pendulum tests (a subject of BS 7976) or DIN 51097:1992 and DIN 51130:1992.

Stair nosings to be suitable for heavy resilient flooring and made of mill finished aluminium. Channels to have slip resistant vinyl inserts available to provide contrast to the surrounding tread / riser material as outlined in Approved Document Part M and BS 8300. Fixings to be concealed.

Tread alert panels 2.5mm thick will be positioned at the top and bottom approach to certain stairs. The panels are made of rubber and have a 6mm raised rib at 50mm centres across the full width of the tile. The raised ribs create a tactile surface that allows the visually impaired to recognise when they are approaching stairs as outlined in BS 8300 : 2001 and Guidance on the use of Tactile Paving Surfaces published by DETR (1998).

Certain flooring finishes will be required to achieve a BREEAM Class A certification as outlined in the list below.

**Floor Paterrns**

1 **Terrazzo/ceramic Tiles Floor type A –** inset patterns within the entrance atriums. Separation joint trims between colours to be provided in a range of polished materials including stainless steel and brass.
2 **Vinyl Sheet Floor type B -** Inset pattern approximately 2400mm - All 4 Bed Wards.
3 **Vinyl Sheet Floor type B –** Tramline strips approximately 500mm wide, inset along both sides of hospital streets and certain corridors. Strips to continue up the wall as a coved skirting.
4 **Vinyl Sheet Floor type B –** Simple inset floor pattern consisting of up to 3 colours in department corridors of paediatric and cancer departments and some single bed rooms.
5 **Vinyl Sheet Floor type B –** Colour inserts approximately 2000mm at departmental entrances.

**Epoxy Floor**
The finish will be heavy duty (‘HD’) to withstand continuous wheeled trolleys in accord with BS8204 part 6.

The epoxy finish will be laid flat and gullies will be provided to self contained areas and at a frequency to prevent leakages from plant tracking across pedestrian routes on the floor. The gullies will have a grating level with finished floor.

Synthetic resin to form the binder.

Epoxy floor finish to underground facilities management tunnel to be class 0 spread of flame.

Epoxy floor finish to all areas to be fire resistant and give off no toxic fumes in a fire situation.

**WALL FINISHES:**
The Wall Finishes Strategy has been developed in response to Volume 2/1: Employer’s Requirements (Hospitals) - Section 7.9 Finishes, Volume 2.1 Appendix E: ADB Room Data Sheets and to ensure compliance with SHTM 56 Internal Partitions. These are performance related finishes types and include options for Art Opportunities. The colours will be developed during the next stage of the project as part of the integrated Interior Design, Wayfinding and Arts Strategy. A List of the proposed Wall Finishes Types is listed below;

**A:** Water based quick drying diamond eggshell emulsion paint with anti-bacterial properties.
**B:** Water based acrylic diamond eggshell emulsion paint
**C:** Polymeric spray coating with anti-bacterial properties.
**D:** Elastomeric spray hygiene coating with anti-bacterial properties.
**E:** Watertight & impervious coloured wall cladding for wet areas.
**F:** Wood Panel Wall Cladding System

A49342285
GH56265_D_4_NP_V4.indb 19
10/9/09 01:41:31

Brookfield

**G:** Artwork opportunity, e.g. digitally printed fabric backed wallcovering.
**J:** Textured and patterned render finish to concrete walls (including dust sealant if required) within atrium spaces
**K:** Dustproof white sealant to lift shaft walls
**L:** Water based acrylic diamond gloss emulsion paint for atrium bridge feature pods and various other locations within atrium spaces
**M:** Feature coloured emulsion walls for department entrance, reception, ceiling bulkheads and waiting areas (as part of the Interior and Wayfinding Strategy)

**3.15. Wayfinding / Signage**

The Wayfinding Strategy has been developed in Volume 3/ Section 3.2.

The design proposal is underpinned by the need for effective wayfinding to facilitate the diverse functions of the new facilities. The design process will tested at each stage to ensure that design decisions support operational demands. Wayfinding refers to the movements around the hospital which will be made by staff, patients, visitors and for servicing and equipment. The goal of the design process is to deliver a high quality healthcare environment which is as user-friendly as possible for people to use, whether for the first time or all the time. This means that journeys to particular parts of the hospital should be as easy to understand as possible and that regular journeys should involve the shortest practical distances for travel. The wayfinding strategy addresses orientation and movement at a variety of scales and ensures that movements can be based upon logical but ultimately intuitive decisions. Clear wayfinding has underpinned the design process in order to make the design as clear and robust as possible.

**External signage**
This is integral to the Masterplanning and will be subject to approvals in discussion with the planning authorities.

**Internal Signage**
This includes both the directional signage and the room names/numbers to individual areas as well as the general

**Health & Safety signs**
Illuminated fire signage and photo luminescent fire signs. To be discussed with M&E Engineering desing requirements. Fire signage is to be compliant with BS5499 and BS5378. In addition to this there needs to be an optional provision for the specialist Healthcare dedicated fire signage which is only covered in HTM 52.

General directional signage from main entrance. Combination of ceiling hung and wall mounted. Colour coded to assist in way finding. There are optional compliance requirements with the NHS standards on these. However, this will require significant end user input and discussion to finalise a scheme in keeping with the design proposals.

Aluminium disk signs to bathrooms, WC's etc to be included in the Ironmongery packages to suit particular doors.

**3.16 Works of Art**

The Art Strategy has been developed in Volume 3/ Section 3.3. This is a crucial part of the scheme which needs both community stakeholders, end users and key Hospital Board Support. There are opportunities to include Artwork within key locations which can form part of the building fabric. These we have picked up below;

**A - Tensile Structures**

Material description:

1 - For use in atria as a feature integrated with the transparent roof as a hanging mobile structure. Also the structure will aid solar shading and acoustic attenuation in large spaces with a lot of hard surface materials.

2 – For areas of flat roof such as the retail units in the dining area in the main NSGH atrium or places that are looked down upon from above. The feature must provide an interesting addition to flat areas and link in to structures and design scheme of surrounding space – including the proposed children's theme. The structures must be easily accessed for cleaning to prevent build up of dirt and dust.

3 – Stand alone structures/sculptures positioned externally outside department entrances. These structures must act as interesting features highlighting the entrances to the visitor from far away and will be part of the wayfinding strategy. The children's entrance in particular may need to link in with a particular theme.

4- Stand alone structures/sculptures positioned externally

A49342285
GH56265_D_4_NP_V4.indb 20 10/9/09 01:41:32

Brookfield

in some courtyards and around the surrounding landscape. Structures will add vitality to the spaces from within the courtyard and provide some solar shade. They will also create interest when looked down upon from above all year round.

**B – High performance polyester resin panel**

This high performance resin panel has a high level of impact and chemical resistance suitable for heavy trafficked healthcare environments and is available with images and objects encapsulated into the material. The encapsulated materials provide a range of designs, surfaces and colours and allows for varying degrees of opacity.

The resin is also available with a UV inhibitor that makes it suitable for exterior applications. The panels can be fixed to walls with a standoff and spider point support system provided by the same manufacturer as the panels. The support system is engineered so that the panels are top hung with intermediate point supports along the sides and the bottom preventing the panel from moving / deflecting.

**C – Stained / etched glass panels**

These can be used in areas where public do not frequent – (e.g. Board offices and controlled visitor meeting suites). Generally as part of the art strategy glass panels will be avoided in highly trafficked patient areas.

**D – Printed Vinyl Wall Images**

These can add to large internal spaces and provide both a durable wall finish and attractive art feature incorporated in selected locations as part of the interior design scheme and art themes.

Brookfield

# Specification for the Roof Drainage Installations

## General

The rainwater drainage system will comply with the relevant clauses of the NHS Model Engineering Specifications Parts C01, D08, Scottish Building Regulations, BSEN 12056:3, and the descriptions and requirements set out below.

Due to the large size of the hospital and the number of different roof areas it is considered that a gravity rainwater system would be the most appropriate solution for all the roofs areas.

However, the storm rainfall intensity for the Glasgow area is relatively lower than most other areas in the UK and therefore the number of rainwater outlets required is lower than would be for buildings in the south of the UK.

## Green Roof Drainage

Green roof drainage will be sized as conventional gravity roof drainage system.

## Perimeter Rainwater Pipes

With the lower roof areas of the podium building it may be acceptable to have architectural downpipes with hopper heads at the external perimeter thus reducing the number of internal rainwater downpipes and associated below slab drainage. The same proposal applies to courtyards.

## Rainfall Intensity

The design rainfall intensity is based upon BS EN 12056:3, Category 3 and is taken as 0.046 l/s/m2 for a building life span of 70 years and a storm return period of 315 years. This gives an 80% probability of the storm intensity not being exceeded during the life of the building.

## Rainwater Outlets

All roof rainwater outlets, except perimeter outlets, will be of the vertical spigot, anti vortex type to give an enhanced performance.

## Internal Rainwater Pipes

All internal rainwater pipes will be stainless steel to AISI 304 and will be installed in a manner to withstand 3bar internal pressure within the pipework system for the rainwater pipes serving the Tower Block and 2bar for all other areas.

The stainless steel pipe will be socket and spigot push fit pipe and fittings manufactured to EN 1124 Parts 1 & 2 and will be installed in accordance with the manufacturer's recommendations in order to achieve the pressure ratings required.

The connection between the stainless steel internal rainwater pipes, of 110, 160 and 200mm OD, respectively to the below slab drainage will be by means of a pressure rated coupling to ensure continuity of the pressure rating of the system.

Where it is possible rainwater pipes from outlets will be connected together to reduce the number of connections to the below ground drainage. Rainwater pipes will be positioned where a straight route through the building is possible so minimising offsets.

## Insulation

Insulation against surface condensation will be provided on all internal rainwater pipes throughout the installation. Insulation will be pre-formed mineral wool, foil faced matt with taped joints and a vapour seal.

## Access

Access points (full bore) for cleaning will be provided on all rainwater pipes. They typically will be at 1200 mm above finished floor level on each floor as appropriate but especially at ground floor level, and will be aligned with the architectural access provision.

Brookfield

## Submission Reference:

Section 4.22 Specification Proposals – Group 1 Equipment

## Submission Response:

Group 1 equipment has been specified and priced as the Equipment Schedule issued by the NHSGG&C Health Board: refer to Volume 6.0 Section 6.1.

The following list of component references and manufacturers, although not exhaustive, are indicative of the standards in the proposal.

| 1. Storage Units and Non-Specialist Fixtures and Fittings: | |
|---|---|
| | Standard laminate selection is from the Formica Washroom range or equal. |
| | Healthcare Storage Units comprise a white melamine faced MDF carcass and high pressure faced laminate faced fibreboard frontal.<br>All plinths are supplied as moisture resistant fibreboard faced with black plastic laminate. |
| | A plinth mounted storage system is proposed throughout. Although not strictly HTM63 compliant this is now generally the preferred system due to increased storage benefits. The box plinths are manufactured from moisture resistant MDF faced in melamine and over laid with a continuous plinth in the same material. |
| | Rear upstands to worktops within HTM63 and HTM71 specifications are supplied only where specifically detailed within the ADB description. |
| | 16mm thick Trespa Athlon or equal (UK stock colours) Worktops are proposed specifically to Laboratory areas or where heat/acid resistance is required. |
| | Shelving is melamine faced MDF. |
| | A standard range of grab rails available in stock RAL colours is proposed. The grab rails are 35mm diameter stainless steel construction, polyester powder coated. As standard, the grab rails are provided with matching steel cover plates and the drop grab rails with a counter balanced mechanism. |
| | Mirrors are a standard range, with the exception of ADB Code MIR023 which will be 3.0mm polycarbonate mirror. |
| | Cubicle tracking Silent Gliss 6100 or equal. |
| | Steel racking is Mistral or equal |

Brookfield

| 2. Specialist Equipment: | |
|---|---|
| CHA040 | Kavo Primus 1058 TM/S, or equal |
| CHA072 | Pelton & Crane Series 3000, or equal |
| DIA011 | Gambro AK200 Ultra, or equal |
| HOI006 | Arjo Maxi Sky 600, or equal |
| POO002 | Barr & Wray, or equal – 20m3 capacity pool with plant and balance tank. |
| REF070 | Labcold RLDF18041 Pharmacy Refrigerator 505 Litres, or equal. |
| REF080 | Labcold RSBT1056MD Compact Blood Bank Refrigerator, Shelf Model or equal. |
| WOR693 | Atmos Medical Limited C21 and AC workstation or equal |
| XRA010, 11, 12, 13, 15 & 18 | Based on installation only of Analogue equipment. |
| IMG026 | Philips Omnidiagnost, or equal |

| 3. Sanitaryware and Fittings: | |
|---|---|
| Generally, all Sanitaryware and associated fittings will be installed strictly in accordance with the supplier's recommendations. Colour to be selected from their standard range. | |
| BAS015 | Pland Gibraltar wall mounted Stainless Steel Rectangular Bowl Wash Basin or equal. |
| BAS101, 105, 106, 107, 109 | Armitage Shanks, HTM64 Portman Washbasin or equal, Vitreous China, White. |
| BAT001, 007, 008 | Armitage Shanks Nisa HTM64 Steel Bath or equal, Heavy Gauge Porcelain enamelled supersteel, slip resistant, 166 litre capacity, White. |
| BAT015 | Arjo, Primo, 50mm Waste Trap, Thermostatic valve, Fibreglass reinforced polyester. |
| DSU005 | Bali HTM64 Slop Hopper or equal, Stainless Steel. |
| DSU006, 007 | Pland Healthcare HTM64 combined Slop Hopper Sink & Drainer or equal |
| SIN013 | Pland Heathcare, Samoa HTM64 Janitorial Unit or equal, Stainless Steel. |
| SHO018 | Armitage Shanks Trevi Compact, lever operation, Thermostic Mixing Valve, Chromium plated. |
| SNS515, 516 | Pland Healthcare, Penang HTM64 Plaster Sink or equal, single bowl and drainer, Stainless Steel. |
| SNS753, 757, 756 | Ibiza Inset Single Stainless Steel Sinktop Sink & Drainer or equal. |
| TAP289 | Armitage Shanks, Contour 21 Basin Mixer, sequential. |

A49342285
GH56265_D_4_NP_V4.indb 26 10/9/09 01:41:34

| | |
|---|---|
| TAP343, 345, 359 | Armitage Shanks Markwik or equal, 15cm lever taps, Chromium plated. |
| TAP892 | Armitage Shanks, HTM64 Markwik Mixer, Thermostatic, Proximity Sensor Detection, Sterilisation System. |
| TRO603 | Pland Healthcare, Trinidad, HTM64 Scrub-Up Trough or equal, Stainless Steel, supplied with sound deadening pads. |
| WAS100, 101, 102, 103 | Armitage Shanks, HTM64, Strainer Waste or equal. |
| WAS110 | Armitage Shanks, HTM64 Contour Washbasin or equal, Vitreous China, White. |
| WCH001 | Armitage Shanks, Contour 21 HTM64 rimless WC or equal, Vitreous China, White. |
| WCH005 | Armitage Shanks, Contour 21 HTM64 rimless WC or equal, Vitreous China, White. |

| **4. General Electrical Outlets Switches & Fittings:** | |
|---|---|
| Our proposal is based upon fittings being provided by MK Electrical Limited and selected from their Logic Plus Range or equal. Colour of fittings to be selected from standard range. | |
| OUT002 | Logic Plus or equal white, flex outlet front plate, un-fused 20 amp. BS 5733 Dimensions 86mm x 86mm |
| OUT004/ OUT046 | Logic Plus or equal white connection units, un-switched, with flex outlet in base and thick front plate. All units are fitted with a 13 amp fuse-link. BS 1363 part 4. Dimensions 86mm x 86mm |
| OUT005 | Logic plus or equal white switch socket outlet 13 amp 1 gang to BS 1363 Part 2. Dimensions 86mm x 86mm |
| OUT010 | 2 gang Socket outlet for isolated power supplies. |
| OUT009/ OUT012 | Logic plus or equal white switch socket outlet 13 amp a gang to BS 1363 Part 2. Dimensions 86mm x 146mm |
| OUT011 | Logic plus or equal white switch socket outlet 13 amp 2 gang with neons, to BS 1363 Part 2. Dimensions 86mm x 146mm |
| OUT025 | Logic plus or equal white shaver supply unit 115 / 230v to BS 3535. Dimensions 146mm x 86mm |
| OUT030 | Masterseal or similar, ingress protected 1 gang un-switched 13 amp socket outlet |
| OUT032 | Masterseal or similar, ingress protected 2 gang switched 13 amp socket outlet. Dimensions 175mm x 115mm x 80mm |
| OUT049 | Logic Plus or equal white connection units, switched, dp with front flex outlet. All units are fitted with a 13 amp fuse-link. Dimensions 86mm x 86mm |
| OUT050 / OUT056 | Logic Plus or equal white connection units, un-switched, with flex outlet in base and thick front plate and tamperproof screws. All units are fitted with a 13 amp fuse-link. BS 1363 part 4. Dimensions 86mm x 86mm |
| OUT052 | Logic Plus or equal white connection units, un-switched, dp flush. All units are fitted with a 13 amp fuse-link. BS 1363 part 4. Dimensions 86mm x 86mm |
| OUT059 | Logic Plus or equal white connection units, switched, dp with neon flex outlet in base and thick front plate. All units are fitted with a 13 amp fuse-link. BS 1363 part 4. Dimensions 86mm x 86mm |

Volume 4.24 Services Equipment (Kitchen Equipment Etc)

As design development progresses the kitchen equipment will be designed, specified, procured and installed by a leading specialist provider with relevant experience in the installation of quality healthcare primary facilities.

We have had initial discussions with CDS Wilman Ltd, a division of Wilman Universal Industries Ltd with whom we have an existing and successful working relationship for the provision of healthcare kitchen and catering facilities.

We anticipate that this input will lead to an appointment whereby CDS will become fully engaged in the philosophy of the contractual framework to coordinate the design, with that of the primary services, architecture and facilities management requirements.

The design will accommodate all necessary legislation and recommended best practices, to ensure that the facilities operate safely, efficiently and profitably throughout their service life.

The specialist turnkey provider will demonstrate an ability to access advice, expertise and supply from leading manufacturers, as well as having recourse to efficient and innovative bespoke fabrications to best meet the NHSGG&C Health Board's operative needs.

Brookfield

# Specification for the Disposal Installations Above Ground Sanitary Pipework

## General

The sanitation pipework system will comply with the relevant clauses of the NHS Model Engineering Specifications Parts C01, C81, D08, Scottish Building Regulations, BSEN 12056:2, and the descriptions and requirements set out below.

The above ground foul drainage will be collected from sanitary fittings, equipment and outlets, by a system of vertical and horizontal pipework distributed within the building, to connect to the below ground drainage system. It will be a gravity discharge part-ventilated soil and waste system, i.e. main soil stacks and anti-siphon ventilation stacks.

Pipework will generally be concealed within modular sanitary panels and ceiling voids. Rodding access for pipework will be provided at the floor being served and not within the ceiling void.

Soil and waste connections on the ground floor will connect directly into the below ground drainage via stub stacks with vent pipes to upper floors where required. The upper floors will have a system of soil and waste stacks and vent pipework.

## Tower Block

At high level third floor where the tower meets the podium building there will be a large number of soil and waste stacks from the upper tower floors. To minimise the amount of pipework passing through the podium building these soil and waste stacks will combine within the plant rooms and drop at points where they can run through the lower podium levels with minimal offsets. Stack positions will be towards the outer edge of the building to reduce the amount of below slab drainage required under the hospital.

Planning of the layout will be such that to avoid pipework at high level above operating theatres and other sensitive areas.

## Pipework

Sanitary stacks will be in cast iron with PVCu for low level branch pipework. Branch pipework subject to high temperature discharges will be in stainless steel. Ventilation pipework will be in PVCu. Ground floor stub-stacks will be in PVCu.

## Chemical and or Radioactive Discharges

There will be separate drainage stacks for any chemical and radioactive drainage so that they will be kept separate from general domestic soil and waste water drainage in the above ground drainage system and will discharge into the below ground drainage. Chemical and radioactive discharges will not be retained in any form of storage, unless advised specifically by the Board.

Waste pipework for chemical and radioactive drainage will be in polypropylene.

## Access

Access points (full bore) for cleaning will be provided on all sanitation stacks. They typically will be at 1200 mm above finished floor level on each floor as appropriate but especially at ground floor level, and will be aligned with the architectural access provision.

Access on ground floor stub stacks will be by means of top-mounted, full bore, cleaning eyes.

Brookfield

# Specification for Mains Water Installation

The incoming water main service systems will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C07, C82, D08, addendums to Part C, SHTM 2027, 2040, BS 6700, Scottish Water Byelaws 2004, and descriptions and requirements set out below.

## Mains Water Installation

### Incoming supplies

Two 150mm water mains from the two external site water mains will enter the basement of the Acute/Children's Hospital and run at high level in the basement corridor to enter the basement cold water storage tank room. Each of the 150mm supplies will connect to the duplicate break tanks serving the filtration plant to ensure that in the event of a mains failure both break tanks will continue to be supplied by the other incoming water main.

### Water Meters

The two incoming water mains will be separately metered with meters being linked to the BMS system.

### Isolation Valves

Both incoming water mains will be fitted with isolation valves and non-return valves at the point of entry into the basement of the building.

### Incoming Fire Main:

A separate 100mm fire main will enter the Acute/Children's Hospital at basement level and run within the basement corridor to serve the Sprinkler and Wet Riser tanks in their tank room. This supply will be unmetered.

### Fire Cladding

The incoming fire main will be fire clad where is passes through any non sprinklered areas on its route to the fire tank room.

Brookfield

# Specification for Cold Water Services

## General

The cold water services systems will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C02 C07, C82, D08, addendums to Part C, SHTN 02, SHTM 2027, 2040, HTM 04-01, BS 6700 and descriptions and requirements set out below.

Note that all these domestic supplies can only connect to outlets and equipment that are suitable for potable quality water supplies, i.e. Type B air gap protection.

Any equipment requiring Type AB air gap protection will be provided with its own integral protection as part of unit or system to prevent any contamination of the potable supply in accordance with the Water Authority requirements.

All pipework will be BS316 stainless steel.

## Cold Water Service Installation

It is generally recognised that the quantity of water storage given in Appendix 1-Table 4 of SHTM 2027 is now excessive. This is a result of the use of low capacity WC cisterns, more provision of showers than baths, water restrictors on basins, etc. Therefore, a reduced capacity of storage is proposed to cover a 12 hour period, and equates to approximately 350 litres per bed.

At each main plant area a pressure-regulating valve will be provided to maintain similar water pressure in the various parts of the building providing convenience of use and minimizing water consumption.

All specific Department Areas will be provided with isolation provision, with draining down facilities for maintenance and shutdown.

In public toilet areas electronically timed isolation valves will shut off the water supply when the area is not in use to conserve water in the event of a leak occurring.

All main distribution and dropper connections will be provided with isolating valves, with local isolation valves installed to isolate and shut down individual Ward/Department areas.

All distribution systems will be capable of being chemically cleaned, disinfected and designed in compliance with SHTM 2027, 2040, HTM 04-01, SHTN 02 and BS 6700.

It should be noted that domestic supplies can only connect to outlets and equipment that are suitable for wholesome quality water supplies, in accordance with the Water Regulations.

## Cold Water Storage Tanks & Break Tanks

Bulk wholesome quality water storage tanks and break tanks will be located within the basement of the hospital building. The tanks will store 100% of the total main hospital water storage.

The tanks will be insulated and complete with raised ball valve housings, middle partitions, self-draining bases, flushing drain, overflows and all necessary connections to comply with Water Authority requirements.

Separate connections will be made from the break tank header to the filtration plants.

Separate connections will be made from the cold water storage tank header to the booster sets.

The whole of the domestic water services installation will be boosted in pressure to ensure adequate flow at outlets points, such as showers, etc.

## Water Filtration Plant

All incoming water for wholesome storage will pass through a filtration system with a 0.2 micron capacity. The filtration plant will be in duplicate and served by duplicate break tanks of one hour capacity. Each filtration plant will be capable of supplying full peak water demand to the bulk cold water storage tanks.

## Cold Water System

From the bulk storage tanks, the wholesome boosted cold-water service will be routed via the main distribution routes to plant level and vertical risers to feed the various departments.

## Wholesome Water Booster Sets

4 No. packaged wholesome grade water booster set will be provided within the tank room.

The booster sets will be arranged so that a duplicate set will serve the Podium and Children's Hospital and a duplicate set will serve the Tower Block.

Each booster set will comprise:

- Dedicated control panel
- Multiple variable speed duty pumps to maintain a constant discharge pressure including a stand-by pump
- Accumulator vessel

A49342285

GH56265_D_4_NP_V4.indb 37 10/9/09 01:41:36

# Brookfield

## Meter Facilities

Water sub-meters will be incorporated with direct reading and a BMS interface onto all major plant areas and their associated HWS storage vessels to allow water consumption to be monitored, and in the case of hot water, energy to be calculated. All sub meters will be linked to the BMS.

## Special Filtration Requirements

Where water supplies to equipment require special filtration, this will be supplied as part of the equipment by the particular supplier.

## Watering Points

Watering points incorporating back-flow protection will be provided in each courtyard, on roof areas, in FM facilities and in each plantroom for wash down use.

Watering points suitable for Category 5 type installation will be provided in refuse storage areas for wash-down purposes.  (Not clinical waste areas)

A49342285
GH56265_D_4_NP_V4.indb 38 10/9/09 01:41:36

Brookfield

# Specification for Hot Water Services

## General

The hot water service systems will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C02 C07, C82, D08, addendums to Part C, SHTM 2027, 2040, BS 6700 and descriptions and requirements set out below.

Note that all these domestic supplies can only connect to outlets and equipment that are suitable for potable quality water supplies, i.e. Type B air gap protection.

Any equipment requiring Type AB air gap protection will be provided with its own integral protection as part of unit or system to prevent any contamination of the potable supply in accordance with the Water Authority requirements.

All pipework will be BS316 stainless steel.

## Hot Water Service Installation

The hot water distribution system will be designed for 60ºC flow and 55ºC return circulating temperature.

A number of hot water systems will be provided, generally related to the location of the MTHW/LTHW heating stations.

Domestic Hot Water (DHWS) will be generated and stored utilising high efficiency semi-storage calorifiers comprising plate heat exchangers and buffer vessels. The hot water generator and distribution system will be fed from the boosted water system, and thus be pressurised. Units will be generally sized to provide one unit for standby purposes, for example 2 @ 100% or 3 @ 50% of the total demand.

The calorifiers will be directly heated from the main primary MTHW heating circuit from the Energy Centre. The storage temperature will be controlled through the BMS by 2-port control valves on the primary heating system, along with 2-port direct acting control valves to provide protection override in the case of high hot water flow temperatures.

The storage system will be capable of achieving higher storage temperatures for carrying out a pasteurising process to minimise contamination from Legionella bacterium within the storage vessel. Each storage vessel will be isolated from the distribution system while the process is carried out.

The DHWS distribution system will be configured with a pumped return to maintain temperatures within the system in accordance with HTM 2027, associated HGN “safe” hot water and surface temperatures and HTM 2040. The pumped return system will minimise “dead legs” and reduce water consumption by providing the correct temperature of water at the outlet with minimum delay.

The system will have isolating valves generally as the cold water system. In addition, the return water pipework will be provided with valves that isolate and automatically regulate the flow rate, in order to maintain satisfactory temperatures throughout the system.

The hot and cold water system pressures will be equalised at each service outlet for successful blending of hot and cold water through anti-scalding devices prior to use.

The anti scalding devices will be used throughout the hospital where service outlets provide water for personal hygiene washing. Designated outlets will use unmixed hot water at system temperatures where utensils or garment washing is required.

Subject to compliance with the SHTMs or with Board approval, hot water service outlets which may be subject to misuse or for clinical convenience may use proximity switching, timed flows and flow regulation for water conservation purposes as described for cold water services.

At each main plant area a pressure-regulating valve will be provided to maintain similar water pressure in the various parts of the building providing convenience of use and minimizing water consumption.

## Special Filtration Requirements

Where water supplies to equipment require special filtration, this will be supplied as part of the equipment by the particular supplier.

Brookfield

# Specification for Steam & Condense Installation

## General

There are no process loads within the Adult or Children's Hospitals, for example CSSD, requiring large quantities of steam.

Furthermore, there is no current requirement for humidification to Operating Theatres, again a large consumer of live steam.

There are, however, some areas that will still require such as Pharmacy Aseptic Suite. To avoid significant distribution losses it is proposed to utilise local electric packaged humidifier units in these instances.

Brookfield

# Specification for Space Heating

## General

The space heating systems will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C02, C07, C82, addendums to Part C and descriptions and requirements set out below.

## Secondary Heating Circuits

From the plate heat exchangers installed within the plantroom areas, as described under Heat Source, the secondary heating circuits systems will emanate to serve specific zones of the hospital.

Each of the main secondary heating systems will be self-contained to provide security of supplies between the various zones.

Each secondary heating system will include the following elements:

i. Heating pressurisation plant with twin pump make-up plant expansion vessel to maintain the pressure in the secondary heating system.

ii. Run and stand-by secondary constant temperature circulation pumps.

iii. Run and stand-by secondary variable temperature pumps.

iv. A deaeration unit on the main flow pipework.

v. The system will be capable of being treated with corrosion inhibiting chemicals via a manual-dosing unit.

The secondary constant temperature pumps will circulate all the secondary water through the plate heat exchangers with temperature control on the primary side of the heat exchangers.

The main secondary flow temperature will operate with a nominal design condition of 80ºC flow and 65ºC return.

The secondary constant temperature system will supply:

i. The secondary variable temperature system

ii. The various air handling unit heater batteries located throughout the associated plantroom areas and remote heater batteries as appropriate.

It is proposed to provide 2-port control valves on all the air handling unit heater batteries. This will allow the use of variable speed control on the secondary constant temperature pumps and conserve energy and reduce carbon emissions. Pump speeds will be varied by inverter motor control units which will be controlled by the BMS to maintain the pressure differential between flow and return pipework within set limits with sensors located in the main sub-distribution pipework. The system will not permit the secondary constant temperature pumps to operate at less than 40% of their design maximum.

The secondary variable temperature heating circuit will serve all the occupied areas heat emitters such as - radiant heating panels, chilled beams, low level low surface temperature heaters, and low level radiators.

The variable temperature flow water temperature will be varied by a control valve, to modulate the water temperature, in respect to the outside dry bulb temperature, with correctional adjustment via the local area sensors.

The local heat emitter valves will generally be controlled by direct acting thermostatic radiator valves and, therefore, the secondary variable temperature pumps will be variable speed type with control via motor inverter unit, under the command of the BMS. BMS sensors and direct acting pressure differential units will be installed in the secondary variable temperature pipework system, generally as the constant temperature system. The system will not permit the secondary variable temperature pumps to operate at less than 40% of their design maximum.

A series of strategically positioned room sensors will be installed to provide feed back to the BMS on conditions and also to allow adjustment on set point settings and minimum air temperature control.

The systems will be divided into sections to allow individual wards and areas to be isolated from the main system for maintenance or shutdown.

Where departments are not operated on a 24 hour basis, the local heating circuits will incorporate motorised valves controlled by the BMS on a timed basis, with optimised control to suit the particular occupation times.

All main and subsequent department branches will be provided with balancing/ measurement and isolation valves along with drain cocks, air vents etc. to ensure proper control and regulation of water flow rates under design load condition with flushing, draining and re-filling facilities.

Brookfield

## Heat Emitters

Heat emitters will generally be ceiling located providing inherent safety in respect of patient care. Where heat emitters are within touch of patients or the public, the emitters will be of the low surface temperatures type with a mean surface temperature below 43∞C.

Thus, the majority of heating will be by either ceiling perimeter radiant panels or incorporated in the active chilled beam units.

In areas where large areas of vertical glazing are envisaged, then heated hand barriers or continuous low-level convectors will be considered to offset down-draught.

These solutions will limit surface temperature to prevent scalding to patients and the general public.

The individual room heating emitters (radiant heating panels, radiators etc.) will be provided with local direct acting control valves, to restrict the water flow on rise of air temperature and provide local control facility. These will be occupant adjustable.

Where emitters are located in areas provided with unitary cooling or air conditioning, controls will be integrated to minimise energy consumption while maintaining local control.

The main entrance atria in the Hospital's Main Entrance will be provided with underfloor hot water heating systems.

Air curtains will be provided above entrance doors to alleviate drafts.

A49342285
GH56265_D_4_NP_V4.indb 44 10/9/09 01:41:38

Brookfield

# Specification for Space Cooling

## General

The space cooling ( refrigeration plant and chilled water distribution systems) will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C02, C10, C82, addendums to Part C and descriptions and requirements set out below.

## Central Refrigeration Plant

Chilled water will be used as the main cooling medium for the ventilation and air conditioning systems.

The total cooling load for the Adult and Children's hospitals has been assessed at 7000kW. For resilience purposes the cooling plant will be arranged as two systems, designated A and B, with each part sharing the load equally, i.e 3500kW. The two systems will be housing in the main energy centre to the North of the main hospital building to concentrate the maintenance of heavy plant away from the main hospital building, but separated by a four hour firewall.

To provide the 3500kW load, each cooling plant will comprise a total of eight chillers divided between the A and B circuits. The plant will comprise seven packaged air cooled multiple screw compressor water chillers located on the roof of the Energy Centre, each sized at 1000kW, and 1000kW absorption or adsorption type chiller fed via the CHP units, with associated adiabatic dry air cooler will be provided adjacent to the air cooled chillers. The absorption cooler will be linked to the A circuit only.

The packaged air cooled chillers will be of the high efficiency type provided an ESEER approaching 4.8 compared with a typical packaged chiller ESEER of 4.0. The compressors will utilise Chlorine free refrigerants with zero Ozone Depletion Potential values and offering refrigerant coefficient of performance values of 95% or better, such as R134a.

Each chiller will be provided with acoustic attenuation packages to meet not only the day/night boundary sound level limitation, but also the intrusive noise level limits into the hospital.

The provision of a total of eight 1000kW chiller units will provide an N+1 arrangement for the plant for resilience purposes.

Chilled water pumping and pressurisation equipment will be located in the plantroom adjacent to the chiller plant. From the plantroom, chilled water pipework systems will run to serve air-handling equipment in the various plantroom areas, and terminal cooling equipment in selected spaces.

The chilled water system will be 100% water with trace heating protection where the pipework is exposed on the roof.

## Primary Cooling Circuits

Primary chilled water circuits will emanate from the Energy Centre.

The primary circuit will operate at nominal design flow and return temperatures of 6ºC and 14ºC respectively.

The Primary chilled water system will include the following elements:

i. Duplicate chilled water pressurisation plant with twin pump make-up pumps and expansion vessels to maintain the pressure in the primary chilled water system.

ii. Multiple circulation pumps.

iii. A combined dirt separator/deaeration unit on the main flow pipework.

iv. The system will be capable of being treated with corrosion inhibiting chemicals via a manual-dosing unit.

Individual pumps for each chiller will ensure a stable design flow rate through each chiller and then form a common primary pipe loop.

Primary heating circuits will emanate from the Energy Centre arranged as A and B circuits feed from their respective cooling plant.

The flow and return pipework will be routed from the energy centre using pre-insulated buried pipework and enter the basement corridor system of the main hospital. At this point the A and B circuits will join a header which, for resilience purposes, will allow either A or B circuits to feed the hospital. From the header chilled water radial feeds will run via the basement corridors and risers to the hospital's plant areas to serve plate heat exchanger stations.

It is proposed to provide 2-port control valves on all of the major load centres to allow the use of variable volume control of the primary chilled water circuit. The circulating pumps will be controlled by the BMS in sequence as needed to match the varying load demand. This will maintain the pressure differential between flow and return pipework within set limits with sensors located within the main sub-distribution pipework. The system will not permit the primary circuit pumps to operate at less than 40% of their design maximum.

## Plate Heat Exchangers

The purpose of the plate heat exchanger installation is to positively separate the primary and secondary circuits and create smaller strategic load centres in a manner which improve system integrity and operational requirements.

Each plate heat exchanger will be selected to provide a percentage of the total design duty as indicated on the drawings. Sizing will be on the basis of primary side flow and return temperatures of 6ºC and 14ºC respectively and secondary side temperatures of nominally 8ºC and 13ºC flow and return.

Brookfield

## Secondary Cooling Circuits

From the plate heat exchangers installed within the plantroom areas, the secondary chilled water circuits systems will emanate.

Each of the main secondary chilled water systems will be self-contained to provide security of supplies between the various areas.

Each secondary chilled water system will include the following elements:

i. Chilled water pressurisation plant with twin pump make-up plant expansion vessel to maintain the pressure in the secondary chilled water system.

ii. Run and stand-by secondary circulation pumps serving air handling plant cooling coils and fan coil units.

iii. Run and stand-by secondary circulation pumps serving chilled beams.

iv. A deaeration unit on the main flow pipework.

v. The system will be capable of being treated with corrosion inhibiting chemicals via a manual-dosing unit.

The secondary pumps will circulate all the secondary water through the plate heat exchangers with temperature control on the primary side of the heat exchangers.

The main secondary flow temperature will operate with a nominal design condition of 8ºC flow and 13ºC return.

It is proposed to provide 2-port control valves on all the air handling unit cooling coils. This will allow the use of variable speed control on the secondary circulation pumps, achieved by inverter motor control units located within the plantroom area. These will be controlled by the BMS to maintain the pressure differential between flow and return pipework within set limits with sensors located in the main sub-distribution pipework. The system will not permit the secondary circulation pumps to operate at less than 40% of their design maximum.

The secondary chilled beam circuit will serve all the occupied areas with local cooling devices such as chilled beams, etc. This circuit will supply water at a higher temperature than the primary loop, achieved via an injection form of mixing of the main secondary chilled water circuit. The circuit will operate at nominal design flow and return temperatures of 14ºC and 17ºC respectively to avoid condensing. The temperature of the water will be controlled to remain above the dewpoint of air within the spaces served.

The systems will be divided into sections to allow individual areas to be isolated from the main system for maintenance or shutdown.

All main and subsequent department branches will be provided with balancing/ measurement and isolation valves along with drain cocks, air vents etc. to ensure proper control and regulation of water flow rates under design load condition with flushing, draining and re-filling facilities.

## Chilled Beams/Ceilings

Local cooling, where required, will be provided via ceiling mounted enclosed chilled beams or chilled ceilings. The beams/ceilings will be complete with dedicated controls enabling temperatures to be varied within each treated space. The equipment will, where applicable, include heating or will integrate with other forms of local heat emitters. The integration will take the form of control sequencing to avoid simultaneous heating and cooling to minimise energy input. The controls will comprise local room mounted temperature sensor/controller operating 2-port electrically operated valves in response to user inputs to raise or lower the room temperatures.

## Fan Coil Units

Where heat gains in spaces exceed of the ability of chilled beam units to provide adequate cooling fan coil units will be utilised.

The units will be complete with dedicated controls enabling temperatures to be varied within each treated space. The units will, where applicable, include heating. The controls will comprise local room mounted temperature sensor/controller operating 2-port electrically operated valves in response to user inputs to raise or lower the room temperatures.

## Computer Rooms

Close control air conditioning units will be located in main computer rooms to provide conditioning air to the spaces.

Units will be arranged on an N + 1 basis to provide 100% standby in the event of a single unit failure.

A49342285
GH56265_D_4_NP_V4.indb 46 10/9/09 01:41:38

Brookfield

# Specification for Ventillating Systems

## General

The mechanical ventilation and air conditioning systems will comply with the relevant clauses of the NHS Model Engineering Specification Parts C04, C82, addendums to Part C, HVAC DW144, 154, TR19, SHTM 03-1, HTM 05-1, BS 5726 (updated), and descriptions and requirements set out below.

## Ventilation and Air Conditioning Installations

### General

Wherever possible, natural ventilation via openable windows will be provided in perimeter rooms.

The Hospital will be mechanically ventilated throughout all internal rooms with no access to natural ventilation, perimeter areas where mechanical ventilation is required for clinical and operational and environmental control reasons and deep plan perimeter areas where necessary to assist the natural ventilation.

The various departments will be served by a number of ventilation air handling systems. The number and extent of these systems proposed are required to meet a number of criteria, namely:

1. To provide energy efficient operation with areas of the hospital operating on a similar time and/or clinical nature being served from the same system.
2. To maintain a sensible level of availability, such that in the event of plant breakdown or maintenance, only limited areas of ventilation are lost.
3. Air handling plants will have their availability reinforced by the provision of duplicate motors or fans, which will automatically changeover to maintain the ventilation requirements.

In general, each air handling system will be served by packaged air-handling units containing all components necessary (e.g. fans, coils, filters, etc.) to provide the correct environmental control of those spaces/rooms served.

Active chilled beams and fan coil units will also be provided for comfort cooling in areas where there is a need for separation or where high heat gains make these a more appropriate choice of systems.

### All Air Systems

These will be low velocity systems with air being distributed throughout the building in galvanised sheet steel ductwork via ceiling void and riser duct spaces terminating in ceiling or wall diffusers as appropriate.

Extract air from the area concerned will be drawn through a similar ductwork system to extract fans in the roof plantrooms for discharge to atmosphere, or returned to the air handling plant for recirculation.

Recirculation will be provided only in areas where there is no danger of cross infection, e.g non clinical areas.

On full fresh air systems, heat recovery devices will be considered, to exchange heat between incoming fresh air and exhausted extract air wherever significant energy savings can be achieved.

Fire separation in ventilation systems will be provided in accordance with SHTM81 and will be achieved using electrically operated smoke/fire dampers incorporated in all ductwork passing through fire compartment and sub-compartment walls and floor slabs. Ductwork passing through designated fire hazard rooms will be provided with fusible link fire dampers.

Acoustic attenuators will be incorporated in ventilation systems to prevent excessive noise transmission to occupied areas of the building or the external environment.

Cross talk attenuators will be used where necessary to achieve privacy, and will have a performance equal to the building element that they pass through.

Supply air handling plants will be of a packaged construction with a double skin casing, complete with thermal/acoustic insulation material between the two skins. Units will house filters, coils, fans and motorised inlet dampers, etc. Heat recovery devices and humidifiers will also be incorporated where required. External fan motors will be provided to all units.

All units will incorporate activated carbon filters to control odours entering the ventilating systems from the adjacent Scottish Water sewage works.

Vibration isolation will be provided in the form of spring anti-vibration mountings located under fan and motor bases with flexible connections from the fan discharge and the adjoining ductwork.

Heating coils will be served with low temperature hot water piped from the constant temperature heating distribution circuits. Cooling coils will be served with chilled water piped from the associated chilled water distribution system.

A49342285

GH56265_D_4_NP_V4.indb 47 10/9/09 01:41:39

Brookfield

Generally, temperature control will be by means of room or duct-mounted sensors which will operate, via the automatic control system software the control valves on the hot water and chilled water to the heating and cooling coils respectively.

Areas will be controlled in zones or as individual rooms as necessary to achieve the conditions required by the ADB Sheets.

Supply plants will incorporate panel type coarse pre-filters followed by high efficiency bag filters. Absolute HEPA (high efficiency particulate air) terminal filters will be provided only for 'ultra clean' areas such as UCV Theatres and Pharmacy Aseptic Suite. Consideration will be given to installing HEPA filters on plants serving vulnerable patients to afford additional protection against air-borne contamination, e.g. Aspergillus.

Full humidity control, including humidification and dehumidification, will be provided only in critical air-conditioned clinical areas such as the Pharmacy Aseptic Suite or wherever close control of humidity is required for the successful operation of sensitive equipment, e.g. computers, as advised by the ADB Sheets. Space will be included within Operating Theatre air handling units for the provision of humidification in the future. Since the anticipated requirement for humidification is limited this will be provided by electric duct mounted steam injection humidifiers.

Air pressure regimes for theatre suites will be designed in accordance with the guidance provided in SHTM 03-1 employing wall mounted pressure control valves.

Air volumes will be established by consideration of heat gains or losses and also the air change rate necessary for comfort and safety as appropriate for the activity carried out in each area. Relative air pressures between rooms will be maintained to suit the activity concerned, by design of the supply and extract air volumes, and use of pressure relief equipment where necessary to prevent cross infection or transfer of unpleasant odours between areas, as required by the ADB sheets.

### Extract Air Heating Energy Recovery

Thermal wheel heat exchangers will be incorporated within extract air plants handling uncontaminated air. These plants will also include main dirty air extract plants. The heat exchangers will transfer heat energy within the extract air to a pumped circulation water heat recovery system. Heat exchangers within the fresh air plants will utilise the recovered heat to pre-heat incoming fresh air.

Where the use of thermal wheel heat recovery units is found to be impractical run-around coil systems will be employed and comprise pumps, distribution pipework, control and isolating valves, expansion vessels and automatic controls.

The heat recovery systems will be configured to operate at all times when useful energy can be recovered and used by the various air plants.

### Local Cooling Units

Local cooling, where required, will be provided wherever possible via ceiling mounted enclosed chilled beams arranged for sensible cooling. The devices will be complete with dedicated controls enabling temperatures to be varied within each treated space. The equipment will, where applicable, include heating or will integrate with other forms of local heat emitters. The integration will take the form of control sequencing to avoid simultaneous heating and cooling to minimise energy input. The controls will comprise local room mounted temperature sensor/controller operating 2-port electrically operated valves in response to user inputs to raise or lower the room temperatures.

In circumstances where sensible cooling units cannot meet the heat gains, then fan coil units may be considered.

## Description of Systems

The following descriptions cover typical ventilation systems within the Hospital:-

### Wards

The ventilation systems serving ward areas will provide treated air to internal spaces, clinical spaces and make-up air for sanitary accommodation.

Make up air for en suite WC accommodation will be introduced directly into the associated bedroom and via active chilled beam units to maintain the required space temperatures.

The supply air will be heated during the cold weather periods to a temperature close to room conditions. In warm weather periods, the air will be cooled to reduce internal temperatures with the supply air temperature adjusted to suit outside conditions.

Air will be extracted from spaces by either the clean or dirty extract systems as appropriate. Heat recovery will be provided between the supply and extract systems.

### Isolation Rooms

Each isolation room will be provided with its own ventilation system in line with SHBN 04.

Each system ventilation plant will filter, heat and cool the air and supply it to the room lobby at the required temperature, as dictated by a sensor in the bedroom.

Air will be transferred to the room via a pressure control valve and then extracted from the suite via the en suite WC, and ducted by fire-clad ductwork to a dedicated extract fan in the plantroom.

Each extract fan unit will comprise an isolation damper and a centrifugal cased extract fan, with the motor located out of the air stream, and the exhaust duct will discharge 3.0 m above roof level.

Due to the small size of the plants, heat recovery is not considered viable and will therefore not be provided.

A49342285
GH56265_D_4_NP_V4.indb 48 10/9/09 01:41:39

Brookfield

### Outpatient Type Departments
The ventilation systems serving outpatient areas will provide heated air to internal spaces, clinical spaces and make-up air for sanitary accommodation.

The supply air will be heated during cold weather periods to a temperature close to room conditions.

In warm weather periods, the air will be cooled to reduce internal temperatures with the supply air temperature adjusted to suit outside conditions.

Air will be extracted by either the clean or dirty extract systems as appropriate.

Heat recovery will be provided between the supply and extract systems.

### Operating Theatres
Each operating theatre will be provided with a dedicated ventilation system.

Each system ventilation plant will filter, heat and cool the air and supply it to the suite of rooms, and arranged to allow individual temperature set point adjustment and indicated on the associated surgeon's theatre panel.

The pressure regimes between the spaces in each theatre suite will be maintained by a combination of supply and extract rates to each space, and pressure stabilisers located in the walls.

Heat recovery will be provided between the supply and extract systems.  Out of hours setback will be provided by reducing the air volumes and temperature set points.

In theatres with a requirement for Ultra Clean Ventilation (UCV), a specialist will be employed to undertake the provision of the UCV canopy in accordance with SHTM 03-1.

Ancillary areas associated with the Operating Theatre department will be served from a dedicated plant.

### Critical Care Departments
Critical care departments such as ITU/HDU will be provided with dedicated ventilation systems.

The supply air ventilation plant will heat, cool and humidify the air as required by the control system to provide the correct condition in the various rooms/zones.

Final temperature control to the spaces will be achieved by terminal reheaters controlled from user adjustable sensors within each space. Heater batteries will be located wherever possible in plant areas, but where heaters can only be provided in the ceiling void of the occupied space they will be located away from patient occupied spaces, i.e bed spaces.

The supply air may be filtered to a high level of cleanliness by plant mounted HEPA filters to protect the most vulnerable patients from any potential airborne contaminant from the external environment.

Heat recovery will be provided between the supply and extract systems.

### Comfort Cooled Areas
Departments where space temperature control is required, such as the Emergency Centre, Diagnostic Imaging, etc. will be provided with treated air to clinical spaces and spaces with high equipment gains.

The department will be arranged in a number of zones to suit the control requirements, varying heat gains and use of the spaces.

Particular areas that have high-density heat gains will be provided with terminal cooling to achieve the required space conditions.

The supply air ventilation plant will heat or cool the air as required by the control system to provide the correct condition in the various rooms/zones.

Heat recovery will be provided between the supply and extract systems.

### Dirty Extract Systems
Potentially contaminated air extract systems will be discharged at, or above, roof level at high or low velocity as appropriate.  Such systems will include the following:

### Toilet Extract Systems
A separate dirty extract will be provided to extract air from toilets, bathrooms, cleaners' rooms and dirty utility areas.

Air will be extracted via grilles in the individual rooms and ducted by galvanised sheet steel ductwork similar to that provided for the general supply and extract systems to extract fans in the plantrooms.

Where toilets or bathrooms are in isolated positions, not convenient to central ducted systems, small units operated by light switch control will be considered.

### Kitchen Ventilation Systems
Ventilation to the central catering areas will be provided to deal with the requirements on the cooking equipment to reduce odours and limit temperatures within the space.

Extraction canopies will be positioned over ranges of equipment as appropriate. Some canopies may require in-built fire suppression systems to achieve the recommendations of the Fire Consultant.

Contaminated air extract systems will be discharged at, or above, the tower roof level at high velocity as appropriate.

Ventilation make-up air will be provided to balance the extracted air.

Brookfield

### Safety Cabinet Extract Systems

The Pharmacy will be served by separate extract systems serving the general areas whilst extracts from safety cabinets will be handled by individual contaminated extract systems.

The design of the general extract system will be co-ordinated with the associated supply system and contaminated extracts to maintain suitable pressure levels and ensure the Clean Room requirements of the Aseptic Suite are maintained.

### Fire and Smoke Dampers

The ductwork system will be provided with fire dampers in locations corresponding to the appropriate fire separation barriers. Actuation of the dampers will be in accordance with SHTM81 Firecode, and the Fire Consultants Report, subject to the separation performance of the barrier.

Where actuation of the damper is via the fire alarm system the damper will be motorised to facilitate re-opening after testing of the fire alarm system. Dampers utilising fusible link operation only will be provided with local mechanical indicator on the side of the fire damper. Dampers with motorised operation will be monitored via a separate electronic remote monitoring system.

Fire rated ductwork will be utilised where the use of fire dampers is inappropriate.

### Data Hub Rooms

Data hub rooms will be provided with cooling by means of fan coil units.

Rooms will be provided with ventilation air to achieve a positive pressure room.

### Computer Rooms

Computer rooms will each be provided with floor standing ‘downflow’ close control cooling units, served from the chilled water system.

Units will be arranged on an N+1 basis to provide resilience in the event of failure or planned maintenance.

Rooms will be provided with ventilation air to achieve a positive pressure.

# Electrical Source & Mains

## General

The incoming electrical supply to the site and 11,000V distribution around the site is described in specification 4.55 “Electrical Mains”.

Low voltage distribution is described within specification 4.35 “Electrical Power Supplies”.

This specification describes the substations within the Adult Acute and Children’s Hospitals.

The electrical source and mains will comply with the relevant clauses of the NHS Model Engineering Specification part C41, SHTM06-01, HTM06-01, SHTM2007, SHTM2011, SHTM2014, SHTM2015, SHTM2020, SHTM2023, MEIGaN, IET Wiring Regulations 17th Edition.

## Substations

Six substations will be provided to the Adult Acute and Children’s Hospitals, as indicated on the accompanying schematic drawings. The substations will be located within the plantrooms on the 2nd, 3rd and 4th floors.

Cast resin transformers will be provided. Each substation will receive two transformers as indicated on the drawings.

The dual transformers will form part of the dual-unified supply strategy and will be termed A side and B side. The transformers will be enclosed in separate fire rated rooms. The hospital will be served by two 11,000V rings.

Transformers will be connected in the following sequence:

| Ring 1 | Ring 2 |
|---|---|
| Substation 1A | Substation 4A |
| Substation 2A | Substation 5A |
| Substation 3A | Substation 6A |

| Open Point | Open Point |
|---|---|
| Substation 3B | Substation 6B |
| Substation 2B | Substation 5B |
| Substation 1B | Substation 4B |

The A and B sides of the 11,000V rings will be routed by diverse routes so that on the loss of one limb, and by automatic switching, power will not be lost.

Transformers will be in accordance with BS 6463, BS EN 60726 Transformers will be in accordance with BS 6436, BS EN 60726, BS 7821, BS 7844, BS EN 60076, BS 171, BS 7806, CENELEC Harmonisation Documents HD 464 S1 : 1988 + / A3 : 1992 for dry-type power transformers, HD 538-1 S1 : 1992 for three-phase dry-type distribution transformers 50Hz, from 100 to 2500 kVA with highest voltage for equipment not exceeding 24 kV and IEC 905 : 1987 - Loading guide for dry-type power transformers.

The transformers will normally be loaded to up to a maximum of 50% load. Upon failure of one transformer within a sub-station the remaining unit will be able to be loaded to 100% (includes future 25% capacity). The cast resin transformers will be able to supply full specified load without forced cooling.

## Ring Main Units

Each Ring Main Unit will have the features/specification as follows:-

i. Vacuum breakers
ii. Normal rated voltage minimum 11 kV
iii. Normal rated current ring switches 630 A
iv. Circuit breaker for transformer feeder
v. Earthing facilities for circuit breaker and ring switches
vi. Each leg is to be motorised and controlled automatically via a Power Management System which is described within specification 4.55 “Electrical mains”.

High voltage switchgear will be compliant with BS EN 62771-200, BS EN 60694, IEC 60466, BS EN 62271-102, BS EN 62271-100, BS EN 60265-1.

# Electrical Power Supplies

## General

The incoming electrical supply to the site and 11,000V distribution around the site is described in specification 4.55 “Electrical Mains”.

The substations within the Adult Acute and Children’s Hospitals are described in specification 4.34 “Electrical Source and Mains”.

This specification describes the low voltage distribution within the Adult Acute and Children’s Hospital.

The electrical power supplies will comply with the relevant clauses of the NHS Model Engineering Specification part C41, SHTM06-01, SHTM2007, SHTM2011, SHTM2014, SHTM2015, SHTM2020, SHTM2023, MEIGaN, IET Wiring Regulations 17th Edition.

## Description of LV Distribution

As described in specification 4.34, the Adult Acute and Children’s Hospitals will be served by six substations, each comprising two transformers, one fed from the A side of the 11,000V ring the other fed from the B side.

Each transformer will serve a 400/230V LV switchboard which in turn will serve sub switchboards within the electrical zone served by that substation.

The main LV switchboards and the sub switchboards will be provided with bus switches so that on loss of the A side supply the switch will close and the switchboard will be entirely supplied from the B side, and vice versa.

Submains cables from the main LV switchboards will be contained in electrical riser cupboards, A side cables will be segregated from B side cables within the risers.

Departments requiring specialist or heavy loads (Imaging Departments, Catering etc.) will be provided with their own LV panel fed directly from the respective main LV panel.

The sub switchboards will feed local distribution boards, a minimum of two per department, one from the A side sub switchboard and one from the B side. Distribution boards will serve lighting and power.

Fixed items of equipment will not be provided with dual supplies, in risk category 3, 4 and 5 areas such supplies will be derived from sub switch panels which themselves have a dual supply.

The Ward Tower will be served as follows:

Each Ward Tower will be provided with two risers each accommodating local distribution boards fed from a rising bus bar. Two bus bars will be provided per tower, one fed from the A side and one from the B side.

## Switchboards

All main LV switchboards will be constructed to Form 4 Type 6. Sub switch panels serving clinical risk category 3, 4 and 5 areas will be to Form 4 Type 6.

Sub switch panels serving non clinical risk category 1 and 2 areas will be to Form 4 Type 2.

## Submains Cables

Submains cables will generally be copper conductors, XLPE/SWA/LSF. Fire rated cables will be provided as appropriate to life safety systems. Submains cables will be laid on cable ladders and trays where run horizontally. Vertical runs of cables in risers will be cleated to wall mounted channel.

## Bus Bars

Bus bar trunking will comply with BS EN 60439-2 and will be fully type tested.

Fire barrier units will be provided within bus bar trunking as appropriate.

Low Voltage Air Break Switches will comply with the following:-

- BS.EN 60947, having an uninterrupted rated duty, a utilisation category AC 23
- Air break switches will have the following number of poles:
- Single phase- Double pole. (DP)
- Three phase- Four pole. (4P)
- Each switch will be provided with facilities for padlocking in the “OFF” position
- To prevent accidental contact with live parts, switches of the withdrawable chassis isolating type, will have either fully shrouded fixed contacts or insulated cover plates
- Switches in individual enclosures will have an earth terminal, meet the degree of protection specified for the switchboard and have the operating mechanisms interlinked with the access door

Distribution Boards will be:-

- Wall mounted
- Fabricated from sheet steel
- Provided with fully opening doors fitted with cylindrical lock
- Type B, surface mounted
- Fitted with an isolator

# Brookfield

Miniature Circuit Breakers will comply with the following:-

MCBs will be of the ratings specified for enclosure continuous operation, and will be manufactured in accordance with the current British Standard BS.EN 60898

Moulded Case Circuit Breakers will be:-

- Manufactured in accordance with the current British Standard BS-EN 60947.
- Residual Current Devices will comply with the following:-
- BS 4293 and the requirements of the IEE Wiring Regulations
- When incorporating overcurrent and short circuit trips and used as circuit breakers the combined RCD/ MCB will comply with BS EN 60898

## Isolated Power Supplies for Areas of Medical Use

Isolated Power Supply Units will be provided for areas of medical use. These will provide Type IT power supplies to meet the requirements of HTM 2007, BS.7671 Guidance Note 7 Section 10 and MEIGaN.

The medical locations covered by isolated power supplies are as indicated on the accompanying LV schematics.

Each isolated safety power supply unit will incorporate:-

- A safety isolating transformer to DIN VDE 0551:Part 1
- A local alarm and test module
- Remote alarm and test stations
- Transformer insulation temperature monitor
- A load monitor
- A 32 A MCB distribution board
- Output 230 V, 50 Hz, single phase, earth free

The units will comply with EN 60439-1:Part 1, DIN VDE 0107:1994-10, DIN VDE 0660Part 500 and IEC439-1:Part 1. The insulation monitor will comply with DIN VDE 0413:T2/01.73 or ASTMF 1209-89.

For the Operating Theatres, the remote alarm/indicator units will be provided in the Theatre. This facility is only required for IPS units serving Theatres. The alarm/indicator units in the Theatres will be built into the Surgeon's Panel. The operational status of the mains supply to each Isolator Power Supply will be relayed to the Building Management System.

IT sockets in the pendants in the Operating Theatres will be controlled from the Operating Theatre Panel.

The isolated power supplies will be contained within metal floor standing cabinets having an ingress protection rating of at least IP42. They will have lockable front covers and will incorporate suitable ventilation facilities for the designed duty. They will be provided as single, dual or triple units as indicated on the schematic drawings. Within each dual or triple unit, each module will be totally electrically independent of the others and will be electrically and physically segregated.

## Uninterruptible Power Supplies and Standby Batteries

Batteries or UPS will be provided to support:-

- Engineering hub cabinets, 2KVA, 10 minute autonomy
- FM office engineering hub, to suit load, 1 hour autonomy
- BMS front end, to suit load, 1 hour autonomy
- BMS outstations, to suit load, 1 hour autonomy
- Generator/HV network control and monitoring system
- Central UPS for Server Rooms, 15 minutes autonomy
- Central UPS for IPS units, to suit load, 15 minutes autonomy, except for theatres 60 minutes
- ICT nodes, 15 minutes, rack mounted
- Emergency lighting luminaires will incorporate self contained battery packs
- Battery back up will be integral to security, access control, fire alarms and nurse call (central data logger)

Central UPS will be configured as follows:-

For a given load, each UPS assembly will comprise 2 No. UPS, each capable of supporting the full load.

Each UPS will have a battery of 50% of the required autonomy so that when both UPS are healthy the full load can be maintained for 100% of the required autonomy. If one UPS is not operational the other UPS will support the full load for 50% of the required autonomy.

UPS will comply with BS EN 62040-3.

The generated harmonic distortion at the point of incoming supply will be in accordance with G5/4-1.

Central UPS batteries will have a ten year design life.

Maximum interruption times to the primary supply will be as scheduled in Appendix 1 of SHTM06-01.

A49342285
GH56265_D_4_NP_V4.indb 54 10/9/09 01:41:41

Brookfield

Only fixed medical lighting and escape lighting will be supported by standby batteries. This will include operating theatre lamps and fixed examination lamps in clinical risk category 3, 4 and 5 areas. General lighting will not be battery supported. Power to general lighting will be restored within the times required by Appendix 1 of SHTM06-01.

## Risk Categories

The electrical services will be designed in accordance with SHTM06-01 so that the electrical infrastructure will adequately protect the end user from power failures.

Acceptable risk options will be assessed in accordance with section 4 of SHTM06-01.

To clarify conflicting statements in the ITPD, bedrooms will be classed as Clinical Risk Category 4, and will fall into Group 1 as defined by IEE Guidance Note 7, Chapter 10.

## Final Circuits

Final circuits within departments will generally be interleaved such that each room has a minimum of one lighting and one small power circuit from both the A side and B side.

Final circuits will generally be LSF insulated copper conductors run in concealed steel conduit and trunking.

Modular wiring systems will be used in non clinical areas.

## Earthing and Bonding

The whole of the electrical installation within the Hospital and all equipment connected thereto will be effectively earthed in accordance with BS 7671.

A high conductivity copper earth bar will be mounted in each main switchroom.

The main earthing conductor and main equipotential bonding conductors will terminate at this bar through removable test links.

A main earthing conductor of nominally half the csa of the phase conductor, and a network of earth electrodes to achieve a resistance to earth of less then one ohm will be provided.

Individual XLPE green/yellow single core main equipotential bonding conductors will be provided at all required locations, in accordance with the IEE Wiring Regulations.

The ceiling grid in each room will be cross bonded to the earthing network. In large rooms the ceiling will be bonded in multiple locations, once per structural grid bay.

## Neutral to Earth Point

The neutral to earth point will be derived at the substation. A removable test link (by tool) will be provided between the neutral and earth bars within the LV switch panel to allow for this connection to be made at the LV switch panel, such that the “Ref” protection is incorporated.

## Circuit Protective Conductors

A separate circuit protective conductor will be installed together with the phase and neutral wiring for all circuits including sub mains cabling.

All installations covered by this contract including switchboards, distribution boards, trunking, tray, ladder, basket tray, conduits, circuit protective conductors, cable armour will effectively form a continuous bonded earthing system.

The earth terminal of all socket outlets will be solidly earthed to the system.

## Main Equipotential Bonding Conductors

A main equipotential bonding conductor will be installed from the main earthing terminal to the main pipework at boilers and chillers and to the main ductwork at air handling units. Local earth bars may be installed in the plantrooms to reduce the cost of this installation. Plantroom earth bars will be connected to the main earthing terminal by means of main equipotential bonding conductors.

Main Equipotential Bonding Conductors will be half the cross sectional area of the main earthing conductor, except that they will be a maximum of 25 mm2 in area.

## Conduits and Conduit Fixings

Metal conduits crossing expansion joints will be fitted with proprietary couplings with an earthing clip at each side of the coupling, connected by a 4 mm2 copper wire.

## Switch and Riser Cupboards

In each riser cupboard at each floor, there will be an earth bar linked to the main earth terminal of the respective main low voltage panel. This will be used to connect all supplementary and equipotential earthing conductors for the area of the building served by that riser.

Brookfield

## Server and Hub Rooms

A functional and general earth connection will be provided in each server and hub room, terminated at a wall mounted busbar arrangement.

## Imaging Equipment Earthing

Earthing in diagnostic imaging and radiotherapy rooms / suites will be compliant with the MEIGaN document published by MHRA.

A reference earth bar ERB will be installed in each diagnostic imaging and radiotherapy room / suite. The ERB will comply with MEIGaN guidance.

Each ERB will be bonded back to the earth bar in the local electrical riser by means of a protective conductor of equal cross section as the phase conductor of the mains supply to the room. The SWA of the supply cable will not be used as an earth path and will be terminated at the supply end only. The ERB will be close to the mains supply isolator in an accessible position. The ERB will be installed in an enclosure with a cover that requires a tool to open it and will be marked ‘Earth reference Bar’.

The cross section of the ERB will be equal to that of the mains supply phase conductor to the room.

Each bonding conductor will be separately terminated at the ERB by means of crimped connections.

All conductive accessible equipment will be bonded to the ERB.

All non powered conductive equipment will also be bonded to the ERB.

The earth impedance between any socket outlet earth and the ERB will not exceed 0.1 ohms.

## High Integrity Earthing

All power circuits and accessories will be provided with high integrity earthing in accordance with Section 607 of BS 7671.

## Earthing of final Circuits from Isolated Power Supplies

The outgoing circuits from Isolated Power Supplies will be earth-free type IT supplies. A safety-isolating transformer will provide isolation from the incoming supply. The socket outlets in these areas will be of the standard 13 A BS 1363 type. The earth terminals of these will be connected via equipotential bonding conductors to an earth bar in the isolated power supply unit.

This will be earthed via the CPC of the Isolated Power Supply incoming sub-main cable, and will act as an equipotential earth only, as far as the final circuits are concerned. These final circuit equipotential bonding conductors will be sized as indicated on the distribution board schedules. Refer to Figure 10.1B, Chapter 10, Guidance Note GN7 of BS 7671 for typical arrangement of Isolated Power Supply earthing.

The earthing and bonding in the operating theatres will comply with Drawing D of the Annex to MEIGaN – Healthcare Interpretation of IEE Guidance Note 7 (Chapter 10). The required earth reference bars will be located adjacent each Isolated Power Supply unit.

# Electric Lighting and Fittings

## Description

General lighting will be provided throughout the Hospital.

All lighting will be 100% supported by the emergency generator system.

## Design Criteria and Standards

The lighting system will comply with CIBSE Code for Lighting, CIBSE Lighting Guide 2 ‘Hospitals and Health Care Buildings’, CIBSE Lighting Guide 3 ‘The visual environment for display screen use’, CIBSE Lighting Guide 7 ‘Lighting for offices’, HTM2007, BS4533, BSEN 12464-1: 2002, BSEN 60598-2-25, SHTM06-01, SHTM2011.

Maintained illuminance will take into account “normal” cleaning of luminaires and surfaces and depreciation of lamp output. “Normal” being defined for lighting design purposes as:

a. Lamp life

b. Annual luminaire cleaning

c. Bi-annual room surfaces clean

d. Spot lamp replacement

The initial illuminance will therefore be higher than the maintained illuminance. The maintained illuminance will be the average illuminance over the reference surface at the time maintenance has to be carried out by replacing lamps and/or cleaning the equipment and room surfaces. The reference surface will be the working plane at desktop, bench top, floor, bed, couch or other position, as stated in CIBSE Lighting Guide LG2.

## Luminaries

### Preliminary Luminaire Schedule

The luminaires will be of the following type, refer also to the luminaire schedule, 5.18

| Area | Type of luminaire | Lamp type |
|---|---|---|
| Staff bases, receptions | Circular downlighter, LG3 / LG7 compliant. | Compact fluorescent, LED, HID |
| Bathrooms, shower rooms and changing rooms | Circular downlighter with sealed IP44 visor | Compact fluorescent |
| Bed rooms | Wall mounted at bed head | T5 lamps |
| Corridors, wait areas | Recessed modular fitting with prismatic diffuser or wall mounted prismatic | T5 lamps |
| Offices, admin areas, interview rooms, meeting rooms, seminar rooms | Recessed modular direct/indirect luminaire. LG3 / LG7 compliant | T5 lamps |
| Treatment room, dirty utility, clean utility, examination room, pantry and kitchens | Recessed modular fitting with prismatic diffuser. Sealed IP44 | T5 lamps |
| Stairwells | Circular surface luminaires | Compact fluorescent |
| Plant areas and stores | Enclosed with high impact protection | T5 lamps |
| Atrium and entrance | Decorative | Various including LED |
| Theatres | Recessed modular fitting with prismatic diffuser. Sealed IP54 | T5 lamps |

Luminaires will be supplied complete with lamps and diffusers or louvres.

A49342285

GH56265_D_4_NP_V4.indb 57 10/9/09 01:41:42

# Brookfield

## Diffusers
All prismatic diffusers will be of the TP(a) type.

## Installation Requirements
Flush mounted modular luminaires, which are to be installed in exposed grid suspended ceilings, will generally be supported by the ceiling grid.

Luminaires to be installed recessed in suspended non-modular plasterboard or similar ceilings will generally be supported by the ceiling, with suitable fixings.

Surface mounted luminaires mounted on suspended ceilings will be supported from the ceiling grid using methods appropriate for the type of ceiling and the particular luminaire.

Luminaires which are smaller than the ceiling grid module will be mounted on the ceiling tiles using a suitable non-combustible backing board.

## Lamps
Lamps will be as specified in the Preliminary Luminaire Schedule.

Linear fluorescent lamps will generally be high frequency T5 type.

In general, all fluorescent lamps will have a colour temperature of 4000 K.

Generally, all lamps will have a colour rendering index Ra ≥ 80.

Lamps in specific areas, as defined by BSEN 12464-1 and CIBSE Code for Lighting will be provided in the lamps with a colour rendering index Ra ≥ 90.

## Control Gear
### General
All fluorescent luminaires will be fitted with high frequency control gear.

## Dimming
Fluorescent luminaires, which are to be dimmed, will have control gear suitable for dimming.

## Special Luminaries and Areas
### IP Rated Luminaires
In certain areas such as operating theatres, showers and any luminaires exposed to external conditions, IP rated luminaires will be provided.

Rooms with plasterboard ceilings for infection control purposes will have luminaires of a minimum IP44 rating.

## Illuminated Warning Signs
Illuminated warning signs will be provided where required by the Room Data Sheets.

Theatre Operating Table Luminaires

Theatre operating table luminaires will be provided.

The mountings will be supported off the structural soffit, which is reinforced concrete.

Operating Theatre General Lighting

The lighting within operating theatres will be controlled via two-way light switches located at the door and within the surgeon's panel.

## Ward Luminaires
Ward bed areas will be provided with a horizontal bed head trunking system, which will provide varying levels of lighting to allow patient examination, general lighting and reading lighting.

Night lighting will be provided in wards.

Recessed fluorescent downlight. To be a large luminous source in ceiling and to have a degree of prismatic diffuser to minimise glare to patient and other users. A large light source luminaire will generate a wider photometric field helping create a more evenly lit space.

## Plantroom lighting
Linear fluorescent luminaires with impact resistant covers will be provided in all plantroom areas.

Final mounting height and layout will suit final plantroom layouts.

Where plant luminaires might be exposed to external conditions, IP rated fittings will be used.

## Corridor lighting
BSEN 12464-1:2002 implies that corridors should be lit to 200 lux during the day and 50 lux at night.  This is taken to mean that night lighting will be provided to corridors in bedded areas only.

Luminaires to be a recessed or semi-recessed linear fluorescent lay-in luminaire with a shallow projection beyond line of ceiling this will throw light across the ceiling surface increase the perceived brightness of the corridor. Luminaire to be fully sealed with internal reflector and external prismatic diffuser.

Brookfield

## Accessory Plate Finishes

Accessory plates will have the following finishes:

- Occupied spaces, flush white plastic
- Unoccupied spaces, metal clad – surface mounted.

All plate types will be from a single proprietary manufacturer.

## Lighting Controls

A mixture of automatic ‘absence’ and ‘presence’ detection will be provided.

Presence detection: detector switches lighting on and off.

Extent of provision: intermittently occupied areas such as WCs, en suites, corridors, ward kitchens, stores, plant rooms, services risers, hospital streets, bathrooms etc.

Absence detection: lights manually switched on, detector extinguishes lighting in unoccupied room.

Extent of provision: offices, consulting rooms etc.

In addition, in rooms benefiting from daylight, luminaires near windows will be dimmable, regulated by the amount of daylight available.

Dimmable lighting has not been included where specifically required by the ADB sheets.

Automatic control of lighting in rooms which have plenty of natural light will be regulated by means of a photocell within the space to ensure the required LUX is achieved by the combination of ambient and artificial light.

## Treatment Rooms

It is not proposed to precisely follow the guidance given in ITPD Volume 2 Clause 8.3.3.1.11. Treatment rooms will be provided with luminaires, half of which will be fed from the ‘A side’ and half from the ‘B side’ of the distribution network.

# Specification for Gas Installations

## General

The gas supply and distribution systems will comply with the relevant clauses of the NHS Model Engineering Specification Part C01, C82, addendums to Part C, BS6644, IGE Guidance, Clean Air Act, and descriptions and requirements set out below.

## Gas Installations

Medium pressure gas services will be distributed around the site, as described in Section 4.54 and introduced into the main hospital building at low pressure (21mBar) via pressure governing sets.

From the governing sets natural gas  will be distributed around the hospital to serve catering areas, orthodontic laboratories, and ADL kitchens, etc.

Individual supply branches will be complete with a manual isolating valve, gas solenoid valve and non-return valve as required.

Catering areas will have their gas supply interlocked with the mechanical ventilation system.

All gas pipework will be routed through ventilated service routes to prevent the build up of gas in the event of any leak.

Where appliances are not provided with integral flame failure devices, pressure proving provision will be provided.

## 1. Escalator Technical Specification Main Hospital Building

| | |
|---|---|
| TYPE | Three General Purpose Indoor Application Escalators |
| VERTICAL RISE | Approx 6.0. metres |
| STEP SPEED | 0.5 m/s |
| STEP WIDTH | 1000 mm |
| HORIZONTAL STEP RUN | Type M: Three flat steps at top and bottom |
| ANGLE OF INCLINE | 30 ° |
| TRANSPORT CAPACITY | 9000 Passengers per Hour |
| ARRANGEMENT | Parallel Arrangement |
| DELIVERY SECTIONS | single piece units with balustrades dismantled in factory for assembly on site.<br>Requires 2.8 m clear access route |
| ELECTRICAL INLET | In top section |
| POWER SUPPLY | 400v 3 phase 50 Hz + Neutral |
| MAINTENANCE PANEL | In machine compartment with 4 digit LED display. |
| SAFETY FEATURES | Handrail entry brushes with safety contacts<br>Step chain contacts<br>Comb plate contacts<br>Thermal overload and PTC resistor in motor<br>Anti-reversal device<br>Speed monitor<br>Mechanical blocking device<br>Handrail monitor<br>Drive unit cover<br>Step presence monitor<br>Phase protection<br>Skirt brushes – single row, black<br>Guard plates<br>Counter track<br>Motor rated at IP 55 |
| OPERATING PANELS | Switch panels at both ends, incorporated into polycarbonate handrail entry profile, with:<br>Up / Down / Off key switch<br>Red, emergency stop button |

# Brookfield

| | |
|---|---|
| BALUSTRADE: | Slim Profile with stainless steel finish:<br>10 mm clear glass panels – Optical Joints<br>1000 mm high over the horizontal |
| SKIRTING: | 2 mm Stainless Steel Linished 240 Grain with anti friction coating. |
| DECKING | Stainless Steel Linished 240 Grain. |
| COVER PLATES | Compartment covers in ribbed aluminium. |
| TRUSS CLADDING: | Stainless Steel Linished 240 Grain. with Optical joints on exposed sides.<br>This is in addition to a primed, full length and width oil collection tray. |
| STEPS: | Painted grey - with linished tread. |
| HANDRAIL: | Black vulcanized rubber. |
| LIGHTING | Green Fluorescent under step gap lighting. |
| ADDITIONAL FEATURES | Star Delta starting<br>Star Delta switching for ECO mode in light traffic<br>Step sound deadening<br>Isolation pads at both ends<br>Working hour meter<br>4 voltage free contacts<br>Down draft lubrication, complete with oil drain channels.<br>Hand held inspection lamp<br>Fire alarm shutdown – signal and wiring by others. |
| SAFETY BARRIERS | Glass anti-climbing barriers at bottom end of escalator, outside and between balustrades as needed.<br>Wedging or deflection barriers as needed.<br>One set of yellow maintenance barriers for both ends. |
| MAINTENANCE PERIOD | 12 months from completion of our works. |
| MAINTENANCE MANUAL | 1 Master copy of our standard, bound A4 manual |
| Staff Instruction | To Employer’s engineer in emergency procedures only |
| WARNING NOTICES | Self adhesive pictographic warning notices fitted to one inner decking at top and bottom of each escalator<br>Definitions : From BS EN 115 : 1995, Clause 15.1.2.1<br>Colour: Blue on a white background with red stripes |
| Notices state pictorially: | a) Small children must be held firmly<br>b) Dogs must be carried<br>c1) Stand facing direction of travel, feet away from sides.<br>c2) Hold the handrail |

Brookfield

## 2.1 General Escalator Information

| | |
|---|---|
| TRUSS | The truss is of welded lattice construction. A sheet steel soffit constitutes an oil-tight lower enclosure of the body. The complete truss and any sheet steel cladding is protected with a coating of rust inhibiting paint. To prevent transmission of body noise to the building structure the entire escalator is borne by the supporting angles at the two extreme truss ends on special rubber pad plates. At the thresholds the horizontal truss sections are covered by ribbed cover tread plates. Truss primer is Grey as standard.<br>The step track assemblies, including main shaft and tension carriage, separately built as self-contained units are independent of possible inaccuracies in the welded truss work. This makes for smooth step performance.<br>Unless otherwise stated, sprinkler pipework is not included in our standard truss. |
| DRIVE UNIT | The drive unit is positioned in the upper escalator head where it is easily accessible for maintenance work.<br>The unit consists of a bed frame, gear, motor and brake and can be readily removed and replaced as a unit. Transmission from the gear shaft to the escalator main shaft is by means of a quiet running duplex roller chain. |
| MOTOR | 6 pole unit rated at IP 55. |
| BRAKE | The service band brake which operates on the gear shaft is designed to ensure that proportional braking moments are attained i.e. the brake moment in the up direction is 1/3 of that in the down direction. This provides maximum braking commensurate with passenger safety, that is, without the risk of excessive braking in the up direction, with its inherent accident hazard. |
| STEP CHAINS | The chains, which have been specially designed for escalator application, have integral step rollers located inside the chain links, run on ball bearings and have tyres of plastic material. |
| CHAIN TENSION DEVICE | The chain tension device and chain tension monitor are located in the lower reversing station and maintains the two step chains under the correct tension. Easy access facilitates easy servicing and adjustment. |
| STEPS | Steps are of die cast aluminium alloy construction and the treads are grooved parallel to the direction of travel. The risers of escalator steps are cleated and meshed with the grooves of adjacent steps.<br>It should be noted that natural aluminium has a natural variation in appearance but is easy to clean and does not scratch or damage in the same way as paint.<br>Steps can easily be removed for maintenance and replacement.<br>Escalator steps are provided with renewable nylon lateral guides, which ensure that the step / skirting clearance can be maintained at a minimum distance. |
| COMB PLATES | The anti-slip comb plates are provided with individual comb segments, which are easily replaceable, and have teeth that mesh with the groove of the step treads. The whole comb plate is moveable and should any foreign object be carried into the combs by the steps the comb plate will be displaced, activating safety contacts and switching off the unit immediately. |

**Brookfield**

| | |
|---|---|
| HANDRAILS | The handrails are of special composition, having a high quality pre-stretched multiply carcass. The handrails are guided throughout their travel length and are partly held in guide rollers.<br>The handrails enter the newel foot-plates through self centering, closely fitting steel plates which, by virtue of the small gap, afford utmost safety against the entry of foreign objects. Handrail lead-in safety brushes / flaps are also provided.<br>The patented handrail drive does not require handrail tensioning. |
| CONTROL | The complete control is contained in enclosed drip-proof steel cabinets in the upper and lower machinery compartments.<br>To facilitate access these cabinets can be withdrawn from the machinery compartments.<br>Maintenance control boards are provided in the two truss heads. These controls allow push button controls to operate while the ordinary controls are inoperable<br>The key switches, by means of which the escalator is turned on in either upward or downward direction, and the stop buttons, are located at both entrances on the inner cover of the balustrade base |

GH56265_D_4_NP_V4.indb 112 10/9/09 01:41:57

# Sprinkler Installations

## Introduction

The automatic sprinkler Installation for the hospital will be design and installed in accordance with BS EN 12845, LPC standards, NHS Scotland Firecode and, due to the height of the building, comply with the high system requirements layout in BS EN 12845:2004 Annex E. The system will protect the building from serious fire damage.

The water supply will comprise of two multistage electric pump sets rated 2700 l/m drawing water from split capacity 160ms tank.

The design of the system would be based on the current BS EN 12845 / L.P.C. standards using the following classification:

| Classification | Area | Density | Area of Operation |
|---|---|---|---|
| Ordinary Hazard Group III | All Areas | 5mm/min | 216m² |

Sprinkler protection will be installed at ceiling level throughout the protected areas from Level -1 to Level 12 in the adult hospital; Level -1 to Level 4 in the children hospital, with the pipe work concealed in the ceiling void. Cold rooms will be fitted with dry pendent heads.

This system will be controlled by five wet alarm valve for the all buildings with zone valves on each floor. Each en suite of the ward rooms will not be protected due to the size and the nature of the room. All staircases will be fitted with a cut-off sprinkler head at each access door to a sprinkler protected

All sprinkler heads will be the fast response type and tested and approved to L.P.C. Standards. The operating temperature of the sprinkler heads at roof level will generally be 68°C.  In areas of high ambient temperatures, sprinkler heads with a higher temperature will be used.

A spares cabinet complete with 25 No. assorted spare sprinkler heads and sprinkler spanner will be mounted on the wall beside the Alarm Valve. A location plate with the words “Sprinkler Stop Valve Inside” would be located on the outside wall of the alarm valve area.

## Wet pipe installation control valves

The Sprinkler System will be controlled by five wet pipe control valves tested and approved to L.P.C. standards each comprising a 150mm alarm valve with flanged connections, a 150mm butterfly valve, two 100mm diameter dial pressure gauges and cocks, an alarm trim, a drain valve and butterfly valve and flow switch.

## Alarms

All the monitored sprinkler equipment such as pumps valves and flow switches will be wired to an addressable panel. A flow alarm switch will be provided on the alarm valve riser to give remote alarm indication.

A water motor alarm gong will be supplied with the alarm valve. All the stop valves will be completed with a tamper switch.

Each zone valve and flow switch will be connected to an I/O box wired to the addressable panel and fire detection system.

## Pipwork and fittings

The sprinkler pipework will be hydraulically sized in accordance with L.P.C. Standards.

The pipework for the sprinkler installations will be black coated steel medium weight to B.S. 1387 or BS EN 10255.

Valves will be black steel or galvanised heavyweight, depending on the requirements of the local water authority.

The fittings would be malleable iron, cast iron or welded.

From 65 mm diameter and above grooved coupling will be used.

The necessary pipe support brackets for hanging the pipework are included and will comply with the BS EN 12485 requirements for spacing and size of the components.

## Pumphouse equipment

Two L.P.C. approved multistage electric driven pumpsets rated 2700 l/min and one jockey pump to the maintain system pressure.

All pipework, valves, fittings, pressure switches and controls required to operate the pumps.

## Sprinkler water storage tank

Each of the two sections of the GRP tank will be complete with fixed roof suction, drain and overflow connection, ball float valve, immersion heater and valved insulated infill riser, contents gauge and ladders.

## Insulation

All sprinkler pipework exposed to the frost will be insulated or trace heated to prevent freezing.

A49342285

GH56265_D_4_NP_V4.indb 113 10/9/09 01:41:57

# Brookfield

## Zone valve arrangements

The installation will be subdivided into zones in accordance with Annex D and Annex F of the BS EN12485. Each zone valve arrangement will comply with the Life Safety requirements and each zone will not exceeded 2400 m2. The drain on each branch will be connected to a 50mm drain collector.

Each zone valve arrangement will comprise a zone valve, a flow switch and a test and drain valve complete with a strap and padlock.

## Drain valve

All drain valves will be fitted at each lowest point of the sprinkler pipe work. These valves will be equipped with a padlock and a Leather straps.

# Fire-Fighting Installations

## Fire Detection and Alarm System

The fire detection and alarm system will be installed by an approved installer to BRE Certification (incorporating LPCB) and adheres to BS5839-1 2002. Fire detection and Alarm systems for buildings -

- Part 1: Code of practice for design, installation, commissioning and maintenance.

## Design Standard

The system will be designed as Category L1 as defined by BS5839-1 and the requirements and guidance contained in SHTM82.

## Control and Monitoring Equipment

The system comprises multiple Fire panels located throughout the new build hospital buildings, networked together by way of a copper network infrastructure. The system can be expanded to accommodate up to 200 control and indicating panels. LCD Repeat Indicators are distributed throughout the hospital to provide local Fire, Fault and Disablement indication as required.

The system will be analogue in operation, with each sensor device providing signal levels relative to the current operating environment. These analogue samples will be transmitted to the control panel in a digital format to reduce possible corruption.

## Control & Indicating Panel - Standards: EN54 parts 2 & 4

The Fire alarm control panel will be multi-tasking in operation with each loop utilising microcomputer technology to communicate with the main panel controller processor. The control panel will be modular in type to allow for future additions up to a maximum of 6 detection loops. The control panel shall be provided with a full QWERTY keyboard and integral printer.

All internal cards are fully monitored for fault conditions and any relevant information will be displayed on the LCD display.

The display is a 40 character by 8-line backlit liquid crystal display with white characters on a blue background. Upon any key press, the screen will be backlit.

The Control and Indicating Equipment provides the following visual indications for each of the following conditions:

- Power on
- Sounder fault
- Common fire
- Common fault
- System fault
- Disablement

The panel will accept the 230V AC supply @ 50Hz, and has an integral battery and charger. The battery provided will be capable of maintaining a standby period of 24 hours (minimum) with a further 30 minutes, under full alarm and control load conditions.

The control and indicator panel and power supply are housed within the same enclosure with a glazed lockable door and is located adjacent to the entrance door to the building. Within the accommodation blocks, the batteries will be remotely located within the store adjacent to the lift.

## LCD Repeat Panel

Each repeat panel displays any Fire, Fault and Disablement information on a 2 X 40 character LCD. The repeat panels are connected to the control panel via an RS485 Communications Port

## Administration P.C.

A desktop P.C. complete with Pentium processor, 128Mb Ram, 40Gb hard drive, 17” SVGA monitor, Windows XP and fully loaded with software will be installed locally to provide full administration facilities for the Fire system.

## Detection Devices and Sounders

All field devices to be connected to the control panel shall be wired directly via 2 core loop circuits. Loop cable types to be selected in accordance with manufacturer’s recommendations to ensure optimum performance. All detection & alarm devices shall incorporate an internal short circuit isolation device as standard to maintain maximum system integrity in the event of a cable or equipment fault.

All analogue sensors and bases will be provided by the manufacturer of the control equipment.

## Optical Sensor - Standards: BS/EN 54 Part 7

Optical sensing is carried out by means of an Infra-red LED transmitting a pulse of light across an obtuse angled chamber. Each device possesses a minimum of 6 possible selecting sensing states of operation.

## Heat Sensor - Standards: BS/EN 54 Part 5 & 8

This will be a dedicated heat only sensor, which may be configured to provide 6 different states of operation, to provide fixed temperature, rate of rise or high temperature sensing.

A49342285

GH56265_D_4_NP_V4.indb 115 10/9/09 01:41:58

# Brookfield

## Optical Sensor/ Sounder – Standards: BS/EN 54 Part 3 & 7

Optical sensing is carried out by means of an Infra-red LED transmitting a pulse of light across an obtuse angled chamber. Each device possesses a minimum of 6 possible selecting sensing states of operation. A piezo disk within the device outputs the sound via a horn which is constructed within the chamber moulding

## Heat Sensor / Sounder - Standards: BS/EN 54 Part 3, 5 & 8

This will be a dedicated heat only sensor, which may be configured to provide 6 different states of operation, to provide fixed temperature, rate of rise or high temperature sensing. A piezo disk within the device outputs the sound via a horn which is constructed within the chamber moulding

## Sounder – Standards BS EN54 Part 3

The sounder is designed to produce a sound output of 103dB (A) + 2dB (A) at 1m.

## Manual Call Points

Manual Call Points are available for either semi-flush or surface fixing. Resettable units are utilised, allowing for system resetting without the use of tools. All inscriptions text and marks are screened onto the glass. The device can be tested functionally with a special test key (supplied as standard) without the need to remove the front cover.

## 4 Channel Interface Unit

The interface unit is capable of accepting 4 input signals, 4 output signals or any combination of either. Dependent upon the specific application, input signals may be interpreted by the system as any of the following:

- Fire signal input
- Fault signal input
- Supervisory signal input

All outputs on the interface can be individually programmed for set events.

1 Channel Interface Unit

The interface unit is capable of accepting 1 input signal or 1 output signal.

Dependent upon the specific application, input signals may be interpreted by the system as any of the following:

- Fire signal input
- Fault signal input
- Supervisory signal input

The output on the interface can be programmed for set events.

## Aspirating Detection System - LPCB approved

The aspirating system operates by continually drawing air into the pipe network via a high efficiency aspirator. The air is then filtered prior to being passed through a calibrated detection chamber. If smoke is present in sufficient quantities an alarm is generated.

## Extinguishant Control System – Standards: EN52-2, 4 & BS5839 Pt 1 2002

A single area 2 zone control panel with double knock confirmation facility will be installed to each protected area. This panel when a confirmed alarm is identified will initiate the release of the extinguishing agent to suppress the fire potential.

## General Installation

The system shall be installed using industry standard “Enhanced” fire cable.

## Fire Damper / Smoke Damper Controls

The Fire / smoke dampers are to wired and controlled by a purpose made fully addressable damper control system supplied and designed by the smoke damper supplier. See schematic arrangement overleaf.

The concept proposal for NSGH is to have 6 main area panels, all tied back to a master control interface.

The area panels will be located as follows:

- Four panels in the Adult Areas
- One panel in the Children’s Area
- One panel in the Energy Centre

The damper control system shall operate via a true bi-direction communication data loop signal from the main panels to the local damper decoder. Allowing the system to monitor and control all dampers on the system even when a loop break may occur.

The control system and equipment shall be in accordance with the relevant sections of EN 54-2/4 BS 5588 (BS 9999), BS 5839 and EMC regulations (EN 80204) Due consideration shall be given to the emerging European Draft Standards (BS EN12101) for smoke damper control systems and the system shall comply with the expected requirements. The system shall be augmented where necessary should the relevant standards change or new standards come into force prior to installation.

A49342285
GH56265_D_4_NP_V4.indb 116 10/9/09 01:41:58

Brookfield

## System Configuration

The system shall comprise of six panels (one in each area) monitoring and controlling of all the dampers connected to the system will be available at all the panels on the system.

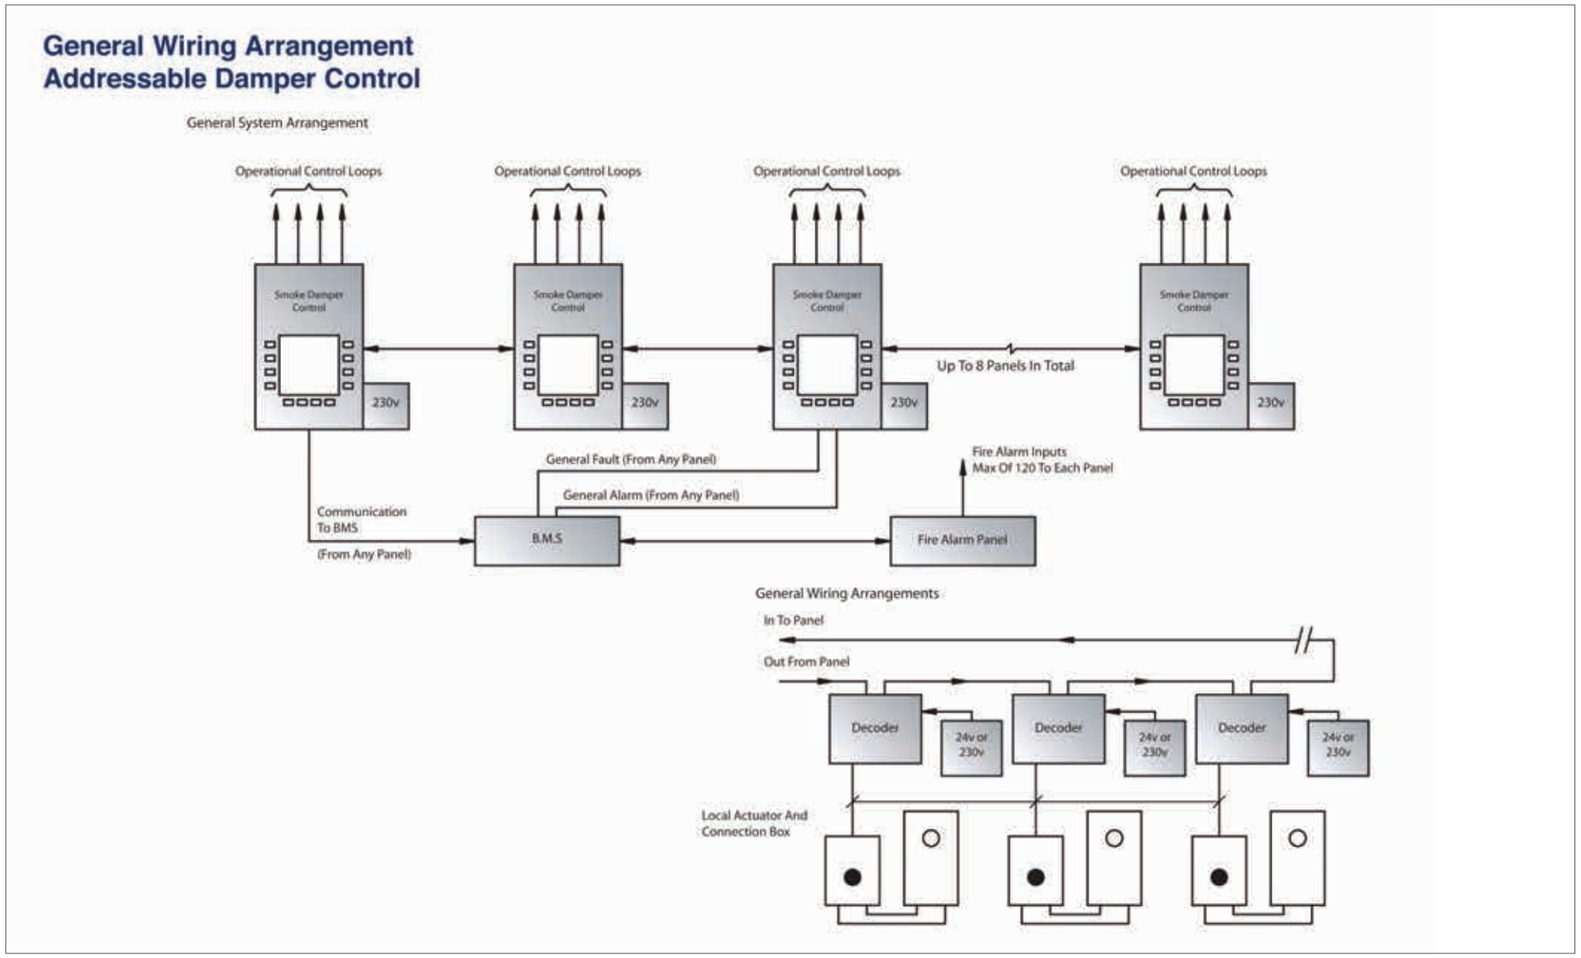
Fire alarm inputs and BMS monitoring shall be available from any of the panels connected to the system.

BMS monitoring will be by one or all of the following means:

- Full damper monitoring  via a communication link
- Hard wired general fault
- Hard wired general alarm

A number of hard wired Fire alarm connections will be required. The numbers of fire zones are yet to be determined but the damper control system must be flexible to provide all zones necessary.

The damper control system shall be programmed to operate in accordance with the cause and effect strategy for the building.



A49342285

GH56265_D_4_NP_V4.indb 117

10/9/09 01:41:59

# Brookfield

## Damper Control Panels

The damper system control panels shall be constructed from mild steel with polyester power coated finish. Colour to be determined before manufacture.

The damper system control panels shall have integral LCD display on the panel facia. The panels shall display the system operating status and report faults on a continuous monitoring basis. The condition of the communication network shall also be monitored with the location of any break in the control loop displayed and the loss of communication with any damper local decoder identified.

If in the event of a loss of communication for more than 60 seconds , the local damper decoder will default to its pre programmed safe status. The loss of communication shall be displayed at each of the main panels including where the break is relative to the decoder.

Damper limit switches shall be constantly monitored. Should a damper switch not be made, a fault shall be raised at the panels, were the associated damper or dampers shall be identified and identifying which switch –open or closed is not made.

The damper control system shall provide data logging for the last 500 events that have occurred with the facility to down load the data onto a PC.

Each main panel shall have the facility to manually operate the dampers either collectively or individually and have an additional built-in general firemen's override facility to carry out the following instructions

- open all dampers
- close all dampers
- close all supply and open all extract

## Control and Input / output Modules

The damper control system shall include a programmable Integrated Microprocessor per panel to manage the required inputs / outputs on the system. The number of input / outputs will be determined on how many external overrides (both automatic and manual) are required to suit the requirements of the cause and effect strategy.

## Damper Decoders

Damper decoders shall include a test switch to facilitate local damper testing and visual indication of the following

- damper open
- damper closed
- power on
- communication

The decoders provided shall be of the 'plug & play' type, and be factory fitted with pre wired power cable for local 230v connection, 2x compression glands for the communication loop cables and a 7 pin socket for quick fault free 'plug & play' connection to its associated damper.

## Replacement of Decoders (Plug & Play)

In the unlikely event of a faulty decoder on the system; the system will report the exact faulty decoder together with its loop position. Replacement of a faulty decoder will be by means of an easy to use 'plug and play' system.

The faulty decoder PCB shall be easily be replaced by unplugging it and a replacement fitted in its place. Once replaced the system shall have the automatic capability to detect the replacement PCB / Decoder and auto reset to a fault free state without the need for a manufacturers service visit.

## Communication Wiring

Each panel will have 4 control loops which the dampers can be controlled on. Each loop will be wired in 2c 1.5mm2 FP 200 gold or equal & approved. Cable to be capable of operating RS 485 control signal.

## Gaseous Extinguishing System

### Control panel

A 2 zone control panel will be located adjacent to the main entrance/exit to the protected space. The panel will be of rigid construction and will be capable of being either surface mounted or semi recessed as indicated, which a semi-recessed collar shall be provided of identical colour to provide a neat appearance.

The panel fascias will be equipped with light emitting diodes to indicate fire, fault and operational status together with push action switches to control functions. The operation of the switches shall be accessed via a key operated security key switch. The following components will be provided on the control panel facia:

A49342285
GH56265_D_4_NP_V4.indb 118 10/9/09 01:42:00

Brookfield

- Silence alarm switch
- Test evacuate alarm switch
- Alarm silenced lamp
- Isolate remote signal – switch and lamp
- System general fault – lamp and buzzer
- Power on lamp
- Lamp test switch
- Extinguishant system automatic mode – lamp
- Extinguishant system manual mode – lamp
- Manual/Automatic mode – push switch
- Isolate extingushant
- Hold extinguishant released – switch and lamp
- Manual release unit

A sealed lead acid battery will be provided within the control panel to provide 24 hours of panel operation and a _ hour under alarm conditions

## Smoke detectors

Ionisation and optical type smoke detectors will be connected together within each space to provide two zones of protection. Both zones will additionally connect to detectors in both ceiling and floor voids where applicable.

## Remote status indication panels

Remote status indication panels will be provided.

Remote panels will display lamps indicating system manual, automatic or discharged conditions.

## Manual release units

Manual release units castings will be coloured yellow.

## Sounders

First stage alarm bells will be coloured red. Second stage alarm will be a combined electronic sounder/strobe unit.

## Remote lamp unit

Remote lamp units will be provided to give indication of an activated smoke detector within a ceiling or floor void.

## Air conditioning shut down relay

An air conditional shut down relay will be provided to shut down air conditioning on receipt of a first stage fire signal.

## Power distribution unit shut down relay

A PDU shut down relay will be provided to shut down the PDU on receipt of a second stage fire signal.

## House link relay

A house link relay will be provided to interface between extinguishing system and the house fire alarm system.

## Electrical installation

All wiring associated with the system will be FP200, cable sheath shall be red.

## Pipework installation

All fittings will be of the same size as the line in which they are installed.

The laying out of fittings at branch connections or other fixed points of the system will be such as to allow provision for movement without causing undue stress on the pipework. Pipework will be arranged to reduce the strain due to expansion on all equipment.

All pipework shall be cleaned all completed pipework fittings, support steelwork and brackets.

## Warning signs

Entrance warning signs will be provided and displayed at each entrance to the protected area.

Manual release warning signs will be provided next to each extinguishant release unit.

A49342285

GH56265_D_4_NP_V4.indb 119 10/9/09 01:42:01

Brookfield

## Cylinders

Cylinders will be floor mounted and securely fastened back into a purpose made racking and braced installation.

Each cylinder will be provided with a certificate provided by the company who charge the vessel with gas mixture.

Each cylinder will be fitted with a dial faced type pressure gauge.

Each of the cylinders will be interconnected with a galvanised steel manifold.

## Wet Riser Installation

### General

A wet risers system will be supplied in the adult and children hospital with a landing valve at each floor and each staircase. The water supply for the system will comprise of one booster electric pump sets each rated 1500 l/m @ 13.5 bar drawing water from two 68 m_ split capacity reservoir.

### Location

4 No. Wet Risers will be installed in the Adult Hospital and 2 No. children Hospital.

### Equipment

A landing valve completed with a pressure reducing valve will be provided at each floor level where personnel can connect and fill hose lines in relative safety before entering the fire compartment.

Each landing valve will be sited in the stairway enclosure and will be protected and installed within a box accordance with BS 5041-2.

The landing valves will be installed with its lowest point 750 mm above floor level.

An automatic air vent will be fitted at the top of each riser, and one drain valve c/w padlock and strap at the bottom.

### Booster pumps for wet riser

Two electric pumps will be installed to feed the wet fire main, one of which will act as standby, and be arranged so that when acting as duty pump it will operate automatically, i.e. on a flow of water or a fall in pressure on the installation. The secondary pump will be so arranged that it will operate automatically on a failure for any reason of the duty pump.

The control panel will be fitted with an automatic changeover a completely independent secondary supply in the event of failure of the primary supply.

A booster pump completed with Jockey pump, pressure vessel, suction and discharge collector will be a packaged unit.

All pumps will be capable of being started and stopped manually.

An audible and visual alarm should be provided at an agreed position to indicate that the equipment and the pumping plant have operated.

Each pump will be capable of providing a flow of water of at least 1500 L/min @ 13.5 bar in the fire main.

A pressure reducing valve will be installed on the discharge collector of the pump to protect the pipework against pressure.

A test facility, including permanently installed devices for measuring pressure and flow, will be provided at the pump delivery branch downstream of each outlet check valve to permit a running pressure test of each pump at full load condition.

A Foam extinguishing System will be connected to the wet riser to protect the Helipad. The helipad fire protection equipment will be designed and sized to meet the NFPA 418 and CAA guidance. A Foam monitor and inductor will be connected to a Foam reservoir.

## Fire Suppression System in Kitchen

Localised kitchen extract fire suppression systems will be installed within the kitchen extract canopies.

## Fire Extinguishers

All extinguishers will be provided complete with all mounting or floor standing brackets, signage, lockable piston and test certificates.

The different type of extinguishers provided will be:

- L Foam Extinguisher
- 6 Kg  ABC Multipurpose Dry Powder Extinguisher
- 5Kg CO2 Gas Fire Extinguisher
- 6L AFFF Foam Fog Spray Fire Extinguisher
- 6L Wet Chemical Fire Extinguisher
- 6L Foam Extinguishers
- 6L Foam Extinguishers
- 50Kg Wheeled Multipurpose Dry Powder Extinguisher

A49342285
GH56265_D_4_NP_V4.indb 120 10/9/09 01:42:01

Brookfield

# Lightning Protection

## General

The lightning protection installation will comply with the relevant clauses of the NHS Model Engineering Specification Part C53 and BS EN 62305.

## Lightning Protection

The metallic roof fabric will be used as much as practically possible to limit the amount of roof termination network.

Where necessary, supplementary conductor tape will be installed to ensure a continuous roof termination network.

The perimeter structural columns will be utilised as down conductors.

Earth electrodes will be provided within a purpose made inspection pit with lid.

An earth termination will be connected to each down connector.

Earth terminations will be capable of isolation for testing purposes at the test joints.

## Surge Arresters

Type 1 and Type 2 surge arresters will be provided on each main distribution switchboard.

Brookfield

GH56265_D_4_NP_V4.indb 122 10/9/09 01:42:02

Brookfield

# Communications Specification

## Scope

The ICT scope proposed for the New South Glasgow Hospitals Project covers the following infrastructure items:

ICT Spaces

- Primary and Secondary Main IT rooms
- Hub Rooms (on floors)
- Entrance Facility 1 and 2 for Service Providers
- Electrical risers

ICT Infrastructure

- Vertical cabling infrastructure
- Fibre optic backbone (distributes LAN services throughout the facility)
- Telecommunications copper cable (distributes Analog services throughout the facility)
- Horizontal cabling infrastructure
- Cat 6a cabling

Structured Cabling to Facilitate Service types

- Data – Data access for workstations
- Internal telephone – Internal telephone network for making internal calls only
- External telephone – Connection to external telephone network
- Emergency telephone – Connection to emergency telephone network
- Staff telephone – Staff telephone access
- Telemedicine – for conferencing
- Patient Entertainment – providing TV, radio facilities at the bedhead
- Video Conference – Access to video conference system
- Nurse call
- Public address
- Public information

## Voice / Data Network

The voice/data network will utilise VOIP Technology but still retain copper backbone cabling for analogue services.

### ICT 01 - Main Fibre Optic Backbone Routes

A fibre optic cable, comprising of 48cores of 50/125um multimode fibre, will extend from the Primary Equipment Room in the Adult Hospital to each of the Intermediate Hub Rooms as detailed in the drawings in a star topology. It will also connect to the Main IT room in the Children's Hospital.

The fibre optic cable will be terminated on to fibre optic patch shelves within the communication cabinets in each of these rooms.

### ICT 02 - Resilient Fibre Optic Routes

A fibre optic cable, comprising of 48cores of 50/125um multimode fibre, will extend between the Secondary Equipment Room in the Children's Hospital and each of the Intermediate Hub Rooms, as detailed in the drawings, in a star topology.

The fibre optic cable will be terminated on to fibre optic patch shelves within the communication cabinets in each of these rooms.

The fibre optic cables will be run in a diverse route from the Primary Fibre Optic backbone described above.

### ICT 03 – Meshed Fibre Optic Routes

A fibre optic cable, comprising of 24cores of 50/125um multimode fibre, will extend from the each Hub Room on each floor to the next Comms Room on each floor wings in a loop topology. This will provide a meshed configuration.

The fibre optic cable will be terminated on to fibre optic patch shelves within the communication cabinets in each of these rooms.

### ICT 04 – FM Backbone

The FM back bone will comprise of a series of hubs provided to suit the building layout and wiring topology located in plant areas, linked to a core switch and server located in the FM Office within the Energy Centre. A 12 core 50/125um multimode fibre optic backbone will be used for this purpose. Wireless applications will be integrated with the Clinical Wireless Infrastructure enabling a single wireless network using VLANs where appropriate.

### ICT05 - Primary and Secondary Incoming Routes

Two distinct and separate routes into the hospital for data and voice communications will be provided. The primary external link will extend directly to the Adult Hospital. The secondary link will extend to the Children's Hospital. Incoming ducts will be provided to these locations to allow Service Providers to provide voice and data services.

# Brookfield

### ICT 06 - Multipair Backbone Routes

A copper multi-pair backbone cable will extend from a Voice Termination Frame (VTF) located within the Main Communications Rooms to voice patch panels within the HUBSs to provide analog services.

The intention by the NHS is to use Voice over IP Telephony and will therefore be utilising the fibre optic backbone for connection to the telephone system. The multicore backbone is only for some essential services (i.e. lifts, fax machines etc) which may be connected back to the local Hub Rooms.

## ICT Spaces

### Main IT Rooms

We have noted the hot isle, cold isle configuration in the drawings and will assist the NHS with the design and implementation of this strategy.

- The campus main IT room will be constructed with a raised floor, under which cabling and cooling will be delivered. Cables will enter racks from the below.
- Racks will be standard 42u height 800mm x 1000mm (space for 1200mm), all doors will be lockable. Racks must be mounted securely and earthed appropriately to an earth bar in the room. The 2 No. Main Comms Rooms will accommodate 6 No. comms Racks, 10 Server Racks and 10 Equipment Racks.  BMS, CCTV and Entertainment equipment will be housed here as well.
- Forced air conditioning will be used in the campus main IT room to ensure environmental conditions are maintained.
- An Inert gas fire suppression system (bottles will be stored in this room) will be installed in the campus main IT room. This room will be sealed and pressure tested.
- After construction, the campus main IT room will be cleaned and made dust free; it will be fitted with a dust seal also.
- The UPS system will be fully redundant
- Anti-static floor tiles will be provided
- Access control systems will be used to prevent unauthorised access to the room.
- Leak detection systems will be installed in floor void.

### Hub rooms

IT hub rooms will generally be located in the Plant rooms, and are used to distribute the edge network about each building.  We will provide Hub rooms at strategic locations in the hospitals and will have fibre and copper connections back to the Main Comms Room

- The hub rooms may be constructed with a raised floor.
- Racks (42u height 800mm x 1000mm) will be installed in each hub room to serve the NHS needs (passive and active).
- Forced air cooling will be used in hub rooms using AC units.
- Inert gas fire suppression systems are not installed in hub rooms.
- After construction, the hub rooms will be cleaned and made dust free, a dust seal will be fitted also.
- Anti-static finish to the floor will be provided.
- Access control systems will be provided to prevent unauthorised access.

### Patch cabinets

These are used where there may be not enough space for Hub rooms and small patch cabinets may be required. Below is an outline of the secure space that will facilitate the patch cabinet

- An appropriately sized wall mounted secure cabinet will be installed in a secure space. This enclosure will facilitate active and passive equipment
- A raised floor will not be provided
- Fire suppression system will not be provided
- Access control systems will be provided to prevent unauthorised access.

### Entrance Facilities

Entrance Facilities receive incoming ducts from outside via ducts and distribute via secure risers. There will be a primary and secondary network point each serving up to 4 carriers. New network incomers will be provided from Govan and Hardgate roads. Data and voice will be run in a combined services trench with connections to the Main Hospital Buildings, Laboratories and Energy Centre.

A49342285
GH56265_D_4_NP_V4.indb 124 10/9/09 01:42:02

Brookfield

Below is a summary of the Entrance Facility room specification:

- Termination equipment for fibre optic and copper multicore cables. This equipment will be provided by the Service Provider
- Raised floors will not be installed in EF's.
- Fire suppression systems will be installed in EF's.
- UPS will be provided to give N+1 support.
- Access control systems will be provided to prevent unauthorised access.

### Wireless Networks

On site paging facilities will be provided along with wireless handsets on the IP Network.

## FM Backbone

### Integrated Building Management System

There is a requirement to provide an Independent Protocol network to support communication, interaction, data transfer and data retrieval from and between the various engineering systems that provide service to the buildings. The Building Management System will be fully integrated with this network and will provide control over the engineering plant and facilities to enable management of maintenance and energy usage. The network will be totally independent of the Clinical network except for an interface, which will be engineered via the server.

The network will comprise of a series of hubs generally located in plant areas linked to a core switch in the FM office within the Energy Centre. Each hub will communicate with local field devices using Cat 6 copper cable and will communicate with other hubs and the server with fibre optic cabling.

Brookfield

A49342285
GH56265_D_4_NP_V4.indb 126 10/9/09 01:42:03

# Specification for Special Installations – Renal Water, Filtered Water Systems

## General

The special water services systems will comply, where relevant, with the relevant clauses of the NHS Model Engineering Specification Parts C01, C02 C07, C82, D08, addendums to Part C, SHTN 02, SHTM 2027, 2040, HTM 04-01, BS 6700 and descriptions and requirements set out below.

## Filtered water system

To meet the Scottish Office guidelines for the protection of pipework in government buildings, the hospital will require a filtration unit to ensure that the feed water has low turbidity.

The installation will comprise a back-washable microfiltration system capable of filtration levels of 0.2 micron absolute.

The cold water filtration plant will include a duty/duty plant to provide continuous operation whilst each plant goes through a backwash cycle and each plant will be capable of producing 36 m3/hr of filtrate.

The plant will incorporate PVDF membranes capable of an automatic backwash onto the surface of the membrane utilising compressed air. The membranes will have a life expectance between replacement of in excess of 5 years.

Each plant will be supplied with a dedicated controller to control all plant operation and ensure even operation of the plant.

## Filtration units

Each unit will be a complete skid mounted plant and comprise: a number of PVDF membrane modules with integral pipework. feed pump, butterfly valves with pneumatic actuators, chemical dosing pumps, filtrate flow meter, and control panel. An interface unit will be complete with air receiver, oil water separator, and drier.

All pipework will be BS316 stainless steel.

## Renal

The installation will comprise a 137 Station Renal RO water purification and distribution system with the maximum simultaneous treatments anticipated to be 66. Each dialysis station will be supplied with a flow rate of 1500ml/min.

The final RO dialysis water quality will be to meet UK Renal Association standards 4th Edition for use with low flux membranes (for UPW)

| | |
|---|---|
| Microbial count | <0.1 CFU/ml |
| Endotoxin | <0.03 IU/ml |

The RO system will comprise:-

- Five high capacity micron pre-filters complete with disposable element mounting brackets, polypropylene housing and pressure gauges indicating pressure drop and the need to change element.
- A feedwater cylindrical break tank manufactured ball valve and air gap to conform to water authority regulations, low level switch for pump protection, service outlet, drain point and overflow connections.
- Two run and one standby stainless steel booster pump set with adjustable timed autochangeover and trip for low water in break tank, pressure relief valves, pressure gauge, non-return valves and isolating valves.
- One backwash pump for timed periodic backwashing of the carbon filter, controlled from the central control panel.
- Five high capacity micron pre-filters complete with disposable element mounting brackets, polypropylene housing, inlet/outlet adapters and pressure gauges indicating pressure drop and the need to change element.
- One Base Exchange softener comprising two reinforced GRP softener vessels, duty and standby/regenerating. Each vessel shall be charged with cation resin in sodium form. Water meter initiated automatic controls for continuity of supply and shall include manual override.
- One salt saturator/brine tank manufactured from medium density polythene including lid, draw tubes and interconnections to softener.
- Three automatic back-washable carbon filters each comprising, reinforced GRP pressure vessel charged with activated carbon medium for removal of free chlorine and general water conditioning, one valved manifold with all necessary valves for backwash and service flow, controls with resettable time clock to initiate backwash.
- Four high capacity 5 micron pre-filters complete with disposable element mounting brackets, polypropylene housing, and pressure gauges to indicate pressure drop and the requirement to change the element.

A49342285

GH56265_D_4_NP_V4.indb 127 10/9/09 01:42:03

# Brookfield

- Three double pass RO unit designed each producing 2000l/h, total 6000l/h (at 10ºC) permeate when supplied with pre-treated water with a temperature in the range 10ºC to 25ºC (operating limits are 1ºC to 35ºC). Each unit will include:-
  - Pressure vessels containing high output spiral wound polyamide based thin film composite permeators
  - Stainless steel centrifugal pumps
  - Control panel with graphic display
  - Conductivity meters for feedwater and RO permeate incorporating alarm facilities
  - Concentrate and permeate rate of flow monitoring and control
  - Status mode indicating lights
  - Combined break tank and CIP tank for cleaning and disinfection
- Wall mounted control panel and distribution board with volt free contacts to provide BMS interface.
- Two mimic panels (located in technicians workshop and nurse base) indicating:-
  - Pump Run/fault
  - RO unit Run/fault
  - Ring disinfect
- Six bacterial sample ports.
- Five Distribution systems will distribute the treated water to the terminal points each comprising PEX pipework, isolation valves, male and female stainless steel Walther couplings, all supports and phenolic foam pipe insulation.
- Each distribution system will incorporate a heat sanitisation unit for automatic sanitisation of distribution pipework, with individually adjusted heating intervals, heating times, temperature holding times and cool down times. The unit will comprise: Stainless steel insulated holding tank fitted with heating elements, level controls for low level protection and permeate feed, stainless steel recirculation pump, stainless steel solenoid valves for isolation of RO unit, drain and distribution ring flow and return. Fully automatic controls incorporating alphanumeric display, RO interface with emergency manual override.
- A media enclosure will be provided for each dialysis station complete with drain coupling with air gap and stainless steel Walther coupling.

On completion of commissioning of the RO system, 10 sets of samples will be taken, one from each of the flow and return of each of the five ringmains for microbial analysis and cultured and enumerated in line with approved methods (i.e. 7 days @ 20-22 Degrees C using TGEA or R2A agar) in order to show compliance with the specification stated in the “Requirements”. One set of samples will be collected and analysed for chemical compliance.

## Renal acid concentrate system

The RO system will be supplied with acid concentrate to supply 43 outlet points from bulk storage tanks located outside the hospital building. The complete installation will comprise:-

- A Delivery Point Control Panel, for delivery personnel to use, with isolation key, stop / start buttons, level indicator lamps, lamps test button and camlock fitting fill point.
- Two Transfer pumps, (resistant to the acid solution) pumping solution from transfer tanks to bulk tanks.
- One Acid Delivery Pipe, from delivery panel to the holding tank
- One 3000 Litre Acid Holding Tank, (unbunded) complete with inlet, outlet, overflow, inspection hatch, high-high, high, low and low-low level switches
- One Control Panel, installed near acid tanks complete with electrical control systems including level indicator lights, lamp test and emergency stop controls for each acid tank.
- One Transfer Pump, acid resistant to maintain supply of acid from holding tanks to transfer tanks on ward level float switch controlled
- Two 100 Litre Transfer Tanks, located on ward level.
- Two Circulation Pump Systems, to deliver the acid solution from transfer tanks around the ring mains at a controlled pressure of less than 1 bar.
- Two Acid concentrate distribution systems constructed from PVC reinforced tubing including acid concentrate connections

## Endoscope washer system

The final rinse water for the endoscope washers will be provided to BS EN ISO 15883-4:2008.

It is estimated that ten endoscope washer machines will be installed (subject to future confirmation) and have feed water flow demand for final rinse as follows:-

Demand= 46 l/cycle x 1.71 cycles/hr x 10 washers = 0.78 m3/hr

| | |
|---|---|
| Peak Flow: | With Diversity Allowance<br>Based on typical washer demand as below<br>Fill rate per minute at 2-5 barg = 15.3 l/min<br>15.3 l/min x 60mins x 10 washers = 9.18 m3/hr |
| Working Hours: | 16 Hrs |
| Production Rate: | Up to 800 l/hr @10oC of RO Water. |

Should the feedwater exceed any of the recommended guidelines in Table A, it is possible that the system offered will require additional pre-treatment in order to fully comply with the standard.

A49342285
GH56265_D_4_NP_V4.indb 128 10/9/09 01:42:04

Brookfield

Sampling: One hygienic sample point will be provided adjacent to the first washer ringmain loop. It is at this point that sampling to comply with the relevant water quality standard should occur. Samples taken elsewhere in the system, or within equipment or devices connected to the system, may not provide relevant, accurate or repeatable results.

The system will comprise:

- Three feedwater Pressure Booster Pumps, stainless steel centrifugal pumps controlled from main panel with adjustable timed auto-changeover and trip for low water in break tank; includes pressure relief valves, pressure gauge, non-return valves and isolating valves.
- One Duplex Base Exchange Softener, comprising two reinforced grp softener vessels, one duty and one standby/regenerating, vessels charged with softener resin; water meter initiated automatic controls for continuity of supply, includes manual override and bypass facility.
- One Salt Saturator/Brine Tank, for use with softeners, manufactured from medium density polythene, includes lid, draw tubes, interconnections to softener.
- Two Automatic Back-washable Carbon Filters, comprising: two reinforced GRP pressure vessel charged with high quality activated carbon medium for removal of free chlorine and general water conditioning, one valved manifold with all necessary valves for backwash procedure and service flow, controls with resettable time clock to initiate backwashing, typically, twice each week. Each vessel sized for 100% duty and running in parallel in normal operation at 50% duty.
- Two Reverse Osmosis Units, designed to produce up to 800 l/h permeate when supplied with adequately pre-treated water with a temperature in the range 10 to 25°C (operating limits are 1 to 35°C), and includes the following built-in features:
  - Pressure vessels containing high output spiral-wound polyamide-based thin-film composite permeators.
  - Pre-filter assembly using 5µm disposable filter elements.
  - Stainless steel high-pressure centrifugal pump.
  - Fascia panel incorporating controls and instrumentation.
  - Conductivity meter for feedwater and RO permeate incorporating alarm facilities.
  - Feed and permeate rate of flow meters.
  - Status mode indicating lights.
  - Integral combined break tank and CIP tank used for cleaning/disinfection.
- One 500 Litre Purified Water Storage and Recirculation Tank, self supporting, Stainless Steel construction with conical base complete with connections for service and drain; additional connections for make up supplies from Reverse Osmosis unit, overflow, and recirculated water return; tank fitted with level controls for operation of RO unit and for pump protection, air vent filter and complete with electrical immersion heaters, lagging and aluminium cladding.
- One Distribution Pressure Booster Pump, stainless steel centrifugal pump controlled from local panel with trip for low water in treated water tank; includes pressure relief valves, pressure gauge, non-return valves and isolating valves.
- One Inline Sanitary Ultraviolet Disinfector, maximum capacity 154 l/m, 316 stainless steel construction, high intensity lamp, high purity quartz thimble and splash-proof control box.
- One Multi-Round, 0.2 Micron Microbial Removal Filter Assembly, comprising sanitary stainless steel housing complete with disposable filter elements, isolating valves and two pressure gauges for determining pressure drop and need to replace filter element and vent valves.
- One wall mounted control panel combines functions of system electrical isolator, power distribution board and automatic auto-changeover controls for feedwater pumps and contains:
  - status display and alarm lights,
  - volt free contacts to provide interface with BMS
- One Remote Mimic Panel, installed in local washroom, with indicative lights to show critical failure.
- Dynamic Distribution System, constructed from approximately welded, stainless steel pipework.

Brookfield

# Specification for Building Management System

## General

The Building Management System will comply with the relevant clauses of the NHS Model Engineering Specification Part C54, addendums to Part C, and descriptions and requirements set out below.

## Building Management System

### Overview

The targeted strategy proposed for this system utilises advances in both the field side technology and also the 'Front End' system advances, namely Open System Integration Framework.

The key objectives are:

- High Level of Distributed Control
- Modular Approach
- Full Open Protocol
- A Front End GUI that works as a Systems Integration platform

### Field Side Environment

The field side environment can be broken into three main branches:

- Primary plant control (AHU's,Chillers, Boilers, pumpskids, fans, etc.)
- Environmental Control (Chilled Beams, FCU's, underfloor heating, etc)
- Supervisory function Control (Systems requiring overview, leak detection, metering, etc.)

The main focus here is to have a distributed control strategy with the controllers in the field adjacent to the process. This has a number of advantages:

- Resilient to failure, when compared with a central system
- Minimum of wiring and containment
- Utilises IP based network for comms
- Systems are deployed fully complete after FAT
- Commissioning much more streamlined
- Systems can be made available without the rest of the system being complete
- Greater flexibility of system during lifetime of facility

### Primary Plant Control

The control solution for this type of application is a fully contained controller with associated electrical requirements. Also the sensing and actuation required for the process being controlled are connected directly to this unit.

With regard to Air Handling Units, the control enclosure will be integrated. This allows complete FAT scenarios, junction box points maybe utilised to allow the units to be split for transport.

IP based control, such as BACnet, has major advantages in terms of open protocol and integration over the lifetime of the facility; all major plant (Boilers, Chillers, AHU's) will be specified with this type of philosophy, this ties in with the combined energy sustainability management approach adopted under the Campus wide Power Management System outlined below.

Pump skids, Fans, etc. have a fully complete control and power cabinet associated and this can be skid mounted or adjacent, as appropriate. The potential to consider, during detailed design phase, on board VFD's with pumps, this will give a very minimal panel needed for local isolation and marshalling. The key here is standardised off site manufacture, to give high standards of installation, seem-less commissioning and commonality of plant during the lifetime of the facility.

### Environmental Control

Within the building there are key environmental controls that equate in real terms to occupant comfort and also key occupant driven demand side energy usage. Both of these elements controlled effectively utilising systems such as KNX.

The two key areas break into HVAC and Lighting control, with KNX these control functions can be combined on a common back plane. This allows the wiring to be combined with the power wiring and effectively eliminates BMS wiring within environmental control spaces. Also this system allows much more flexibility in terms of design, construction, commissioning and subsequent reworking during the lifetime of the facility.

### Supervisory Function Control

Similar to 'Environmental control' there are many classical BMS offerings in the market place, KNX can be utilised for these functions, with direct plug and play for the likes of metering, leak detection and impulse clocks and also third party systems that require BMS monitoring.

### Systems Integration and GUI

The Open System Integration framework solution with seamless transfer of information to and from certified field devices.

This system for the proposed project application is a software solution of two parts:

- The Integration of field systems
- The Graphical User Interface (GUI)

Brookfield

### Integration of Field Systems

With the Framework solution certified drivers are available for different industry standard field device protocols, such as:

- IP
- BACnet
- KNX
- DALI
- LON
- OPC
- And others

This in real terms means that, a system can be built as follows:

- BACnet can be utilised for the AHU's, chillers and burner management.
- KNX is used for the environmental control
- KNX and DALI are used for lighting control and metering

All of these are interfaced to the Open System Integration environment with the certified 'Drivers', at this point all data points from all of the systems are now in a common environment.

### Programming

Programming of this system is done with standard toolboxes for applications, such as AHU display; out of the box there is a generic bones that can be customised for the specific site.

The standard environment is a Function Block scenario, with blocks being linked together graphically.

## Power Management System Overview

### General

Campus wide energy management needs to be viewed in two halves:

- Supply Side
- Demand Side

The approach for optimum overall efficiency, as proposed with this scheme, is that the demand side is dealt with entirely via the Building Management System (BMS) outlined above and that the supply side of consisting of, on site generating capacity and also connected capacity from the national grid, be dealt with by a Power Management System (PMS).

Integration of both systems happens in the Integration Layer as outlined in the Energy Management Scheme Overview Schematic overleaf.

The PMS, when compared to BMS, requires a much higher degree of guaranteed security in operation as it must also ensure continuity electrical supply in an effective manner to the campus. This also includes the integration of emergency electrical generation.

The most effective way to achieve this standard is to utilise IEC 61850 protocol which is a network utility approach to manage HV national grid distribution networks primarily.

This methodology offers several advantages emanating from the fact that the control is local to the switchgear and combined within the protection releases.

The overall energy supply, on site capacity, is a combination of different plant:

- Boilers
- Vapour Compression Chillers
- Absorption Chillers
- CHP Engine Sets

These combined give the best energy performance over the entire demand side operating range. This combination has to be viewed in a symbiotic light to ensure that the highest operating efficiencies overall are achieved.

For example; with the proposed integration of absorption chiller into the scheme and the gas fired CHP engines, it is desirable that the engines are loaded as much as is possible to ensure highest efficiency electricity is available to the demand side, while the heat being captured effectively and utilised for chilling (Via absorption chilling) and heating.

Also the system will factor key plant characteristics and potentially present and forecast weather, to ensure effective sequencing of plant to take advantage of ambient conditions and also performance curves of equipment.

A49342285
GH56265_D_4_NP_V4.indb 132 10/9/09 01:42:05

Brookfield

# Design Strategy For Pneumatic Tube System

## General

A PC controlled pneumatic tube system (PTS) will be installed in the Acute and Children's Hospitals with links to the Laboratory building via the service link tunnel.

The preliminary plan for the PTS is a ten zone network to serve around 92 stations within the hospital buildings, with four zones covering the Ward Tower itself. A dedicated zone between A&E and Pathology will be provided to maintain a high priority service, three dedicated systems will be provided between the network hub and specimen reception to maximise traffic handling capacity with automatic empty carrier return using transponder fitted carriers.

The system will be capable of supporting 300 (carriers) per hour on the power assisted links and 40 (carriers) per hour on the direct link from A&E. A proposed layout is illustrated on the schematics drawings accompanying this document

A front end PC will be provided complete with dedicated printer and modem for remote operation and analysis.

The system will incorporate an advanced platform software control package with full automatic dual control redundancy to provide optimal flexibility, performance and convenience in the management and maintenance of the pneumatic tube system.

The controller will have battery backup for system memory and status, and be capable of being remotely controlled through the PC.

Tubing will be 160 mm diameter solvent welded rigid UPVC, with intumescent fire sleeves when passing through firewalls or floors.

The equipment will be supplied and installed in accordance with SHTM2009, utilising optical carrier detectors, safety extra low voltage cabling to the stations, electronic positioning sensors, volt free contacts for BMS alarm status and fire alarm interface at the controller.

## Stations

The stations will generally be of front-loading design with a wipeable membrane type keypad.

A 'spare carrier' rack holding up to four carriers will be wall mounted adjacent to the station.

The stations are to be designed to comply with the latest Health & Safety Regulations. Access to the station mechanism is to be protected by an electronically controlled opening/ closing guard door with full mechanical interlock.

The stations in-built LCD display will show:

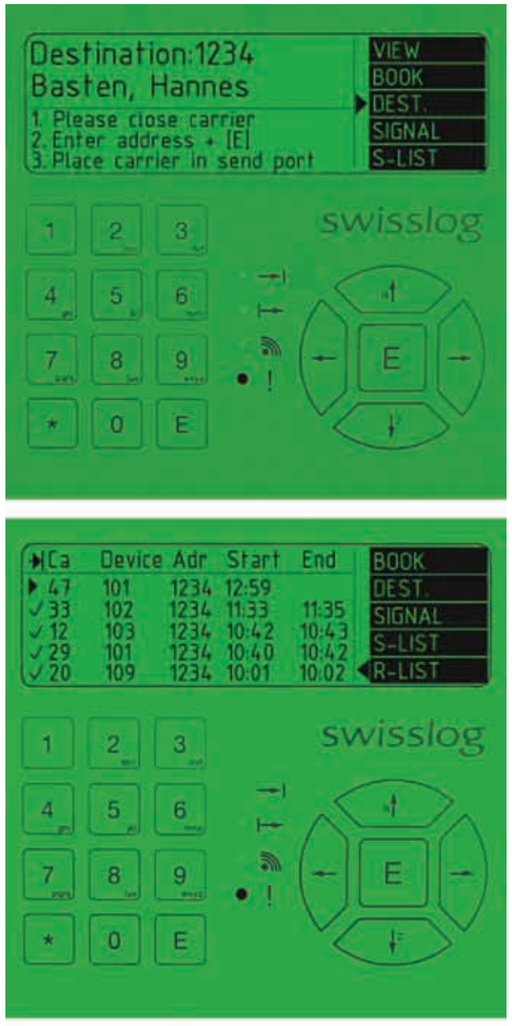
- Time and date
- Carrier destination
- The station the last carrier arrived from
- Station status - ready, selection OK, out of use, maintenance, faulty, basket full, invalid address and purge

The display will also have a directory of all system station names and numerical addresses.

The stations indicators display will show:

- Carrier being despatched
- Carrier incoming
- Carrier arrived at destination
- System busy
- System faulty

Stations will be fully automatic and capable of accepting a carrier when another carrier is incoming to that station.



Station display information

A49342285

GH56265_D_4_NP_V4.indb 133 10/9/09 01:42:05

# Brookfield

Destinations will be addressed by the use of the 4 digit number or by accessing the station name through the directory.

Destinations may be restricted if required.

The destination setting can be optionally set to return to 1 of 3 settings after a carrier has been sent:

- Force new address input
- Default to a pre-set address
- Default to “last number re-dial”

Wrongly addressed carriers will not be accepted by the system. A code reader at the station will allow only carriers to be introduced into the system, e.g. objects such as cans will not be accepted.

Incoming carriers will be able to be re-directed to another station.

All stations will be fitted with air control to ensure carrier soft arrival. This system will provide total safety of even delicate glass samples.

The station will automatically clear and eject a blocked carrier exit by agitating the station mechanism.

The station will be set to automatically return a carrier to the station from where it has been received by use of a single keystroke.

Carriers will be received into a cabinet below the station. The cabinet will be either an open type, or secure, accessible only by the use of a swipe card. Arrival signal units will be able to be programmed to discriminate to different user addresses, thereby allowing urgent full carriers to be immediately notified to the user, whilst allowing no alarm for empty returns.

The use of the station will be restricted by a user identifiable touch key and security card.

The station will include an in-built carrier arrival indicator consisting of a warning bleep and light. The bleep is to be enabled or disabled as required at the station by the user.

Remote indicators will be provided in some locations to indicate the arrival of a carrier at the station, as indicated in the schedule. These are generally from the Clean Utility Rooms to the appropriate Staff Base, and indicate on the Nurse Call Panel.

## Carriers

Carriers will have transparent bodies with coloured ends and are available in various lengths The coloured ends can be used for different purposes, for example red for pathology or green for Pharmacy.

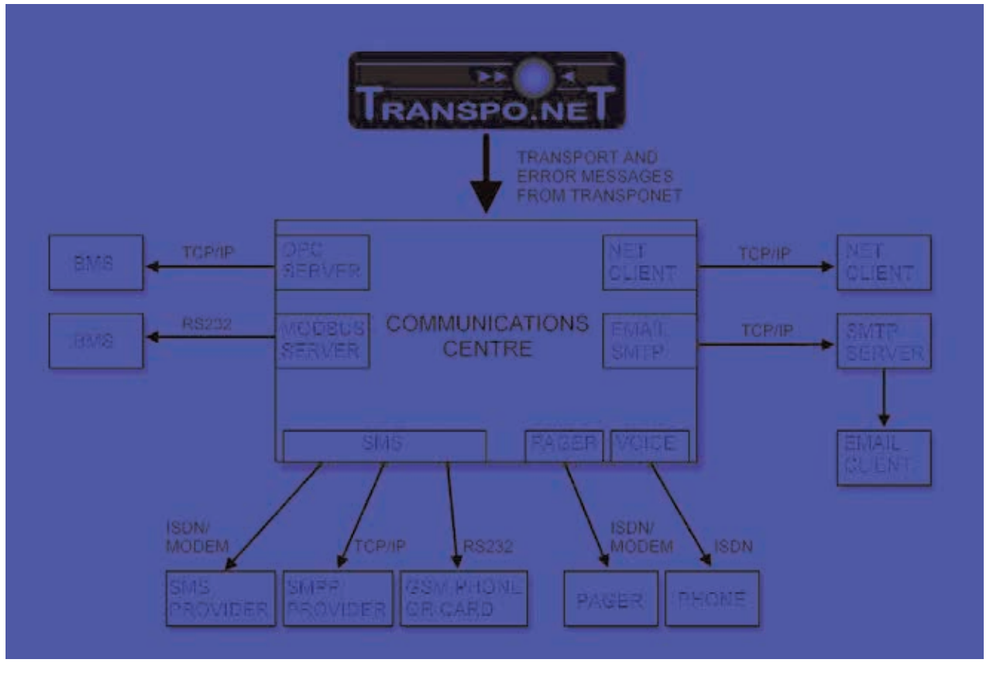
Each carrier will come complete with transponder technology that allows automatic redistribution and allow only correct carriers to be sent from any station.

Carriers will be secured during both the send and receive operations.

## PC & Printer

A PC based maintenance System Control Center will be provided for use by the hospital engineering and operations departments to configure the system, monitor system operations, schedule system operations and troubleshoot system errors, and to run a remote facility management PC and Communications Centre which will provide all external communications interfaces as illustrated below.

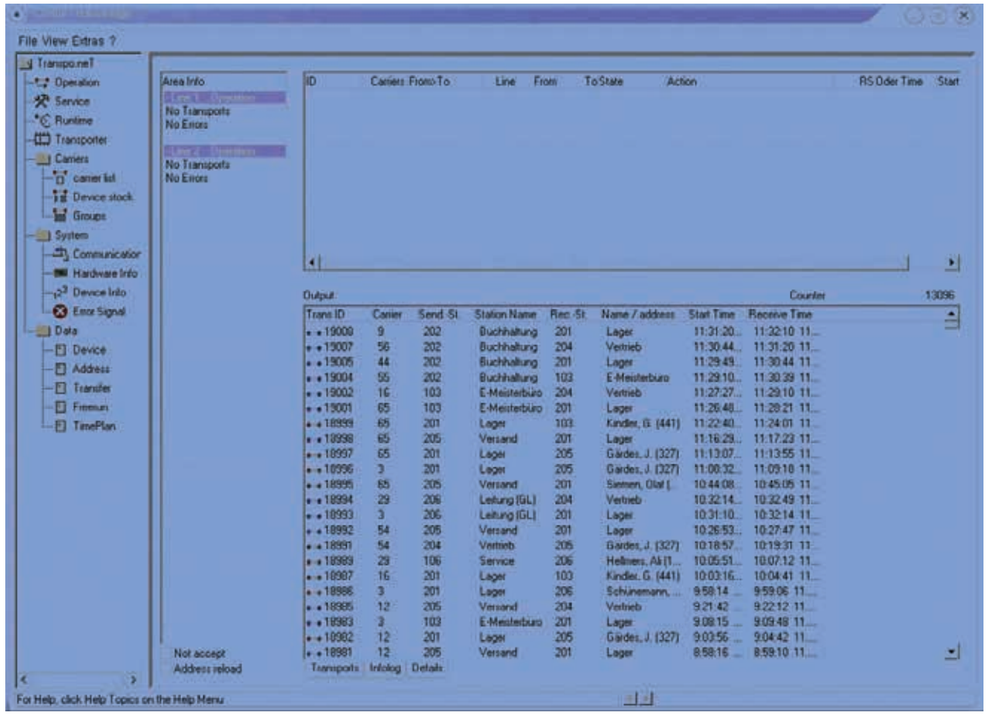
The supervisor terminal will be positioned in allocation to be agreed with the Board, and be used to monitor the activity of the system, all carrier movements plus the status of all of the equipment.



A49342285
GH56265_D_4_NP_V4.indb 134 10/9/09 01:42:07

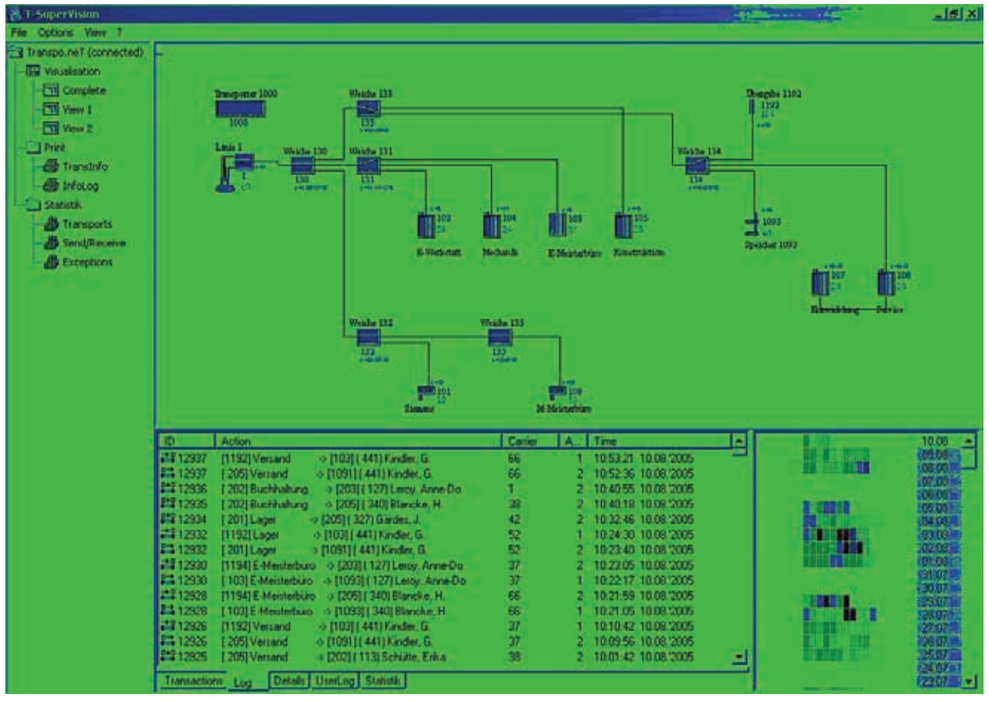
Brookfield

In the event of the requirement to track down individual sending of carriers from particular stations on the network it will be possible to interrogate the PC to display all transactions between a particular requested timeframe between any 2 stations. This function can be repeated right across the network.



For historical information the PC will be able to produce the last 20,000 transactions.

In addition the monitoring PC will identify the load time of each carrier into the load / despatch tube of each and every single station on the network. The time that the carrier is accepted into the station ready to be transported will also be registered. The PC will also log the time that each carrier is discharged from the network. In the event of a localised power failure to the PC the system will continue to operate.



A49342285
GH56265_D_4_NP_V4.indb 135 10/9/09 01:42:07

Brookfield

## Additional Features

### Follow Me / Redirection Facility.

Each station on the network will have this ability, and will be controlled by the user. This will allow users to divert their station address to any other one within the network, enabling them to still receive carriers even if they are working within another area of the hospital.

### Automatic Isolation of stations

Stations can be isolated electronically on a ‘timed’ basis if required.

This facility will be programmed at the central processor unit PC.

### Manual Operation of Station

Any station nominated by the user can be closed locally without affecting any other station or diverter on the network, thus giving the user full control of their station.

### Alpha Numeric Address

The system will include Alpha Numeric address facilities. Once an address code is inserted the user has the opportunity to check it before accepting the displayed, programmed target address. If satisfied then the confirmation key can be pressed.

### Modem

This will enable external connection to allow remote technical support from the Facilities Management Department or any other external point.

Carrier Monitoring

All carrier transactions through the network will be monitored in real time.

### Power Failure

In the event that a power failure occurs, the system will automatically be reinitiated and any carriers that are contained within the system will be removed and taken to their pre-programmed destination or to the assigned ‘dump’ station.

### Fire Alarm

In the event that the fire alarm system is activated (either in a real event, by accident or a planned test) then the system will close down following completion of any transaction in progress. As and when the Fire Alarm is reset then the system will be reinstated. This can be carried out either manually or automatically. A manual ‘test’ key will be provided to override and disable this facility for fire alarm testing, so as to avoid disruption to the system operation. This is to be positioned at the main control location (to be agreed).

The system will be linked to the BMS via volt free contacts within the main control unit. In a fault condition the system will activate the alarm.

# Outline Specification – Roads, Carparks, Pavements & Cycle Paths

## Contents

1.0 Paving

2.0 Carriageway Kerbs

3.0 Walls

4.0 Gravel Pavings

5.0 Special Surfacing / Paving for Sport / General Amenity

Note: This section should be read in conjunction with the Structural Engineer's (WSP) specification for Roads and Carparks specification.

## 1.0 Paving

### 1.1 Natural stone flag paving to pedestrian areas in the hospital Adult entrance and Children's hospital external entrance space

Type: Natural granite pavers
Finish: Fine picked
Size: 600 x 200mm
Colour: Silver Grey, Mid Grey, Dark grey
Pattern: Stretcher bond
Jointing: 6mm
Natural Granite products to comply with the performance levels in European Standard BS EN 1341.

### 1.2 Natural stone block paving to roadways and parking bays in the hospital Adult entrance and Children's hospital external entrance space

Type: Natural granite pavers
Finish: Fine picked
Size: 100 x 100mm
Colour: Dark grey
Pattern: Herring bone
Jointing: 6mm
Natural Granite products to comply with the performance levels in European Standard BS EN 1341

### 1.3 Concrete paving to pedestrian secondary entrance areas

Type: Exposed granite aggregate Concrete pavers
Finish:
Size: 400x200, 600x750, 450x450
Colour: Silver Grey, Mid Grey, Dark grey
Pattern: random
Jointing: 6mm

### 1.4 Concrete paving to pedestrian pathways

Type: Standard concrete pavers
Finish: Standard
Size: 450 X 600
Colour: Grey
Pattern: Stretcher bond
Jointing: 6mm

### 1.5 Laying paving- General

Appearance: Smooth and even with regular joints and accurate to line, level and profile
Falls: To prevent ponding
Bedding of paving units: Firm so that rocking or subsidence does not occur or develop.

- Bedding/Laying course: Consistently and accurately graded, spread and compacted to produce uniform thickness and support for paving units.

Slopes: Lay paving units upwards from the bottom of slopes
Paving units: Free of mortar and sand stains
Cutting: Cut units cleanly and accurately, without spalling, to give neat junctions with edgings and adjoining finishes.

### 1.6 Regularity

Maximum variation in gap under a 3 m straight edge placed anywhere on the surface (where appropriate in relation to the geometry of the surface):10 mm
Sudden irregularities: not permitted
Difference in level between adjacent blocks/pavers/setts: 2mm (maximum)

## 2.0 Carriageway Kerbs

### 2.1 Kerbs to entrance plaza

Type: Split stone reproduction of natural granite kerb with exposed granite aggregate
Size: 200mm wide depth to engineer's detail
Colour: Grey
Joints: Narrow mortar joints. Ends of units buttered with bedding mortar as laying proceeds. Joints completely filled, tightly butted and surplus mortar removed immediately.- joint width: 3mm

### 2.2 Proprietary precast concrete edge kerbs

Type: British standard Concrete kerb
Size: 125mm wide depth to engineers detail
Colour: Grey
Joints: Narrow mortar joints. Ends of units buttered with bedding mortar as laying proceeds. Joints completely filled, tightly butted and surplus mortar removed immediately.- joint width: 3mm

A49342285

GH56265_D_4_NP_V4.indb 137 10/9/09 01:42:09

# Brookfield

### 2.3 Laying Kerbs, Edgings and Channels
Cutting: Neat, accurate and without spalling. Form neat junctions.

- Long units (450mm and over) minimum length after cutting :300mm
- Short units minimum length after cutting: the lower of the one third of their original length or 50mm
- Bedding of units: Position true to line and leveled along top and front of faces, in mortar bed on accurately cast foundations or on a race of fresh concrete.
- Securing of units: After bedding has set, secured with a continuous haunching of concrete or on a race of fresh concrete with backing concrete cast monolithically.

### 2.4 Radius kerbs/channels
Usage: Radii of 15 m or less

### 2.5 Angle Kerbs
Usage: Internal and external 90° changes of direction
Cutting of mitres: not permitted

### 2.6 Accuracy
Deviations (maximum):

- Level : +/- 6mm
- Horizontal and vertical alignment: 3mm in 3m

## 3.0 Walls
### 3.1 Concrete seating wall to main entrance and Children's Park
Height: 500mm
Width: 1200mm
Length: Refer to drawings
Finish: Faced with re-used sandstone cladding from demolished existing buildings on site.

### 3.2 Stone wall facing
Material: Site sandstone cladding
Pattern: Random stretcher bond
Size: to be determined
Stone section: Hand selected stone at the specified sizes

## 4.0 Gravel Pavings
### 4.1 Loose gravel to maintenance strips
Gravel: Loose laid and racked to uniform thickness
Type: Pea gravel

- Size: Graded 6mm
- Thickness: 75mm
- Colour: Buff

### 4.2 Permeable resin bound gravel to main park paths
Chippings: 6mm natural gravel aggregate
Colour: Buff
Application: Hand applied and trowelled
Binder- uniformly at a rate to manufacture's specification
Clean chippings: Cover at a rate to manufactures specification
Completion: Before trafficking, remove excess chippings

### 4.3 Porous self binding gravel to secondary paths in parks
Gravel: Granite and Quartzite
Size: Graded 6mm maximum
Thickness: to engineers specification
Colour: Buff

### 4.4 Laying generally
Materials: Chippings to be suitable for use with respective binders/emulsions
Channels gullies etc: Keep clear
Finished surfaces:

- Lines and levels: To prevent ponding
- Overall texture: Even

## 5.0 Special Surfacing / Paving for Sport / General Amenity
### 5.1 Impact absorbing surfacing to play areas
Extent of impact absorbing surfacing: lay to the impact areas shown in the relevant parts of BS EN 1176
Surface Course: Impact absorbing continuous, joint-free, porous rubber granules and polyurethane binders.
Colour: Yellow, Red, Blue, orange, green
Thickness: as per manufactures recommendations
Critical fall height when tested to BS EN 1177: 2.0m

### 5.2 Play surface testing
Standard: To BS EN 1177 and BS 7188, where applicable.
Testing boding: A United Kingdom Accreditation Service (UKAS) independent laboratory.
Timing: within ten days of completing the surfacing works.

A49342285
GH56265_D_4_NP_V4.indb 138 10/9/09 01:42:09

# Outline Specification – Soft Landscaping

## Contents

1.0 Topsoil and Growing Media

2.0 Seeding / Turf

3.0 Planting Trees and Shrubs

4.0 Indicative Plant List

## Topsoil and Growing Media

### 1.1 Imported topsoil

Quantity: provide as necessary to make up any deficiency of topsoil existing on site ant to complete the work.

Standard: to BS 3882.

Imported topsoil shall be a suitable medium for growing the ordinary range of cultivated plants under satisfactory conditions of management.

Topsoil must be as dug soil from an approved source. Manufactured or composite screened topsoil would not normally be acceptable.

It shall comply with BS 3882 and also with the following specification.

Topsoil will not be allowed on site until the relevant test certificates have been furnished by the Trade Contractor.

Depth:
450 mm deep for all shrub beds
150 mm deep for low maintenance grass areas
Depth for tree pits refer to drawings
Physical and Chemical Properties:
Texture medium loam: Sand (0.05-2.00 mm) max 75% min 20%
Silt (0.002-0.05 mm) max 60% min 5%
Clay (less than 0.002mm) max 30% min 5%
Soil reaction: 6.0 - 7.5 ph
Stone Content: 2 mm - 50 mm 20 % max. by dry weight, of which the fraction of 2 mm - 5mm must not exceed 15 % by dry weight.
Max. stone size: 40 mm, any dimension
Electrical conductivity: 100-1500 micromole per cm on a 1:2.5 (w/v) soil-water extract

Nitrogen (N): Not less than 0.2 per cent Extractable
Phosphorus (P): Not less than 45 ppm Extractable
Potassium (K): Not less than 240 pm Extractable
Magnesium (Mg): Not less than 80 ppm
Organic matter: Not less than 4 per cent by dry weight in any circumstance.

Where the textural clay of soil offered contains more than 27 % clay and less than 45 % sand, the sub-contractor shall raise the organic matter of the soil to 5 % by dry weight.

Where the soil contains more than 60% sand the organic matter of the soil is required to be raised to 6 % by dry weight.

Where organic matter is required to be incorporated into topsoil the type of material must be agreed with the Construction Manager.

General condition: Free of weed seeds and all pernicious weeds and roots. It shall be building materials, foreign matter and chemical contamination.
Phytotoxic elements: Total Copper 130mg/kg max. on air dried soils
Total Nickel 70mg/kg max. on air dried soils
Total Zinc 300mg/kg max. on air dried soils
Water Soluble Boron 3mg/kg max.
Zootoxic elements: Arsenic 40mg/kg max. on air dried soils
Cadmium 15mg/kg max. on air dried soils
Chromium 1,000mg/kg max. on air dried soils
Lead 2,000mg/kg max. on air dried soils
Mercury 20mg/kg max. on air dried soils

### 1.2 Grading subsoil

General: Grade to smooth flowing contours to achieve specified finished levels of topsoil.
Area of thicker topsoil: Excavate locally.

### 1.3 Spreading top soil

Temporary roads/ surfacing: remove before spreading topsoil
Layers:
- Depth: 150mm (maximum)
- Gently firm each layer before spreading the next

Depths after firming and settlement: 150mm (minimum)
Crumb structure: Do not compact topsoil. Preserve a friable texture of separate visible crumbs wherever possible.

### 1.4 Finished levels of topsoil after settlement

Above adjoining paving or kerbs: 30mm
Below dpc of adjoining buildings: not less than 150mm
Shrub areas: higher than adjoining grass areas by 50mm
Within root spread of existing trees: Unchanged
Adjoining soil areas: Marry in

A49342285

GH56265_D_4_NP_V4.indb 139 10/9/09 01:42:10

# Brookfield

### 1.5 Topsoil storage heaps
Location: to be agreed.
Height (maximum): 1.5 m.
Width (maximum): 2.0 m.
Protection:
- Do not place any other material on top of storage heaps.
- Do not allow construction plant to pass over storage heaps.
- Prevent compaction and contamination, by fencing and covering as appropriate.

## 2.0 Seeding / Turf
### 2.1 Seeded areas
Growth and development: Healthy, vigorous grass sward, free from the visible effects of pests, weeds and disease.
Appearance: A closely knit, continuous ground cover of even density, height and colour.

### 2.2 Grass seed for all grassed areas
Mixture: 35% Chewings fescue, 35% Slender red fescue, 20% Smooth stalked meadow grass, 10% Brown top bent.
Application rate: 20–35 g/m_.

### 2.3 Quality of seed for all grassed areas
Freshness: Produced for the current growing season.
Certification: Blue label certified varieties.

- Standard: EC purity and germination regulations.
- Official Seed Testing Station certificate of germination, purity and composition: Submit when requested.

### 2.4 Edges to seeded areas adjacent to planting beds and tree pits
Timing: After seeded areas are well established.
Edges: Clean straight lines or smooth curves.
- Mulch and soil: Draw back to permit edging.

Arisings: Remove.
Completion: Re-spread soil and mulch.

## 3.0 Planting Trees and Shrubs
### 3.1 Planting General:
Free from toxins, pathogens or other extraneous substances harmful to plant, animal or human life.
Certification: Submit a certificate giving supply source, content analysis, confirmation of suitability for purpose and confirmation of absence of harmful substances.
Certified materials: Give notice before ordering or using.
Condition: Materially undamaged, sturdy, healthy and vigorous.
Appearance: Of good shape and without elongated shoots.
Hardiness: Grown in a suitable environment and hardened off.
Health: Free from pests, diseases, discoloration, weeds and physiological disorders.
Budded or grafted plants: Bottom worked.
Root system and condition: To requirements of The National Plant
Specification and balanced with branch system.
Species: True to name.
Origin/ Provenance: British grown.
Origin and Provenance have the meaning given in the National Plant Specification.

### 3.2 Plants/ Trees - Specification Criteria
Name, forms, dimensions, provenance and other criteria: As scheduled and defined in the National Plant Specification.

### 3.3 Container Grown Plants/ Trees
Growing medium: With adequate nutrients for plants to thrive until permanently planted.
Plants: Centred in containers, firmed and well watered.
Root growth: Substantially filling containers, but not root bound, and in a condition conducive to successful transplanting.
Hardiness: Grown in the open for at least two months before being supplied.
Containers: With holes adequate for drainage when placed on any substrate commonly used under irrigation systems.

### 3.4 Labelling and Information
Standard: To BS 3936.

### 3.5 Supply of Plants/ Trees
Suppliers: Members of the Horticultural Trades Association Nursery Certification Scheme.

### 3.6 Plants/ Trees Reserved at Supplier's Premises
Types/ Species: As scheduled.
Pre-delivery inspection: All plants to be inspected by Landscape Architect before supplying to site, then clearly identified as being reserved.
Labelling: Identify inspected plants/ trees as reserved for use on this project.

A49342285
GH56265_D_4_NP_V4.indb 140 10/9/09 01:42:10

Brookfield

### 3.7 Plant/ Tree Substitution
Plants/ trees unobtainable or known to be likely to be unobtainable at time of ordering: Submit alternatives, stating:
- Price.
- Difference from specified plants/ trees.

Further alternatives: Proposed substitutions may not be acceptable and submission of further alternatives may be required
Approval: Obtain before making any substitution.

### 3.8 Plant/ Tree Handling, Storage and Transport
Standard: To HTA 'Handling and establishing landscape plants' (obtainable from the Horticultural Trades Association) Part I, Part II and Part III, paragraphs 1.3.3 to 1.3.6, 3.0, and 4.0.
Frost: Protect plants/ trees from frost.
Handling: Handle plants/ trees with care. Protect from mechanical damage and do not subject to shock, e.g. by dropping from a vehicle.
Plant packaging: Coextruded polyethylene bags with black interior and white exterior. To minimise storage of plant stock, operations are to be arranged so that trees and shrubs are planted immediately following the cultivation of planting areas.

### 3.9 Planting Generally
Standard: To HTA 'Handling and establishing landscape plants' Part III, paragraphs 6.2 to 6.6.
Appearance: Plant upright or well balanced with best side to front.

### 3.10 Treatment of Tree Wounds
Cutting: Keep wounds as small as possible.
Cut cleanly back to sound wood using sharp, clean tools.
Leave branch collars. Do not cut flush with stem or trunk.
Set cuts so that water will not collect on cut area.
Fungicide/ Sealant: Do not apply unless instructed.

### 3.11 Surplus Material
General: Remove subsoil, stones, debris, wrapping material, canes, ties, temporary labeling, prunings and other arisings/ rubbish.

### 3.12 ultivation of Shrub Beds
Compacted topsoil: Break up to full depth.
Cultivation: Loosen, aerate and break up soil into particles of 2-8 mm.
Depth: Top 350mm of planting beds.
Timing: Within a few days before planting.
Weather and ground conditions: Suitably dry.
Surface: Leave regular and even.
Undesirable material brought to the surface: Remove, including weeds, roots, stones and clods larger than 50 mm in any dimension, tufts of grass and foreign matter.

### 3.13 Planting Pits
Timing: Excavate no more than 2 days before planting, with topsoil retained for use where specified.
Pit bottom improvement: to be broken to a depth of 75mm.
Plants should be planted in tree pits of the following sizes (mm) unless directed otherwise:-

| | |
|---|---|
| Herbaceous | 150 x 150 x 150 |
| Shrubs, transplants and whips | 300 x 300 x 300 |
| Feathered and standard trees | 900 x 900 x 450 |
| up to 3 metres high | (0.36 m_) |
| Selected and heavy standards | 1000 x 1000 x 600 |
| up to 4.25 metres high | (0.60 m_) |
| Extra heavy standards | 1200 x 1200 x 600 |
| up to 4.9 metres high | (0.86 m_) |

### 3.14 Backfilling Material
Composition: Previously prepared mixture of topsoil excavated from pit and additional topsoil as required.

### 3.15 After Planting
Watering: Immediately after planting, thoroughly and without damaging or displacing plants or soil.
Firming: Lightly firm soil around plants and fork and/ or rake soil, without damaging roots, to a fine tilth with gentle cambers and no hollows.

A49342285
GH56265_D_4_NP_V4.indb 141 10/9/09 01:42:10

# Brookfield

### 3.16 Tree Pits
Sizes: Of adequate dimensions to permit planting at the same depth to which they have been previously grown, enabling the roots to be spread in their natural position.
Sloping ground: Maintain horizontal bases and vertical sides with no less than minimum depth throughout.
Pit bottoms: With slightly raised centre. Break up to a depth of 150 mm.
Pit sides: Scarify.
Additional requirements: None.
Backfilling material: Reuse excavated material.

Accessories: Long double staking.

### 3.17 Staking Generally
Stakes: Softwood, peeled chestnut, larch or oak, straight, free from projections and large or edge knots and with pointed lower end.
Preservative treatment: Water based, non-CCA, service life 20 years.
Nails: To BS 1202-1, galvanized, minimum 25 mm long and with 10 mm diameter heads.
Minimum stake sizes: 100mm dia.

### 3.18 Short Double Staking for Standard Trees
Staking: Drive stakes vertically at least 300mm into bottom of pit on either side of tree position before planting. Consolidate material around stakes during backfilling.
Height of stakes: Cut to approximately 600mm above ground level.
Cross bar: Wood, as stake.
Firmly fix on windward side of tree and as close as possible to stem.

### 3.19 Backfilling Material
Composition: Previously prepared mixture of topsoil excavated from pit and additional topsoil as required, together with:
Ameliorant/ Conditioner: Tree compost at 1 nr 80 litre bag per tree.
Coverage: To manufacturer's/ supplier's recommendations.
Fertilizer: Sierrablen Yellow fertilizer tablets to be added to the backfill material at 200mm depth.
Coverage: As per suppliers/ manufacturers recommendations.

### 3.20 Mulching Trees
Material: Medium bark mulch.
Purity: Free of pests, disease, fungus and weeds.
Preparation: Clear all weeds. Water soil thoroughly.
Coverage: Within 1m diameter of tree, to a depth of 50mm.

### 3.20 Native Buffer / Screening Planting Generally
To be specified

### 3.21 Notch planting
Notching: Make a vertical 'I', 'L', 'T' or 'H' notch, deep enough to accommodate full depth of roots.
Planting: Plant tree, close notch with root collar at ground level and firm the soil.

### 3.22 Whip Protection
Product reference: Spiral Shelters.
Type: Spiral.
Size/ Colour: 50mm dia by 60cm height, colour: slight tint.
Support: 90cm 12-14lb/100 bamboo cane- as per manufacturers recommendation.
General: Ensure that protection methods do not impede natural movement of shrubs or restrict growth.

# Outline Specification – Site Enclosure

## Contents

1.0 Fencing

## 1.0 Fencing

### 1.1 Palisade fencing to north west site boundary

Height: 1800 mm.
Design load: To BS 6180
- Applied horizontally at: Design height.

Material/ Protection: Steel, galvanized to BS EN ISO 1461 after fabrication.
Surface finish: Powder coating.
Colour/ Texture: Black.

### 1.2 INSTALLATION GENERALLY

Set out and erect:

- Alignment: Straight lines or smoothly flowing curves.
- Tops of posts: Following profile of the ground.
- Setting posts: Rigid, plumb and to specified depth, or greater where necessary to ensure adequate support.

Fixings: All components securely fixed.

# Outline Specification – External Fittings & Furniture

## Contents

1.0 Site / Street Furniture and Equipment

## 1.0 Site / Street Furniture and Equipment

### 1.1 Bollards standard to arrival square

Height: 1100mm
Diameter:140mm.
Material: 316 stainless steel.
Finish: Bead blasted 316 stainless steel bollard body, Brushed 316 stainless steel top cap.
Colour: silver.

### 1.2 Bollard Illuminated to arrival square, court yards and roof garden

Height: 1100mm
Diameter:140mm.
Material: 316 stainless steel.
Finish: Bead blasted 316 stainless steel bollard body, Brushed 316 stainless steel top cap.
Colour: silver.
Lighting specification: to lighting engineers' detail

### 1.3 Bollard Illuminated to maintenance strips around building

Height: 1100mm
Diameter: 210mm
Material:

- Top: Die cast aluminium
- Post: Extruded aluminium

Finish: Powder coated texture surface
Colour: silver

### 1.4 Timber bench seat to park areas and courtyards

Material: FSC certified hardwood.

- Treatment: Supplier's standard 30 year service life.

Finish: sanded with pencil rounded edge.
Colour: natural finish.
Supports: Cast aluminium
Size: Various
Features: Back and arm rests

### 1.5 Cast stone benches to arrival square

Material: cast stone.
Finish: Polished and Waterproofed.
Colour: Light Grey.
Size: Various
Feature: Back and arm rest

### 1.6 Wall mounted timber seats to Courtyards

Material: FSC certified hardwood.

- Treatment: Supplier's standard 30 year service life.

Finish: sanded with pencil rounded edge.
Colour: natural finish
Size: various
Feature: Back rest

### 1.7 Bins

Material: stainless steel.
Finish: Brushed.
Colour: None.
Size: 90L

### 1.8 Cycle stands

Type: Sheffield cycle stand
Material: stainless steel.
Finish: Brushed.
Colour: None.

### 1.9 Tree grills

Material: Reinforced cast stone
Colour: Granite grey
Finish: Acid Etched and Waterproofed
Size: 1200L x 1200w mm
Fixing: Embedded at pavement level

# Drainage Specifications

R12 Below ground drainage systems

## General

### 110 BELOW GROUND DRAINAGE SYSTEMS Small bore dia. Surface Water up to 300 Dia.

- Surface water and rainwater drainage sources: One piece gullies and Rainwater downpipes
- (non-siphonic).
- Foul drainage sources: None.
- Land drainage sources: None.
- Pressure relief drainage sources: None.
- Pipes, bends and junctions: Plastics - structured wall and PVC-U - plain wall.
  - Accessories:
  - Access points;
  - Connectors - saddle; and
  - Roding points.
- Manholes, inspection chambers, traps, and separators:
  - Inspection chambers - plastics;
  - Manholes and inspection chambers - concrete; and
  - Manholes and inspection chambers - brick.
    - Accessories:
    - Manhole channels and branches - conventional;
    - Manhole steps; and
    - Sealing for concrete manholes - bituminous strips.
- Disposal: To outfalls.
- Accessories – general:
  - Access covers and frames;
  - Access covers and frames - precast concrete beatings;
  - Access ladders; and
  - Concrete (general).

### 110A BELOW GROUND DRAINAGE SYSTEMS Large bore dia Surface Water over 300 Dia

- Surface water and rainwater drainage sources: One piece gullies and Rainwater downpipes
- (non-siphonic)
- Foul drainage sources: None
- Land drainage sources: None .
- Pressure relief drainage sources: None .
- Pipes, bends and junctions: Concrete.
  - Accessories:
  - Access points;
  - Connectors - saddle; and
  - Roding points.
- Manholes, inspection chambers, traps, and separators:
  - Inspection chambers - plastics;
  - Manholes and inspection chambers - concrete; and
  - Manholes and inspection chambers - brick.
  - Accessories:
  - Manhole channels and branches - conventional;
  - Manhole steps; and
  - Sealing for concrete manholes - bituminous strips.
- Disposal: To outfalls.
- Accessories – general:
  - Access covers and frames ;
  - Access covers and frames - precast concrete seatings;
  - Access ladders; and
  - Concrete (general).

Brookfield

### 110C BELOW GROUND DRAINAGE SYSTEMS Small bore dia Foul Water up to 300 Dia from NON HAZARDOUS sources

- Surface water and rainwater drainage sources: None
- Foul drainage sources: Discharge stack and branch pipes
- Land drainage sources: None .
- Pressure relief drainage sources: None .
- Pipes, bends and junctions: Plastics - structured wall and PVC-U - plain wall.
  - Accessories:
  - Access points;
  - Connectors - saddle; and
  - Roding points.
- Manholes, inspection chambers, traps, and separators:
  - Inspection chambers - plastics;
  - Manholes and inspection chambers - concrete; and
  - Manholes and inspection chambers - brick.
  - Accessories:
  - Manhole channels and branches - conventional;
  - Manhole steps; and
  - Sealing for concrete manholes - bituminous strips.
- Disposal: To outfalls.
- Accessories – general:
  - Access covers and frames ;
  - Access covers and frames - precast concrete seatings;
  - Access ladders; and
  - Concrete (general).

### 110D BELOW GROUND DRAINAGE SYSTEMS Small bore dia Foul Water up to 300 Dia from HAZARDOUS sources

- Surface water and rainwater drainage sources: None
- Foul drainage sources: Discharge stack and branch pipes
- Land drainage sources: None .
- Pressure relief drainage sources: None .
- Pipes, bends and junctions: Clay - flexible joints.
  - Accessories:
  - Access points;
  - Connectors - saddle; and
  - Roding points.
- Manholes, inspection chambers, traps, and separators:
  - Inspection chambers - plastics;
  - Manholes and inspection chambers - concrete; and
  - Manholes and inspection chambers - brick.
  - Accessories:
  - Manhole channels and branches - conventional;
  - Manhole steps; and
  - Sealing for concrete manholes - bituminous strips.
- Disposal: To outfalls.
- Accessories – general:
  - Access covers and frames ;
  - Access covers and frames - precast concrete seatings;
  - Access ladders; and
  - Concrete (general).

## Products

### 313 ONE PIECE GULLIES - ROAD

- Standards:
- Cast iron: To BS 437 and Kitemark certified, or Agrément certified.
  - Clay: To BS EN 295-1 and Kitemark certified, or Agrément certified.
  - Concrete: To BS 5911-6 and Kitemark certified, or Agrément certified.
  - Plastics: To BS 4660 and Kitemark certified, or Agrément certified.
  - Polypropylene: To BS EN 1852-1.
- Material: Concrete.
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.
- Sizes: 900 x 450 mm.
- Outlet sizes: DN 150.
- Silt buckets: Aluminium.
  - Product reference: Contractor’s choice.

### 329 PIPES, BENDS AND JUNCTIONS - SUPPLY

- Pipes and fittings: From same manufacturer for each pipeline.

### 336 PIPES, BENDS AND JUNCTIONS - CLAY - FLEXIBLE JOINTS Small bore dia Foul Water up to 300 Dia from HAZARDOUS sources

- Material and standard: Vitrified clay to BS EN 295-1, Kitemark certified.
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.
- Sizes:
  - DN 100;
  - DN 150;
  - DN 225; and
  - DN 300.
- Crushing strength (minimum): FN 40.
- Jointing type: EDPM sealing rings or polypropolene sleeve for smaller diameters.

### 336A PIPES, BENDS AND JUNCTIONS - CLAY - FLEXIBLE JOINTS Small bore dia Foul Water up to 300 Dia from NON HAZARDOUS sources

- Material and standard: Plastics - structured wall and PVC-U - plain wall.
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.
- Sizes:
  - DN 100;
  - DN 150;
  - DN 225; and
  - DN 300.
- Crushing strength (minimum): FN 40.
- Jointing type: SBR Rubber.

### 342 PIPES, BENDS AND JUNCTIONS - CONCRETE SURFACE WATER over 300 dia

- Standards: To BS 5911-1 and BS EN 1916, with flexible joints.
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.
- Sizes:
  - DN 375;
  - DN 450;
  - DN 525;
  - DN 675;
  - DN 1050; and
  - DN 1200.
- Shapes: Circular.
- Cement type and content: To BS 5911-1 and BS EN 1916.
- Accessories: Cast in lifting anchors.

A49342285

GH56265_D_4_NP_V4.indb 153 10/9/09 01:42:14

# Brookfield

### 344 PIPES, BENDS AND JUNCTIONS - PLASTICS - STRUCTURED WALL - SURFACE WATER DRAINAGE AND NON HAZARDOUS FOUL DRAINAGE

- Standard: To WIS 04-35-01, Kitemark or Agrément certified.
- Material: PVC-U.
- Manufacturer: Contractor's choice.
  - Product reference: Contractor's choice.
- Recycled content: 10% (minimum) to BS EN ISO 14021.
- Sizes: 225, 300.
- Jointing type: Spigot and socket.

### 346 PIPES, BENDS AND JUNCTIONS - PVC-U - PLAIN WALL - SURFACE WATER DRAINAGE AND NON HAZARDOUS FOUL DRAINAGE

- Standard: BS EN 1401-1, class SN4, with flexible joints, Kitemark certified.
- Manufacturer: Contractor's choice.
  - Product reference: Contractor's choice.
- Recycled content: 10% (minimum) to BS EN ISO 14021.
- Sizes: DN 100 and DN 160.
- Application area code: UD.

### 359 FLEXIBLE COUPLINGS

- Standard: To BS EN 295-4 or WIS 04-41-01 and Kitemark certified, or Agrément certified.
- Manufacturer: Contractor's choice.
  - Product reference: Contractor's choice.

### 371 RODDING POINTS At untrafficked areas around buildings

- Standards:
  - Cast iron: To BS 437 and Kitemark certified, or Agrément certified.
  - Clay: To BS EN 295-1 and Kitemark certified, or Agrément certified.
  - Concrete: To BS 5911-6 and Kitemark certified, or Agrément certified.
  - Plastics: To BS 4660 and Kitemark certified, or Agrément certified.
- Material: Clay.
- Manufacturer: Contractor's choice.
  - Product reference: Contractor's choice.
- Sizes: DN 150.

### 373 ROOT BARRIERS

- Manufacturer: Contractor's choice.
  - Product reference: Contractor's choice.

### 401 INSPECTION CHAMBERS - PLASTICS Shallow small diameter foul and surface water drainage

- Standard: To BS 7158 or BS EN 13598-1, or Agrément certified.
- Diameter: 475 mm.
- Manufacturer: Contractor's choice.
- Bases:
  - Product reference: Contractor's choice.
- Shaft units:
  - Product reference: Contractor's choice.
- Access covers and frames:
  - Product reference: Contractor's choice.
  - Loading grades to BS EN 124: B125 and C250.

### 407 MANHOLES AND INSPECTION CHAMBERS - CONCRETE For new foul and surface water drainage systems

- Standards:
  - To BS 5911-3 and BS EN 1917 and Kitemark certified; or
  - To BS 5911-4 and BS EN 1917.
- Manufacturer: Contractor's choice
- Shape: Circular
- Sizes:
  - DN 1050;
  - DN 1200;
  - DN 1500; and
  - DN 1800.
- Cement type and content: To BS 5911-1 and BS EN 1916.
- Chamber sections:
  - Product reference: Contractor's choice.
  - Jointing type: Bituminous strips.
- Cover slabs:

A49342285
GH56265_D_4_NP_V4.indb 154 10/9/09 01:42:15

- Product reference: Contractor’s choice.
- Thickness: 175 mm.
- Loading grades to BS EN 124:
- B125;
- C250; and
- D400.
- Openings: To suit access covers.

- Steps: Required in chambers over 900mm deep.

### 409 MANHOLES - CONCRETE - ADDITIONAL COMPONENTS FOR DEEP MANHOLES

- Standards:
- To BS 5911-3 and BS EN 1917 and Kitemark certified; or
- To BS 5911-4 and BS EN 1917.
- Manufacturer: Contractor’s choice.
- Cement type and content: To BS 5911-3 and BS EN 1917 and Kitemark certified; or to BS 5911-4
- and BS EN 1917.
- Landing slabs:
- Product reference: Contractor’s choice.
- Sizes: As directed on manhole schedule.
- Reducing slabs:
- Product reference: Contractor’s choice.
- Sizes: As directed on manhole schedule.
- Straight backed tapers:
- Product reference: None.
- Nominal sizes: N/A.
- Shaft sections:
- Product reference: Contractor’s choice.
- Sizes: As directed on manhole schedule.

### 433 MANHOLE CHANNELS AND BRANCHES - CONVENTIONAL

- Material: Clay.
- Manufacturer: Contractor’s choice.
- Product reference: Contractor’s choice.

### 439 MANHOLE STEPS To Type B manholes

- Standard: To BS EN 13101.
- Type: D.
- Manufacturer: Contractor’s choice.
- Product reference: Contractor’s choice.
- Material: Galvanized steel.

### 444 SEALING FOR CONCRETE MANHOLES - BITUMINOUS STRIPS

- Manufacturer: Contractor’s choice.
- Product reference: Contractor’s choice.

### 464A STORMWATER HONEYCOMB UNITSTo be installed during phase 1

- Manufacturer: Conder Products (or similar approved).
- Product reference: Condercell (or similar approved).
- Size: 60125mm L x 20150mm W x 610mm H.

### 471 ACCESS COVERS AND FRAMES External in areas other than where there is block paving

- Standard: To BS EN 124.
- Types: Single seal.
- Manufacturer: Contractor’s choice.
- Product reference: Contractor’s choice.
- Materials: Ductile cast iron.
- Finishes: Self finish.
- Sizes: As directed on Manhole Schedule.
- Loading grades to BS EN 124:
- B125;
- C250; and
- D400.
- Edging trims: Not required.
- Accessories: n/a.

A49342285

GH56265_D_4_NP_V4.indb 155 10/9/09 01:42:15

# Brookfield

### 471A ACCESS COVERS AND FRAMES External in areas where there is block paving
- Standard: To BS EN 124.
- Types: Recessed covers for blockwork filling.
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.
- Materials: Ductile cast iron.
- Finishes: Self finish.
- Sizes: As directed on Manhole Schedule.
- Loading grades to BS EN 124:
  - B125;
  - C250; and
  - D400.
- Edging trims: Not required.
- Accessories: n/a.

### 471B ACCESS COVERS AND FRAMES Internal
- Standard: To BS EN 124.
- Types: To suit individual floor types, foul chambers to be double sealed.
- •Manufacturer: Contractor’s choice.
  - - Product reference: Contractor’s choice.
- Materials: Ductile cast iron.
- Finishes: Self finish.
- •Sizes: As directed on Manhole Schedule.
- Loading grades to BS EN 124:
  - B125;
  - C250; and
  - D400.
- Edging trims: Not required.
- Accessories: n/a.

### 475 ACCESS LADDERS Type A manholes
- Standard: To BS 4211.
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.
- Finish: Galvanized to BS EN ISO 1461.
- Accessories: Safety chains and hoops.

### 483 CONCRETE (GENERAL)
- Standard: To BS 8500-2.
- Concrete: Designated, GEN1 or Standardized prescribed, ST2.

### 485 CONCRETE (STRUCTURAL)
- Standard: To BS 8500-2.
- Concrete: Designated, GEN3 or Standardized prescribed, ST4.

### 487 CONCRETE (ADOPTABLE MANHOLE BENCHINGS AND SURROUNDS)
- Standard:
  - Scotland: To WRc ‘Sewers for Scotland’.
- Concrete: In situ.

### 489 CONCRETE (ADOPTABLE MANHOLE BENCHING TOPPING)
- Standard:
  - Scotland: To WRc ‘Sewers for Scotland’.
- Concrete: High strength.

### 492 GEOTEXTILE MEMBRANES - FILTER
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.

### 494 GEOTEXTILE MEMBRANES - IMPERVIOUS
- Manufacturer: Contractor’s choice.
  - Product reference: Contractor’s choice.

A49342285
GH56265_D_4_NP_V4.indb 156 10/9/09 01:42:16

Brookfield

## FABRICATION

### 510 VERMIN GRATINGS FOR OUTFALLS AND OUTLET HEADWALLS

- Construction: Mild steel frame extending 75 mm beyond pipe opening all around, with 25 mm
- maximum opening steel mesh grille. Top hinged on built-in fish-tail straps and with bottom pin lock.
- Finish: Galvanized to BS EN ISO 1461 after fabrication.
- Submit: Shop drawings.
  - Timing: Before manufacture.

## EXECUTION

### 611 EXISTING DRAINS

- Setting out: Before starting work, check invert levels and positions of existing drains, sewers, inspection chambers and manholes against drawings. Report discrepancies.
- Protection: Protect existing drains to be retained and maintain normal operation if in use.

### 616 SELECTED FILL FOR BACKFILLING

- Selected fill: As-dug material, free from vegetable matter, rubbish, frozen soil and material retained on a 40 mm sieve.
  - Compaction: By hand in 100 mm layers.

### 623 LOWER PART OF TRENCH – GENERAL

- Trench up to 300 mm above crown of pipe: Vertical sides, width as small as practicable.
  - Width (minimum): External diameter of pipe plus 300 mm.

### 625 LOWER PART OF TRENCH - TRANSITION DEPTH

- Trench widths up to 300 mm above crown of pipe (maximum):
  - DN 100 pipelines more than 6.0 m deep: 600 mm.
  - DN 150 pipelines more than 5.4 m deep: 700 mm.
  - DN 225 pipelines more than 4.0 m deep: 800 mm.
  - DN 300 pipelines more than 2.9 m deep: 900 mm.

### 631 TYPE OF SUBSOIL

- General: Where type of subsoil at level of crown of pipe differs from that stated for the type of bedding, surround or support, give notice.

### 635 FORMATION FOR BEDDINGS

- Timing: Excavate to formation immediately before laying beddings or pipes.
- Mud, rock projections, boulders and hard spots: Remove. Replace with consolidated bedding material.
- Local soft spots: Harden by tamping in bedding material.
- Inspection of excavated formations: Give notice.

### 641 PIPES AT DIFFERENT LEVELS IN COMMON TRENCH

- Subtrench: Permissible provided soil of step is stable and unlikely to break away.
  - Subtrench not permissible: Trench depth as required for lower pipe. Increase thickness of bedding to upper pipe as necessary.
- Lower pipe: Backfill with compacted granular material to at least half way up higher pipe.
- Clear horizontal distance between pipes (minimum):
  - Pipes up to DN 700: 350 mm.
  - Pipes exceeding DN 700: 500 mm.

### 667 CLASS S SURROUND To all drainage other than <1.2m deep in trafficked areas and <0.9m deep in untrafficked areas

- Type of subsoil: Sand, silty sand, clayey sand - loose.
- Trench width up to 300 mm above crown of pipe (maximum):
  - DN 100 nominal pipe size: 600 mm.
  - DN 150 nominal pipe size: 700 mm.
  - DN 225 nominal pipe size: 800 mm.
  - DN 300 nominal pipe size: 900 mm.
- Granular material: Contractor’s choice.
  - Pipe sizes DN 100 and DN 150: Size 4/10.
  - Pipe sizes DN 225 and DN 300: Size 4/10, 10/20 or 4/20.
  - Pipe sizes DN 375-500: Size 10/20 or 4/20.
  - Pipe sizes DN 600 and above: Size 10/20, 20/40, 4/20 or 4/40.
- Bedding:
  - Material: Granular, compacted over full width of trench.
  - Thickness (minimum): 50 mm for sleeve jointed pipes, 100 mm for socket jointed pipes. Where trench bottom is uneven, increase depth by 100 mm.
- Pipes: Dig slightly into bedding, rest uniformly on barrels and adjust to line and gradient.

# Brookfield

- Initial testing before placing surround: Required.
- Surround:
  - Material: Granular.
  - Depth: To 50 mm above crown of pipe.
  - Compaction: By hand in 100 mm layers.
- Backfilling:
  - Material: Protective cushion of selected fill.
  - Depth: 150 mm (250 mm for adoptable sewers) above crown of pipe.
  - Compaction: By hand in 100 mm layers.

### 678 CLASS Z SURROUND To all drainage other than where >1.2m deep in trafficked areas and >0.9m deep in untrafficked areas

- Type of subsoil: refer to NSGAGC GLRP0010 ASR2 Southern General Geo-Env Report Draft-issue1-rev by URS Corporation.
- Blinding:
  - Material: Concrete (general).
  - Thickness (minimum): 25 mm.
  - Width: Full width of trench.
  - Allow to set before proceeding.
- Pipes:
  - Temporary support: Folding wedges of compressible board. Prevent flotation.
  - Clearance under pipes (minimum): 100 mm.
  - Adjust pipes to line and gradient.
- Initial testing before placing surround: Required.
- Surround:
  - Material: Concrete (general).
  - Depth: To 150 mm above crown of pipe.
  - Width: Full width of trench.
- Vertical construction joints:
  - Location: At face of flexible pipe joints.
  - Material: 18 mm thick compressible board pre-cut to profile of pipe.
  - Socketed pipes: Fill gaps between spigots and sockets with resilient material to prevent entry of concrete.

### 680 CONCRETE SURROUND FOR PIPE RUNS NEAR FOUNDATIONS

- Class Z surround: Provide in locations where bottom of trench is lower than bottom of foundation and as follows (horizontal clear distance between nearest edges of foundations and pipe trenches):
- Trenches less than 1 m from foundations: Top of concrete surround not lower than bottom of foundation.
- Trenches more than 1 m from foundations: Top of concrete surround not lower than D mm below bottom of foundation, where D mm is horizontal distance of trench from foundation, less 150 mm.

### 683 LAYING PIPELINES

- Laying pipes: To true line and regular gradient on even bed for full length of barrel with sockets (if any) facing up the gradient.
- Ingress of debris: Seal exposed ends during construction.
- Timing: Minimize time between laying and testing.

### 685 JOINTING PIPELINES

- Connections: Durable, effective and free from leakage.
- Junctions, including to differing pipework systems: With adaptors intended for the purpose.
- Cut ends of pipes: Clean and square. Remove burrs and swarf. Chamfer pipe ends before inserting into ring seal sockets.
- Jointing or mating surfaces: Clean and, where necessary, lubricate immediately before assembly.
- Allowance for movement: Provide and maintain appropriate clearance at ends of spigots as fixing and jointing proceeds.
- Jointing material: Do not allow to project into bore of pipes and fittings.

### 687 CONCRETE SURROUND FOR CROSSOVERS

- Class Z surround: Provide where two pipelines (other than plastics pipes) cross with less than 300mm separation.
  - Extent, on both pipes: 1 m centred on the crossing point, and beyond as necessary to come within 150 mm of nearest flexible joints.

A49342285
GH56265_D_4_NP_V4.indb 158 10/9/09 01:42:17

Brookfield

### 689 PIPELINES PASSING THROUGH STRUCTURES

- Pipelines that must be cast in or fixed to structures (including manholes, catchpits and inspection chambers): Provide 600 mm long rocker pipes adjacent to the external face of the structure (or both
- faces where appropriate, e.g. walls to footings), with flexible joints at both ends.
  - Distance to rocker pipe from structure (maximum):150 mm.
- Provision for movement for pipelines that need not be cast in or fixed to structures (e.g. walls to footings):
  - Rocker pipes as specified above; or
  - Openings in the structures to give 50 mm minimum clearance around the pipeline. Closely fit a rigid sheet to each side of opening to prevent ingress of fill or vermin.

### 691 BENDS AT BASE OF SOIL STACKS

- Type: Nominal 90° rest bends.
  - Radius to centreline of pipe (minimum): 200mm for 110mm dia stacks, 300mm for 150mm dia stacks.
- Height of invert of horizontal drain at base of stack below centreline of lowest branch pipe (minimum): 450 mm for buildings up to 3 storeys, 750mm for other buildings.
- Bedding: Do not impair flexibility of pipe couplings.
  - Material: Concrete (general).

### 693 DIRECT CONNECTION OF GROUND FLOOR WCS TO DRAINS

- Drop from crown of WC trap to invert of drain (maximum): 1.3m.
- Horizontal distance from the drop to a ventilated drain (maximum): 6 m.

### 695 BACKDROP PIPES OUTSIDE MANHOLE WALLS

- Excavation beneath backdrop pipe: Backfill.
  - Material: Concrete (general).
- Pipe encasement:.
  - Material: Concrete (general).
  - Thickness (minimum): 150 mm.

### 697 INSTALLING FLEXIBLE COUPLINGS

- Ends of pipes to be joined: Cut cleanly and square.
- Outer surfaces of pipes to be joined: Clean and smooth. Where necessary, e.g. on concrete or iron pipes, smooth out mould lines and/ or apply a cement grout over the sealing area.
- Clamping bands: Tighten carefully to make gastight and watertight seals.

### 699 CONNECTIONS TO SEWERS

- General: Connect new pipework to existing adopted sewers to the requirements of the adopting authority or its agent.

### 705 INITIAL TESTING OF PIPELINES

- Before testing:
  - Cement mortar jointing: Leave 24 h.
  - Solvent welded pipelines: Leave 1 h.
- Method: Block open ends of pipelines to be tested and pressurise. Air test short lengths to BS EN 1610.

### 711 TRENCH SUPPORTS

- Removal of trench supports and other obstacles: Sufficient to permit compacted filling of all spaces.

### 713 INSTALLING ROOT BARRIERS

- Root barrier installation: Full depth of excavation. Fit closely to trench wall nearest the tree.

### 715 BACKFILLING TO PIPELINES

- Backfilling above top of surround or protective cushion: Material excavated from trench, compacted

in layers 300 mm (maximum) thick.

- Heavy compactors: Do not use before there is 600 mm (total) of material over pipes.

### 718 BACKFILLING OVER CONCRETE

- Minimum times from placing concrete:

- Backfilling generally: 24 h.

- Heavy compactors and traffic loads: 72 h.

### 720 BACKFILLING UNDER ROADS AND PAVINGS

- Backfilling from top of surround or protective cushion up to formation level: Granular sub-base material, laid and compacted in 150 mm layers.

### 722 PUBLIC ROADS AND PAVINGS – E&W, SCOT

- Excavating and backfilling of trenches: To Department for Transport ‘Specification for the

reinstatement of openings in highways’.

A49342285

GH56265_D_4_NP_V4.indb 159 10/9/09 01:42:17

# Brookfield

### 726 FOAMED CONCRETE BACKFILL
- Preparation: Seal off openings in, and ends of, abandoned pipelines and ducts. Seal off cavities in or next to the excavation which are not to be filled.
- Backfilling: To British Cement Association ‘Foamed concrete - specification for use in the reinstatement of openings in highways’.

### 732 TEMPORARY BRIDGES
- Trench bridges: As necessary to prevent construction traffic damaging pipes after backfilling.

### 734A INSTALLING ACCESS POINTS AND GULLIES
- Setting out relative to adjacent construction features: Square and tightly jointed.
- Permissible deviation in level of external covers and gratings: +0 to -6 mm.
- Raising pieces (clay and concrete units): Joint with 1:3 cement:sand mortar.
- Exposed openings: Fit purpose made temporary caps. Protect from traffic.

### 736 INSTALLING RODDING POINTS
- Bedding and surround:
  - Material: Concrete (general).
  - Thickness (minimum): 150 mm..
- Permissible deviation in level of external covers and gratings: +0 to -6 mm.

### 741 INSTALLING INSPECTION CHAMBERS - PLASTICS
- Bedding:
  - Material: Concrete (general).
  - Thickness (minimum): 150 mm.
- Surround:
  - Material: Not required.
  - Thickness (minimum): Not required.
- Backfilling: Granular material - manufactured, size 4/10, to 100 mm above crown of pipes, then selected fill.
  - Compaction: By hand in 100 mm layers.
- Concrete collar:
  - Material: Concrete (general).
  - Thickness (minimum): 225 mm.
  - Width (minimum): 300 mm.
- Seating: Not required.

### 743 INSTALLING CONCRETE MANHOLES
- Bases:
  - Material: Concrete (general).
  - Thickness (minimum): 225 mm.
- Surround:
  - Material: Concrete (general).
  - Thickness (minimum): 150 mm.
  - Height: Full height.
- Backfilling:
  - Material: Granular material - manufactured, size 4/10, to 100 mm above crown of pipes, then selected fill.
  - Compaction: By hand in 100 mm layers.

### 753 FIXING MANHOLE STEPS
- Fixing: Bed in joints.
- Positioning: 300 mm vertical centres staggered 300 mm horizontally, with lowest step 300 mm (maximum) above benching and top step 450 mm (maximum) below top of cover.

### 755 JOINTING CONCRETE MANHOLE CHAMBER SECTIONS
- Jointing and sealing: Bituminous strips.
- Inner joint surface: Trim surplus jointing material extruded into chamber and point neatly.

### 757 LAYING CONVENTIONAL CHANNELS, BRANCHES AND BENCHING
- Main channel: Bed solid in 1:3 cements and mortar.
  - Branches: Connect to channel, preferably at half pipe level, so that discharge flows smoothly in direction of main flow.
  - Branches greater than nominal size 150 mm: Connect the branch soffit level with the main drain soffit.
  - Connecting angles more than 45° to direction of flow: Use three-quarter section channel bends.
- Benching:
  - Material: Concrete (general) to adoptable standards if manholes are to be adopted.
  - Profile: Rise vertically from top of main channel to a level not lower than soffit of outlet pipe, then slope upwards at 10% to walls.

A49342285
GH56265_D_4_NP_V4.indb 160 10/9/09 01:42:18

- Topping:
- Material: 1:3 Cement sand mortar or to adoptable standards if manholes are to be adopted .
  - Application: Before benching concrete has set, and with dense smooth uniform finish.

### 759 LAYING PREFORMED PLASTICS CHANNELS, BRANCHES AND BENCHING

- Main channel: Bed solid in 1:3 cement sand mortar.
  - Branches: Connect to channel, preferably at half pipe level, so that discharge flows smoothly in direction of main flow.
  - Connecting angles more than 45° to direction of flow: Use three-quarter section channel bends.
- Bedding: 1:3 cement sand mortar. Use clips or ensure adequate mechanical key.
- Benching:
  - Material: Concrete (general).
  - Profile: Rise vertically from top of main channel to a level not lower than soffit of outlet pipe, then slope upwards at 10% to walls.
  - Topping:
- Material: 1:3 Cement sand mortar.
- Application: Before benching concrete has set, and with dense smooth uniform finish.

### 766A INSTALLING UNDERGROUND STORAGE TANK UNITS

- To be installed and backfilled in accordance with manufacturers instructions

### 771 INSTALLING OUTFALLS

- Pipe outflow invert (minimum): Seasonal peak level or 150 mm above normal water level, whichever is the higher.
- Pipe surround and backfill to the last 2 m run of drain: Excavated subsoil, rammed home.

### 773 INSTALLING ACCESS COVERS AND FRAMES

- Seating: Brickwork as section F10.
- Bedding and haunching of frames: Continuously.
  - Material: 1:3 cement :sand mortar.
  - Top of haunching: 30 mm below surrounding surfaces.
- Horizontal positioning of frames:
  - Centred over openings.
  - Square with joints in surrounding paving.
- Vertical positioning of frames:
  - Level; or
  - Marry in with levels of surrounding paving.
- Permissible deviation in level of external covers and frames: +0 to -6 mm.

### 776 EXPOSED OPENINGS IN INSPECTION CHAMBERS, ACCESS POINTS, FITTINGS AND EQUIPMENT

- General: Fit purpose made temporary caps. Protect from site traffic.

## COMPLETION

### 901 REMOVAL OF DEBRIS AND CLEANING

- Preparation: Lift covers to manholes, inspection chambers and access points. Remove mortar droppings, debris and loose wrappings.
  - Timing: Before cleaning, final testing, CCTV inspection if specified, and immediately before handover.
- Cleaning: Thoroughly flush pipelines with water to remove silt and check for blockages. Rod pipelines between access points if there is any indication that they may be obstructed.
- Washings and detritus: Do not discharge into sewers or watercourses.
- Covers: Securely replace after cleaning and testing.

### 903 TEMPORARY MEASURES

- Water used to stabilize tanks and the like during installation: Drain.

### 911 TESTING AND INSPECTION

- Dates for testing and inspection: Give notice.
  - Period of notice: To be agreed with Employer.

### 921 FINAL TESTING OF PRIVATE GRAVITY DRAINS AND SEWERS UP TO DN 300

- Before testing:
  - Cement mortar jointing: Leave 24 h.
  - Solvent welded pipelines: Leave 1 h.
- Standard: To Building Regulations.
- Method: Air.

A49342285

GH56265_D_4_NP_V4.indb 161 10/9/09 01:42:18

Brookfield

### 931 FINAL TESTING OF ADOPTABLE AND LARGE PRIVATE SEWERS

- Standard (sewers up to and including size DN 750):
  - Scotland: To WRc ‘Sewers for Scotland’.
- Method: Air.

### 941 WATER TESTING OF MANHOLES AND INSPECTION CHAMBERS

- Timing: Before backfilling.
- Standard:
  - Exfiltration: To BS EN 1610.
  - Method: Testing with water (method W).
  - Infiltration: No identifiable flow of water penetrating the chamber.

### 971 CCTV INSPECTION OF PRIVATE PIPELINES

- General: Carry out and record internal inspection using CCTV equipment.
  - Locations to be inspected: Foul and Surface Water Drains.
- Illumination: Of adequate intensity.
- Recording: Provide continuous position recording, still photographs and stopping of the camera at any point.
  - Copy of videotape recording: Submit.

### 978 LIFTING KEYS

- Lifting keys: Supply suitable keys for each type of access cover.
  - Timing: At completion.

### 980 INSTRUCTIONS

- Manufacturer’s user instructions: Submit for attenuation tanks.

A49342285
GH56265_D_4_NP_V4.indb 162 10/9/09 01:42:19

Brookfield

# Specification for Water Mains

## General

The water main services systems will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C07, C82, addendums to Part C, SHTM 2023, 2027, 2040, SHTM 04-01, BS 6700, Scottish Water Byelaws 2004, and descriptions and requirements set out below.

## Site External Water Mains

Wholesome mains cold water will be derived from two separate street public water mains with a separate water main entering the site from each main. The two 150mm respective site water mains will run in a shared trench with the fire and gas main. The site water mains supply will be capable of isolation by valves within all buildings supplied. To safeguard against the event of a mains failure from either public street main and ensure resilience to the hospital site water supply the two site mains will be linked by a valve chamber with a normally closed valve for sole use by Scottish Water if and when required.

All incoming water supplies to buildings will have external isolation valves.

Site water mains will be installed in accordance with NJUG requirements for utility apparatus with regards to depth, colour coding, identification markers, and position.

Underground pipework will use Polyethylene PE 100 SDR 11.

## Water Meters

A water meter will be incorporated with direct reading and a BMS interface onto both incoming mains supply at the entry to the site and also sub meters within each building served by the site water mains. All sub meters will be linked to the BMS. This additional metering will allow for any leakage from buried mains in soft dig areas to be detected by meter readings.

The site's two main water meters will be fitted with isolation valves and non return valves.

Brookfield

A49342285
GH56265_D_4_NP_V4.indb 164 10/9/09 01:42:19

Brookfield

# Specification for Fire Mains

## General

The fire water services systems will comply with the relevant clauses of the NHS Model Engineering Specification Part C01, C24, C82, addendums to Part C, BS 9990:2006, and descriptions and requirements set out below.

## Fire Mains Installation

Two separate water main connections from Govan and Hardgate Roads will be brought onto the site each with 1No 150mm branches to run as fire mains around the site to serve fire hydrants located not more than 90m apart and not more than 90m from the entry to a building as required by BS 9990:2006. The fire mains will form a ring around the building and be interlinked by a normally closed Fire Brigade valve to ensure resilience to the site fire main network. The fire mains will be unmetered unless specifically requested by the local water authority.

Each of the two fire mains will be capable of supplying 25 litres/second respectively at all times.

A 100mm branch from the fire ring main will supply the basement sprinkler and wet riser storage tanks.

The fire mains below ground will be in polyethylene pipe to PE100 and be fusion welded. All pipe tees and bends will be fitted with anchor points to be sized and installed by others.

The type, number and location of fire hydrants will be approved by the local fire brigade.

Fire Hydrants will be ductile iron to BS 750:2006 Type 2.

Fire hydrants will be sited below ground in purpose built chambers of engineering brick class B. Pipe connections to the hydrants will be 125mmOD pipe. Hydrants chambers will be identified “Fire Hydrant” and have indicator plates giving location and size. Hydrant chambers will not be sited in roadways or other locations where heavy external loads may be expected.

Brookfield

A49342285
GH56265_D_4_NP_V4.indb 166 10/9/09 01:42:20

Brookfield

# Specification for Heating Mains

## General

The heating mains installation will comply with the relevant clauses of the NHS Model Engineering Specification Parts C01, C02, C07, C82, addendums to Part C and descriptions and requirements set out below.

## Heating Mains

Primary heating circuits will emanate from the Energy Centre arranged as A and B circuits feed from their respective boiler system.

The flow and return pipework will be routed from the energy centre using pre-insulated buried pipework and enter the basement corridor system of the main hospital. At this point the A and B circuits will join a header which, for resilience purposes, will allow either A or B circuits to feed the hospital.

The buried pipe system will employ an HDPE outer casing with welded steel pipework to carry the heating medium. The space between the casing and steel pipe will be filled with insulating polyurethane foam.

A leak detection system will be incorporated to signal any failure of the system and be linked to the BMS.

Thermal expansion will be incorporated into the system using soft foam bends and expansion loops as necessary.

Brookfield

A49342285
GH56265_D_4_NP_V4.indb 168 10/9/09 01:42:20

Brookfield

# Specification for Gas Mains

## General

The gas supply and distribution systems will comply with the relevant clauses of the NHS Model Engineering Specification Part C01, C82, addendum to Part C, BS6644, IGE Guidance, Clean Air Act, and descriptions and requirements set out below.

## Gas Mains Installation

The gas supply for the Adult Hospital and Children's Hospital will run from a new meter housing and booster station at the boundary of the site on Govan Road and run as a medium pressure supply (150mbar) in a soft dig trench alongside other site piped services to the Energy Centre and with a branch to serve the Laboratory Building. The medium pressure gas main will continue in soft dig to the Acute building to serve the kitchen/ catering areas with a low pressure supply of 21mbar via a medium to low pressure regulator sited external to the hospital building. Similarly the medium pressure supply to the Laboratory building shall be equipped with medium to low pressure regulator to provide an incoming supply to the Laboratory building at 21mbar.

Whilst the current solution is based on s supply being brought o the site at Low Pressure, consideration will be given to bringing in a medium pressure supply to avoid the need for onsite boosters.

## Energy Centre

The medium pressure supply into the Energy Centre will be taken to the heating boilers and CHP unit for direct use at this pressure, thus avoiding the need for individual plant gas boosters. All gas/dual fuel boilers and CHP plant will be individually metered and lined to the BMS system.

## Acute/Children's Hospital

From the medium/low pressure regulator gas at 21mbar will be distributed around the Acute/Children's Hospital to serve catering areas. All subsidiary gas use areas will be sub metered and linked to the BMS system.

Gas pipework below ground will be polyethylene PE80 with fusion joints. Pipework above ground will be in heavy duty mild steel with screwed joints.

Brookfield

# Specification for Electric Mains

## General

Refer to the Electrical Services Mains Schematic Drawing SK-201.

For a description of the substations, refer to specification 4.34 “Electrical Source and Mains”.

This specification describes the proposed incoming Utility 33,000V supply, the 11,000V distribution system and its controls, and the proposed method of operation of the 11,000V distribution system.

In this specification, reference to the loads of the NSGH Adult and Children’s Hospitals and the Laboratory include an allowance for the full diversified estimated maximum demand plus 25% additional future capacity. No spare capacity has been allowed for the Retained Estate, which is stated as estimated maximum demand.

## Estimated Supply Capacity

The new supply to the NSGH site must be capable of supporting the following loads:-

| | |
|---|---|
| Existing Retained Estate | 6658kVA |
| New Adult and Children’s Hospital | 12500kVA |
| Laboratories | 2380kVA |
| Total site load | 21538kVA |

Total supply capacity requirement is therefore in the order of 21.5MVA.

## Incoming Utility Services

The Incoming Utility supply will be derived at 33kV from the Govan Grid Connection Point. The11kV supply up to and including the Utility Primary 11kV switchboard will, under normal supply conditions, provide two independent incoming 11kV supplies to the Hospital’s 11kV system. The configuration of Utility 33kV and 11kV feeders and switchgear will allow the Utility Company to maintain or rapidly restore the 11kV supply to the hospital under most scenarios of a planned outage, or during any unplanned failure, of part of a leg of the Utility 33kV/11kV supply system. This will be achieved by the Utility switching the 33kV and 11kV feeder and bus section switchgear.

Two main incoming 11kV Utility supplies from the Utility Primary 11kV Switchboard are proposed, entering the site routed via diverse routes. Each of these will be terminated into one of the two NSGH 11kV main intake switchboards, each located within one of the two Energy Centre generator halls. Under normal supply conditions the supply arrangement will provide two independent incoming 11,000V supplies to the Hospital’s 11,000V system. The two separate sections of the Energy Centre, and the equipment contained in them, will be designated A and B respectively.

The segregation of the two parts of the Energy Centre will provide a high degree of fire separation between the two sections.

In the event of a loss of supply from either section of the Utility Primary 11,000V switchboard, or one of the metered services from it, the lost Utility service will be replaced by automatic switching of the incoming and interconnector 11,000V switches on both NSGH Main Intake Switchboards to isolate the failed service and replace it with a feed from the remaining service. This will be done via the automatic controls for the NSGH 11,000V distribution system.

The overall arrangement will provide an incoming 11kV supply having an inherently high degree of resilience. This incoming supply will also be backed up by the Standby generator provisions; refer to the later section of this specification, “Standby Generators”, for a description of this system.

## 11kV Distribution System

From each of the two 11kV main intake switchboards, two 11kV ring mains will be installed around the NSGH new-build site to supply local substations, each limb of each ring having the A or B designation of the Main Intake switchboard serving it. The A and B limbs of each ring will each serve one transformer of every substation on that ring. The ring cables will be routed via diverse routes to avoid the possibility of common mode failure due to damage, and will be operated in the “normally open” configuration. The two rings will form the basis of the site’s dual-unified support strategy. The substations will be configured as per the Schematic Drawing SK201, as follows, the transformer ratings are proposed and are provisional:-

### Ring 1:

Sub Station 1A/1B (Located on the Roof of the Children’s Hospital) - 2 x 1600kVA transformers.

Sub Station 2A/2B (Located on the Podium Roof, Children’s Hospital area) - 2 x 2000kVA transformers.

Sub Station 3A/3B (Located on the Podium Roof, Towers 1 & 2 area) - 2 x 2000kVA transformers.

### Ring 2:

Sub Station 4A/4B (Located on the Podium Roof, Towers 3 & 4 area) - 2 x 1600kVA transformers

Sub Station 5A/5B (Located on the Podium Roof, Theatres area) - 2 x 2000kVA transformers

Sub Station 6A/6B (Located on the Podium Roof, Emergency Centre area) - 2 x 1600kVA transformers.

A separate ring will be provided to serve the Laboratories and Retained Estate. This will initially be configured to serve the Laboratories alone, and the Laboratory switchboard will be provided with facilities to facilitate the reconfiguration of the ring at a later date by the Board to serve the Retained Estate, without loss of supply to the Laboratories. Ducts will be provided from the Energy Centre to the boundary of the Retained Estate to facilitate its connection.

# Brookfield

The 11kV ring mains will be routed around the NSGH site, externally and within the new main NSGH Building, via diverse routes. The open ring configuration is proposed primarily for resilience but will also more readily facilitate extension for future expansion. The open ring configuration will restrict the extent of the effects of a ring fault to one half of the ring.

A Power Management System will control the operation of the ring switchgear. This will be programmed to automatically detect and isolate ring faults and reconfigure the ring to restore supply to as much of the site as possible in the event of a ring fault. Refer to the later controls section of this Specification.

The proposed 11kV rings will operate in open configuration. Should a fault occur anywhere within a ring system the section of the ring having the fault will be automatically isolated, and the ring reconfigured to rapidly restore supplies to all affected substations under the control of the Power management System. This automatic operation will effectively move the open point to the faulty section of the ring.

The configuration is intended to provide two nominally equally loaded rings, which, in normal configuration, will each comprise two equally loaded limbs. Each ring will have its own dedicated matched standby generator facility and CHP provision.

11kV Main Intake Switchboards

Each of the two 11kV Main intake Switchboards will comprise an incoming 1250A 11kV Utility supply switch, the outgoing 11kV 630A service circuit breakers, and 11kV 1250A bus-section switches to connect to the adjacent Generator Switchboard. These will be linked by 11kV 1250A busbars. The 11kV switchgear will be vacuum insulated circuit-breakers, the outgoing service circuit breakers having protection relays, automatic tripping units, and motorised open/close mechanisms. The incoming feeder switches and bus-section switches will have motorised open/close mechanisms. The Interconnector between Main Intake Switchrooms A and B will have switches with motorised open/close mechanisms. These will be hard-wire interlocked to ensure that only three of the four switches can be closed at any time, to prevent paralleling of the incoming Utility supplies. The switchgear with motorised mechanisms will be controlled by the 11kV control system.

Protection relays will be of the electronic type. IDMT 3-phase overcurrent and earth-fault protection will be provided on all 11kV load circuit breakers. Ring feeder protection will be provided in the form of unit protection, with a pilot cable, to allow full selective protection of each section of the ring.

The protection relays, motorised mechanisms and switchgear trip units in the two Main Intake Switchboards will be powered from a common dual-redundant power supply unit. Consideration will be given to combining this with the power supply units for the Power Management System if that proves technically feasible.

Each Main Intake Switchboard will incorporate the circuit breakers for two 11kV CHP units and the outgoing circuit breakers for two transformers (substations 7 & 8) feeding the main chillers; a motorised Bus-section switch will be provided for the connection of the adjacent Standby Generator switchboard.

## Substations, Transformers and Ring Main Units

The substations will comprise two 11kV/400V dry type cast resin insulated transformers, each with its own Ring Main Unit (RMU), each serving a Low Voltage switchboard. As previously described, each half of each substation will be served from one limb of the ring, designated A and B. The two parts of each substation will be separated by fire resistant compartment walls, providing a high degree of resilience in the event of fire in one part of the substation. The RMUs will have motorised ring switches controlled by the 11kV control system. For a more complete description of the substation equipment refer to Section 4.34 of this specification.

## Power Management System

The focus of the combined system control approach is to achieve maximum efficient operation of the CHP units with the focus of minimising carbon output from the campus.

The basic facet of the control strategy is that the primary control is decentralised at each unit.  For example on board chiller and boiler control.

A Power Management System (PMS) of electrical control and real time metering of the MV electrical distribution is run through the protection control units, utilising the established IEC61850 utility grade standard.  The primary LV feeders are also metered and integrated into the PMS.  These can also be controlled should the need arise.

The PMS handles the complete electrical system during emergency conditions.

The PMS can manage load augmentation utilising the emergency generation units, should the need arise.

The CHP interface of the PMS calculates the optimum load output for each CHP unit, in terms of carbon from the whole campus and also efficiency of each unit.  The CHP system is considered holistically and will cater in it’s calculations for units out of service.

At the application layer level, an algorithm models the system in real time, taking real time energy usage form the PMS and also the campus BMS, it factors in the current weather conditions from the weather station and also a weather forecast file.  The system utilises a “learned” approach to developing a continuous look up table to predict the upcoming load requirements of the campus.

This algorithm allocates the optimum load for the CHP island, the chillers and boilers.

Brookfield

## 11kV System Controls

The 11kV ring switchgear control system will comprise duplicate Power Management System controllers operating in parallel in “hot standby” configuration. The Power Management System controllers will monitor the ring protection system relays and from these will identify the location of any first fault which occurs on a ring. The Power Management System controllers will control the motorised 11kV ring circuit breakers on the Main Intake Switchboards, the substation ring main unit (RMU) motorised ring switches and selected low voltage circuit breakers throughout the NSGH site. On detection of a fault on the ring (including the 11kV busbars of any substation RMU), the protection unit on the ring feeder circuit breaker on the affected limb will trip the breaker, and the Power Management System controllers will identify the location of the fault and will operate the ring switchgear on either side of the fault to isolate the faulty part of the ring. The control system will then close the ring switchgear at the original open point to restore the supply to the healthy part of the ring from the other, healthy, limb of the ring, and will close the ring feeder circuit breaker which previously tripped (assuming that the fault was not on the section of ring fed by that breaker), to restore the supply to the remainder of the ring.

The control of the LV circuit breakers will permit load shedding control under conditions of standby generator operation when only partial generator back-up is available.

The Power Management System controllers will communicate to a front end touch screen Human Machine Interface (HMI) panel located within the main control room.

A manual override facility will be provided, together with electronic and hard-wired interlocks where necessary, to avoid the risk of closing switchgear onto faulty sections. Switchgear status (open/closed/tripped etc) will also be monitored, to ensure that any tripped switchgear is not accidentally closed under automatic or manual control, particularly when reconfiguring the ring after a failure of a section..

The system will provide automatic reconfiguration of a ring as described for only the first detected fault on either ring. It will be programmed to allow further reconfiguration necessary due to further faults on the same ring only under manual control from the HMI or locally at the substations and Main Intake Switchboards.

Manual control will be possible only by authorised personnel in possession of the appropriate high-level password for the control system.

A Control Bus ring will link the local Power Management System controllers at each substation with the main Power Management System controllers in the Main Control Room. This will provide the resilience of a ring for the control system.

The two Power Management System controllers will each have a dedicated power supply, rated to simultaneously serve both Power Management System controllers. The Power Management System controller power supply will be provided with mutual automatically switched cross-feeds to ensure that in the event of failure of one power supply, the feed to the affected Power Management System controller will be switched to the remaining healthy power supply.

## Control of the 11kV System During Incoming Utility Supply Failure

The Power Management System controllers will also be linked to the standby generator control system to control the 11kV system switchgear in the event of a partial or total Utility incoming supply failure.

For any Utility supply failure, the Utility incoming circuit breaker on the affected Main Intake switchboard will open and the associated standby generators will start, but the Power Management System controller will inhibit other any action for a preset short time delay (to be determined) to confirm whether the Utility supply will be restored quickly by the Utility Company.

If the Utility supply is quickly restored, and proved healthy, the Utility incoming circuit breaker will be closed to reconnect the supply and the standby generators will be shut down.

Should the Utility supply not be quickly restored, the following will occur.

For the failure of a single incoming Utility supply, after the Utility incoming circuit breaker has opened, the switches on the interconnector between Main Intake switchboards A and B will be closed, thus restoring the supply. The standby generators will be shut down. If the interconnector is not available, or its connection is delayed, the standby generators will be connected to serve the load until either the interconnector is available or the failed Utility supply has been restored and proved healthy for a preset time. The load will then be transferred to the interconnector or the Utility supply.

For the failure of both Utility incoming services, the standby generators will be connected to the system to serve the NSGH load, until the Utility supplies have been restored and proved healthy for a preset time. The load will then be transferred back to the Utility supplies. If only a single Utility supply only is restored, after it has been reconnected to its main Intake switchboard, the interconnector may be used to serve the other Main Intake switchboard by seamless transfer from the standby generators.

In all cases when the Standby Generators are supporting the load, the load will be transferred back to the restored Utility supplies by agreement with the Utility Company (refer also to the Standby Generator section of this specification for further description).

Measures will be taken to avoid tripping of the ring feeder and Utility circuit breakers due to transformer inrush currents upon re-energisation of the rings. The standby generators will not be connected to the load but will shut down.

Refer also to the Standby Generator section of this specification for further description.

A49342285
GH56265_D_4_NP_V4.indb 174 10/9/09 01:42:23

## 11kV Cables

The 11kV cables will generally be 3-core XLPE insulated, steel wire armoured, LSOH sheathed with stranded copper conductors, and will have a voltage rating of 6350/11000V. External cables will be run buried direct in soft ground, or in ducts under hard surfaces. Route marker/cable identification tiles, buried warning tape and protector tiles will be provided.

## Emergency Power-Off Systems

A system of emergency power-off (EPO) buttons will be provided in the Main Intake Switchrooms, the Generator Switchrooms, and the Ring Substations. The operation of any EPO button in a room will automatically isolate that room only from the 11kV supply.

The Generator Hall will be separated from the adjacent Main Intake Switchroom by a fire-rated wall, with one bus-section switch located on either side. The operation of an EPO button will cause all circuit breakers, ring switches and bus-section switches immediately outside the room to open and lock out, thus ensuring that all 11kV supplies to that room are completely isolated. For the Main Intake Switchroom, this will involve the tripping of the ring circuit switches on the nearer side of the first substation on the two rings.

A similar provision will be installed in each ring substation, with intertripping of the 11kV and LV circuit breakers to prevent a backfeed from the LV system to the 11kV system. This intertripping facility will operate in the event of the 11kV transformer feeder circuit breaker tripping due to a fault.

The EPO system will be linked to the fire alarm and gaseous suppression systems in each room, to provide local isolation of power supplies under fire alarm conditions.

## Standby Generators and Controls

The NSGH site will be provided with 11kV standby generators, capable of supporting the whole of the new Adult and Children's Hospital, the new Laboratory building and the Retained Estate. The standby generators will be provided in two separate, equally sized groups, one group installed in each of the two Energy Centre Generator Halls (1 & 2). The two groups will be identical, and each will be sized to support half the load of the full NSGH estate including Retained Estate. This will provide independent standby generator support for each the A switchroom and the B switchroom, and the corresponding substations. Only the appropriate group of standby generators will start in the event of the failure of one incoming 11kV Utility service. The following description applies equally to each group of generators.

The standby generators will be connected to an 11kV Generator Switchboard, which will be similar in specification to the Main Intake Switchboard, to which it will be connected via two normally open bus-section switches (one on the Main Intake switchboard, one on the Standby Generator switchboard) in series (refer to "Emergency Power Off" above). The generator circuit breakers will be motorised and will be controlled by the Standby Generator Power Management System controller.

The ITPD requires that the generators shall be rated for Continuous Operating Power, as per ISO8528, and installed in N + 1 redundant configuration. However, the definition of Continuous Operating Power as defined by ISO8528 refers to operation for unlimited hours. As the generators will be used for Standby Power only, this bid includes for Limited Time Running Power (LTP) generators, as defined by ISO8528, which will be capable of supporting a constant electrical load for 500 hours per year.

The governors will be electronic, providing class A1 in accordance with BS5514 Part 4. Space will be provided for additional generator capacity to allow future load growth of 25% of the initial installed capacity. It is currently estimated that, at handover, each group of generators will incorporate six standby sets each nominally rated at 2000kW/2500kVA @ nominal 0.8pf. There will be a provision for connection of a trailer mounted LV generator when necessary, via a step-up transformer, to provide back-up and retain redundancy if a single 11kV standby set is out of service for an extended period for major maintenance. This will also provide a facility for "last ditch" back-up in the unlikely event that the main standby generator system becomes totally disabled for any reason.

The two groups of standby generators will each be controlled by a dual, hot-standby, Power Management System controllers system to monitor the status of the standby sets and the incoming mains to the site. These will be interconnected with the 11kV Power Management System. The links with the 11kV control system will allow load to be shed to suit the available generator load, should any generators fail in service or be unavailable at start-up, and also inhibit connection of the generators if the Utility supply is quickly restored before the generators are connected to the load. Links with the BMS will allow it to inhibit the mechanical plant operation until sufficient generation capacity has become available.

Upon Utility supply failure the generators serving the affected switchroom will automatically start, the generators will mutually synchronise with the first generator to reach operational speed, prior to supplying load to the hospital. After a short proving period to verify that the Utility supply will not return quickly, the generators will be connected to the load. The general mechanical load will initially be held off by the Building Management System (BMS) at the local Motor Control Panels and then added by the BMS in an agreed prioritised sequence, to give priority to the hospital lighting and power loads (including the life safety and essential mechanical systems).

When the building loads are supported by multiple generator operation, should a generator fail the entire load will be removed from the standby generator system to avoid stalling of the remaining generator/s. The system will then be loaded up via the Power Management System, and the BMS system will then load the mechanical services to suit the remaining available standby capacity. Motorised breakers will be provided in the low voltage distribution system for the 'lower priority loads' in order to limit the load under reduced standby supply conditions. Prioritisation of the loads will be subject to detailed discussion and agreement with the Board.

A49342285

GH56265_D_4_NP_V4.indb 175 10/9/09 01:42:23

Brookfield

The system will also be provided with G59/1 for allowance for short term parallel operation with the mains utility supply. This will be provided to permit, after a Utility supply failure, seamless transfer back to mains once stable Utility supplies have been confirmed as being restored. A manually instigated automatic transfer facility back to incoming mains supply will be provided, with a key switch or other secure facility to provide a fully automatic transfer if required. It will also allow seamless test running of the generator system against the Hospital load.

Each standby set will have its own daily service fuel tank, served from a transfer connection to the combined standby heating and power bulk fuel storage system.

Sound attenuation will be provided in the fabric of the Generator Switchrooms, and by inlet and exhaust air attenuators. Exhaust attenuators (silencers) will be provided within the Generator switchroom. These measures will be specified to ensure that Local Authority's environmental noise level limits are achieved.

## Test Facilities

A manually instigated automatic testing system will be provided, which will allow automatic testing of single standby sets and the whole system. This shall be under the control of the Standby Generator control system. The method of testing remains to be finalised.

## CHP Systems

It is proposed to connect two 11kV CHP units to each of the Main Intake Switchboards. The CHP Units will be self-contained. They will be sized, and their controls interlinked, to ensure that they operate in a way which matches the available heating and electrical loads, and maximises the potential for energy saving and reduction of the carbon footprint of the NSGH.

Operation of the CHP units will be enabled only when a Utility supply is available at the Main Intake switchboard (either directly or via the Interconnector). During a loss of this incoming supply the local CHP units will be disabled.

The CHP systems will be housed in acoustic housings to ensure that the environmental noise levels meet the limits imposed by the local Planning Authority.

Brookfield

# Outline Specification – Site Lighting

## Contents

1.0 Site Lighting

## 1.0 Site Lighting

### 1.1 Luminaires generally

Standards: To BS EN 60598-1 and BS EN 55015.

### 1.2 Illuminated bollards

Refer to Specification – External Fittings and Furniture section 1.2

### 1.3 Lighting columns to roads

Type: Single and double headed post top lights as indicated on drawings
Standard: To BS EN 60598-2-3.
- Approval: Kitemark certified.

Photometric performance: To BS 5225-1.
Ingress protection to BS EN 60529: to manufacturer's recommendation.
Material: Steel.
Finish and colour: Aluminium colour textured surface.
Mounting: pole mounted 8m high.

### 1.4 Lighting columns to the Central Park

Type: Single headed post top light
Standard: To BS EN 60598-2-3.
- Approval: Kitemark certified.

Photometric performance: To BS 5225-1.
Ingress protection to BS EN 60529: to manufacturer's recommendation.
Material:
- Top shade: Spun copper
- Reflector: spun matt and polished alumimium
- Enclosure: vacuum formed clear polycarbonate
- Base: dia cast aluminium
- Struts: Stainless steel

Finish: Copper, brushed
Mounted: pole mounted 6m high

### 1.5 Lighting columns to the Children's Park and roof garden

Type: Single and double headed post top lights as indicated on drawings
Standard: To BS EN 60598-2-3.
- Approval: Kitemark certified.

Photometric performance: To BS 5225-1.
Ingress protection to BS EN 60529: to manufacturer's recommendation.
Material:
- Diffuser: Extruded opal polycarbonate
- Top shade: Spun copper
- Base: dia cast aluminium
- Struts: Stainless steel

Finish: Copper, brushed
Mounted: pole mounted 6m high

### 1.6 Ground mounted up lights to selected trees

Standard: To BS EN 60598-2-3.
- Approval: Kitemark certified.

Photometric performance: To BS 5225-1.
Ingress protection to BS EN 60529: to manufacturer's recommendation.
Material: Steel.
Finish and colour: stainless steel surface
Mounting: Installation sleeve.

### 1.7 Feature lighting to arrival square

Type: Tapered lighting column with Circular parabolic floodlights
Standard: To BS EN 60598-2-3.
- Approval: Kitemark certified.

Photometric performance: To BS 5225-1.
Ingress protection to BS EN 60529: to manufacturer's recommendation.
Material: Cor-Ten steel
Finish and colour:  Cor-Ten Steel

GH56265_D_4_NP_V4.indb 177 10/9/09 01:42:24

# Brookfield

### 1.8 LED lighting strip to seating wall in arrival square and children's park

Type: LED Strip lighting
Standard: To BS EN 60598-2-3.
- Approval: Kitemark certified.

Photometric performance: To BS 5225-1.
Ingress protection to BS EN 60529: to manufacturer's recommendation.
Materials: Steel
Finish and colour: Stainless steel

### 1.9 Bollard Illuminated to arrival square, court yards and roof garden

Height: 1100mm
Diameter:140mm.
Material: 316 stainless steel.
Finish: Bead blasted 316 stainless steel bollard body, Brushed 316 stainless steel top cap.
Colour: silver.
Lighting specification: to lighting engineers' detail

### 1.10 Bollard Illuminated to maintenance strips around building

Height: 1100mm
Diameter: 210mm
Material:
- Top: Die cast aluminium
  - Post: Extruded aluminium

Finish: Powder coated texture surface
Colour: silver

Brookfield

## Submission Reference:

Section 4.57 – Minor Building Works

## Submission Response:

Minor Building Works

### 1.0 Break-through into Neurology & Maternity

The elements of work associated with breaking through into these existing buildings will include (but not limited to):

- Making good

  This will involve ‘making good’ in and around the newly formed ‘openings’ and ensuring the integrity of the structure remains intact.

- Flooring

  There will be a gentle transition from the existing floor finishes to finishes in the ramp.

- Ceiling

  Ceiling finishes will accommodate exposure to external environments

- Doors & Ironmongery

  External weather proof doors will be introduced at the exit points, with ironmongery to suit

- Lock suiting

  The external doors to both the new and existing building will be suited such that access can be gained by the Board and appointed staff.

- Security

  Brookfield will ensure that existing security is not compromised

  For a fully integrated scheme and to ensure services are inter-linked, Brookfield will assist the Board to investigate compatibly between systems listed below:

a. IT

b. Phones

c. Lighting

d. Fire Alarms

e. Pneumatic Tubes (if required)

f. CCTV

### 2.0 Bicycle Stores (Public cycle spaces / Staff cycle spaces)

Staff and Public Cycle Shelters - Contemporary shelters at designated locations to suit easy access, designed to compliment the environment, whilst providing a modern and stylish solution to secure cycle storage, weather protection and promoting cycle usage.

### 3.0 Tunnel Emergency Exit Enclosure

We will provide an unobtrusive shelter that can house the exit from the emergency tunnel with a secure mechanism to stop unwanted access.

### 4.0 Bus Shelter

Portal frame shelter in single and modular units, to provide a stylish modern shelter that can withstand the elements.

### 5.0 Café Pavilion (Optional)

A bespoke ‘standalone’ simple lightweight steel frame unit with low wall and glass enclosure to house the ‘Café’ and hub for both staff and visitors, It will offer catering facilities to the community.

# NHS Mandatory Documentation

## Submission Reference

7.1 NHS Mandatory Documentation

## Submission Response

In relation to the architectural design, structural design and services design of the new buildings comprised in the Works, the documents listed in the following Table 2 below set out that guidance which the Board considers to be mandatory. Brookfield response to each document is set out in the Proposals Comply/Compliance Narrative columns as requested in the ITSFB.

Table 2 (extract from ITPD Vol 2/1 Section 5.1.2) – ITSFB Clarification Appendix 1

| Document | Title | Proposals Comply? (Yes/No) | Compliance Narrative (How compliance is being Achieved) |
|---|---|---|---|
| CEL 25 | Fire Safety policy for NHS Scotland 2008 | yes | Volume 2 Section 2.10 Fire Strategy report takes cognizance of the document |
| SHTM 81 | Part 1: version 4, Fire Precautions in new healthcare premises | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. |
| SHTM81 | Part 2: version 1, Guidance on the fire engineering of healthcare premises | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. |
| SHTM 82 | Alarm and detection systems Version 2 | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. |
| SHTM 82 SUPP A | Automatic fire control systems and voice alarm systems | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. |
| SHTM 83 | Fire safety in healthcare premises – general fire precautions Version 2 | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. |
| SHTM 85 | Fire precautions in existing hospitals Version 3 | no | This document covers existing hospitals rather than new |
| SHTM 86 | Fire risk assessment Part 2 Healthcare Premises Version 4 | no | This document covers occupied hospitals rather than new |
| SHTM 87 | Textiles and furniture Version 2 | yes | Refer to Volume 2 Section 2.10 Fire Strategy report takes cognisance of the document |

Brookfield

| Document | Title | Proposals Comply? (Yes/No) | Compliance Narrative (How compliance is being Achieved) |
|---|---|---|---|
| HTM 05 – 01 | Firecode – Fire safety in the NHS | yes | Volume 2 Section 2.10 Fire Strategy report covers areas of compliance with Firecode (HTM) where there is no Scottish Equivalent document (SHTM). |
| HTM 05 – 02 | Firecode – Fire safety in the NHS | yes | Volume 2 Section 2.10 Fire Strategy report covers areas of compliance with Firecode (HTM) where there is no Scottish Equivalent document (SHTM). |
| HTM 05 – 03 | Firecode – Fire safety in the NHS | yes | Volume 2 Section 2.10 Fire Strategy report covers areas of compliance with Firecode (HTM) where there is no Scottish Equivalent document (SHTM). |
| HSANs | All published Health & Safety Action Notices | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| NHSE 10 | Cubicle Rails | yes | This NHS Estates Alert (2004) instructed Mental Health Trusts to remove all non-collapsible bed and shower curtain rails in psychiatric In-patient settings by 2005. Compliance is shown for NCH DCFP where the specification will ensure no accessible part of a system will bear enough load great enough to present a ligature risk. |
| NHSE HN04 | Curtain Tracks | yes | This NHS Estates Hazard Notice (1998) reported action should be taken to identify curtain tracking installed in areas used by patients vulnerable to suicide, assess the risk, and where necessary, upgrade tracking to ensure that no accessible part of the system will bear a load great enough to present a hanging risk. Compliance is shown for NCH DCFP where the specification will ensure no accessible part of a system will bear enough load great enough to present a ligature risk. |
| NHSE HN03 | Centre Pivot Window | yes | This NHS Estates Hazard Notice (2003) applies to all centre pivot windows. Compliance is shown as the window specification includes window restrictors to both sides of the window complying with BS6375 – 2 (The restrictor will be capable of withstanding 1000 N applied force). |
| SAN05/08 | Flooring Materials | yes | This Safety Action Notice SAN(SC)05/08 applies to flooring materials and the risk of ‘slip and trip’ accidents. Compliance is shown as specification requires compliance with SHTM 61. |
| SN(01)01 | Cubicle Rail | yes | This NHS Safety Notice SN(01)01 applies to Mental Health Trusts and the adult psychiatric setting. Compliance is shown for NCH DCFP where the specification will ensure no accessible part of a system will bear enough load great enough to present a ligature risk. |

| | Part 2 Design considerations | yes | Lifts will be provided to meet Health Services standards HTM & SHTM design and documentation. |

| Document | Title | Proposals Comply? (Yes/No) | Compliance Narrative (How compliance is being Achieved) |
|---|---|---|---|
| | Part 3 Validation and verification | yes | Validation & verification will be done in accordance with SHTM and European standard code requirements. |
| | Part 4 Operational management | yes | 24 hour x 7 day fully comprehensive maintenance cover in accordance SHTM to be confirmed with the Board. |
| | SHTM 2024 forms | yes | SHTM 2024 documentation will be provided confirming the equipment for lifts & escalators proposed will be in compliance. |
| HTM 03-01 | Specialised ventilation for Healthcare Premises Part B | yes | Ventilation will be provided to meet clinical, process and environmental requirements. Refer to Design Strategy for Ventilation Volume 3 Section 3.9 and Specification Volume 4 Section 4.33. |
| HTM 03-01 Part B | Specialised ventilation for Healthcare Premises Part B | yes | Ventilation will be provided to meet clinical, process and environmental requirements. Refer to Design Strategy for Ventilation Volume 3 Section 3.9 and Specification Volume 4 Section 4.33. |
| HTM 03-01 Part A | Specialised ventilation for Healthcare Premises Part A | yes | Ventilation will be provided to meet clinical, process and environmental requirements. Refer to Design Strategy for Ventilation Volume 3 Section 3.9 and Specification Volume 4 Section 4.33. However, the same comments apply as for SHTM03-01 |
| SHTM 03-01 Part A | Specialised ventilation for Healthcare Premises Part A | yes | Ventilation will be provided to meet clinical, process and environmental requirements. Refer to Design Strategy for Ventilation Volume 3 Section 3.9 and Specification Volume 4 Section 4.33. However, the following amendments are proposed:- Clause 3.10 recommends limiting supply temperatures to 7°C below room temperature. The limitation on supply temperature may be exceeded in order to provide economic plant and distribution sizes. However, terminals will be selected to avoid draughts and resulting discomfort. Clause 7.187 suggests limiting plantroom temperatures to 32°C. If plantroom temperatures are to be limited to 32°C, then in the majority of cases this would be impractical by mechanical ventilation alone, and would require the provision of cooling. Therefore, plantrooms will be ventilated to maintain suitable operating temperatures for equipment installed. Clause 5.6 suggests that in spaces requiring air change rates in excess of 15 per hour, circular diffusers should be used. Circular diffusers may not be the most appropriate pattern to select, alternatives being swirl, perforated plate, etc. Diffusers will be selected to achieve draught-free conditions. |

| Document | Title | Proposals Comply? (Yes/No) | Compliance Narrative (How compliance is being Achieved) |
|---|---|---|---|
| SHTM 04-01 Part A | Control of Legionella…drinking systems Part A | yes | Hot and cold water services are described in Design Strategy for Hot and Cold Water Services Volume 3 Section 3.7 and specification sections Volume 4 Sections 4.27, 4.28 & 4.51. However, the following adjustments are proposed:- Fig 2 shows A small CWS break cistern serving each cold water system, prior to the main filtration plant will be provided. However, a secondary break cistern before each bulk storage cistern will not be provided. At least two equally sized bulk storage cisterns with a total of 100% of the design capacity in each location have been provided. The recommended quantities of water storage given in Table A1 are considered excessive for modern hospitals. Therefore, reduced levels have been used. Refer to Design Strategy for Hot and Cold Water Services Volume 3 Section 3.7 for further details. Clauses 9.13/9.23 recommend providing peak continuous hot water output for 20 minutes. Following the recommendations of the SHTM, results in excessive storage capacity, which can increase energy consumption and increase the risk of Legionella, the HTM approach is also outdated and relates back to when there was high usage of baths at set periods of the day. Modern hospitals predominantly use showers, which use less water and have a much higher diversity factor. This approach will not be followed, but diversity will be considered using the principles of BS 6700. |
| SHTM 04-01 Part B | Control of Legionella…drinking systems Part B | yes | Hot and cold water services are described in Design Strategy for Hot and Cold Water Services Volume 3 Section 3.7 and specification sections Volume 4 Sections 4.27, 4.28 & 4.51. |

# NHS Guidance Documentation

In relation to the architectural design, structural design and services design of the new buildings comprised in the Works, the documents listed in the following Table 3 set out that guidance which the Board considers to be guidance. Brookfield response to each document is set out in the Proposals Comply/Compliance Narrative columns as requested in the ITSFB.

Our design has been informed by the guidance provided in SHBNs and HBNs (and other docs) insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents.

Table 3 (extract from ITPD Vol 2/1 Section 5.1.3) – ITSFB Clarification Appendix 1

| Document | Title | Proposals Comply (Yes/No) | Compliance Narrative (How compliance is being achieved) |
|---|---|---|---|
| | NHSSCOTLAND National Cleaning Services Specification | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| SFPN 6 | The prevention and control of deliberate fire-raising in NHS Scotland healthcare premises Version 3 | yes | This is largely an operational management issue. However where relevant, Volume 2 Section 2.10 Fire Strategy report takes cognizance of the document |
| SFPN 10 | Laboratories on hospital premises | yes | Volume 2 Section 2.10 Fire Strategy report takes cognizance of the document |
| SFPN 11 | Reducing unwanted fire signals in healthcare premises | yes | This is largely an operational management issue. However where relevant, Volume 2 Section 2.10 Fire Strategy report takes cognisance of the document |
| SHGN | Magnetic Resonance Imaging | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| SHGN | “Safe” hot water and surface temperatures | yes | All sanitary fitting accessed by the public and patients will be provided with TMV3 blending valves. Surface temperatures of heat emitters will be either specifically low surface temperature or out of reach of occupants, e.g at high level. |
| SHGN | Static discharges | yes | Refer to Specification for Electrical Power Supplies Volume 4 Section 4.35 |
| SHGN | Structured cabling for IT systems | yes | Refer to Specification Volume 4 Section 4.42 |
| SHTN 2 | Domestic Hot and Cold Water Systems for Scottish Health Care Premises | yes | Hot and cold water services are described in Design Strategy for Hot and Cold Water Services Volume 3 Section 3.7 and specification sections Volume 4 Sections 4.27, 4.28 & 4.51. |
| SHTN 4 | General Purpose Estates and Facilities Model Safety Permit-to-Work system | yes | We intend to comply with this system where we are required work within the existing estates and facilities. |
| SHTN 5 | The Operation and Management of Emergency Electrical Generators in Scottish Healthcare Premises. | yes | Refer to Design Strategy for Mains Power Distribution Volume 3 Section 3.10 |
| SHTN 6 | The Safe Operation and Maintenance of Thermostatic Mixing Valves | yes | All sanitary fitting accessed by the public and patients will be provided with TMV3 blending valves. |

| Document | Title | Proposals Comply (Yes/No) | Compliance Narrative (How compliance is being achieved) |
|---|---|---|---|
| SHPN 03 | General Design Guidance | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| SHPN 06 Part 1 | Facilities for diagnostic imaging and interventional radiology | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2 of the submission document |
| SHPN 08 | Facilities for rehabilitation services | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2 of the submission document |
| SHPN 13 Part 2 | Decontamination Facilities: Local Decontamination Unit | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| SHPN 20 | Facilities for mortuary and post mortem room services | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| SHPN 22 | Accident and emergency facilities for adults and children | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 27 | Intensive care unit | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 28 | Facilities for cardiac services | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 35 | Accommodation for people with mental illness | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 23 of the submission document |
| SHPN 52 | Accommodation for day care: Day surgery unit | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 52 | Accommodation for day care: Endoscopy unit | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 52 | Accommodation for day care: Medical investigation and treatment unit | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 54 | Facilities for cancer care centres – design and briefing guide | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |
| SHPN 06 Part 2 | Facilities for diagnostic Imaging | yes | As per sections 5.1.1.7 & 5.2.6 of Volume 2/1 Employer's Requirements (Hospitals) and as per Volume 2 Section 2of the submission document |

# Additional Guidance

**Submission Reference**

7.2 Additional Guidance

**Submission Response**

Further to the requirement noted in Section 2.2, that the Contractor shall comply with all Law and Consents, and the requirements in relation to NHS Mandatory Documentation and NHS Guidance Documentation above, the Contractor shall also comply with the standards and documents listed below. Brookfield response to each document is set out in the Proposals Comply/Compliance Narrative columns as requested in the ITSFB.

Our design has been informed by the guidance provided in SHBNs and HBNs (and other docs) insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents.

| Document / Standard | Proposals Comply (Yes/No) | Compliance Narrative (How compliance is being achieved) |
|---|---|---|
| Health and Safety Legislation, including construction (Design and Management) Regulations 2007 | yes | Risk assessments undertaken on civil and structural design to date. Compliance with this regulation is a statutory obligation. |
| The Technical Standards complying with the Building Standards (Scotland) Regulations 1990 as amended by all subsequent Amendment Regulations | no | These Regulations were made under the previous Building (Scotland) Act 1959 & 1970 now withdrawn and no longer applicable; they have been replaced by regulations made under the Building (Scotland) Act 2003. Compliance comments are referred to under the appropriate section later in this document. |
| Disability Discrimination Act 1995 | yes | The 1995 Disability Discrimination Act protects disabled people from discrimination in access to services, facilities and goods, as well as in education and employment. Compliance is shown by taking full consideration of SHFN 14 Disability Access, SHFN 20 Access Audits of primary healthcare facilities and BS 8300:2001. |
| Current British Standards, European Standards, and Codes of Practice, as appropriate | yes | Volume 2 Section 2.10 Fire Strategy report takes cognisance of the requirements of the relevant Current British Standards, European Standards, and Codes of Practice in relation to fire.<br>Civil and Structural design has been carried out in accordance with relevant standards as scheduled in Volume 2 Section 3.26 of the ITPD submission. |
| Strathclyde Fire Brigade and the Glasgow City Council's Fire Officer requirements | yes | Volume 2 Section 2.10 Fire Strategy report takes cognizance of the requirements of the fire and local authority |
| The Board's Approved Codes of Practice, Procedure and Policy documents as listed in Appendix G | yes | We will work with the Board to ensure our bid complies with all Approved Codes of Practice, Procedure and Policy documents as listed in Appendix G as our detailed design develops |
| Control of Substances Hazardous to Health; | yes | This is a mandatory regulation and compliance is achieved by our proposed solutions being reviewed and commented on by our Health and Safety advisors |
| Health Department Letters (or Management Executive Letters) as appropriate published he SEHD; | yes | The Scottish Government Health Directorate issues a wide range of guidance on all matters pertaining to the delivery of healthcare in Scotland. Where these apply to capital developments, such as CEL 48 (2008), which refers to single room accommodation and bed spacing, Brookfield will, as in the case of CEL 48 (2008) comply with the guidance. |

Brookfield

| Document / Standard | Proposals Comply (Yes/No) | Compliance Narrative (How compliance is being achieved) |
|---|---|---|
| NHS QIS (Quality Improvement Scotland) 2003. | yes | NHS Quality Improvement Scotland helps NHS Boards improve patient care by; providing advice, guidance and setting standards; supporting implementation and improvement; assessing, measuring and reporting the performance of NHS Board's. NHS Quality Improvement Scotland also have central responsibility for patient safety and clinical governance across NHSScotland. It is the umbrella organisation for the Scottish Health Council which monitors NHS Boards to make sure they are involving patients and the public in decisions about services, and taking account of their views; and the Scottish Intercollegiate Guidelines Network (SIGN) promoting consistence in clinical practice and clinical outcome. Its guidelines contain recommendations for effective practice based on current evidence.<br>The Healthcare Environment Inspectorate, whose remit is to inspect Scottish hospitals, ensuring the highest standards of infection prevention and cleanliness.<br>NHS Quality Improvement Scotland have issued a wide range of advice and guidance on clinical operational issues. Compliance with NHS QIS will be achieved by identifying which documents published by MHS QIS to this project and integrating the requirements where these are design specific. |
| NHS Model Engineering Specifications; | yes | We will work with the Board to ensure our bid complies with all Board identified requirements as our detailed design develops |
| The Building (Scotland) Act 2003 | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. Other Parts of the Act will also be complied with |
| The Building (Scotland) Regulations 2004 | yes | Compliance is shown within Volume 2 Section 2.10 Fire Strategy report together with those areas where fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained in the document. Other Parts of the Regulations will also be complied with |
| Requirements of the utilities companies | yes | We will work with the Board to ensure our bid complies with all Board identified requirements as our detailed design develops |
| Building Research Establishment Digest Recommendations; | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| Local Bye-Law and Regulations; | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |

Brookfield

| Document / Standard | Proposals Comply (Yes/No) | Compliance Narrative (How compliance is being achieved) |
|---|---|---|
| Scottish Centre for Infection and Environmental health guidance / recommendations | no | The Scottish Centre for Infection and Environmental Health (SCIEH) was a multi-disciplinary organisation comprising expertise from Environmental Health, Clinical Infectious diseases, Information Sciences, Public Health Medicine, Nursing, Social Sciences and Veterinary Public Health.<br>SCIEH was responsible for the national surveillance of communicable diseases and environmental health hazards and the provision of expert support on infection and environmental health to Health Boards and local authorities in Scotland.<br>The Centre offered current and topical support within the field of public health to a wide range of professional bodies representing medical, veterinary, nursing and environmental health professionals. It was replaced by Health Protection Scotland (HPS). HPS provides a wide range of guidance on infection control to hospitals and the public at large. Brookfield will agree with the Board which guidelines apply to capital developments, and will comply as appropriate. |
| All other bodies and authorities having jurisdiction; | no | It will be necessary to identify these specific bodies and authorities with the Board and Brookfield will comply with the relevant guidance and requirements. |
| Secure by Design | yes | Secured by Design is a police initiative to encourage the building industry to adopt crime prevention measures in developing design to assist in reducing the opportunity for crime, creating a safer and more secure environment. The design team will liaise with the relevant Architectural Liaison Officer or Crime Prevention Design Advisor to ensure that the opportunity for crime is designed out during the design process and the proposals comply with the Secured by Design certification requirements. |
| The Ionising Radiations Regulations 1999 (IRR99); | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| The Radioactive Substances Act (1993) | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| Medical and Dental Guidance Notes: A good practice guide on all aspects of ionizing radiation protection in the clinical environment, Institute of Physics and Engineering (IPEM), York, 2002; | yes | Our design has been informed by the guidance provided insofar as our design has developed. We will continue to progress our design solution with reference to the guidance in these documents |
| Various related to the additional security required re use of radioactive materials e.g. IRR99, RSA93, NHS Security Management guidance note 001/2004; | yes | Our design has been informed by the guidance provided insofar as our design has developed. |---|---|---|
| Provision of Paediatric Radionuclide Imaging Services, British Nuclear Medicine society (BNMS), London 2003 | yes | The British Nuclear Medicine Society guidance, Provision of Paediatric Radionuclide Imaging Services, provides recommendations including a safe play area and a child friendly imaging area. Our proposal has a dedicated child imaging area that will be designed to be child friendly and age appropriate, and include a safe play area and a child friendly imaging area |
| Published papers on operational radiation safety e.g. Zanzonico P et al, Operational Radiation Safety for PET-CT, SPECT-CT and cyclotron facilities. Health Physics 2008; | no | We are aware of this document. The guidance contained in this document is not relevant to the stage of deign that has been reached so far. We would expect to work closely with your Radiation Protection Advisor during the next stages of the project to apply this guidance as deemed appropriate, and to the satisfaction of you RPA. |
| Standards for Intensive Care Units, A Joint Document for the intensive Care Society and the Intercollegiate Board for Training in Intensive Care Medicine, May 2006 | yes | The Standards for Intensive Care beds pulls together advice from a number of sources and includes a number of recommendations relating to the design of intensive care units. Our proposal exceeds the recommendations providing 100% single beds and the bed areas at 26sqm meet the Society's recommendation of 25.5sqm |
| Leather P, Pygras M, Beale D and Lawrence C. Windows in the Workplace: Sunlight, View and Occupational Stress. Environment and Behaviour 1998; 30:: 739 – 762; | no | This article investigates the direct and indirect effects of windows in the workplace on job satisfaction, intention to quit, and general well-being. The impact of three specific influencing mechanisms are examined: general level of illumination, sunlight penetration, and view. The extent to which these environmental features might moderate the negative consequences of job stress is investigated. The results showed a significant direct effect for sunlight penetration on job satisfaction, intention to quit, and general well-being. A view of natural elements (i.e., trees, vegetation, plants, and foliage) was found to buffer the negative impact of job stress on intention to quit and to have a similar, albeit marginal, effect on general well-being. No effects for general level of illumination were found |
| Leslie RP. Capturing the Daylight Dividend in Buildings: Why and How? Building and Environment 2003; 38: 381 – 385 | no | This article reviews the literature on day lighting, the design of buildings to use light from the Sun. Day lighting supports human health and activities and reduces energy demand. Current research suggests health, productivity, and economic benefits from day lighting. Good day lighting techniques include configuring buildings properly, elongating buildings along an east–west axis, locating critical visual tasks near the building's perimeter. |

| European Renal Association best Practice Guidance – 4th Edition 2007. NB New guidelines are due in 2009 and should be considered at that time. | no | Unable to locate this document. However, once released, it will be reviewed in conjunction with the Board to determine the relevant aspects at that time |

**AGREEMENT**

between

**GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street, Glasgow G3 8YZ ("the *Employer*"); and

**BROOKFIELD CONSTRUCTION (UK) LIMITED** having its principal place of business at 23 Hanover Square, London, W1S 1JB (the "*Contractor*").

WHEREAS: -

The *Employer* wishes to have the *Contractor* Provide the Works for the New South Glasgow Hospital comprising management and delivery of design and construction services as follows: -

| Stage | Heading | Outline Activities |
|---|---|---|
| Stage 1 | Design and Construct Laboratories | Detailed design and construction of the Laboratories and FM Hub. Concurrent with Stage 2. |
| Stage 2 | Design Development - New Hospitals Building | Detailed design of New Adult Acute and New Children's Hospitals to Full Business Case Submission. Concurrent with Stage 1. |
| Stage 3 | Design and Construct New Hospitals Building | Design and Construction of New Adult Acute and New Children's Hospitals and Energy Centre. Consecutive to Stage 2. |
| Stage 3A | Demolition of Surgery Block | Demolition of surgical block and associated buildings and completion of soft landscaping. |

**NOW IT IS AGREED THAT**

1. The *Contractor* will Provide the Works in accordance with the NEC Engineering and Construction Contract, Option C: Target contract with activity schedules, June 2005 (as the same are amended in by the Contract Data) (*"the conditions of contract"*) and the principles stated in Appendix 1 of this Agreement.

2. The *Contractor* acknowledges and agrees that the final Price for Work Done to Date plus the *agreed profit* will not exceed the following sums for each Stage: -

| Stage | Stage Maximum Price |
|---|---|
| Stage 1 | £76,533,905.69 |
| Stage 2 | £17,850,685.69 |
| Stage 3 | £483,690,624.25 |
| Stages 3A | £4,382,458.97 |

(in each case "the Stage Maximum Price").

If the effect of a compensation event is to increase the total of the Prices for a Stage, the relevant Stage Maximum Price will be increased in accordance with the MPTC calculator set out in the Contract Documents: Part Three: (Maximum Price Target Calculator)

If the effect of a compensation event is to reduce the total of the Prices for a Stage and Clause 63.11 of the *conditions of contract* applies, the relevant Stage Maximum Price will be reduced in accordance with the MPTC calculator set out in the Contract Documents: Part Three (Maximum Price Target Calculator)

The *Contractor* acknowledges and agrees that the final Price for Work Done to Date for the whole of the *works* plus the *agreed profit* for the whole of the *works* will not exceed the Project Maximum Price, being the total of the Stage Maximum Prices.

3. On Completion of the whole of the *works*, the *Employer* calculates the total sum payable to the *Contractor* by adding together (i) the Price for Work Done to Date for each Stage, (ii) the *Contractor*'s share of savings or share of excess for each Stage, and (iii) the *agreed profit* for each Stage ("Project Cost"). If the Project Cost is less than the Project Maximum Price and the *Contractor* has exceeded one or more of the Stage Maximum Prices and has paid 100% of that excess, the *Contractor* is paid that 100% excess, subject to the Project Maximum

Price. If the Project Cost is less than the Project Maximum Price and the *Contractor* has not exceeded one or more of the Stage Maximum Prices the *Contractor* is not entitled to further payment. If the Project Cost is more that the Project Maximum Price, the *Contractor* is paid the Project Maximum Price and the *Employer* recovers any over payment as a debt.

4. The *Employer* will pay the *Contractor* the amounts due for each Stage of the *works* in accordance with this Agreement, the *conditions of contract*, the Contract Data and as may be detailed in the Works Information. The *Contractor* will provide the Works for each Stage for the following Stage Target Price (as hereinafter defined).

| Stage | Stage Target Price |
|---|---|
| Stage 1 | £75,779,610.42 |
| Stage 2 | £17,850,685.69 |
| Stage 3 | £477,128,752.52 |
| Stages 3A | £4,352,332.82 |

The Stage Target Price is the total of the Prices for the relevant Stage together with the *Contractor's* accepted risk allowance and the *agreed profit.*

5. The *Contractor* acknowledges and agrees that as at the Contract Date the *Contractor* shall be authorised to proceed with Stage 1 and Stage 2 only. The *Contractor* is authorised to commence and proceed with Stage 3 upon written authorisation given by the *Employer* in the form attached as Appendix 2 hereto. The *Contractor* is authorised to commence and proceed with Stage 3A upon written authorisation given by the *Employer* in the form attached as Appendix 3 hereto. In the event that the *Contractor* commences and proceeds with Stage 3 or Stage 3A without such written authority from the *Employer*, the *Contractor* does so at his own cost and risk.

6. The documents forming part of this contract are:

6.1 this Agreement

6.2 the *conditions of contract*,

6.3 Contract Data part one including Works Information — data provided by the *Employer*

6.4 The *Contractor*'s Tender Return Submission dated 10 September 2009 Including:

(i) Contract Data part two - Data provided by the *Contractor*

7. In the event of conflict between the documents forming part of this contract the following order of priority will apply: -

7.1 This Agreement (excluding Appendix 1)

7.2 The *conditions of contract*,

7.3 Contract Data part one including the Works Information

7.4 Contract Data part two

7.5 Appendix 1 of this Agreement

IN WITNESS WHEREOF these presents consisting of this and the 2 preceding pages together with Appendices 1, 2 and 3 and the Contract Data part one (including its Appendices) and Contract Data part two are executed as follows: -

EXECUTED for and on behalf of the *Employer* at Glasgow on the 18th day of December 2009 as follows: -

[redacted]

(Authorised official) Before this witness: -

[redacted]

Full name JANE GRANT

Address Dalian House

351 St. Vincent St

**This is Appendix 1 to the foregoing Agreement between Greater Glasgow Health Board and Brookfield Construction (UK) Limited**

**Principles governing the Agreement**

**Definitions**

| **Defined Term** | **Definition** |
|---|---|
| "Overriding Objective" | means the objective set out in Paragraph 4. |
| "Overriding Principle" | means principle set out in Paragraph 1. |
| "Professional Advisor" | means any party providing specialist advice to the *Employer.* |
| "Supply Chain" | means the individuals and organisations appointed by the *Contractor* and approved by the *Employer* who will be responsible for the majority of the management and delivery of design and construction (and where appropriate operation) in relation to the *works* including the Specified Subcontractors and Specified Consultants. |

1. The Overriding Principle of this agreement is to work together with the Supply Chain and the *Employer* (and any Professional Adviser) in a co-operative and collaborative manner to achieve the Overriding Objective acting in good faith and in the spirit of mutual trust and respect.
2. In order to work together in co-operative and collaborative manner the *Employer* and the *Contractor* agree that they should each give to and welcome from each other, the Supply Chain and any Professional Adviser feedback on performance and shall share information openly and highlight any difficulties at the earliest practical time. The parties shall support collaborative behaviour and confront behaviour that does not comply with the Overriding Principle.
3. The terms of the Agreement shall be interpreted according to their natural meaning but in the event of any ambiguity in their natural meaning they shall be interpreted so as to give best effect to the Overriding Principle.
4. In entering into the Agreement the parties' Overriding Objective is by working together in accordance with the terms of the Agreement to achieve the successful delivery by the *Contractor* of the *works*: -

4.1 to the standard and functionality defined or as reasonably inferred from the *Employer*'s requirements set out in the Works Information to a quality which meets or exceeds these requirements;

4.2 at a cost to the *Employer* that offers best value for money taking into account whole life (as well as capital) costs over the proposed design life of the *works* through the application of the principles of value engineering;

4.3 to the timescale acceptable to the *Employer* and agreed between the parties without compromising health and safety or the *Employer*'s required standards and the quality of the completed *works* and in any event before the Completion Dates set out in the Agreement; and

4.4 with an appropriate allocation of the risks associated with the *works* to the party best able to manage such risks.

5. The *Contractor* shall carry out the management and be responsible for the delivery, design and construction of the *works* in accordance with the Agreement and shall work and liaise with the *Employer*, the Supply Chain and any Professional Adviser as necessary or appropriate or as requested by the *Employer* in order to achieve the Overriding Objective.

6. The *Contractor* shall engage persons from the key people set out in the Contract Data — part two in the performance of the *works* to be provided by the *Contractor* under the Agreement and shall not replace any of the key people without the approval of the *Employer* (such approval not to be unreasonably withheld). The *Contractor* will ensure that where a member of its key personnel is replaced that they have the skills, qualifications, experience and ability to provide the best service to the *Employer.*

7. When engaging its Supply Chain the *Contractor* shall either use the appropriate contract from the NEC3 Suite of Contracts and where they do not use the NEC3 Suite of Contracts they shall ensure that the forms of contract used reflect the principles and procedures identified in the Agreement and the NEC3 Suite of Contracts.

8. Until the later of the end of the *defects date* and the end of the last *defect correction period*, the performance of the Contractor shall, in relation to the *works*, be monitored against the Key Performance Indicators defined in the Works Information.

9. Until the later of the end of the *defects date* and the end of the last *defect correction period* amendments may be made to the Key Performance Indicators by agreement between the *Employer* and the *Contractor* except where the *Employer* is required by the Scottish Government or regulatory bodies to provide Key Performance Indicators. In such cases the

*Employer* will provide information on any requirements to the *Contractor* as soon as reasonably practicable.

10. At two-month intervals or at such intervals as the parties may agree during the performance of the *works*, the *Employer* and the *Contractor* shall undertake formal reviews of the performance of the *Contractor* against its Key Performance Indicators. In addition the performance of the *Employer* against the *Employer*'s Key Performance Indicators as set out in the Agreement will be monitored. The *Employer* and the *Contractor* will discuss any way in which the performance of the *Contractor* and/or the *Employer* may be improved.

11. The formal review process will also include an open book process where the *Contractor* will be subject to an independent ongoing review.

12. The *Contractor* shall keep a comprehensive record as specified by the *Employer* of all performance monitoring carried out under the Agreement in such form as the *Employer* may reasonably request for a period of 6 years after the expiry or earlier termination of the Agreement and shall provide copies of such records to the Project Manager for the works to enable him to record, disseminate and compare the performance of the *Contractor*. Each record shall be retained in a format that can be read and copied and kept with the IT requirements on an electronic based database.

13. Throughout the period of the Agreement and up to the date final payment is made in accordance with Clause 50.1, the *Contractor* will be required to operate an open book accounting regime providing the *Employer* or their nominated representative with access to such relevant financial or other information as may be required to provide evidence that the Overriding Principle is being applied and that the Overriding Objective is being met. This open book accounting regime will be applied to the Specified Subcontractors and the Specified Consultants therefore the *Contractor* should make all Specified Subcontractors and Specified Consultants aware of this requirement.

14. The open book regime referred to above will be achieved in three stages:

14.1 a detailed review on the valuation of the *Contractor* and the Specified Subcontractors and Specified Consultants processes, costing structures and accounts to ensure that systems are in place to enable the Contractor and the Specified Subcontractors and Specified Consultants to work within the Agreement.

14.2 ongoing financial audits to ensure that costs fall within the contractual definition of Defined Cost.

14.3 ongoing reviews of the procurement processes to ensure that all parties are operating systems for the delivery of the *works* in accordance with this agreement.

15. Until Completion the *Contractor* shall look for and achieve in conjunction with the Supply Chain continuous improvement in the quality and functionality of the *works* while reducing low life costs, wastage, construction related accidents and the time taken to deliver the works. Innovation and best practice will be shared with the *Employer*.

16. To achieve the aim set out in Clause 15 the *Contractor* shall actively participate in the continuous improvement "learning sets" with the Project Manager and the Supply Chain in relation to the Agreement. This commitment is likely to involve meetings at least once every 3 months in relation to the *works* and meetings at least once every 6 months in relation to the lessons to be learned. The *Contractor* shall also use reasonable endeavours to procure the involvement of members of its Supply Chain in such learning sets where considered appropriate.

**This is Appendix 2 to the foregoing Agreement between Greater Glasgow Health Board**

**and**

**Brookfield Construction (UK) Limited**

**GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street, Glasgow G3 8YZ ("the *Employer*"); and

**BROOKFIELD CONSTRUCTION (UK) LIMITED** having its principal place of business at 23 Hanover Square, London, W1S 1JB (the "*Contractor*").

WHEREAS

1. The *Employer* and the *Contractor* entered into the Agreement dated [ ] whereby the *Contractor* is to Provide the Works in connection with the New South Glasgow Hospital Project.
2. The *Employer* wishes the *Contractor* to continue to Provide the Works by commencing and carrying out:

| | | |
|---|---|---|
| Stage 3 | Design and Construct New Hospitals Building | Design and Construction of New Adult Acute and New Children's Hospitals and Energy Centre. Consecutive to Stage 2. |

NOW IT IS AGREED THAT

1. The *Employer* hereby authorises the *Contractor* to commence and carry out Stage 3 of the *works* ie the Design and Construction of the New Adult Acute and New Children's Hospitals.
2. The *Contractor* will continue to Provide the Works in accordance with the Agreement.
3. The Agreement is amended and modified to the following extent:-

   [*Any amendments to Works Information and/or Contract Data which will have come about during Stage 2 including adjusted target/Maximum Price*]

**CONTRACT DATA PART ONE —**

**DATA PROVIDED BY *THE EMPLOYER***

A49342285

**Contract Data Part one - Data provided by the *Employer***

**Statements given in all Contracts**

**1. General**

- The *conditions of contract* are the core clauses and the clauses for main Option C, dispute resolution Option W2 and Secondary Options — X2, X4, X5, X7, X13, X16, X18.5, Y(UK)2 and Z of the NEC3 Engineering and Construction Contract (June 2005).
- The works are Management and delivery of design and construction services for the New South Glasgow Hospital Project as the *works* are more specifically referred to in the Works Information
- The *Employer* is

  Name: Greater Glasgow Health Board

  Address: Dalian House, 350 St Vincent Street, Glasgow G3 8YZ
- The *Project Manager* is

  Name: Peter Moir

  Address: St Andrew's House, 80 Queen Elizabeth Avenue, Hillington, Glasgow G52 4NQ
- The *Supervisor* is

  Name: Peter Moir or such other party notified by the Employer

  Address: St Andrew's House, 80 Queen Elizabeth Avenue, Hillington, Glasgow G52 4NQ
- The *Adjudicator* is

  Name: To be nominated by the Scottish branch of the Royal Institute of Chartered Surveyors

  Address: RICS Scotland, 9 Manor Place, Edinburgh EH3 7DN
- The Works Information comprises
  - The Contract Documents: Part Five (Works Information);
  - The Employers Requirements; and
  - The Contractor's Proposals including the M&E Clarification Log.
- The Works Information agreed relationship and hierarchy is set out in Appendix 5 to this Contract Data Part one.
- The Site Information is set out in the Contract Documents: Part Six (Site Information)

  The boundaries of the site are set out in the Contract Documents: Part Six (Site Information).

- The Gateway Procedure is in the Contract Documents: Part One (Gateway Procedure)
- The Schedule of Cost Components is in the Contract Documents: Part Two (Schedule of Cost Components)
- The *language* of the contract is English.
- The *law of the contract* is the law of Scotland subject to the jurisdiction of the Courts of Scotland.

- The *period for reply* to a communication is
    - To *Contractor's* submission of particulars of design for acceptance (Clause 21.2)
        - Stages 1, 3 and 3A – Three (3) weeks
        - Stage 2 – two (2) weeks
    - Reply to a *Contractor* notification of a compensation event (clause 61.4, fourth paragraph, first bullet point) is four (4) weeks
    - Reply to all other communications unless otherwise stated in this contract two (2) weeks
- The *Adjudicator* nominating body is:

  The Scottish Branch of the Royal Institute of Chartered Surveyors
- The *tribunal* is the Scottish Courts
- The following matters will be included in the Risk Register:

  The Employer Risks not included in the total of the Prices/Maximum Price are as noted in the Risk Register reference Appendix E – Board Accepted Risks set out in the Contract Documents: Part Seven (Risk Register) All other risks are deemed to be included in the total of the Prices/Maximum Price

**3. Time**

- The *starting date* is 18 December 2009
- The access dates are:

| Part of the Site | Award Contract | Start on Site |
|---|---|---|
| 1. Stage 1 Laboratories | 18th December 2009 | 4th March 2010 |
| 2. Stage 2 Design Development | 18th December 2009 | NA |
| 3. Stage 3 Works | 8th November 2010 | 28th February 2011 |
| 4. Stage 3A Works | 1st February 2015 | 20th July 2015 |

- The *Contractor* submits revised programmes at intervals no longer than four (4) weeks alternatively calendar monthly

**4. Testing and Defects**

- The *defects date* is 104 Weeks after Completion of the relevant *section* of the *works*.
- The *defect correction period* is two (2) weeks (or such longer period as may be agreed between the *Employer* and the *Contractor*, having regard to the nature of the Defect, the

*Employer's* operational requirements or any period for procurement of necessary Plant and Materials) except that:

- the *defect correction period* for accommodation occupied by the NHS for patients on an operational basis is 2 days unless notified as an urgent repair requiring immediate attention
- the *defect correction period* for works which are urgent requiring immediate attention and might affect the safe and secure running of the site eg security systems, fire alarm systems, building heating systems, building potable water supplies, sanitation, building mains electricity supply systems (excluding works to be carried out by utility providers) is 24 hours provided that where replacement parts are required in order to fully rectify the Defect and procurement of such parts will take longer than 24 hours, the *Contractor* will, for the purposes of assessing compliance with this obligation, only be obliged to remove all risks to safety caused by the Defect and ensure the resumption of the *Employer's* operations within the 24 hour period and the replacement of the defective part(s) will be carried out within a period to be agreed with the *Employer*.

**5. Payment**

- The *currency of this contract* is the pound sterling (£)
- The *assessment interval* is four (4) weeks alternatively calendar monthly.
- The interest rate is 5% per annum
- The *overhead percentage* is:

| Stage | *Overhead %* |
|---|---|
| 1 | 3.92% |
| 2 | 0.93% |
| 3 | 4.12% |
| 3A | 2.79% |

- The *agreed profit* is: -

| Stage | *agreed profit* |
|---|---|
| 1 | £1,571,017.64 |

| Stage | agreed profit |
|---|---|
| 2 | £50,475.19 |
| 3 | £9,872,732.41 |
| 3A | £91,202.59 |

**Optional Statements for Clause 5**

The Contractor's share percentages and the share ranges are

| Pain/Gain | Difference in Price from Target Cost | NHS GGC % share | Contractor % share |
|---|---|---|---|
| = Maximum Price (MP) | | 0 | 100 |
| Pain | 76-99% | 10 | 90 |
| Pain | 51-75% | 20 | 80 |
| Pain | 26-50% | 30 | 70 |
| Pain | 0-25% | 40 | 60 |
| = Target Price | | 0 | 0 |
| Gain | £1-£4.99m | 80 | 20 |
| Gain | £5m-£9.99m | 70 | 30 |
| Gain | £10m-£12.99m | 40 | 60 |
| Gain | £13m-£14.99m | 20 | 80 |
| Gain | £15m | 20 | 80 |

The *Contractor* prepares forecasts of Defined Cost for the *works* at intervals no longer than four (4) weeks alternatively calendar monthly.

**6. Compensation Events**

- The place where weather is to be recorded is: the Site
- The weather measurements to be recorded each month are
  - the cumulative rainfall (mm);
  - the number of days with rainfall more than 5mm;

- the number of days with minimum air temperatures less than Zero degrees Celsius;
- the number of days with snow lying at 09.00 hrs GMT;
- and these measurements:

- The weather measurements are supplied by The Met Office.
- The weather data are the records of past weather measurements for each calendar month which were recorded at Glasgow Airport and which are available from The Met Office.

**8. Risks and Insurance**

The minimum limit of indemnity for insurance in respect of loss of or damage to property (except the works, Plant and Materials and Equipment) and liability for bodily injury to or death of a person (not an employee of the *Contractor*) caused by activity in connection with this contract for any one event is

**£20,000,000.00 (twenty million pounds sterling)**

The minimum limit of indemnity for insurance in respect of death or bodily injury to employees of the *Contractor* arising out of and in the course of their employment in connection with this contract for any one event is

**£10,000,000.00 (ten million pounds sterling)**

The amount of the minimum limit of indemnity for insurance (CAR) in respect of loss or damage to the works in connection with this contract is the replacement cost

And the amount for replacement of any Plant and Materials provided by the *Employer* is

**£10,000,000.00 (ten million pounds sterling)**

The amount of the minimum limit of indemnity for Professional Indemnity Insurance for design liability in connection with this contract for any one event is

**In any one event £20,000,000 (twenty million pounds sterling)**

The *Contractor* to provide documentary evidence to establish that it has discharged its obligations under this contract with respect to insurance.

The *Contractor* provides all other insurances required by the *law of the contract*

**Optional Statements**

**If the *Employer* has decided the *completion date* for the whole of the *works***

The *completion date* for the whole of the *works* is 31st January 2016

**If no programme is identified in part two of the Contract Data**

The *Contractor* is to submit a first programme for acceptance within four (4) weeks of the Contract Date

**If the *Employer* has identified work which is to meet a stated *condition* by a *key date***

The *key dates* and *conditions* to be met are

| **Condition to be met** | **key date** |
|---|---|
| Stage 2: Completion of Detailed design to allow FBC to be submitted to Scottish Government by 9th November 2010 | 8th November 2010 |

**If there are additional *Employer's* risks**

- These are the additional *Employer's* risks

1. Completion is delayed as a result of a *Contractor's* insurable event; insurable events include fire, lightening, explosion, storm, tempest, flood bursting or overflowing water tanks, apparatus or pipes, earthquake, aircraft and other aerial devices or articles dropped there from.

   Clarification - limit of the *Employer's* risk:

   Where there is delay as a result of the *Contractor's* insurable event the completion date is changed, but there is no effect on the Prices; cost incurred in remedy of the event is a Disallowed Cost. The *Project Manager* notifies a compensation event if timing or sequence of operations is to be changed to alleviate the effect of the delay.
2. Any variance in the rate of insurance due to market conditions, will form part of the Project Maximum Price.
3. The *works* are delayed or suspended due to an act of terrorism
4. Any other Employer Risks noted in the Risk Register reference Appendix E – Board Accepted Risks set out in the Contract Documents: Part Seven (Risk Register) issued with the ITSFB. All other risks are deemed to be included in the total of the Prices/Maximum Price

**If Option X5 is used**

- The *completion date* for each *section* of the *works* is

| Section | Description | *completion date* |
|---|---|---|
| 1 - Stage 1 | Laboratories | 10th March 2012 |
| 2 - Stage 3 | New Hospital | 31st January 2015 |
| 3 - Stage 3A | Demolition of Surgical Block | 19th July 2016 |

**If Options X5 and X7 are used together**

- Delay damages for the sections of the *works*

| Section | Description | Amount per week or pro-rated part thereof |
|---|---|---|
| 1 - Stage 1 | Laboratories | £50,000 |
| 2 - Stage 3 | New Hospital | £250,000 – provided that in the first 4 weeks after the *completion date* delay damages will be levied at 25% of £250,000; in weeks 5 – 8 inclusive after the *completion date* delay damages will be levied at 50% of £250,000; in weeks 9 – 12 inclusive after the *completion date* delay damages will be levied at 75% of £250,000; and from week 13 after the *completion date* delay damages will be levied at 100% of £250,000 |
| 3 - Stage 3A | Demolition of Surgical Block | £20,000 |

**If Option X13 is used**

The amount of the performance bond is: -

Stage 1 – 5% of the Maximum Price for Stage 1

Stage 3 – 5% of the Maximum Price for Stage 3

Stage 3A – 5% of the Maximum Price for Stage 3A

**If Option X18 is used**

The *end of liability date* is twelve (12) years after the Completion of the whole of the *works*.

**If Option Z is used**

*The additional conditions of contract are*

**Amendments and additions to existing Clauses:**

**Z 1 Additions to Clause 11.2 - Identified and Defined Terms**

11.2(34) "Collateral Warranty Agreement" is an agreement substantially in the relevant form attached as Appendix Parts 1 and 2 hereto to be granted in favour of the *Employer* by the *Contractor* and (i) each Specified Subcontractor and (ii) each Specified Consultant (any changes to the said form(s) having been approved by the *Employer,* which approval will not be unreasonably withheld or delayed).

11.2(35) "Contract Documents" is the ancillary information comprising part of Contract Data Part one and signed by the parties for identification and deemed to be incorporated in and forming part of this Agreement.

11.2(36) "Contractors Proposals" is the contractors tender response comprising ten volumes:

Volume 1 – Schedule of Accommodation

Volume 2 – Drawings

Volume 3 – Design Narratives

Volume 4 – Specifications

Volume 5 – Components

Volume 6 – Equipment

Volume 7 – SHTM

Volume 8 – ADB

Volume 9 – Programme

Volume 10 - Logistics

and signed by the parties for identification and deemed to be incorporated in and forming part of this Agreement.

11.2(37) The "Supply Chain Member (SCM)" *is* the individuals and organisations appointed by the *Contractor* and approved by the *Employer* who will be responsible for the majority of the management

and delivery of design and construction (and where appropriate operation) in relation to the *works*.

11.2(38) "Documents" includes, without limitation, all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things provided or to be provided by or on behalf of the *Contractor* in connection with the *works*.

11.2(39) "Employer's Requirement" is the description of the Employer's technical requirements for the works supplemented and amended by the Logs and signed by the parties for identification and deemed to be incorporated in and forming part of this Agreement.

11.2(40) "Agreement" is the form of agreement entered into between the *Employer* and the *Contractor* in respect of the works forming part of this contract.

11.2(41) "Full Business Case" is the *Employer's* submission to the Scottish Government for approval to proceed with Stage 3 and Stage 3A of the *works*.

11.2(42) "Laboratories" is the new laboratory block as the same is more particularly described in the *Works Information*.

11.2(43) "Laboratory Consultant" is BMJ Architects Limited, 2 Central Quay, 89 Hydepark Street, Glasgow, G3 8BW.

11.2(44) "Novation Agreement" is an agreement in the relevant form set out in Appendix Part 3 hereto.

11.2(45) "Specified Subcontractors" is those Supply Chain Members specified as such in the Works Information.

11.2(46) "Specified Consultants" is those Supply Chain Members specified as such in the Works Information.

11.2(47) "Stage" has the meaning ascribed to it in the recital to the Agreement.

11.2(48) "*conditions of contract*" is the NEC Engineering and Construction Contract, Option C: Target contract with activity schedules, June 2005 (as the same are amended by the Contract Data)

11.2(49) "Stage Maximum Price" is the maximum price payable for each Stage of the *works* as set out in Clause 2 of the Agreement unless later changed in accordance with this contract and "Stage Maximum Prices" are construed accordingly.

11.2(50) "Project Maximum Price" is the total of the Stage Maximum Prices.

11.2(51) "Project Cost" is the sum of the Price for Work Done to Date for the whole of the *works* plus the *agreed profit* for the whole of the *works*, all adjusted by the Contractor's *share* for each of the Stages.

11.2(52) "Design Deliverables" are those elements of design to be delivered by the *Contractor* to the *Employer* during Stage 2 being:

- to achieve 85% User Group sign off to 1:200 Drawings for Adult Hospital (Current Programme Completion Date for Milestone is 17 May 2010);
- to achieve 85% User Group sign off to 1:200 Drawings for Children's Hospital (Current Programme Completion Date for Milestone is 27 May 2010);
- to achieve 95% sign off to Standard Room Type ADB sheets and 1:50 Drawings (Current Programme Completion Milestone is 27 August 2010);
- Conclusion of Planning Submission - Final Reserved Matters Approvals (Current Programme Completion Milestone is 30 June 2010);
- Achieve Formal Planning Consent from Glasgow City Council (Current Programme Completion Milestone is 6 October 2010).

11.2(53) "Key Subcontract" means those subcontracts entered into with the Key Subcontractors.

11.2(54) "Key Subcontractors" means those subcontractors specified as being a Key Subcontractor in the Works Information.

**Z 2 Amendment to clause 11.2 (25) - Identified and Defined Terms**

At end of first bullet point after 'records' add: 'including amounts for invoices that the *Contractor* is liable to pay but has not paid within 28 days from having been included in the *Project Manager's* assessment',

**Z3 Amendment to clause 11.2 (8) - Identified and Defined Terms**

Delete and replace with "The Overhead is the sum of the amounts calculated by applying the *overhead percentage* to the Defined Cost of subcontracted and other work."

**Z4 Amendment to clause 11.2 (4) - Identified and Defined Terms**

Delete and replace with "the Contract Date is the date of execution of this contract"

**Z5 Amendment to clause 11.2 (29) - Identified and Defined Terms**

Delete "plus the Fee" and replace with "plus the Overhead."

**Z 6 Amendment to Clause 11.2(30) – Identified and Defined Terms**

Delete and substitute "The Prices are the sum of (i) the lump sum prices for each of the activities in the Activity Schedule (unless later changed in accordance with this contract) plus (ii) the total of such lump sum prices multiplied by the *overhead percentage*"

**Z7 Amendment to Clause 17.1 – Ambiguities and Inconsistencies**

Add the following sentence to the end of Clause 17.1

"Instructions issued under this clause do not necessarily give rise to a compensation event"

**Z8 Addition to Clause 17 – Ambiguities and inconsistencies**

"17.2 The *Project Manager* and the *Contractor* agree that inconsistencies and ambiguities between (a) the NHS Mandatory Documentation and NHS Guidance Documentation and building control or (b) between the NHS Mandatory Documentation and NHS Guidance Documentation and the Schedules of Accommodation or (c) between the NHS Mandatory Documentation and NHS Guidance Documentation and any information issued to the *Contractor* by the *Employer*, will be dealt with in accordance with the procedures set out in the Works Information."

**Z9 Amendment to Clause 19 – Prevention**

Add new Clause 19.2

"Notwithstanding the provisions of Clause 60 and subject to Clause 19.4, the *Contractor*'s sole right to payment in respect of the occurrence of an event under Clause 19.1 is as provided in Clause 93."

Add new Clause 19.3

"The *Contractor* and the *Employer* take all reasonable steps to mitigate the effect of the occurrence of an event under Clause 19.1."

Add new Clause 19.4

"If the *Project Manager* instructs the *Contractor* to take steps to Provide the Works in a manner not prevented by the occurrence of an event under Clause 19.1, and such instruction changes the Works Information, the *Contractor* is entitled to notify a compensation event under clause 60."

**Z10 Amendment to Clause 21.1 - The *Contractor's* design**

At the end of the Clause add: "the *Contractor* designs the parts of the *works* which the Works Information states he is to design using the degree of skill and care that would reasonably be expected of a competent professional design and build contractor experienced in carrying out projects of a similar nature, scope and complexity to those comprised in the *works*.

**Z11 Amendment to Clause 21.2 – The Contractor's Design**

After the first sentence add: - "The *Project Manager* either accepts the design or rejects it and notifies the *Contractor* of his reasons for doing so within the *period of reply* to the *Contractor*'s submission of particulars of his design for acceptance."

After the second sentence add: - "A failure by the *Project Manager* to either accept the design or reject it and notify the *Contractor* of his reasons for doing so within the *period of reply* is treated as acceptance of the design by the *Project Manager*. Where the *Project Manager* rejects the design and notifies *Contractor* of his reasons for doing so, the *Contractor* amends the particulars of design taking into account the reasons notified by the *Project Manager* and resubmits the particulars of design to the *Project Manager* for acceptance. Within one (1) week of the *Contractor* resubmitting such particulars of his design for acceptance the *Project Manager* either accepts the design or rejects it and notifies the *Contractor* of his reasons for doing so. A failure by the *Project Manager* to either accept the resubmitted design or reject it and notify the *Contractor* of his reasons for doing so within the period of one (1) week is treated as acceptance of the re-submitted design by the *Project Manager.* This process of re-submission is repeated until such time as the *Project Manager* has accepted or is treated to have accepted the design. "

In the third sentence, after "has accepted" add: - " or is treated to have accepted"

**Z12 Amendment to Clause 22.1 – Using the *Contractor's* design**

Delete and replace with: -

"22.1 The copyright and all intellectual property rights in the Documents remain vested in the *Contractor* or the person responsible for the production (as the case may be).

22.2 Where documentation (including drawings) is (or are) provided by the *Employer* copyright and such documentation and drawings remain vested in the *Employer*.

22.3 The *Employer* has an irrevocable, non-exclusive royalty free licence to copy and use the Documents and to reproduce the designs contained in them for any purpose relating to the *works* including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair, any extension of the *works* and for dissemination within the NHS as part of the feedback of information to better or enable the NHS to realise improvements in its methods and practice of construction and in the design and procurement of its construction.

22.4 The *Contractor* shall not be liable for any use by the *Employer* of the Documents for any purpose other than that for which the same is prepared and provided."

**Z13 Amendment to Clause 24.2 – People**

24.2 After the words "The *Contractor* then arranges that after one day" add: "(or such other period as may be agreed between the parties in writing)".

**Z14 Addition to Clause 31 – The programme**

31.5 A failure by the *Project Manager* to either accept the programme or notify the *Contractor* of his reasons for not accepting it within the two-week period is treated as acceptance of the programme by the *Project Manager*. Where the *Project Manager* notifies the *Contractor* of his reasons for not accepting the programme, the *Contractor* amends the programme taking into account the reasons notified by the *Project Manager* and resubmits the programme to the *Project Manager* for acceptance. Within one (1) week of the *Contractor* resubmitting the programme for acceptance the *Project Manager* either accepts the programme or rejects it and notifies the *Contractor* of his reasons for doing so. A failure by the *Project Manager* to either accept the resubmitted programme or notify the *Contractor* of his reasons for not accepting the programme within the period of one (1) week is treated as acceptance of the programme by the *Project Manager*. This process of re-submission is repeated until such time as the *Project Manager* has accepted or is treated to have accepted the programme."

"31.6 The *Contractor* complies with section 6.8 of Volume 2/1 of the Employers Requirements Section of the Works Information in connection with commissioning and handover for the whole of the *works*. The *Contractor*

accepts and agrees that the *Project Manager* is not under any obligation to certify Completion unless and until the *Contractor* fully complies with such requirements."

**Z15 Amendment to Clause 40.3 – Tests and Inspections**

Add at the end: "The *Contractor* may watch any test done by the *Supervisor*".

**Z16 Amendment to Clause 43.2 – Correcting Defects**

Add at the beginning: - "Unless a different period is agreed in writing between the *Contractor* and the *Supervisor*,"

**Z16A Amendment to Clause 50.2 – Assessing the Amount Due**

Add as a second bullet: "the *agreed profit* as a proportion of the Work Done to Date".

Re-order bullets 2 and 3 as bullets 3 and 4.

**Z17 Amendment to Clause 50.6 – Assessing the Amount Due**

Delete "Fee" and replace with "Overhead".

**Z18 Amendment to Clause 51 – Payment**

In the first sentence of Clause 51.1 delete "one week" and replace with "two weeks".

In the first sentence of Clause 51.2 delete "three" and replace with "four".

**Z 19 Addition to Clause 51 - Payment**

51.5 If the Defined Cost plus the Overhead at an assessment date exceeds the amount for the assessment interval as shown in the *Contractor*'s cash flow forecast, then the *Project Manager* certifies payment up to the amount forecast. Any amount exceeding the forecast is not certified but held over to the next assessment interval, where if the Defined Cost plus the Overhead at the next assessment date again exceeds the *Contractor*'s cash flow forecast for the assessment interval the process is repeated. This clause does not apply where the *Contractor* provides a valid and acceptable reason for an exception to the limitation of the *Project Manager*'s assessment certification.

51.6 If the *Employer* intends to withhold payment of any amount due under the contract he notifies the *Contractor* no later than 7 days before the final date for payment of the sum due specifying:

- the amount proposed to be withheld
- the ground for withholding payment or
- if there is more than one ground, each ground and the amount attributable to it

**Z20 Amendment to Clause 52.1 – Defined Cost**

Delete "Fee" and substitute "Overhead and *agreed profit*"

**Z21 Amendment to Clause 52.2 - Defined Cost**

Add at the end: "The *Contractor* keeps these records until the later of the issue of the Defects Certificate or the final payment being made under this contract pursuant to Clause 50.1".

**Z 22 Amendments to Clause 53 – The *Contractor*'s share**

Delete Clause 53.1 and substitute "The *Project Manager* assesses the *Contractor's* share of the difference between the total of the Prices and the Price for Work Done to Date for each Stage. "

In Clause 53.2, after "total of the Prices" where it appears twice, add "for the relevant Stage"

In Clause 53.3, delete "of the whole of the *works*" where it appears twice and substitute in each case "at the end of each Stage

In Clause 53.3 after "final total of the Prices", add "for each Stage"

In Clause 53.4 after "final total of the Prices", add "for each Stage"

**Z23 Amendment to Clause 54.3 – The Activity Schedule**

In the third bullet point add: "other than in accordance with this contract" at the end.

**Z24 Amendment to Clause 60.1(19) – Compensation Events**

Add new bullet point 6, "does not arise from a Subcontractor ceasing to trade or becoming insolvent (or other equivalent event)"

Add at the end, "provided that the occurrence of such event only entitles the *Contractor* to a change to the Completion Date or a change to a Key Date and not to a change in the Prices and Clauses 61 – 65 are interpreted accordingly."

**Z25 Amendment to Clause 60.3 - Compensation Events**

After the words "the *Contractor* is" add: "subject to Clause 60.1(12)".

**Z 25 Amendment to Clause 61.4 - Notifying of Compensation events**

In line 15 delete "two" and substitute "four"

**Z26 Amendment to Clause 63.1 – Assessing Compensation Events**

In the third bullet delete "Fee" and substitute "Overhead and *agreed profit*"

**Z26A Amendment to Clause 63.4 – Assessing Compensation Events**

After "the Prices" add: "the *agreed profit*".

**Z27 Amendment to clause 80.1 - Employer's Risks**

Bullet point 3, sub-bullet 1 second line after 'power,' add 'terrorism (except to the extent insured by the *Contractor* in relation to the works at the time of any loss or damage),'

**Z28 Addition to Clause 84.2 – Insurance cover**

Add at the end of line 3 before the full stop, "except in the case of professional indemnity insurance which is in the name of the *Contractor* and runs from the *starting date* to the date twelve years after Completion of the whole of the *works*"

Add to the Insurance Table:

| | |
|---|---|
| Liability for negligent management or design – professional indemnity insurance | The amount specified in the Contract Data for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months from the date the *Contractor* starts to Provide the Works for a period of twelve years from Completion of the whole of the *works*, with insurers of good repute carrying on business in the European Union provided always that such insurance is available at rates and terms which are commercially reasonable to contractors of a similar size and standing in the UK In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the *Contractor* shall be ignored. |

**Z29 Amendment to Clause 91.2 – Reasons for Termination**

In the third bullet delete "Subcontractor" and substitute "Key Subcontractor" wherever the term occurs.

**Z30 Amendment to Clause 91.7 – Reasons for Termination**

Add at the end "notwithstanding that a delay to the Completion Date has previously been notified to the *Contractor* in respect of such event"

**Z31 Addition to Clause 91 - Reasons for termination**

91.8 The *Employer* may terminate the *Contractor's* obligations to Provide the Works for Stages 3 and 3A either (i) on completion of Stage 2 or (ii) if the Full Business Case is not approved by the Scottish Government (R22)

**Z32 Addition to 92.2 - Procedures on termination**

P5 The *Contractor* hands over to the *Project Manager* all hard copy and electronic data for the *Contractor's* design including material prepared by a subcontractor, the Works Information for the *Contractor's* design and Site Information obtained so far as prepared at termination. At such termination the *Employer* has the right to use such material for completion of the *works*.

**Z33 Termination Table — additions**

| Terminating Party | Reason | Procedure | Amount Due |
|---|---|---|---|
| The *Employer* | R22 | P1, P2 and P5 | A1 (excluding principle bullet point 3) and A2 |

**Z34 Amendment to Clause 93.1 – Payment on Termination**

Delete the 3rd principal bullet and substitute "other Defined Cost reasonably incurred in expectation of completing the Stage during which termination occurs".

**Z35 Amendment to Clause 93.2 – Payment on Termination**

In A4 delete "direct fee percentage" and substitute "*overhead percentage*"

**Z36 Amendment to Clause 93.7 - Payment on Termination**

Add new Clause: - "Subject to any Defined Cost reasonably incurred in expectation of completing the Stage during which termination occurs (Clause 93.1), on termination the *Employer* shall not be liable to the *Contractor* for loss of profit, loss of expectation of profit, loss of use, loss of production or indirect and consequential damages."

**Z37 Addition to Clause W2.1(1) – Dispute Resolution**

Add at the end: - "The word "dispute" in this Clause W2 includes any difference under or in connection with this contract".

**Z38 Addition to Clause W2.3(8) – the adjudication**

After "reasons" add the words, "(which will be in writing)"

**Z39 Addition to Clause W2.3(11) – The adjudication**

Delete the first sentence and replace with, "The decision of the *Adjudicator* is binding until the dispute is finally determined by the *tribunal* or by agreement."

**Z40 Addition to Clause X7**

Add new Clause X7.4: "The *Employer's* right to deduct Delay Damages pursuant to this Clause X7 is the *Employer's* sole and exclusive remedy in respect of delay to completion of the *works*.

**Z41 Amendment to Clause X13**

Delete and substitute: "The *Contractor* gives the *Employer* performance bonds for each of Stages 1, 3 and 3A of the *works*, provided by a bank or insurer which the *Project Manager* has accepted, for the amounts stated in the Contract Data and in the form set out in Appendix 6. A reason for not accepting the bank or insurer is that its commercial position is not strong enough to carry the bond. If the bond for Stage 1 is not given by the Contract Date, it is given to the *Employer* within four weeks of the Contract Date. If the bond for Stage 3 is not given when the *Employer* authorises the *Contractor* to commence and proceed with Stage 3, it is given to the *Employer* within four weeks of such authorisation. If the bond for Stage 3A is not given when the

*Employer* authorises the *Contractor* to commence and proceed with Stage 3A, it is given to the *Employer* within four weeks of such authorisation. "

**Z42 Amendment to Option X16**

Delete X16 and substitute:

"In respect of each of the Stages an amount is retained by the *Employer* in each amount due. The following applies to each of the Stages: -

| Stage | Retention |
|---|---|
| 1 - Design and Construct Laboratories | • 5% retained in each amount due until Completion of *section 1.*<br>• Amount retained is halved at Completion of *section 1* and remains at this amount until the Defects Certificate for *section 1* is issued.<br>• Amount retained released on issue of Defects Certificate for *section 1*<br>• No amount retained after issue of Defects Certificate for *section 1* |
| 2 – Design Development - New Hospitals Building | • 10% retained in each amount due and released on delivery of the Design Deliverables to the *Employer*<br>• No amount retained after all information for Full Business Case received from *Contractor* i.e. completion of Stage 2 |
| 3 - Design and Construct New Hospitals Building | • The *Employer* retains 2½% of the total of the Prices for Stage 3. No sums retained from each amount due until the final year of the Stage 3 *works* (or such other period as the *Employer*, acting reasonably, may determine)<br>• Amount retained released on issue of Defects Certificate for *section 2*<br>• No amount retained after issue of Defects Certificate for *section 2* |

| | |
|---|---|
| 3A - Demolition of Surgery Block | • 5% retained in each amount due until Completion of *section 3*.<br>• Amount retained is halved at Completion of *section 3* and remains at this amount until the Defects Certificate for *section 3* is issued.<br>• Amount retained released on issue of Defects Certificate for *section 3*<br>• No amount retained after issue of Defects Certificate for *section 3* |

**Z43 New Clause — Assignation**

Z43.1 The *Employer* has the right to assign this contract to another NHS body without having to seek the *Contractor*'s consent.

Z43.2 The *Employer* notifies the *Contractor* of the intention to assign the contract to another NHS body.

Z43.3 The *Employer* notifies the *Contractor* of the assignation of the contract to another NHS body.

**Z44 New Clause - Confidentiality**

Z44.1 The *Contractor* shall not append their name or give authority to the appending of their name to any publicity concerning this agreement or the works or indulge in any publicity concerning the *works* without the prior written consent of the *Employer*.

Z44.2 The *Contractor* warrants the accuracy of all information of a legal, commercial or financial nature provided by them to the *Employer*. Details must be provided by the *Contractor* to the *Employer* regarding any matter which affects the ability of the *Contractor* to perform the *works* as and when they take place, which affects the legal, commercial or financial standing of the *Contractor*.

Z44.3 The *Contractor* undertakes to treat any information derived from or obtained in the course of the Agreement as confidential and to take all the necessary

precautions to ensure that its employees and sub-contractors and their employees treat any information as confidential and in doing so the *Contractor* shall ensure that its employees and sub-contractors and their employees keep secret and do not disclose information of a confidential nature by him or them by reason of the Agreement.

Z44.4 Subject to Clause Z46, the *Employer* undertakes to treat any information obtained by it concerning the legal, financial or commercial standing of the *Contractor* as confidential and to take all necessary precautions to ensure that its employees do the same".

**Z45 New Clause – Data Protection**

Z45.1 The *Contractor* warrants and will at all times comply with the provisions of the Data Protection Act 1998 ("the 1998 Act") and any other subordinate legislation enacted pursuant thereto.

Z45.2 The *Contractor* shall only undertake such processing of personal data as is reasonably required in connection with the performance of its obligations under pursuant to the Agreement. To the extent required by the 1998 Act the *Contractor* shall notify the Information Commissioner of any processing which is being carried out and maintain any such notification in full force and effect.

Z45.3 The *Contractor* in its role as Data Processor undertakes to comply with the obligations imposed on a Data Controller under the 7th Data Protection Principle as set out in Part 1 of Schedule 1 of the 1998 Act in respect of all personal data processed pursuant to this contract.

Z45.4 The *Contractor* shall not, other than in accordance with the 1998 Act, transfer any personal data to any country or territory outside the European Economic Area.

Z45.5 Terms defined within the 1998 Act shall have the same meaning when used in this clause.

**Z46 New Clause – Freedom of Information**

The *Contractor* co-operates, facilitates, supports and assists the *Employer* to comply with the Freedom of Information (Scotland) Act 2002 and any codes of practice applicable from time to time relating to access to public authorities' information. In the event that the *Employer* is required to provide information to any person as a

result of a request made to it under such Act and/or codes, the *Employer* shall adhere to the requirements of such Act and/or codes in disclosing information relating to this Agreement, the Project Documents and the *Contractor*.

**Z47 New Clause: Collateral Warranty Agreements**

Z47.1 As soon as possible and in any event within 14 days following execution by each Specified Subcontractor of its subcontract the *Contractor* delivers to the *Employer* Collateral Warranty Agreements from each Specified Subcontractor in favour of the *Employer* together with a copy of the relevant subcontract.

Z47.2 Within 10 days of request by the *Employer* the *Contractor* delivers to the *Employer* Collateral Warranty Agreements from each Specified Consultant in favour of the *Employer* together with a copy of the relevant appointment.

**Z48 New Clause – Novation Agreements**

On execution of the Agreement, the *Contractor* enters into a Novation Agreement with the *Employer* and the Laboratory Consultant. At the same time, the *Contractor* delivers to the *Employer* a Collateral Warranty Agreement from the Laboratory Consultant generally in terms of the relevant Collateral Warranty Agreement.

**Z49 New Clause – Failure to deliver Collateral Warranty Agreements and/or Novation Agreements**

When any Collateral Warranty Agreement or Novation Agreement is not delivered as required pursuant to Clauses Z47 and Z48 (save where the reason for the non provision of the Novation Agreement is refusal or delay on the part of the Laboratory Consultant to execute such an agreement) one quarter of the Price for Work Done to Date plus *agreed profit* is retained in assessments of the amount due until the *Contractor* has delivered such Collateral Warranty Agreement or Novation Agreement to the *Employer*.

**Z50 New Clause – Third Parties**

The *Contractor* performs its obligations under this contract in such a manner and at such times that no act, omission or default of the *Contractor* in relation thereto constitutes, causes or contributes to any breach by the *Employer* of any third party agreement or any other obligation it may owe to a third party relating to the works, details of which the *Contractor* was made aware of prior to the Contract Date.

**Z51 New Clause - Inconsistencies**

In the case of any inconsistency between these *additional conditions of contract* and the other terms of the contract, the *additional conditions of contract* prevail. In the

event of any inconsistency between the Core Clauses and any other term of this contract (except these *additional conditions of contract*) the Core Clauses prevail.

**Z52 New Clause – Approval**

No inspection, testing, approval or review nor any omission to inspect, test, approve or review on the part of the *Employer* diminishes any duty or liability under this contract of the *Contractor*.

**Z53 New Clause – Set off**

Without derogating from its rights under this contract or under the *law of the contract*, whenever any sum of money is recoverable by the *Employer* against the *Contractor*, such sum is deducted from any sum due or which may become due to the *Contractor* under this or any other contract with the *Employer*.

**Z54 New Clause – Security**

Z54.1 The *Contractor* acknowledges that the Site forms part of the larger Southern General Hospital site and that the Southern General Hospital is a live and functioning acute hospital. The *Contractor* takes measures to prevent its employees, Subcontractors and suppliers of the Contractor from entering into or otherwise interfering with the operation of the existing Southern General hospital, except for access to or egress from the Site.

Z54.2 The *Project Manager* may instruct the *Contractor* to take measures to prevent unauthorised persons being admitted on the Site. The instruction is a compensation event if the measures are additional to those required by the Works Information.

Z54.3 The *Contractor* does not take photographs of the Site or the *works* or any part of them unless he has obtained the approval of the *Project Manager*.

Z54.4 The *Contractor* takes the measures needed to prevent his and his Subcontractors' people taking, publishing or otherwise circulating such photographs.

**Appendix 1 to Contract Data part one: Form of Sub-Consultant Warranty**

A49342285

**CONSULTANT'S COLLATERAL WARRANTY**

This Agreement is among

(1) **GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street Glasgow, G3 8YZ ("the Beneficiary" which expression shall include its successors in title or permitted assignees under this Agreement)

(2) [ ] (Registered number [ ]) of [ ] (" Main Contractor" which term shall include any successor including any parties taking over the obligations of Main Contractor. under the Project Agreement)

(3) [ ], (registered number [ ]) whose registered office is at [ ] ("the Consultant")

WHEREAS:

A The Beneficiary has entered or is about to enter into an agreement with the Main Contractor ("the Building Contract") in connection with the design and construction of the New South Glasgow Hospital, Govan, Glasgow ("the Project").

B The Main Contractor has engaged or is about to engage the Consultant under an appointment ("the Appointment"), which expression shall include all documents incorporated therein and any agreed amendment thereto, to carry out [ ] services as more particularly described in the Appointment ("the Services"), which expression shall include any additional services performed by the Consultant under the Appointment including in connection with any modifications or variations made thereunder.

C It is a condition precedent of the Building Contract that the Consultant, the Main Contractor and the Beneficiary enter into this agreement ("this Agreement").

NOW IT IS AGREED:

1 The Consultant warrants and undertakes to the Beneficiary that it has complied and will continue to comply with all the terms and obligations under the

Appointment on the Consultant's part to be performed and observed and shall complete the Services in accordance with the Appointment.

2. Without prejudice to Clause 1 of this Agreement, the Consultant further warrants and undertakes to the Beneficiary that:

2.1 it has exercised and will continue to exercise all the reasonable skill, care and diligence to be expected from a competent and qualified professional designer experienced in carrying out services similar in nature, size and complexity to the Services including in the selection of goods and materials for the Project; and

2.2 it has not and will not specify for use in relation to the Project any products or materials not in conformity with relevant British or European standards or Codes of Practice or which are at the time of specification generally known within the United Kingdom to an experienced professional designer of works such as the Project to be deleterious to health and safety or to the durability of buildings and/or other structures and/or finishes and/or plant and machinery in the particular circumstances in which they are used;

Provided that:

2.3.1 the obligations of the Consultant under this Agreement shall be no greater in extent or quantity than if the Beneficiary had been named as joint employer with Main Contractor under the Appointment; and

2.3.3 the Consultant shall be entitled in any action or proceedings brought by the Beneficiary to rely on any limitation in the Appointment and to raise the equivalent rights in defence of liability (excluding counterclaim and set-off in respect of amounts due to the Consultant under the Appointment) as it would have if the Beneficiary had been named as joint employer with the Main Contractor under the Appointment;

3. The Beneficiary has no authority to issue any direction or instruction to the Consultant in relation to the Appointment unless and until the Beneficiary has given notice under Clauses 4 or 5, below. The Beneficiary or its appointee has no liability to the Consultant in relation to amounts due under the Appointment unless and until the Beneficiary has given notice under Clauses 4 or 5.

4. The Consultant agrees that it will, if so required by notice in writing given by the Beneficiary, subject to Clause 6, below, accept the instructions of the Beneficiary or its appointee, as the case may be, (which for the avoidance of doubt and without limitation may include a third party appointed by the Beneficiary to act as "the Employer" under the Appointment) to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Appointment. The Main Contractor acknowledges that the Consultant shall be entitled to rely on a notice given to the Consultant by the Beneficiary under this Clause 4 and further acknowledges that such acceptance of the instructions of the Beneficiary or its appointee, as the case may be, to the exclusion of the Main Contractor shall not constitute any breach of the Consultant's obligations to the Main Contractor under the Appointment.

5. The Consultant further agrees that it will not without first giving the Beneficiary not less than 35 days notice in writing exercise any right or purported right it may have to determine its employment under the Appointment, treat the same as having been repudiated by the Main Contractor, or discontinue the performance of any duties or obligations thereunder. Further, the Consultant shall within 14 days of giving the said notice, provide statements to the Beneficiary containing the following:

5.1 all amounts properly due and payable to the Consultant under the Appointment on or before the date of issue of the said notice which remain unpaid;

5.2 in the reasonable estimation of the Consultant, the amount of any monetary claim (if any) asserted by the Consultant against the Main Contractor under the Appointment arising out of or in connection with the breach for which the said notice was served; and

5.3 where the Consultant intends to terminate the Appointment due to some default or breach of contract of a non-financial nature:

5.3.1 the provision of the Appointment alleged to have been breached or not fulfilled;

5.3.2 supporting information in reasonable detail to enable the Beneficiary to identify the material facts;

5.3.3 the steps reasonably required to remedy the specified breaches or conditions not fulfilled;

5.3.4 the time within which the specified steps can reasonably be expected to be taken;

5.3.5 (if applicable) the amount of damages claimed and the basis of their calculation; and

5.3.6 (if applicable) the relief to be sought.

The Consultant warrants to the Beneficiary that to the best of the Consultant's knowledge and belief, having made all proper and appropriate enquiries, the statements submitted under this Clause 5 shall be true, complete and accurate statements of the amounts to which the Consultant considers itself entitled. In the event that the Consultant shall delay in giving such notice and information within the said 14 days, the period of 35 days shall be extended to correspond with the period of any such delay. The Consultant's right to determine its employment under the Appointment or to treat the same as having been repudiated or to discontinue performance shall cease if, within the said 35 day period (extended as appropriate) and subject to Clause 6 the Beneficiary shall give notice in writing to the Consultant requiring the Consultant to accept the instructions of the Beneficiary or its appointee to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Appointment.

6. It shall be a condition of any notice given by the Beneficiary under Clauses 4 or 5 above, that the Beneficiary or its appointee, as the case may be, accepts liability for payment of the sums due under the Appointment and detailed in the statements provided under Clause 5 (and makes payment within a period of 28 days of such notice from the Beneficiary), and for subsequent performance of the Main Contractor's obligations. Upon the issue of any notice by the Beneficiary under clauses 4 or 5, the Appointment shall remain in full force and effect as if no right of determination of its employment under the Appointment, or any right of the Consultant to treat the Appointment as having been repudiated by the Main Contractor. had arisen and the Consultant shall be liable to the Beneficiary and/or its appointee, as the case may be, under the Appointment in lieu of its liability to the Main Contractor.

7. The Beneficiary may at any time following the issue of any notice by the Beneficiary under Clauses 4 or 5, serve a further notice that following the expiry

of 28 days from the giving of such notice the Beneficiary will have no liability (save in respect of the Beneficiary's antecedent breach) for any sums due or to become due to the Consultant in respect of the period following expiry of the last mentioned 28 day period. The Beneficiary may exercise any of its rights pursuant to Clauses 4 or 5 on more than one occasion.

8. The Consultant shall maintain for the period expiring 12 years after completion of the Services or until termination of the Consultant's employment under the Appointment, Professional Indemnity Insurance in an amount of not less than £[10]m [(ten million pounds)] sterling for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months with insurers of good repute carrying on business in the European Union provided always that such insurance is available at rates and terms which are commercially reasonable to consultants of a similar size and standing in the UK. In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the Consultant shall be ignored. The Consultant shall immediately inform the Beneficiary if such insurance ceases to be available at rates and terms which are commercially reasonable in order that the Consultant and the Beneficiary can consider alternative means of best protecting their respective positions in respect of the Project in the absence of such insurance provided that the Beneficiary shall be entitled to require the Consultant to maintain such lesser amount of Professional Indemnity Insurance as is available to the Consultant at rates and terms which are commercially reasonable. As and when it is reasonably requested to do so by the Beneficiary (but not more than once in any period of insurance) the Consultant shall produce for inspection documentary evidence satisfactory to the Beneficiary (acting reasonably) that its Professional Indemnity Insurance is being maintained.

9. The Consultant hereby grants to the Beneficiary or its appointee and all those authorised by the Beneficiary an irrevocable, non-exclusive and royalty-free licence (which shall be capable of assignation) to use and reproduce all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things whatsoever provided or to be provided by the Sub-Contractor in connection with the Project (the **"Documents"**) for any purpose relating to the Project including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair and any extension of the Project and for dissemination within the NHS as part of the feedback of information to better or enable the NHS to realise improvements in its

methods and practice of construction and in the design and procurement of its construction. Such licence shall carry the right to grant sub-licenses and shall subsist notwithstanding that the Appointment is terminated or the obligations and duties thereunder have been completed. For the avoidance of doubt, the grant of such licence or sub-licences shall not impose any additional liability on the Consultant. The Consultant will not assign or agree to assign the copyright in any of the documents without the prior written consent of the Beneficiary. The Consultant shall on reasonable demand provide to the Beneficiary or its appointee and those authorised by the Beneficiary additional copies of any documents on receipt of reasonable copying costs. The Consultant shall not be liable for any use by the Beneficiary of any of the documents for any purpose other than those authorised by this clause.

10. This Agreement may be assigned on a maximum of two occasions in whole or in part by the Beneficiary to any party to whom the Beneficiary's interest in the Main Contract or any part thereof is assigned or disposed to without the consent of the Main Contractor or the Consultant being required and any such assignation shall be effective upon written notice thereof being given to the Main Contractor and to the Consultant. No other or further assignation of this Agreement, other than permitted by this clause, by the Beneficiary or any other party shall be permitted. The Consultant shall not be entitled to assign or transfer any rights or obligations hereunder without the consent of the Beneficiary.

11. The Consultant undertakes that it will not raise as a defence to any action by the Beneficiary for alleged breach of this Agreement the fact that the obligations of the Main Contractor to the Beneficiary in respect of the Services have been released as a result of the termination of the Building Contract.

12. No failure, approval, act or forbearance on the part of the Beneficiary in respect of any right of the Beneficiary pursuant to this Agreement shall constitute any waiver of any right of the Beneficiary under or arising out of this Agreement nor relieve the Consultant of any of its duties or obligations under or arising out of this Agreement.

13. Any notice, consent or demand to be given or made by any party under this Agreement (hereinafter called a **"Notice"**) shall only be validly served if in writing and delivered personally or sent by pre-paid first class recorded delivery post to the following address and marked for the attention of the following person in the case of each party:

| Party: | Address: | Person: |
|---|---|---|
| Beneficiary | Dalian House, 350 St Vincent Street Glasgow, G3 8YZ | Head of Board Administration |
| Main Contractor | | |
| Contractor | | |

Any party may by Notice to the other party/parties change its address or the title of the person for whose attention Notices are to be given or made pursuant to this Clause. Any such Notice shall be deemed to have been received:

13.1 if delivered personally, at the time of delivery;

13.2 in the case of pre-paid first class recorded delivery post, on the first Business Day after the date of posting.

If any Notice is delivered after 5 p.m. on a Business Day, or at any time during a day which is not a Business Day, that Notice shall be deemed to have been received at 9 a.m. on the next Business Day. For the purposes of this Clause, "Business Day" means any day which is not a Saturday, a Sunday or a public holiday in Scotland. In proving service it shall be sufficient to prove that the envelope containing such Notice was properly addressed to the relevant party and either delivered personally to that address or delivered into the custody of the postal authorities as a pre-paid first class recorded delivery letter. For the avoidance of doubt, Notices shall not be validly served if sent by e-mail or fax

14 No action or proceedings for any breach of this Agreement shall be commenced against the Consultant after the expiry of twelve years from Completion or earlier termination of the Consultant's employment under the Appointment.

15. The definitions of words and phrases used in this Agreement shall be those set out in the Appointment except where expressly defined in this Agreement.

16. This Agreement shall be governed by and construed in accordance with Scots Law and the parties hereto submit to the exclusive jurisdiction of the Scottish Courts.

**Appendix 2 to Contract Data part one: Form of Sub-Contractor Warranty**

A49342285

**SUB-CONTRACTOR'S COLLATERAL WARRANTY**

This Agreement is among

(1) **GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street Glasgow, G3 8YZ ("the Beneficiary" which expression shall include its successors in title or permitted assignees under this Agreement)

(2) [ ] (Registered number [ ]) of [ ] (" Main Contractor" which term shall include any successor including any parties taking over the obligations of Main Contractor. under the Project Agreement)

(3) [ ], (registered number [ ]) whose registered office is at [ ] ("the Sub-Contractor")

WHEREAS:

A The Beneficiary has entered or is about to enter into an agreement with Main Contractor ("the Building Contract") in connection with the design and construction of the New South Glasgow Hospital, Govan, Glasgow ("the Project").

B The Main Contractor has engaged or is about to engage the Sub-Contractor under a [design and build] contract ("the Sub-Contract"), which expression shall include all documents incorporated therein and any agreed amendment thereto, to carry out [design and] works as more particularly described in the Sub-Contract ("the Sub-Contract Works"), which expression shall include any additional works performed by the Sub-Contractor under the Sub-Contract including in connection with any modifications or variations made thereunder.

C It is a condition precedent of the Building Contract that the Sub-Contractor, the Main Contractor and the Beneficiary enter into this agreement ("this Agreement").

NOW IT IS AGREED:

1 The Sub-Contractor warrants and undertakes to the Beneficiary that it has complied and will continue to comply with all the terms and obligations under the Sub-Contract on the Sub-Contractor's part to be performed and observed and shall complete the Sub-Contract Works in accordance with the Sub-Contract.

2. Without prejudice to Clause 1 of this Agreement, the Sub-Contractor further warrants and undertakes to the Beneficiary that:

2.1 it has exercised and will continue to exercise all the reasonable skill, care and diligence to be expected from a competent and qualified professional designer experienced in carrying out works similar in nature, size and complexity to the Sub-Contract Works in:

2.1.1 the design of the Sub-Contract Works; and

2.1.2 the selection of goods and materials for the Sub-Contract Works, and in particular in ensuring that it has not and will not specify for use in relation to the Sub-Contract Works any products or materials not in conformity with relevant British or European standards or Codes of Practice or which are at the time of specification generally known within the United Kingdom to an experienced professional designer of works such as the Sub-Contract Works to be deleterious to health and safety or to the durability of buildings and/or other structures and/or finishes and/or plant and machinery in the particular circumstances in which they are used;

2.2 the Sub-Contract Works will on completion satisfy all performance specifications and other requirements contained in the Sub-Contract;

2.3 the Sub-Contract Works and all materials and goods comprised therein will correspond as to description, quality and condition with the requirements of the Sub-Contract; and

2.4 the Sub-Contract Works will on completion comply with the requirements of the Sub-Contract in respect of compliance with Legislation, Guidance and Good Industry Practice (all as defined in the Sub-Contract);

Provided that:

2.5.1 the obligations of the Sub-Contractor under this Agreement shall be no greater in extent or quantity than if the Beneficiary had been named as joint employer with the Main Contractor under the Sub-Contract; and

2.5.3 the Sub-Contractor shall be entitled in any action or proceedings brought by the Beneficiary to rely on any limitation in the Sub-Contract and to raise the equivalent rights in defence of liability (excluding counterclaim and set-off in respect of amounts due to the Sub-Contractor under the Sub-Contract) as it would have if the Beneficiary had been named as joint employer with the Main Contractor under the Sub-Contract;

3. The Beneficiary has no authority to issue any direction or instruction to the Sub-Contractor in relation to the Sub-Contract unless and until the Beneficiary has given notice under Clauses 4 or 5, below. The Beneficiary or its appointee has no liability to the Sub-Contractor in relation

to amounts due under the Sub-Contract unless and until the Beneficiary has given notice under Clauses 4 or 5.

4. The Sub-Contractor agrees that it will, if so required by notice in writing given by the Beneficiary, subject to Clause 6, below, accept the instructions of the Beneficiary or its appointee, as the case may be, (which for the avoidance of doubt and without limitation may include a third party appointed by the Beneficiary to act as "the Employer" under the Sub-Contract) to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Sub-Contract. The Main Contractor acknowledges that the Sub-Contractor shall be entitled to rely on a notice given to the Sub-Contractor by the Beneficiary under this Clause 4 and further acknowledges that such acceptance of the instructions of the Beneficiary or its appointee, as the case may be, to the exclusion of the Main Contractor shall not constitute any breach of the Sub-Contractor's obligations to the Main Contractor under the Sub-Contract.

5. The Sub-Contractor further agrees that it will not without first giving the Beneficiary not less than 35 days notice in writing exercise any right or purported right it may have to determine its employment under the Sub-Contract, treat the same as having been repudiated by the Main Contractor, or discontinue the performance of any duties or obligations thereunder. Further, the Sub-Contractor shall within 14 days of giving the said notice, provide statements to the Beneficiary containing the following:

5.1 all amounts properly due and payable to the Sub-Contractor under the Sub-Contract on or before the date of issue of the said notice which remain unpaid;

5.2 in the reasonable estimation of the Sub-Contractor, the amount of any monetary claim (if any) asserted by the Sub-Contractor against the Main Contractor under the Sub-Contract arising out of or in connection with the breach for which the said notice was served; and

5.3 where the Sub-Contractor intends to terminate the Sub-Contract due to some default or breach of contract of a non-financial nature:

5.3.1 the provision of the Sub-Contract alleged to have been breached or not fulfilled;

5.3.2 supporting information in reasonable detail to enable the Beneficiary to identify the material facts;

5.3.3 the steps reasonably required to remedy the specified breaches or conditions not fulfilled;

5.3.4 the time within which the specified steps can reasonably be expected to be taken;

5.3.5 (if applicable) the amount of damages claimed and the basis of their calculation; and

5.3.6 (if applicable) the relief to be sought.

The Sub-Contractor warrants to the Beneficiary that to the best of the Sub-Contractor's knowledge and belief, having made all proper and appropriate enquiries, the statements submitted under this Clause 5 shall be true, complete and accurate statements of the amounts to which the Sub-Contractor considers itself entitled. In the event that the Sub-Contractor shall delay in giving such notice and information within the said 14 days, the period of 35 days shall be extended to correspond with the period of any such delay. The Sub-Contractor's right to determine its employment under the Sub-Contract or to treat the same as having been repudiated or to discontinue performance shall cease if, within the said 35 day period (extended as appropriate) and subject to Clause 6 the Beneficiary shall give notice in writing to the Sub-Contractor requiring the Sub-Contractor to accept the instructions of the Beneficiary or its appointee to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Sub-Contract.

6. It shall be a condition of any notice given by the Beneficiary under Clauses 4 or 5 above, that the Beneficiary or its appointee, as the case may be, accepts liability for payment of the sums due under the Sub-Contract and detailed in the statements provided under Clause 5 (and makes payment within a period of 28 days of such notice from the Beneficiary), and for subsequent performance of the Main Contractor's obligations. Upon the issue of any notice by the Beneficiary under clauses 4 or 5, the Sub-Contract shall remain in full force and effect as if no right of determination of its employment under the Sub-Contract, or any right of the Sub-Contractor to treat the Sub-Contract as having been repudiated by the Main Contractor. had arisen and the Sub-Contractor shall be liable to the Beneficiary and/or its appointee, as the case may be, under the Sub-Contract in lieu of its liability to the Main Contractor.

7. The Beneficiary may at any time following the issue of any notice by the Beneficiary under Clauses 4 or 5, serve a further notice that following the expiry of 28 days from the giving of such notice the Beneficiary will have no liability (save in respect of the Beneficiary's antecedent breach) for any sums due or to become due to the Sub-Contractor in respect of the period following expiry of the last mentioned 28 day period. The Beneficiary may exercise any of its rights pursuant to Clauses 4 or 5 on more than one occasion.

8. The Sub-Contractor shall maintain for the period expiring 12 years after Completion (or equivalent event under the Sub-Contract) or until termination of the Sub-Contractor's employment under the Sub-Contract, Professional Indemnity Insurance in an amount of not less than £[10]m [(ten million pounds)] sterling for any one claim or series of claims arising out

of one single incident during any period of insurance which shall not be more than 12 months with insurers of good repute carrying on business in the European Union provided always that such insurance is available at rates and terms which are commercially reasonable to contractors of a similar size and standing in the UK. In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the Sub-Contractor shall be ignored. The Sub-Contractor shall immediately inform the Beneficiary if such insurance ceases to be available at rates and terms which are commercially reasonable in order that the Sub-Contractor and the Beneficiary can consider alternative means of best protecting their respective positions in respect of the Project in the absence of such insurance provided that the Beneficiary shall be entitled to require the Sub-Contractor to maintain such lesser amount of Professional Indemnity Insurance as is available to the Sub-Contractor at rates and terms which are commercially reasonable. As and when it is reasonably requested to do so by the Beneficiary (but not more than once in any period of insurance) the Sub-Contractor shall produce for inspection documentary evidence satisfactory to the Beneficiary (acting reasonably) that its Professional Indemnity Insurance is being maintained.

9. The Sub-Contractor hereby grants to the Beneficiary or its appointee and all those authorised by the Beneficiary an irrevocable, non-exclusive and royalty-free licence (which shall be capable of assignation) to use and reproduce all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things whatsoever provided or to be provided by the Sub-Contractor in connection with the Project (the "**Documents**") for any purpose relating to the Project including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair and any extension of the Project and for dissemination within the NHS as part of the feedback of information to better or enable the NHS to realise improvements in its methods and practice of construction and in the design and procurement of its construction. Such licence shall carry the right to grant sub-licenses and shall subsist notwithstanding that the Sub-Contract is terminated or the obligations and duties thereunder have been completed. For the avoidance of doubt, the grant of such licence or sub-licences shall not impose any additional liability on the Sub-Contractor. The Sub-Contractor will not assign or agree to assign the copyright in any of the documents without the prior written consent of the Beneficiary. The Sub-Contractor shall on reasonable demand provide to the Beneficiary or its appointee and those authorised by the Beneficiary additional copies of any documents on receipt of reasonable copying costs. The Sub-Contractor shall not be liable for any use by the Beneficiary of any of the documents for any purpose other than those authorised by this clause.

10. This Agreement may be assigned on a maximum of two occasions in whole or in part by the Beneficiary to any party to whom the Beneficiary's interest in the Main Contract or any part thereof is assigned or disposed to without the consent of the Main Contractor or the Sub-Contractor being required and any such assignation shall be effective upon written notice thereof being given to the Main Contractor and to the Sub-Contractor. No other or further assignation of this Agreement, other than permitted by this clause, by the Beneficiary or any

other party shall be permitted. The Sub-Contractor shall not be entitled to assign or transfer any rights or obligations hereunder without the consent of the Beneficiary.

11. The Sub-Contractor undertakes that it will not raise as a defence to any action by the Beneficiary for alleged breach of this Agreement the fact that the obligations of the Main Contractor to the Beneficiary in respect of the design and construction of the Sub-Contract Works have been released as a result of the termination of the Building Contract.

12. No failure, approval, act or forbearance on the part of the Beneficiary in respect of any right of the Beneficiary pursuant to this Agreement shall constitute any waiver of any right of the Beneficiary under or arising out of this Agreement nor relieve the Sub-Contractor of any of its duties or obligations under or arising out of this Agreement.

13. Any notice, consent or demand to be given or made by any party under this Agreement (hereinafter called a **"Notice"**) shall only be validly served if in writing and delivered personally or sent by pre-paid first class recorded delivery post to the following address and marked for the attention of the following person in the case of each party:

| Party: | Address: | Person: |
|---|---|---|
| Beneficiary | Dalian House, 350 St Vincent Street Glasgow, G3 8YZ | Head of Board Administration |
| Main Contractor | | |
| Contractor | | |

Any party may by Notice to the other party/parties change its address or the title of the person for whose attention Notices are to be given or made pursuant to this Clause. Any such Notice shall be deemed to have been received:

13.1 if delivered personally, at the time of delivery;

13.2 in the case of pre-paid first class recorded delivery post, on the first Business Day after the date of posting.

If any Notice is delivered after 5 p.m. on a Business Day, or at any time during a day which is not a Business Day, that Notice shall be deemed to have been received at 9 a.m. on the next Business Day. For the purposes of this Clause, "Business Day" means any day which is not a Saturday, a Sunday or a public holiday in Scotland. In proving service it shall be sufficient to prove that the envelope containing such Notice was properly addressed to the relevant party and either delivered personally to that address or delivered into the custody of the postal

authorities as a pre-paid first class recorded delivery letter. For the avoidance of doubt, Notices shall not be validly served if sent by e-mail or fax

14 No action or proceedings for any breach of this Agreement shall be commenced against the Sub-Contractor after the expiry of twelve years from Completion or earlier termination of the Sub-Contractor's employment under the Sub-Contract.

15. The definitions of words and phrases used in this Agreement shall be those set out in the Sub-Contract except where expressly defined in this Agreement.

16. This Agreement shall be governed by and construed in accordance with Scots Law and the parties hereto submit to the exclusive jurisdiction of the Scottish Courts.

**Appendix 3 to Contract Data part one: Form of Novation Agreement**

A49342285

**NOVATION AGREEMENT**

**amongst**

**Greater Glasgow Health Board** of Dalian House, St Vincent Street, Glasgow (hereinafter referred to as "the **Board**");

and

**Brookfield Construction (UK) Limited**, incorporated under the Companies Acts (Company Number 3808946) and having its Registered Office at 23 Hanover Square, London W1S1JB (hereinafter referred to as the "**Contractor**" which term shall include its successors and assignees);

and

**Boswell Mitchell and Johnston Limited,** incorporated under the Companies Acts (Company Number SC258273) and having its Registered Office at 2 Central Quay, 89 Hydepark Street, Glasgow, G3 8BW (hereinafter referred to as "the "**Consultant**"");

WHEREAS

(A) By an agreement dated 6 November 2009 ("the **Appointment**") the Board has appointed the Consultant to carry out services as detailed in the Appointment (**"the Services"**) in connection with a new Laboratory Block forming part of the New South Glasgow Hospitals Project at the Southern General Hospital, Glasgow (the **"Project"**).

(B) The Board and the Contractor have entered into or shall enter into a building contract ("the **Building Contract**") for, inter alia, the construction and completion of the Project, as more particularly described therein (hereinafter referred to as "the **Works**");

(C) It is intended that the Contractor will in terms of the Building Contract be responsible to the Board for all design and construction work required as part of the Project, including the Services undertaken or to be undertaken by or on behalf of the Consultant under the Appointment;

(D) It is a condition of the Building Contract and the Appointment that the Contractor and the Consultant shall enter into a Novation Agreement with the Board in respect of the Appointment in connection with the Works, under exception of those aspects of the Services covering cost consultancy and quantity surveying (hereinafter referred to as the **"Excluded Services"**).

(E) The Board, the Contractor and the Consultant have agreed to novate the Appointment, under exception of the Excluded Services, so that it shall be between the Contractor and the Consultant to the exclusion of the Board on the terms and conditions of this agreement

(F) The Contractor and the Consultant have agreed that the terms of the Appointment shall as from the date of this Novation Agreement be amended as set out in Clause 3A below.

NOW THEREFORE the parties hereto DO HEREBY AGREE as follows: -

1. The Board hereby novates to the Contractor its entire rights, benefits, liabilities and obligations under and pursuant to the Appointment including its accrued rights, benefits, liabilities and obligations with the exception of (a) the right to receive, and obligation on the Consultant to perform the Excluded Services and (b) the Board's obligation to pay the Outstanding Fee if any (as hereinafter defined).

2. The Consultant and the Contractor hereby release and discharge the Board from any and all of the obligations and liabilities under the Appointment, past, present or future owed by the Board to the Consultant under or in connection with the Appointment with the exception of the Board's obligation to pay the Outstanding Fee if any (as hereinafter defined), provided that nothing in this clause shall operate to exclude or limit the liability or obligations of the

Consultant to the Board in terms of the collateral warranty granted or to be granted to the Board in terms of this Agreement or in respect of the Excluded Services whether such liabilities or obligations arise or occur before or after the date of this Agreement.

3. The Consultant shall provide the Services (with the exception of the Excluded Services) to the Contractor from the effective date specified in clause 10 of this Agreement.

3A The Parties agree that the terms of the Appointment are hereby amended by their replacement with the terms and conditions set out in Appendix A to this Novation Agreement and the Consultant agrees to perform the Services under the Appointment in accordance with these amended terms and conditions from the date of this Novation Agreement. Consequently, the Parties agree that their sole obligations in respect of and in connection with the Services as performed after the date of this Novation Agreement shall be as set out in Appendix A.

4. Subject to Clause 1 the Consultant accepts the liability of the Contractor under the Appointment in substitution for the liability of the Board.

5. The Consultant hereby warrants and undertakes to the Contractor that it has performed and will continue to perform each and all of its obligations, duties and undertakings under and pursuant to the Appointment as and when required by and in all respects in accordance with the Appointment. The Contractor shall have the right to enforce its rights and remedies in connection with the Appointment and to pursue all claims and demands in connection with any breach, negligence, omission, default of the Consultant or those for whom it is responsible in connection with the Appointment and/or the Works irrespective of when losses, costs, expenses or claims occurred or the breach, negligence, omission or default occurred. For the purposes of this Clause 5, the expression "the Appointment" shall include the original appointment between the Board and the Consultant and the novated appointment between the Contractor and the Consultant as attached at Appendix A.

6. The Contractor undertakes to the Consultant and to the Board to perform all the duties and obligations on the Board's part under the Appointment and to be bound by the terms of the Appointment as if the Contractor had been the employer under the Appointment from the date of commencement of the Services (with the exception of the Excluded Services) or the date of the Appointment, whichever is the earlier, in substitution for the Board.

7.1 The Consultant shall owe no greater duty to the Contractor hereunder than it would have owed to the Contractor if the Contractor had been named as employer under the Appointment from the outset in substitution for the Board.

7.2 The Consultant shall be liable to the Contractor subject to and in accordance with the terms of the Appointment for the Services (with the exception of the Excluded Services) and performance of its obligations under the Appointment whether performed prior to, on or after the effective date referred to in Clause 10 below and irrespective of: -

(i) to whom the relevant Service or obligation was performed;

(ii) whether or not any losses, costs, expenses or claims could be conceived as having been suffered by the Board or the Contractor and irrespective of whether attributable to the period before or after the effective date referred to in clause 10 or suffered or incurred by the Contractor;

(iii) the fact that the Board has suffered no losses, costs, expenses or claims or could not have suffered losses, costs, expenses or claims or in either case the losses, costs, expenses or claims caused, were in whole or in part attributable to an act, omission, breach, default or negligence in the period before or after such effective date or are different in extent, nature or otherwise from those suffered or incurred or which could have been suffered or incurred by the Board.

7.3 The Consultant shall not be entitled in defence or mitigation of any claim to state a defence of no loss or to state a defence that the Contractor has suffered or incurred a loss, which would not have been suffered or incurred by the Board.

8. For the avoidance of doubt, the parties hereto agree and undertake that save to the extent expressly provided otherwise, nothing contained in this Agreement shall:

(i) limit, vary or discharge any right or liability arising under or in connection with the Appointment save to the extent of the identity of the creditor and/or debtor in respect of the relevant right and/or obligation;

(ii) waive, discharge, limit or affect any of the rights, obligations or liability of the Consultant and any beneficiary under or in connection with any collateral warranty agreement issued pursuant to the Appointment;

(iii) adversely affect any right of step-in granted to any party under any collateral warranty agreement referred to above.

9. The Consultant acknowledges and agrees that the Consultant has been paid the whole fee due to the Consultant by the Board in connection with the Appointment, therefore there is no outstanding fee due to the Consultant by the Board in connection with the Appointment ("the **Outstanding Fee**").

10. The provisions of this Agreement shall take effect between the parties hereto on the effective date of the Building Contract notwithstanding the dates of execution hereof ("The **Effective Date**").

11. The Consultant hereby undertakes to execute and deliver to the parties (including the Board) collateral warranty agreements in terms of those specified in the Appointment in favour of the parties (including the Board) and within the timescales referred to therin but for the avoidance of doubt on the date of execution hereof in respect of the Board.

12. Words and expressions used in this Agreement shall, unless the context otherwise requires, bear the same meaning ascribed to them in the Appointment. The rules of construction and interpretation provided for in the Appointment shall apply to this Agreement. Save insofar as expressly amended hereby the terms of the Appointment shall continue in full force and effect.

13. This Agreement and the rights and obligations of the parties hereto shall be governed and construed according to the Law of Scotland and the parties hereby prorogate the non-exclusive jurisdiction of the Scottish Courts;

# APPENDIX A

**AGREEMENT**

between

**BROOKFIELD CONSTRUCTION (UK) LIMITED** of 23 Hanover Square, London, United Kingdom W1S 1JB ("the *Employer*"); and

**BOSWELL MITCHELL AND JOHNSTON LIMITED** having its principal place of business at 2 Central Quay, 89 Hydepark Street, Glasgow G38BW (the "*Consultant*").

WHEREAS: -

The *Employer* has been appointed to carry out the design and construction of the New South Glasgow Hospital ("the Project") and wishes to have the *Consultant* Provide the *services* in connection with the same.

**NOW IT IS AGREED THAT**

1. The *Consultant* will Provide the Services in accordance with the NEC Professional Services Contract, Option A: Priced Contract with activity schedule June 2005 (as the same are amended by the Contract Data) ("*the conditions of contract*") and the principles stated in Appendix 1 of this Agreement.
2. The *Employer* will pay the *Consultant* in accordance with Section 5 of the *conditions of contract.*
3. Not used.
6. The documents forming part of this contract are:
   - 6.1 this Agreement
   - 6.2 the *conditions of contract*,
   - 6.3 Contract Data part one — data provided by the *Employer*
   - 6.4 Contract Data part two – data provided by the *Consultant*
7. In the event of conflict between the documents forming part of this contract the following order of priority will apply:-
   - 7.1 This Agreement (excluding Appendix 1)
   - 7.2 The *conditions of contract*,

7.3 Contract Data part one

7.4 Contract Data part two

7.5 Appendix 1 of this Agreement

IN WITNESS WHEREOF these presents consisting of this and the 1 preceding page together with Appendix 1 and the Contract Data part one (including its Appendices) and Contract Data part two are executed as follows: -

**This is Appendix 1 to the foregoing Agreement between Brookfield Construction (UK) Limited**

**and**

**Boswell Mitchell and Johnston Limited**

**Principles governing the Agreement**

**Definitions**

| **Defined Term** | **Definition** |
|---|---|
| "Building Contract" | means the contract between or to be entered into between the Employer and Greater Glasgow Health Board in relation to the design and construction of the New South Glasgow Hospital. |
| "Overriding Objective" | means the objective set out in Paragraph 4. |
| "Overriding Principle" | means principle set out in Paragraph 1. |
| "Professional Advisor" | means any party providing specialist advice to the *Employer*. |

1. The Overriding Principle of this agreement is to work together with the *Employer* and its Professional Advisers in a co-operative and collaborative manner to achieve the Overriding Objective acting in good faith and in the spirit of mutual trust and respect.
2. In order to work together in co-operative and collaborative manner the *Employer* and the *Consultant* agree that they should each give to and welcome from each other, and any Professional Adviser, feedback on performance and shall share information openly and highlight any difficulties at the earliest practical time. The parties shall support collaborative behaviour and confront behaviour that does not comply with the Overriding Principle.
3. The terms of the Agreement shall be interpreted according to their natural meaning but in the event of any ambiguity in their natural meaning they shall be interpreted so as to give best effect to the Overriding Principle.
4. In entering into the Agreement the parties' Overriding Objective is by working together in accordance with the terms of the Agreement to achieve the successful delivery by the *Consultant* of the *services*: -

4.1 to the standard and functionality defined or as reasonably inferred from the *Employer*'s requirements set out in the Building Contract to a quality which meets or exceeds these requirements;

4.2 at a cost that offers best value for money taking into account whole life (as well as capital) costs over the proposed design life of the *works* through the application of the principles of value engineering; and

4.3 to the timescale acceptable to the *Employer* and agreed between the parties without compromising health and safety or the *Employer*'s required standards and the quality of the completed *works* and in any event before the Completion Dates set out in the Building Contract.

5. The *Consultant* shall carry out the management and be responsible for the delivery of the *services* in accordance with the Agreement and shall work and liaise with the *Employer* and any of its Professional Advisers as necessary or appropriate or as requested by the *Employer* in order to achieve the Overriding Objective.

6. The *Consultant* shall engage persons from the key people set out in the Contract Data — Part two in the performance of the *services* to be provided by the *Consultant* under the Agreement and shall not replace any of the key people without the approval of the *Employer* (such approval not to be unreasonably withheld). The *Consultant* will ensure that where a member of its key personnel is replaced that they have the skills, qualifications, experience and ability to provide the best service to the *Employer*.

7. Throughout the period of the Agreement the performance of the *Consultant* shall in relation to the *services* be monitored against the Key Performance Indicators defined in the Scope and/or the Contract Data.

8. During the period of the Agreement amendments may be made to the Key Performance Indicators by agreement between the *Employer* and the *Consultant* except where the *Employer* is required by the Scottish Government or regulatory bodies to provide Key Performance Indicators. In such cases the *Employer* will provide information on any requirements to the *Consultant* as soon as reasonably practicable.

9. At 2 monthly intervals or at such other intervals as the parties may agree during the performance of the Agreement, the *Employer* and the *Consultant* shall undertake formal reviews of the performance of the *Consultant* against its Key Performance Indicators. The *Employer* and the *Consultant* will discuss any way in which the performance of the *Consultant* may be improved.

10. The *Consultant* shall keep a comprehensive record as specified by the *Employer* of all performance monitoring carried out under the Agreement in such form as the *Employer* may reasonably request for a period of 6 years after the expiry or earlier termination of this

Agreement and shall provide copies of such records to the *Employer* for the *services* to enable him to record, disseminate and compare the performance of the *Consultant*. Each record shall be retained in a format that can be read and copied and kept with the IT requirements on an electronic based database.

11. The *Consultant* shall throughout the period of the Agreement look for and seek to achieve continuous improvement in the quality of the *services* while reducing low life costs, wastage (in accordance with WRAP guidance), and the time taken to deliver the *services*. Innovation and best practice will be shared with the *Employer*.

12. To achieve the aim set out in Clause 11 the *Consultant* shall actively participate in the continuous improvement "learning sets" with the Employer in relation to the Agreement. This commitment is likely to involve meetings at least once every 3 months in relation to the *services* and meetings at least once every 6 months in relation to the lessons to be learned. The *Consultant* shall also use reasonable endeavours to procure the involvement of any of its subconsultants in such learning sets where considered appropriate.

A49342285

**CONTRACT DATA PART ONE —**

**DATA PROVIDED BY *THE EMPLOYER***

**Contract Data Part one - Data provided by the *Employer***

**1. General**

- The *conditions of contract* are the core clauses for main Option C, dispute resolution Option W2 and Secondary Options — X2, X8, X18.3, Y(UK)2 and Z of the NEC3 Engineering and Construction Contract (June 2005).
- The services are management and delivery of design services for the New South Glasgow Hospital Project as the *services* are more specifically referred to in the Scope.
- The *Employer* is

  Name: Brookfield Construction (UK) Limited

  Address: 23 Hanover Square, London, United Kingdom W1S 1JB
- The *Adjudicator* is

  Name: To Be Appointed as below

  Address: [tba]
- The *Services* are: As Set out in Appendix 2 to this Agreement
- The Scope is as set out in Appendix 2 to this Agreement

- The *language* of the contract is English.
- The *law of the contract* is the law of Scotland subject to the jurisdiction of the Courts of Scotland.
- The *period for reply* to a communication is
  - to *Consultant's* submission of particulars of design for acceptance is five (5) weeks
  - Reply to all other communications unless otherwise stated in this contract three (3) weeks
- The *Adjudicator* nominating body is:

  The Scottish Branch of the Royal Institute of Chartered Surveyors
- The *tribunal* is the Scottish Courts

**2. The Parties' main responsibilities:**

Not used

**3. Time**

- The *starting date* is 22 Dec 09
- The Consultant submits revised programmes at intervals no longer than three (3) weeks.

**4. Quality**

- The quality policy statement and quality plan are provided within 4 weeks of the Contract Date.
- The *defects date* is 104 Weeks after Completion of the *services*.

**5. Payment**

- The *assessment interval* is four (4) weeks alternatively calendar monthly.
- The *currency of this contract* is the pound sterling (£)
- The interest rate is 5% per annum

**8. Indemnity, Insurance and liability**

The minimum limit of indemnity for insurance in respect of loss of or damage to property (except the works, Plant and Materials and Equipment) and liability for bodily injury to or death of a person (not an employee of the Consultant) caused by activity in connection with this contract for any one event is

**£10,000,000.00 (ten million pounds sterling)**

The minimum limit of indemnity for insurance in respect of death or bodily injury to employees of the *Consultant* arising out of and in the course of their employment in connection with this contract for any one event is

**£10,000,000.00 (ten million pounds sterling)**

The amount of the minimum limit of indemnity for Professional Indemnity Insurance for design liability in connection with this contract for any one event is

**[In any one event / In the aggregate] of £10,000,000 (ten million pounds sterling)**

Consultant to provide documentary evidence to establish that it has discharged its obligations under this contract with respect to insurance.

**Optional Statements**

**If the Employer has decided the completion date for the whole of the *works***

The *completion date* for the whole of the *services* is 4 March 2012.

**If no programme is identified in part two of the Contract Data**

The Consultant is to comply with Brookfield Design Programme ref BCL-GS1-CND1-0002 Rev 01 dated 14 Dec 09.

**If the Employer has identified work which is to meet a stated *condition* by a *key date***

The *key dates* and *conditions* to be met are Completion of the Stage 1 Laboratory Works by 4th March 2012

**If the Employer states any *expenses***

- The *expenses* stated by the *Employer* are:

| Item | Amount |
|---|---|
| ..... | ..... |
| ..... | ..... |
| ..... | ..... |

**If Option A is used**

- The *Consultant* prepares forecasts of the total *expenses* at intervals no longer than 4 weeks.

**If Option X5 is used**

Not used

**If Options X5 and X7 are used together**

Not used

**If Option X8 is used**

- The *collateral warranty agreements* are:

| Agreement reference | Third Party |
|---|---|
| Form as set out in Appendix 3 to this Agreement | Greater Glasgow Health Board<br>[Others] |

**If Option X18 is used**

The *end of liability date* is twelve (12) years after the Completion of the whole of the *services*.

**If Option Z is used**

*The additional conditions of contract are*

**Amendments and additions to existing Clauses:**

**Z 1 Additions to Clause 11.2 - Identified and Defined Terms**

11.2(14) "Agreement" is the form of agreement entered into between the *Employer* and the *Consultant* in respect of the services forming part of this contract

11.2(15) "the Client" is the Greater Glasgow Health Board.

11.2(17) "Laboratories" is the new laboratory block as the same is more particularly described in the Scope.

11.2(18) "Stage" has the meaning ascribed to it in the recital to the Agreement.

11.2(19) "*conditions of contract*" is the NEC Professional Services Contract, Option A: Priced contract with activity schedules, June 2005 (as the same are amended in by the Contract Data).

11.2(21) "Documents" includes, without limitation, all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things provided or to be provided by or on behalf of the *Consultant* in connection with the *services*.

**Z2 Amendment to clause 11.2 (4) - Identified and Defined Terms**

Delete and replace with "the Contract Date is the date of execution of this contract"

A49342285

**Z3 Amendment to Clause 16.1 – Ambiguities and inconsistencies**

Add the following sentence to the end of Clause 16.1

"Instructions issued under this clause do not necessarily give rise to a compensation event"

**Z4 Addition to Clause 16 – Ambiguities and inconsistencies**

"16.2 Inconsistencies and ambiguities between (a) the NHS Mandatory Documentation and NHS Guidance Documentation and building control or (b) between the NHS Mandatory Documentation and NHS Guidance Documentation and the Schedules of Accommodation or (c) between the NHS Mandatory Documentation and NHS Guidance Documentation and any information issued to the Consultant by the Employer, are to be dealt with in accordance with the procedures set out in the Scope and/or the Contract Data."

**Z5 Amendment to Clause 18 – Prevention**

Add new Clause 18.2

"Notwithstanding the provisions of Clause 60 and subject to Clause 18.4, the *Consultant*'s sole right to payment in respect of the occurrence of an event under Clause 18.1 is as provided in Clause 92."

Add new Clause 18.3

"The *Consultant* and the *Employer* take all reasonable steps to mitigate the effect of the occurrence of an event under Clause 18.1."

Add new Clause 18.4

"If the *Employer* instructs the *Consultant* to take steps to Provide the Services in a manner not prevented by the occurrence of an event under Clause 18.1, and such instruction changes the Scope, the *Consultant* is entitled to notify a compensation event under clause 60."

**Z6 Amendment to Clause 21.12 - The *Consultant's* design**

Delete and replace with: "The *Consultant's* obligation is to perform the *services* using the degree of skill and care that would reasonably be expected of a competent professional designer experienced in carrying out design activities of a similar nature, scope and complexity to those comprised in the *services*.

**Z7 Not used.**

**Z 8 Addition to Clause 51 - Payment**

51.6 If the amount to be paid at an assessment date exceeds the amount for the assessment interval as shown in the *Consultant*'s cash flow forecast, then the *Employer* certifies payment up to the amount forecast. Any amount exceeding the forecast is not certified but held over to the next assessment interval, where if amount to be paid at the next assessment date again exceeds the *Consultant*'s cash flow forecast for the assessment interval the process is repeated. This clause does not apply where the *Consultant* provides a valid and acceptable reason for an exception to the limitation of the *Employer's* assessment certification.

**Z9 Amendment to Clause 60.1(11)**

Add new bullet point 6, "does not arise from a sub-consultant ceasing to trade or becoming insolvent (or other equivalent event)"

Add at the end, "provided that the occurrence of such event only entitles the Consultant to a change to the Completion Date or a change to a Key Date and not to a change in the Prices and Clauses 61 – 65 are interpreted accordingly."

**Z10 Amendment to Clause 61.4 - Notifying of Compensation events**

In line 15 delete "two" and substitute "four"

**Z11 Amendment to Clause 70 – the Parties' use of material**

Delete and replace with: -

"70.1 The copyright and all intellectual property rights in the Documents remain vested in the *Consultant* or the person responsible for the production (as the case may be).

70.2 Where documentation (including drawings) is (or are) provided by the *Employer* copyright and such documentation and drawings remain vested in the *Employer*.

70.3 The *Employer* has an irrevocable, non-exclusive royalty free licence to copy and use the Documents and to reproduce the designs contained in them for any purpose relating to the *works* including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair, any extension of the *works* and for dissemination within

the NHS as part of the feedback of information to better or enable the NHS to realise improvements in its methods and practice of construction and in the design and procurement of its construction.

70.4 The *Consultant* shall not be liable for any use, misuse or variation whatsoever of the *Employer* of the Documents for any purpose other than that for which the same is prepared and provided."

**Z12 Addition to Clause 81.1 – Insurance cover**

Add to the Insurance Table:

| | |
|---|---|
| Liability for negligent management or design – professional indemnity insurance | The amount specified in the Contract Data for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months from the date the *Consultant* starts to Provide the Services for a period of twelve years from Completion of the whole of the *services*, with insurers of good repute carrying on business in the European Union provided always that such insurance is available at rates and terms which are commercially reasonable to Consultants of a similar size and standing in the UK In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the Consultant shall be ignored. |

**Z13 Not Used**

**Z14 Amendment to Clause 90.4 – Reasons for Termination**

Add at the end "notwithstanding that a delay to the Completion Date has previously been notified to the *Consultant* in respect of such event"

**Z15 Not used.**

**Z16 Addition to 91 - Procedures on termination**

"91.2 The *Consultant* hands over to the *Employer* all hard copy and electronic data for the *Consultant*'s design including material prepared by a sub-consultant, so far as prepared at termination. At such termination the *Employer* has the right to use such material for completion of the *services*.

**Z17 Amendment to Clause 92 - Payment on Termination**

92.3 : - "On termination the *Employer* shall not be liable to the *Consultant* for loss of profit, loss of expectation of profit, loss of use, loss of production or indirect and consequential damages."

**Z18 Addition to Clause W2.1(1) – Dispute Resolution**

Add at the end: - "The word "dispute" in this Clause W2 includes any difference under or in connection with this contract".

**Z19 Addition to Clause W2.3(8) – the adjudication**

After "reasons" add the words, "(which will be in writing)"

**Z20 Addition to Clause W2.3(11) – The adjudication**

Delete the first sentence and replace with, "The decision of the *Adjudicator* is binding until the dispute is finally determined by the *tribunal* or by agreement."

**Z21 Amendment to Clause X8 – Collateral Warranty Agreements**

Add at the end: "and provides them to the *Employer* within 7 days of the *Employer*'s written request".

**Z22 New Clause - Confidentiality**

Z22.1 The *Consultant* shall not append their name or give authority to the appending of their name to any publicity concerning this agreement or the services or indulge in any publicity concerning the services without the prior written consent of the *Employer*.

Z22.2 Not used.

Z22.3 The *Consultant* undertakes to treat any information derived from or obtained in the course of the Agreement as confidential and to use best endeavours to

ensure that its employees and sub-consultants and their employees treat any information as confidential and in doing so the *Consultant* shall ensure that its employees and sub-consultants and their employees keep secret and do not disclose information of a confidential nature by him or them by reason of the Agreement. Nothing in this clause shall prevent the disclosure or use of any information to obtain insurance, professional or legal advice or during the course of any legal proceedings or where disclosure is required in accordance with any law or regulation.

**Z23 New Clause – Data Protection**

Z23.1 The *Consultant* warrants and will at all times comply with the provisions of the Data Protection Act 1998 ("the 1998 Act") and any other subordinate legislation enacted pursuant thereto.

Z23.2 The *Consultant* shall only undertake such processing of personal data as is reasonably required in connection with the performance of its obligations under pursuant to the Agreement. To the extent required by the 1998 Act the *Consultant* shall notify the Information Commissioner of any processing which is being carried out and maintain any such notification in full force and effect.

Z23.3 The *Consultant* in its role as Data Processor undertakes to comply with the obligations imposed on a Data Controller under the 7th Data Protection Principle as set out in Part 1 of Schedule 1 of the 1998 Act in respect of all personal data processed pursuant to this Contract.

Z23.4 The *Consultant* shall not, other than in accordance with the 1998 Act, transfer any personal data to any country or territory outside the European Economic Area.

Z23.5 Terms defined within the 1998 Act shall have the same meaning when used in this clause.

**Z24 New Clause – Failure to deliver Collateral Warranty Agreements**

When any Collateral Warranty Agreement is not delivered as required pursuant to Clause X8, one quarter of any amount due to the *Consultant* is retained in assessments of the amount due until the *Consultant* has delivered such Collateral Warranty Agreement to the *Employer*.

**Z25 New Clause – Third Parties**

The *Consultant* performs its obligations under this contract in such a manner and at such times that no act, omission or default of the *Consultant* in relation thereto constitutes, causes or contributes to any material breach by the *Employer* of any third party agreement or any other obligation it may owe to a third party relating to the works, details of which the *Consultant* was made aware of prior to the Contract Date.

**Z26 New Clause - Inconsistencies**

In the case of any inconsistency between these *additional conditions of contract* and the other terms of the contract, the *additional conditions of contract* prevail. In the event of any inconsistency between the Core Clauses and any other term of this contract (except these *additional conditions of contract*) the Core Clauses prevail.

**Z27 New Clause – Approval**

No inspection, testing, approval or review nor any omission to inspect, test, approve or review on the part of the *Employer* diminishes any duty or liability under this contract of the *Consultant*.

**Z28 New Clause – Set off**

Without derogating from its rights under this contract or under the *law of the contract*, whenever any sum of money is recoverable by the *Employer* against the *Consultant*, such sum is deducted from any sum due or which may become due to the *Consultant* under this contract.

**Z29 New Clause – Security**

Z29.1 The *Consultant* acknowledges that the Site forms part of the larger Southern General Hospital site and that the Southern General Hospital is a live and functioning acute hospital. The Consultant takes measures to prevent its employees, sub-consultants and suppliers of the Consultant from entering into or otherwise interfering with the operation of the existing Southern General hospital, except for access to or egress from the Site.

Z29.2 The *Employer* may instruct the *Consultant* to take measures to prevent unauthorised persons being admitted on the Site.

Z29.3 The *Consultant* does not take photographs of the Site or the works or any part of them unless he has obtained the approval of the *Employer*.

Z29.4 The *Consultant* takes the measures needed to prevent his and his sub-consultants' people taking, publishing or otherwise circulating such photographs.

**Z29 Addition to Clause 82.1**

Z29.1 Any liability under Clause 82.1 shall be limited to an amount that is no more £10,000,000 (ten million pounds).

**This is Appendix 2 referred to in the foregoing Contract Data Part One**

A49342285

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**General Commission**

**The Architect shall:**

**1.** Study in detail the Employer's Requirements for the Project and receive Brookfield's instructions.

**2.** Discuss with Brookfield and assist in the preparation of Brookfield's requirements including timescale and any financial limits; assess these and give general advice on how to proceed.

**3.** Develop the detailed design from the approved scheme design for incorporation within the Employer's Requirements as detailed within Contract Data 1 Part 1 to the Building Contract and include specifications and schedules prepared by the Architect in the Employer's Requirements

**3.1.** Where applicable provide information for the preparation of bills of quantities for incorporation into the Employer's Requirements and/or (as the case may require) the Contractor's Proposals

**4.** Within the scope of the Architect's discipline advise Brookfield of any further information or investigations which in the opinion of the Architect Brookfield should obtain in respect of any matter which might affect the Contractor's Proposals. Study all data relevant to the scope of service and information relating to the Project and relevant to the works which are reasonably accessible to the Architect and report on same to Brookfield.

**4.3.** Give any relevant advice with regard to the final form and content of the Employer's Requirements to be included within the Building Contract.

**4.4.** Co-ordinate all matters relating to design (whether undertaken or to be undertaken by the Consultants the Building Contractor (Brookfield Construction UK Ltd) or any specialist (collectively in this Schedule "Designers") or any one or more of them) including:- use best endeavours to ensure that all architectural design work for the Project is carried out in accordance with statutory requirements including, but not limited to, all necessary orders, regulations and bye-laws (whether local or otherwise) and that all information required in connection therewith is submitted to the appropriate authority or delegated person to meet Project programme requirements.

**5.** In conjunction with Brookfield, liaise with any advisers who are appointed by Brookfield or Greater Glasgow Health Board ("the Board"). As an additional duty prepare information relevant for Brookfield's or the Board negotiations with third parties including ground landlords, financing bodies and adjoining site owners.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**6.** Advise Brookfield on the need to obtain statutory approvals and of their duties under CDM Regulations

**7.** Receive information about the site from the client (CDM Reg. 11)

**8.** Not Used

**9.** Use all reasonable endeavours to obtain from the Board and others employed by the Board and statutory authorities as necessary information on ownership and the identity of any owners, landlords and tenants of the Site, any existing buildings on the Site, ownership and responsibility for boundaries, boundary fences and other enclosures, and any known easements, wayleaves, rights, encroachments, underground services, rights of way, rights of support, rights of light and other relevant matters

**10.** Visit the Site and carry out an initial appraisal

**11.** In co-ordination with, and with the assistance of the Other Consultants, Designers and Specialist Subcontractors where appointed co-ordinate and supervise the making of any measured, topographical and dimensional surveys of the Site and adjacent land and buildings and the taking of levels needed for the preparation of the tender. Render such assistance as may be necessary to others in connection with:

- The digging of trial holes
- The carrying out of other site/soil investigations
- The gathering of other geological data in relation to the Site
- The investigation of and preparation of advice on existing drainage and services

**12.** In co-ordination with, and with the assistance of the Other Consultants, Designers and Specialist Subcontractors, where appointed gather and analyse information and data relating to the boundaries of and the structure and buildings previously erected on the Site and immediately adjacent thereto and in relation to the history and archaeology of the Site.

**13.** As an additional duty prepare with the Other Consultants and Designers plans and reports on the site and its surrounds and on the condition of any boundary structures.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**A to E** **Appraisal, Brief, Outline, Detailed, Final Proposals**

**1.** Carry out such studies as may be reasonably necessary to determine the feasibility of the Boards requirements for the Project

**2.** As an additional service review with Brookfield Construction (UK) Limited (Brookfield) (or if the Board shall require with the Project Manager) alternative design and construction methods and cost implications

**3.** Advise on the need for an environmental impact study

**4.** Develop the Boards requirements and submit them to Brookfield for approval

**5.** The Architect shall satisfy himself upon the adequacy of all architectural proposals for the design and construction of the project and the suitability of materials thereto.

**6.** Complete development of Project brief.

**7.** Assist in the preparation of a pre-development programme and outline proposals for the Employer's Requirements and liaise with cost consultants in the preparation of cost plans and cash flow statements

**8.** Submit and negotiate where required applications for approvals under Building Acts, Building Regulations or other statutory requirements

**9.** In liaison with the CDM Co-ordinator and other Consultants and Designers:

**9.1.** Develop the outline proposals taking into account any amendments requested by the Board

**9.2.** Provide information to the Consultants for their preparation of an approximation of construction cost

**10.** Submit outline proposals for the Employer's Requirements to be incorporated into the Building Contract.

**11.** In liaison with the Other Consultants and Designers develop the Employer's Requirements from the approved outline proposals (taking into account the requirements of the Health & Safety Plan).

**12.** Develop the detailed design from the approved scheme design for incorporation within the Employer's Requirements and include specifications and schedules prepared by the Architect in the Employer's Requirements to be incorporated into the Building Contract.

**13.** Where applicable provide information for the preparation of bills of quantities for incorporation into the Employer's Requirements and/or (as the case may require) the Contractor's Proposals all of which are to be incorporated into the Building Contract.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**14.** Develop Final Proposals from the approved Detailed Proposals.

**15.** Provide sufficient information to discuss the Contractor's Proposals with and incorporate the input of the Other Consultants, Designers and Specialist Subcontractors where appointed from time to time as may be necessary to enable them to carry out their respective duties.

**16.** Act in the capacity of the lead designer in the development of the final design by directing and integrating the design work of the Other Consultants, Designers and Specialist Subcontractors into the overall scheme. Co-ordinate, review and comment in principle on the design work of other consultants and specialist sub contractors and (within the scope of the Architects discipline) use all reasonable endeavours to see that their design work complies with the specifications and cost plan and the Employer's Requirements and Works Information included with Contract Data Part 1 to the Building Contract.

**17.** Prepare as an additional duty any report or additional documentation required for consideration of alternative proposals for the execution of the works.

**18.** Develop the scheme design for incorporation within the Employer's Requirements and consult as circumstances shall require with the local planning authority, building control, Fire Officer's Committee and the Services Engineer.

**19.** With the Other Consultants, Designers and Specialist Sub-contractors where appointed, advise Brookfield on the implication of any proposed changes to the design on the cost of the Project and on the overall time period for the construction of the Project.

**20.** Provide information to Brookfield, the Other Consultants and Designers, Specialist Subcontractors and others from time to time as may be necessary to enable them to carry out their respective duties.

**21.** Prepare and provide as an additional duty architectural written description of any alternative proposals describing the scope and nature of the works.

**22.** Prepare and provide outline construction specifications for inclusion in the Contractor's Proposals which are to be included in the Building Contract.

**23.** Advise on the need for site staff and the need for inclusion thereof within the Employer's Requirements.

**24.** Pass relevant information to the CDM Co-ordinator, in good time, for incorporation in the initial Health and Safety Plan.

**25.** Assist in the preparation and production of the Contractors' Proposals Documentation to be included in the Building Contract.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**J** **Design Development**

**1.** Continue and develop the services described in Stages A to E above to the extent they are not complete throughout the construction period and where necessary up to the issue and acceptance by others of the Final Statement or Final Certificate under the Building Contract.

**2.** Provide information to discuss proposals with and incorporate the design and other information of the Other Consultants and Designers into the scheme design and detailed proposals for the Project

**3.** Agree with Brookfield and the Other Consultants and Designers a Schedule of Design Information to be prepared under this Stage of the works covering all Design and Presentation Work to be undertaken which Schedule may only be amended with the consent of all parties. Provide a report at intervals to be agreed, but not to exceed one per month, on the progress of the design in relation to the Schedule of Design Information. Develop the scheme design and detailed proposals from the design contained in the Contractor's Proposals within the project Contract Sum allowances and any nett or gross lettable floor areas and parking bay provision which form part of the Employer's Requirements or Contractor's Proposals included with Contract Data Part 1 to the Contract.

**4.** Prepare, submit and agree with Brookfield a drawing schedule identifying all drawings anticipated to be produced by the Architect to include drawing titles, drawing numbers, scales and whether CAD or manual.

**5.** Prepare, submit and agree with Brookfield production programmes all to agree with the Design Programme included within Contract Data Part 1 to this Agreement. These are to be updated regularly and must include the following:

- Labour histogram including staff names, job titles and job functions.
- Design Team Programme: identifying the drawing groups of each consultant and integrating their production - in a bar chart format and must accord with the Brookfield Master Programme and Schedule of Design Information.
- Architects Drawing Production Programme identifying all drawings by number and title with target issue dates listed at Preliminary and Approved for Construction stages, all in accordance with Brookfield's Master Programme and Schedule of Design Information. An update is to be issued each month and actual drawing issue dates are to be recorded thereon.
- Specification Production Programme identifying the specifications to be issued and the timescale for their production.

**6.** Act in capacity of the Lead designer and co-ordinate the work of other the Other Consultants and Designers and in conjunction with the CDM Co-ordinator co-ordinate all the elements of design including the design work of the Designers and integrate such work into the overall design of the Works

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

7. In accordance with the schedule of Design Information provide relevant information to discuss proposals with and incorporate input of Other Consultants, Designers and Specialist Subcontractors into the scheme design and detailed design proposals. Request in sufficient time information from Brookfield, the Other Consultants, Designers, and Specialist Subcontractors. Examine all drawings prepared for the project or any part thereof and satisfy himself as to the adequacy of the design therein contained for the purposes of the overall architectural design and co-ordination of elements of the works.

8. Provide relevant information to Other Consultants, Designers and Specialist Subcontractors for their preparation or revision of their designs and cost estimates.

9. In the event of a proposed change to the design advise Brookfield of the effects of the proposed change upon the design of the Works and upon design work generally in accordance with the terms of this Agreement.

10. On receipt of any confirmation by the Client of a decision to proceed with a change order, following issue of approximate costing as item J9, the Architect together with the Other Consultants, Designers, and Specialist Subcontractors where appointed should provide Brookfield with reasonable detail to enable a firm price for the change to be derived within the timescale identified in this Agreement.

11. Modify as an additional duty and revise the design, specification, drawings or other documents prepared in whole or part by the Architect by reason of instructions received from Brookfield's Project Manager from time to time or as may be necessary for construction reasons. Any such modification and revision shall be without prejudice to any liability of the Architect in respect of documents existing prior to the modification and revision being made.

12. Prepare as may be required an application to satisfy any outstanding matters in order to secure a full planning permission

13. Prepare and make applications for approvals under the Building Acts and Building Regulations and other statutory requirements

14. Prepare and make all the necessary the Building Regulation submissions

15. Submit and negotiate where required applications for approvals under Building Acts, Building Regulations or other statutory requirements

16. Advise Brookfield on revisions to the scheme design to deal with requirements of planning authorities and where necessary prepare a revised planning application for the Project.

17. Negotiate if necessary in relation to the Building Acts and Building Regulations and other statutory requirements and revise production information and any waivers or relaxations under the Building Acts and Building Regulations and other statutory requirements

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**18.** Supply Brookfield with a copy of the notice of grant or any refusal of planning permission, subject to payment of any additional fee justified under this Agreement.

**18.1.** If instructed to do so as an additional service, prepare and submit or assist in the preparation and submission of any appeals.

**19.** Advise Brookfield on revisions to scheme design to deal with requirements of planning authorities and where necessary prepare a revised planning application for the Project

**20.** Prepare as may be required an application to satisfy any outstanding matters in order to secure a full planning permission, as listed in the Employers Requirement or other requirements to the Building Contract.

**21.** Prepare and give all necessary notices under the Building Acts and Building Regulations

**22** Obtain any other approvals and/or consents required at any time for the Project.

**23.** As an additional service/duty consult and liaise as necessary for the proper performance of the Services with all owners (whether landlords or tenants) of properties adjacent to the Site and/or their surveyors.

**24.** Assist Brookfield in any liaison with the Boards and/or the Boards technical supervisors, including, for example, the provision of drawings and documents.

**25.** Prepare a project quality plan for work carried out by the Architect, for incorporation into Brookfield's overall Quality Plan.

**26.** Co-operate with and pass any relevant information to the CDM Co-ordinator, in good time, for incorporation in the Health and Safety File pursuant to the Health and Safety Requirements.

**F** **Production Information**

**1.** Advise and agree with Brookfield on a timetable for the supply of production information and continue the preparation and submission of drawing schedules and production programmes in order to deliver the Services so as to not impact upon the Completion Date identified in the Building Contract and in accordance with the Programme ref BCL-GS1-CND1-0002 Rev 01 dated 14 Dec 09 included within Contract Data Part 1 to this Agreement.

**2.** Prepare production drawings in accordance with the agreed Drawing Production Programme and in compliance with all requirements of the Employer Requirements and Contractors Proposals included with Contract Data Part 1 to the Contract and Programme ref BCL-GS1-CND1-0002 Rev 01 dated 14 Dec 09 included within Contract Data Part 1 to this Agreement.

**3.** Supply to Brookfield all Drawings and Specifications electronically together with one copy to the Other Consultants, and Designers where appropriate. Drawings and

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

specifications will be uploaded to the Extranet system in the following formats. Drawings in PDF and DWF and specifications in PDF format.

General Arrangement and Location Drawings will be issued to Brookfield in DWG format on Compact Disk and to be utilised by Brookfield and their Contractors at their own risk.

**4.** Prepare in accordance with the agreed Specification Production Programme such schedules and specifications of materials and workmanship which may reasonably be required by Brookfield to construct the Works.

**5.** Provide Brookfield with general arrangement drawings interface details performance specifications and other technical information reasonably necessary to seek quotations from sub-contractors and suppliers and in sufficient detail to enable completion of these works in compliance with the Building Contract.

**5.1.** Provide relevant information with the other Consultants for the preparation of bills of quantities and/or schedules of work.

**6.** Assist Brookfield in the evaluation of quotations received from sub-contractors and suppliers.

**7.** Provide relevant information to discuss proposals with and incorporate material supplied by or required of the Consultants into production information.

**7.1.** Act in the capacity of Lead designer in order to co-ordinate all production information.

**8.** Examine to the timescale called for in the agreed Schedule of Design Information Specialist subcontractors' and suppliers' drawings and details, with particular reference to tolerances and dimensional co-ordination, finish, durability, appearance and performance criteria, and report to Brookfield on any matters which in the opinion of the Architect are unsatisfactory or likely to affect the Project Cost Plan and/or Project Programmes as identified in the Building Contract and furthermore ensure that they are in full accordance with the Employers Requirements and Contractors Proposals as included with Contract Data Part 1 to the Building Contract..

**9.** Provide relevant information to the Other Consultants, and Designers for any necessary revisions of their proposals

**10.** Provide relevant information for revisions to cost estimates

**11.** Where required and within the scope of service prepare additional production information

**K** **Operation on Site**

**1.** Provide all such further information reasonably required for construction purposes and at each issue of drawn information provide CAD files in PDF and DWF format to

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

Brookfield for archive purposes.

2. Attend meetings as reasonably requested by Brookfield but in any event all main design team and Building Contract site meetings in connection with the design or progress of the Works. Attendance at meetings will not normally be more often than once a week

3. Review design information from Other Consultants, Designers or specialist Subcontractors.

4. Advise Brookfield concerning drawings and samples to be submitted to the Employer and prepare sample boards of proposed finishes, ironmongery etc.

5. Advise Brookfield on any requirement for sample taking and carrying out tests of materials components techniques and workmanship.

6. Prepare and deliver to Brookfield a written statement confirming that, save for any identified outstanding or defective items, those items of the Works that the Architect has designed or had design responsibility for have been completed in accordance with the Employer's Requirements and other requirements of Contract Data Part 1 to the Building Contract and all (if any) subsequent instructions issued by the Boards Project Manager pursuant to the Building Contract insofar as the same shall have been evident during the Architect's visits from time to time to the Site.

7. Issue monthly reports at regular site meetings on quality of construction and general compliance with the Employer's Requirements, and Contractors Proposals and all other requirements of Contract Data Part 1 to the Building Contract.

8. As reasonably required by Brookfield visit the sites of extraction and fabrication and assembly of materials and components to inspect materials and workmanship before delivery to site and report to the Brookfield thereon.

9. Inspect and advise on the compliance of off-site and on-site goods and materials generally in accordance with the conditions of the Building Contract, the Employer's Requirements and the Contractor's Proposals and the drawings, specifications and other documents produced by the Architect, Other Consultants, and Specialist Subcontractors where appointed from time to time as the Architect may in his professional opinion consider necessary or as may be requested by Brookfield.

10. Attend any inspection of the Works prior to anticipated Practical Completion if requested by Brookfield

11. With the Other Consultants and Specialist Subcontractors, provide Brookfield, (in a time period as directed in the Employers Requirements) before the date of Practical Completion of the Project, for onward transmission to the Employer, three paper prints and or CAD files in DWG and PDF format of all 'as designed' drawings showing the Project in detail, the external works, main lines of drainage and services, details, documents, detailed technical specification and information necessary to fully show and describe the Project.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**12.** Assist the Client as an additional service in the compilation of maintenance and operational manuals as may be specified in the Building Contract.

**12.1.** Assist the CDM Co-ordinator in the compilation of maintenance and operational manuals incorporating all relevant information prepared by the Architect properly co-ordinated with the design information obtained from the other Consultants.

**12.2.** As an additional service and in conjunction with the other Consultants advise upon the arrangements for a programme for the maintenance of the Buildings and the arrangement of maintenance contracts.

**13.** Assist Brookfield in the detailed preparation or examination of any financial claim or following the taking of a step in or towards resolution of any dispute or difference or towards any arbitration or litigation in connection with the Works at additional cost.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**Practical Completion**

1. Give guidance and advice to Brookfield during the Defects Liability Period as to the correction of any fault in design, workmanship or materials and where requested by Brookfield and where appropriate with the Other Consultants, and Designers modify and revise the design, specification, drawings or other documents prepared in whole or part by the Architect and integrate and make compatible any alteration to the Project with the remainder of the Project. Any such modification and revision shall be without prejudice to any liability of the Architect in respect of documents existing prior to the modification and revision being made.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**Scope of Services**

The main work elements for which the Architect is required to perform the Consultancy Services shall include but not be limited to:

- Relationship and setting out between Ordnance Grid, Site Grid and Building Grid.
- Building footprint and relationship to any existing buildings, structure and boundaries
- Servicing and access requirements
- Co-ordination with landscaping
- Co-ordination of column positions and sizes
- Perimeter wall construction and features
- Building surround paving etc.
- Means of escape
- Roofscape, including maintenance access
- Specialist areas such as reception areas, goods delivery points, loading bays, compactors
- Staircases, lift shafts and service risers/ducts
- Lightning conductor routes in liaison with the Services Consultant/Engineer.
- All openings
- Form and type of cladding (rain-screens; curtain walls; copper; solar shading; etc)
- Liaison with the Board representative and with other consultants on:
- All specialist FM installations/equipment
- All specialist medical installations/equipment
- Special architectural features
- Entrances
- Signage of all types
- Window and door types
- Storey heights
- Trade interface requirements
- External wall construction
- Materials specifications and detail/performance specifications for the Works
- Fire protection requirements
- Compartmentation
- Fire walls - position, type of construction, fire rating and surface finish
- Openings in fire walls and treatment thereof
- Fixtures, Fittings & Fixed Furniture - Internal joinery; specialist areas, etc
- Door, window and ironmongery specification and schedules
- Finishes and schedules and the like
- Partitions walls and door positions and function and finish
- All balustrading/screening features and the like
- Toilet layouts co-ordinate waste outlets and ventilation positions with the Services Consultant
- Accessible service ducts/hatches etc.
- Ceiling grid and type
- Features, steps/bulkheads
- Positions of lights, grilles, sprinklers, switches, sockets etc. agreed with Building Services consultant and/or the Services contractor
- Spatial zones for structural and services elements

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

- Perimeter interface; wall/floor and wall/ceiling
- Entrance/exit internal/external interface
- Internal wall elevations in special areas, i.e. Toilets, kitchens etc.
- Specifications for all builders-work materials and workmanship
- Details at appropriate scales to fully illustrate particularly difficult areas of construction and architectural detail
- Details of all builders' work required in connection with the building services
- Landscape architecture.

1. The Architect is required to be fully responsible for all aspects of the Architectural design of the Works with the exception of any specialist services that are specifically excluded.

2. The Architect is to utilise best endeavours to produce an overall design which is compliant with the Employer's Requirements and Contractors Proposals as incorporated within Contract Data Part 1 to the Building Contract, unless otherwise agreed with Brookfield. Where appropriate define zonal arrangements and positions for the structural and building services elements.

3. Complete designs, fully dimensioned drawings and NBS specifications which shall fully define the scope of the Works and standards in sufficient detail to enable Brookfield to confirm Cost Plan price.

4. Where reasonable assist Brookfield in testing the designs against cost targets where a breakdown of the cost plan has been provided in detail by Brookfield.

5. Advice Brookfield on and incorporate into the design any major builder's works required in connection with and identified by the building services design.

6. Continue consultations, and co-ordinate consultations by the other Consultants, with the Local Authority, Planning, Building Control, Fire and Statutory Authorities to ensure that the scheme design incorporates their requirements. Advice Brookfield on fees related to these authority requirements.

7. Where design is to be provided by Brookfield Sub-contractors, and other Designers ensure that such design is fully co-ordinated with the overall design and meets the specified requirements and cost allowances. Encourage value engineering by sub-contractors.

8. Examine shop fabrication drawings submitted by the Work Package Sub-contractors for the Works or parts thereof, in respect of general dimensions, adequacy of components and compliance with performance criteria. Advise Brookfield of any non-compliance.

9. Advise Brookfield of any variations arising from the sub-contractors design, assist in their evaluation, and advise on their impact on other building elements. As additional service the Architect shall revise and update his drawings where superseded or changed by approved subcontract designs.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

**Scope of Deliverables**

Provide all information required for the construction of the project in compliance with Programme ref BCL-GS1-CND1-0002 Rev 01 dated 14 Dec 09. The following list is indicative of the scope and level required but is not exhaustive.

**Site planning**

- The main setting out information

Site Plans @ 1:200 or 1:500 scale indicating

- Relationship and setting out between Ordnance Grid, Site Grid and Building Grid.
- Building footprint and relationship to any existing buildings, structure and boundaries
- Servicing and access requirements
- External works, car parking and landscaping

**Envelope and Structure**

Layout plans at each level @ 1:100 scale detailing

- Column positions and sizes
- Perimeter walls and features
- Building surround paving etc.
- Means of escape
- Roofscape, including maintenance access
- Specialist areas such as reception areas, goods delivery points, loading bays, compactors
- Staircases, lifts and service risers/ducts
- Lightning conductor routes

Elevations to 1:100 and/or 1:50 scale as appropriate to show

- All openings

- Pedestrian routes levels and associated drainage
- Hard and soft landscaping areas
- Lighting, signage, furniture etc.
- Interface with building envelope

Details at appropriate scales to fully illustrate particularly difficult areas of construction and architectural detail

Material Specification for surface treatment/finish.

# Appendix 2 – Consultant Agreement
## New South Glasgow Hospital – Stage 1 Laboratory Works

## Architectural Responsibilities & Scope of Service

In accordance with our ISO 9001 quality assurance systems the Architect must ensure that:

1 He acknowledges receipt of all design input requirements for the project, as listed in the Employers Requirements and Contractors Proposals all as incorporated in Contract Data Part 1 to the Building Contract documents.

2 He confirms that the design input requirements are adequate for his work. The design responsibilities are as defined in this Scope of Works documents, as detailed in this Consultant Services Agreement.

3 If he believes that the design input requirements are inadequate or unclear, he must identify specifically where there are inadequacies or lack of clarity. It is also necessary that he identifies who, in his opinion, is best placed to resolve the inadequacies or lack of clarity. These can be carried out by use of Brookfield R.F.I systems (Blank form attached).

4 All documents issued by him, to Brookfield, must be checked before issue and the documents signed or initialled to indicate that the check has taken place. Similarly all documents issued by him, to Brookfield, must be approved for issue and the documents signed or initialled to indicate that the approval has taken place. The checking signature shall mean that the document is technically correct in all respects; the approval for issue signature shall mean that the document complies with the design input requirements.

5 All documents issued by him, to Brookfield, must be accompanied by a document transmittal sheet indicating, as a minimum, project name, the document number, title, revision letter, size, distribution list, purpose of issue, initials of originator, initials of checker, initials of approver, and date of issue.

6 Documents received without signatures or initials identifying the checker and the approver, or without a transmittal sheet, may be returned to him without review, for re-issue. Such documents will not be considered as having been received, in terms of programmed document delivery dates.

7. As part of Brookfield Design Quality Procedure, he will be required to provide a Design Quality Plan, identifying the following activities within your organisation:

7.01 The overall management structure, responsibilities and authority.
7.02 Responsibility for each design activity and the resources allocated
7.03 The procedure for monitoring and controlling assigned activities
7.04 Qualifications and experience of personnel involved
7.05 Design Input Requirements
7.06 Design Output documentation
7.07 Minuted Design Reviews
7.08 Design Verification procedures
7.09 Design Validation procedures
7.10 Procedures for complying with the CDM Regulations 1994
**7.11** Document and data control procedures

**This is Appendix 3 referred to in the foregoing Contract Data Part One**

**CONSULTANT'S COLLATERAL WARRANTY**

This Agreement is among

(1) **GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street Glasgow, G3 8YZ ("the Beneficiary" which expression shall include its successors in title or permitted assignees under this Agreement)

(2) [ ] (Registered number [ ]) of [ ] (" Main Contractor" which term shall include any successor including any parties taking over the obligations of Main Contractor. under the Project Agreement)

(3) [ ], (registered number [ ]) whose registered office is at [ ] ("the Consultant")

WHEREAS:

A The Beneficiary has entered or is about to enter into an agreement with the Main Contractor ("the Building Contract") in connection with the design and construction of the New South Glasgow Hospital, Govan, Glasgow ("the Project").

B The Main Contractor has engaged or is about to engage the Consultant under an appointment ("the Appointment"), which expression shall include all documents incorporated therein and any agreed amendment thereto, to carry out [ ] services as more particularly described in the Appointment ("the Services"), which expression shall include any additional services performed by the Consultant under the Appointment including in connection with any modifications or variations made thereunder.

C It is a condition precedent of the Building Contract that the Consultant, the Main Contractor and the Beneficiary enter into this agreement ("this Agreement").

NOW IT IS AGREED:

1 The Consultant warrants and undertakes to the Beneficiary that it has complied and will continue to comply with all the terms and obligations under the

Appointment on the Consultant's part to be performed and observed and shall complete the Services in accordance with the Appointment.

2. Without prejudice to Clause 1 of this Agreement, the Consultant further warrants and undertakes to the Beneficiary that:

2.1 it has exercised and will continue to exercise all the reasonable skill, care and diligence to be expected from a competent and qualified professional designer experienced in carrying out services similar in nature, size and complexity to the Services including in the selection of goods and materials for the Project; and

2.2 it has not and will not specify for use in relation to the Project any products or materials not in conformity with relevant British or European standards or Codes of Practice or which are at the time of specification generally known within the United Kingdom to an experienced professional designer of works such as the Project to be deleterious to health and safety or to the durability of buildings and/or other structures and/or finishes and/or plant and machinery in the particular circumstances in which they are used;

Provided that:

2.3.1 the obligations of the Consultant under this Agreement shall be no greater in extent or quantity than if the Beneficiary had been named as joint employer with Main Contractor under the Appointment; and

2.3.3 the Consultant shall be entitled in any action or proceedings brought by the Beneficiary to rely on any limitation in the Appointment and to raise the equivalent rights in defence of liability (excluding counterclaim and set-off in respect of amounts due to the Consultant under the Appointment) as it would have if the Beneficiary had been named as joint employer with the Main Contractor under the Appointment;

3. The Beneficiary has no authority to issue any direction or instruction to the Consultant in relation to the Appointment unless and until the Beneficiary has given notice under Clauses 4 or 5, below. The Beneficiary or its appointee has no liability to the Consultant in relation to amounts due under the Appointment unless and until the Beneficiary has given notice under Clauses 4 or 5.

4. The Consultant agrees that it will, if so required by notice in writing given by the Beneficiary, subject to Clause 6, below, accept the instructions of the Beneficiary or its appointee, as the case may be, (which for the avoidance of doubt and without limitation may include a third party appointed by the Beneficiary to act as "the Employer" under the Appointment) to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Appointment. The Main Contractor acknowledges that the Consultant shall be entitled to rely on a notice given to the Consultant by the Beneficiary under this Clause 4 and further acknowledges that such acceptance of the instructions of the Beneficiary or its appointee, as the case may be, to the exclusion of the Main Contractor shall not constitute any breach of the Consultant's obligations to the Main Contractor under the Appointment.

5. The Consultant further agrees that it will not without first giving the Beneficiary not less than 35 days notice in writing exercise any right or purported right it may have to determine its employment under the Appointment, treat the same as having been repudiated by the Main Contractor, or discontinue the performance of any duties or obligations thereunder. Further, the Consultant shall within 14 days of giving the said notice, provide statements to the Beneficiary containing the following:

5.1 all amounts properly due and payable to the Consultant under the Appointment on or before the date of issue of the said notice which remain unpaid;

5.2 in the reasonable estimation of the Consultant, the amount of any monetary claim (if any) asserted by the Consultant against the Main Contractor under the Appointment arising out of or in connection with the breach for which the said notice was served; and

5.3 where the Consultant intends to terminate the Appointment due to some default or breach of contract of a non-financial nature:

5.3.1 the provision of the Appointment alleged to have been breached or not fulfilled;

5.3.2 supporting information in reasonable detail to enable the Beneficiary to identify the material facts;

5.3.3 the steps reasonably required to remedy the specified breaches or conditions not fulfilled;

5.3.4 the time within which the specified steps can reasonably be expected to be taken;

5.3.5 (if applicable) the amount of damages claimed and the basis of their calculation; and

5.3.6 (if applicable) the relief to be sought.

The Consultant warrants to the Beneficiary that to the best of the Consultant's knowledge and belief, having made all proper and appropriate enquiries, the statements submitted under this Clause 5 shall be true, complete and accurate statements of the amounts to which the Consultant considers itself entitled. In the event that the Consultant shall delay in giving such notice and information within the said 14 days, the period of 35 days shall be extended to correspond with the period of any such delay. The Consultant's right to determine its employment under the Appointment or to treat the same as having been repudiated or to discontinue performance shall cease if, within the said 35 day period (extended as appropriate) and subject to Clause 6 the Beneficiary shall give notice in writing to the Consultant requiring the Consultant to accept the instructions of the Beneficiary or its appointee to the exclusion of the Main Contractor in respect of the Project upon the terms and conditions of the Appointment.

6. It shall be a condition of any notice given by the Beneficiary under Clauses 4 or 5 above, that the Beneficiary or its appointee, as the case may be, accepts liability for payment of the sums due under the Appointment and detailed in the statements provided under Clause 5 (and makes payment within a period of 28 days of such notice from the Beneficiary), and for subsequent performance of the Main Contractor's obligations. Upon the issue of any notice by the Beneficiary under clauses 4 or 5, the Appointment shall remain in full force and effect as if no right of determination of its employment under the Appointment, or any right of the Consultant to treat the Appointment as having been repudiated by the Main Contractor. had arisen and the Consultant shall be liable to the Beneficiary and/or its appointee, as the case may be, under the Appointment in lieu of its liability to the Main Contractor.

7. The Beneficiary may at any time following the issue of any notice by the Beneficiary under Clauses 4 or 5, serve a further notice that following the expiry of

28 days from the giving of such notice the Beneficiary will have no liability (save in respect of the Beneficiary's antecedent breach) for any sums due or to become due to the Consultant in respect of the period following expiry of the last mentioned 28 day period. The Beneficiary may exercise any of its rights pursuant to Clauses 4 or 5 on more than one occasion.

8. The Consultant shall maintain for the period expiring 12 years after completion of the Services or until termination of the Consultant's employment under the Appointment, Professional Indemnity Insurance in an amount of not less than £[10]m [(ten million pounds)] sterling for any one claim or series of claims arising out of one single incident during any period of insurance which shall not be more than 12 months with insurers of good repute carrying on business in the European Union provided always that such insurance is available at rates and terms which are commercially reasonable to consultants of a similar size and standing in the UK. In determining whether or not insurance is available as aforesaid, the financial characteristics and claims' record of the Consultant shall be ignored. The Consultant shall immediately inform the Beneficiary if such insurance ceases to be available at rates and terms which are commercially reasonable in order that the Consultant and the Beneficiary can consider alternative means of best protecting their respective positions in respect of the Project in the absence of such insurance provided that the Beneficiary shall be entitled to require the Consultant to maintain such lesser amount of Professional Indemnity Insurance as is available to the Consultant at rates and terms which are commercially reasonable. As and when it is reasonably requested to do so by the Beneficiary (but not more than once in any period of insurance) the Consultant shall produce for inspection documentary evidence satisfactory to the Beneficiary (acting reasonably) that its Professional Indemnity Insurance is being maintained.

9. The Consultant hereby grants to the Beneficiary or its appointee and all those authorised by the Beneficiary an irrevocable, non-exclusive and royalty-free licence (which shall be capable of assignation) to use and reproduce all technical information (whether or not stored in computer systems), drawings, models, calculations, specifications, schedules, details, plans, programs, budgets, reports or other documents, work or other things whatsoever provided or to be provided by the Sub-Contractor in connection with the Project (the **"Documents"**) for any purpose relating to the Project including (but without limitation) the construction, completion, maintenance, promotion, advertisement, reinstatement, repair and any extension of the Project and for dissemination within the NHS as part of the feedback of information to better or enable the NHS to realise improvements in its methods and practice of construction and in the design and procurement of its

construction. Such licence shall carry the right to grant sub-licenses and shall subsist notwithstanding that the Appointment is terminated or the obligations and duties thereunder have been completed. For the avoidance of doubt, the grant of such licence or sub-licences shall not impose any additional liability on the Consultant. The Consultant will not assign or agree to assign the copyright in any of the documents without the prior written consent of the Beneficiary. The Consultant shall on reasonable demand provide to the Beneficiary or its appointee and those authorised by the Beneficiary additional copies of any documents on receipt of reasonable copying costs. The Consultant shall not be liable for any use by the Beneficiary of any of the documents for any purpose other than those authorised by this clause.

10. This Agreement may be assigned on a maximum of two occasions in whole or in part by the Beneficiary to any party to whom the Beneficiary's interest in the Main Contract or any part thereof is assigned or disposed to without the consent of the Main Contractor or the Consultant being required and any such assignation shall be effective upon written notice thereof being given to the Main Contractor and to the Consultant. No other or further assignation of this Agreement, other than permitted by this clause, by the Beneficiary or any other party shall be permitted. The Consultant shall not be entitled to assign or transfer any rights or obligations hereunder without the consent of the Beneficiary.

11. The Consultant undertakes that it will not raise as a defence to any action by the Beneficiary for alleged breach of this Agreement the fact that the obligations of the Main Contractor to the Beneficiary in respect of the Services have been released as a result of the termination of the Building Contract.

12. No failure, approval, act or forbearance on the part of the Beneficiary in respect of any right of the Beneficiary pursuant to this Agreement shall constitute any waiver of any right of the Beneficiary under or arising out of this Agreement nor relieve the Consultant of any of its duties or obligations under or arising out of this Agreement.

13. Any notice, consent or demand to be given or made by any party under this Agreement (hereinafter called a **"Notice"**) shall only be validly served if in writing and delivered personally or sent by pre-paid first class recorded delivery post to the following address and marked for the attention of the following person in the case of each party:

| Party: | Address: | Person: |
|---|---|---|

| | | |
|---|---|---|
| Beneficiary | Dalian House, 350 St Vincent Street Glasgow, G3 8YZ | Head of Board Administration |
| Main Contractor | | |
| Consultant | | |

Any party may by Notice to the other party/parties change its address or the title of the person for whose attention Notices are to be given or made pursuant to this Clause. Any such Notice shall be deemed to have been received:

13.1 if delivered personally, at the time of delivery;

13.2 in the case of pre-paid first class recorded delivery post, on the first Business Day after the date of posting.

If any Notice is delivered after 5 p.m. on a Business Day, or at any time during a day which is not a Business Day, that Notice shall be deemed to have been received at 9 a.m. on the next Business Day. For the purposes of this Clause, "Business Day" means any day which is not a Saturday, a Sunday or a public holiday in Scotland. In proving service it shall be sufficient to prove that the envelope containing such Notice was properly addressed to the relevant party and either delivered personally to that address or delivered into the custody of the postal authorities as a pre-paid first class recorded delivery letter. For the avoidance of doubt, Notices shall not be validly served if sent by e-mail or fax

14 No action or proceedings for any breach of this Agreement shall be commenced against the Consultant after the expiry of twelve years from Completion or earlier termination of the Consultant's employment under the Appointment.

15. The definitions of words and phrases used in this Agreement shall be those set out in the Appointment except where expressly defined in this Agreement.

16. This Agreement shall be governed by and construed in accordance with Scots Law and the parties hereto submit to the exclusive jurisdiction of the Scottish Courts.

**Appendix 4 to Contract Data part one: Parent Company Guarantee**

# Building Contractor's parent company guarantee

Brookfield Europe LP

Brookfield

Greater Glasgow Health Board

Principal

## Building Contractor parent company guarantee

## Between

**Brookfield Europe LP**, a limited partnership formed under the Limited Partnerships Act 1907 with registered number LP013183 and having its place of business at 23 Hanover Square, London, W1S 1JB (**"Brookfield"**), acting through its general partner Brookfield Europe GP Limited, a company registered in Ontario, Canada with registered number 1775491 and having its registered office at [ ] (the "General Partner")

**and**

**GREATER GLASGOW HEALTH BOARD** of Dalian House, 350 St Vincent Street, Glasgow G3 8YZ (**"Principal"**)

## Recitals

A. The Building Contractor has, or will enter into, a Building Contract with the Principal.

B. At the request of the Principal, Brookfield has agreed to provide a guarantee in favour of the Principal in relation to the due and punctual performance of the Obligations by the Building Contractor on the terms and conditions of this Guarantee.

## Operative provisions

---

## 1.

### 1.1 Definitions

In this Guarantee:

**"Building Contract"** means the building contract to be entered into between the Principal and the Building Contractor on or about the date of this Guarantee in relation to the Project under which the Building Contractor is appointed as the building contractor to design, build and commission certain facilities.

**"Building Contractor"** means Brookfield Construction (UK) Limited, Registered Company Number 03808946.

**"Obligations"** means all the obligations, liabilities, warranties, duties and undertakings of the Building Contractor to the Principal arising pursuant to the Building Contract.

**"Project"** means the New South Glasgow Hospital project

### 1.2 Interpretation

In this Guarantee:

(a) headings are for convenience only and do not affect the interpretation of this document;

(b) a reference to a party includes that party's executors, administrators, successors and permitted assigns, including persons taking by way of novation;

(c) a reference to any statute or to any statutory provision includes any statutory modification or re-enactment of it or any statutory provision substituted for it, and

all ordinances, by-laws, regulations, rules and statutory instruments (however described) issued under it;

(d) a word importing the singular includes the plural (and vice versa), and a word indicating a gender includes every other gender;

(e) where the day on which or by which any act, matter or thing is to be done under this document is not a Business Day, that act, matter or thing will be done on the next following Business Day; and

(f) **"includes"** and cognate expressions indicate what is included without limiting what may be included.

### 1.3 Brookfield warranty as to capacity

Brookfield warrants that it enters this Guarantee in its own right and not as a trustee or in any other representative capacity.

### 1.4 General Partner Warranty as to capacity

The General Partner warrants that it has power and capacity to contract on behalf of and bind Brookfield in this Guarantee.

### 1.5 Consideration

Each party acknowledges to each other party that it enters into this Guarantee and incurs obligations and gives rights under it for valuable consideration from the other party.

## 2.

### 2.1 Guarantee

Brookfield irrevocably and unconditionally guarantees to the Principal the due and punctual performance by the Building Contractor of all the Obligations and if there is a default in respect thereof or the Building Contractor is affected by one or more of the events set out in Clause 91.1 of the Building Contract, Brookfield shall perform or cause to be performed the Obligations.

### 2.2 Payment by Brookfield

The Principal will give to the Contractor, with a copy to Brookfield, 10 Business Days notice of its intention to make a claim against Brookfield under this Guarantee. Provided such notice has been given, Brookfield must, within 2 Business Days of receipt of a written demand from the Principal, properly served hereunder, pay to the Principal the amount properly claimed by it under this Guarantee.

## 3.

### 3.1 Building Contract

Brookfield acknowledges that the guarantee set out in this Guarantee will apply to the Building Contract as amended or varied by agreement in writing between the Principal and the Building Contractor.

Notwithstanding any other provision of this Guarantee, Brookfield shall have no greater liability under this Guarantee than that of the Building Contractor under the Building Contract.

**4.**

Each party represents and warrants for the benefit of the other party that:

(a) (**Legally binding obligation**): this Guarantee constitutes a valid and legally binding obligation of it in accordance with its terms;

(b) (**No violation**): the execution, delivery and performance of this Guarantee does not violate its constitution or any law applying to it; and

(c) (**Due authority**): it has the power, and has taken all corporate and other action required, to enter into this Guarantee and to authorise its execution and delivery and the performance of its obligations under it.

**5.**

In the event of the Principal exercising its rights under this Guarantee, the Guarantor reserves the right to utilise all defences, set-offs and counterclaims that would be available to the Building Contractor and have disputes arising in respect of these defences, set-offs and counterclaims resolved in accordance with the terms of the Building Contract.

**6.**

No proceedings may be commenced by the Principal in connection with this Guarantee against Brookfield more than twelve (12) years after the earlier of (i) Completion of the whole of the *works* (as defined in the Building Contract) and (ii) the earlier termination of the Building Contract.

**7.**

## 7.1 Severance

Any provision of this Guarantee, which is illegal, void or unenforceable, will be ineffective to the extent only of that illegality, voidness or unenforceability without invalidating the remaining provisions of this Guarantee.

## 7.2 Notices

All notices and other communications to a party in connection with this Guarantee shall be deemed to be duly given if it is delivered by hand or sent by registered post or recorded delivery to the address of the party, as notified to the other party from time to time. Such notice shall, if sent by registered post or recorded delivery, be deemed to have been received 48 hours after being posted:

(a) within two (2) hours after sending, if sent on a Business Day between the hours of 9am and 5pm; or

(b) by 11am on the next following Business Day, if sent after 5pm, on a Business Day but before 9am on that next following Business Day.

## 8.

### 8.1 Governing law

This Guarantee is governed by and will be construed according to the laws of Scotland.

### 8.2 Jurisdiction

Each party irrevocably submits to the exclusive jurisdiction of the courts of Scotland, with respect to any proceedings, which may be brought at any time relating in any way to this Guarantee.

## 9.

This Guarantee may be executed in any number of counterparts and by the parties on separate counterparts. Each counterpart constitutes an original of this Guarantee, all of which together constitute one agreement.

## 10.

This guarantee may only be assigned or transferred by the Principal to any person to whom the Contract is assigned or transferred. No other or further assignation shall be permitted.

**11.**

No person may enforce any term of this Guarantee by virtue of the Jus Quaesitum Tertio.

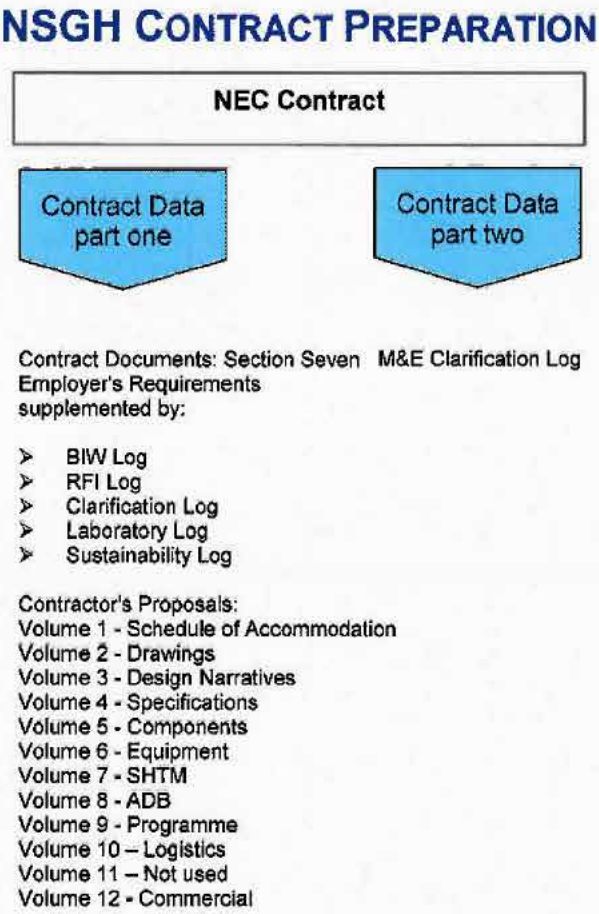
**Appendix 5 to Contract Data part one: Works Information agreed relationship and hierarchy**

A49342285

**NSGH Contract Data Part One and Part Two: Works Information**
**Agreed relationship and hierarchy**

The contract is arranged such that the contract includes Contract Data part one and Contract Data part two. The Works Information will be wholly contained in Contract Data part one with the exception of the M&E items contained in the M&E Clarifications Log. The Works Information therefore will be in two parts and contained in Contract Data part one and Contract Data part two.

The output requirements of the Employer in relation to the M&E Clarifications Log will be contained in the Employer's Requirements with the proposals of the Contractor in relation to the M&E Clarifications Log contained in the Contractor's Proposals Volume 1 to Volume 10 set out in Contract Data part one. The contents of Works Information is illustrated below.



It is agreed that the Employer's Requirements takes precedence over the Contractor's Proposals, with the requirements of the Employer's Requirements to be met by the Contractor as a minimum requirement. The exception to this stated hierarchy is in relation to the items contained in the M&E Clarifications Log (found in Volume 3 of the Employers Requirements), which identifies the agreement between the parties in relation to the requirement for certain M&E items. All other aspect of M&E design require to achieve the standards and other requirements stated in Contract Data Part One.

In order to maintain an audit trail of the status of the documents to be included in the Employer's Requirements throughout the procurement process, the Employer's Requirements in Contract Data part one is supported by a Building Information Warehouse ("BIW") Log, Request for Information ("RFI"), Additional Log and Clarifications Log (collectively known as "the Logs") which track and identify the agreed position between the parties in relation to certain technical matters and documents and identifies the documents included in the Works

Information. In the event of a discrepancy between any item in the Employer's Requirements in the Employer's Requirements and that item in the Logs, the information contained in the Log takes precedence and the standard set out in the Logs is to be achieved by the Contractor. Further, the BIW Log identifies aspects of the original technical information which set out the Employer's Requirements (issued with the Invitation to Participate in Competitive Dialogue) which are included or omitted from the Employer's Requirements as well as providing similar clarity in respect of the other documents and information that was uploaded to Building Information Warehouse during the period up to the issue of the Invitation to Submit Final Bids.

The process for review of design to be submitted by the Contractor in relation to Contractor's Proposals to ensure that it meets the Employer's Requirements is appended to this document as Appendix A. The Works Information contained in both Contract Data Part One and Contract Data Part Two have been signed by the parties to identify their acknowledgement that such documentation is included in the Contract. The drawings referred to in the drawing register included in the Works Information which is signed by the parties, are deemed to be incorporated in and form part of the Contract by reference without having to be signed individually.

Appendix 1.

**Reviewable Design Data**

Within the Design Development process all information will be subject to review in three categories:

- For approval
- For acceptance
- For comment

The procedure to be adopted will be used to review and approve/accept/comment, as appropriate, a range of deliverables such as clinical functionality at department and room level, specifications including finishes, colour schemes, and materials and components.

Pro-formas, based upon the attached example will be provided for each category and these will be utilised to record the design development process.

Clinical functionality* both at department level and for individual room layouts will typically follow a staged process of review and sign-off, in line with the Stage 2 Design Development Programme.

Items such as finishes, colour scheme and materials will similarly follow a staged process, however, it is envisaged, that they could be concluded in less iterations.

Components and specifications for acceptance will typically follow a two stage process of submission/comment/re-submission/acceptance.

The pro-formas will be set-out to record the history of the Design Review Process and it is envisaged that each drawing, specification or schedule will have its own sheet to record and sign-off where appropriate the contractor's design.

At each review the Board will consider the design information provided by the contractor, against the Works Information, and will respond within the Stage 2 programme timescales, confirming the level of approval/acceptance/comment and providing supporting narrative or marked up drawings with status coded as follows:

A - no comment proceed to construction
B - comments but proceed to construction taking comments on board and
C - comments resubmit with amendments.
D - rejected

The Board will ensure that all responses are signed off by the appropriate staff, to record user and managerial acceptance of the design element under review.

The data set out in the attached table 1 indicates the proposed extent for Approval and Acceptance with all other data being for comment. The list is not however exhaustive and a final agreed list will be prepared jointly within 2 calendar months of contract execution, on the understanding that table 1 is a minimum requirement.

* Clinical Functionality

a) the following matters as shown on the 1:500 scale adjacency layouts
   I. the points of access to and within the Sites and the buildings:
   II. the relationship between one or more buildings that comprise the development:
   III. the adjacencies between different Hospital departments:

b) The following matters as shown on 1:200 scale departmental layouts
   I. The points of access to and within the Site and the buildings
   II. The relationship between one or more buildings
   III. The adjacencies between different Hospital departments
   IV. The adjacencies between rooms within the Hospital departments

c) The quantity, description and areas (in square metres) of those rooms and spaces shown on the agreed schedules of accommodation.

d) The location and relationship of equipment, furniture, fittings and user terminals as shown on the 1:50 loaded room plans in respect of:
   I. All bed and trolley positions
   II. Internal room elevations
   III. Actual ceiling layouts

e) The location of and the inter-relationships between rooms within a department as shown on the 1:200 departmental layouts

f) The fire strategy

g) Infection control

But only insofar as each of the matters listed in (a) to (g) above relate to or affect clinical use.

**NEW SOUTH GLASGOW HOSPITALS**

**List of Data for Review**

TABLE 1

**Drawn Information**

| Scale | Content | Aspect of review |
|---|---|---|
| 1:500 | Block plans noting | Site and whole hospital operation relationship to existing site operations. |
| | 1. The point of access to and within the Site and the buildings; | |
| | 2. The relationship between one or more buildings that comprise the development; | |
| | 3. The location of and adjancencies between different hospital departments and corridors | |
| 1:200 | Departmental layouts and floor plans noting | Clinical functionality, room relationships within departments |
| | 1. The adjacencies between different hospital departments and corridors; | |
| | 2. The quantity, description and areas (in square metres) of these rooms and spaces shown on the Accommodation Schedule; | |
| | 3. The location of the inter-relationships between rooms within a department | |
| 1:50 | Room layout drawings including | Clinical functionality, location of equipment |
| | 1. The location and relationship of equipment, | |
| | (i) Group 1 and group 2 equipment | |
| | (ii) Internal room elevations | |
| | (iii) actual ceiling layouts | |
| | (iv) all bed and trolley positive | |
| | Departmental plans to show building systems | |
| | Equipment | |
| | 1. Items of equipment as shown on the Equipment Schedule incorporated into the Room data Sheets and the operational temperature tolerance. | |

**Description of Item**

| Item | Aspects (specification including) |
|---|---|
| External Finishes | Lifecycle, maintenance, H&S |
| Hard Landscaping | Colour, layout, maintenance, lifecycle, H&S. |
| Soft Landscaping | Colour, layout, maintenance, lifecycle, H&S. |
| External furniture | Colour, maintenance, lifecycle, H&S. |
| Interior design public space | Colour schemes, layout, wayfinding, maintenance, lifecycle. |
| Interior design public corridors | Colour schemes, layout, wayfinding, maintenance, lifecycle. |
| Wall finishes | Colour, maintenance, lifecycle, H&S. |
| Wall protection, handrails balustrades | Colour, maintenance, lifecycle, H&S. |
| Floor finishes | Colour, maintenance, lifecycle, H&S. |
| Plumbing fittings/tapware | Colour, maintenance, lifecycle, H&S. |
| Sanitaryware/IPS panels | Colour, maintenance, lifecycle, H&S. |
| WC cubicles and prefab partitions | Colour, maintenance, lifecycle, H&S. |
| External and internal doors, door furniture and ironmongery including schedules | Colour, maintenance, lifecycle, H&S. Glazing, door protection, door configuration. |
| Light fittings all areas | Colour, maintenance, lifecycle, H&S. |
| Ceiling layouts | Colour, maintenance, lifecycle, H&S. |
| Nurses stations | Colour, layout, maintenance, lifecycle, H&S. |
| Reception desks | Colour, layout, maintenance, lifecycle, H&S. |
| Blinds and curtains | Colour, maintenance, lifecycle, H&S. |
| Lifts | Colour, maintenance, lifecycle, H&S. |
| Group 1 fitted furniture | design, materials for construction, colour, maintenance |
| Schedules of components for M&E systems | Colour, maintenance, lifecycle, H&S. |
| Bedhead layouts | Colour, service layout maintenance, lifecycle, H&S. |
| Public lighting design | Colour, layout, maintenance, lifecycle, H&S. |
| Public art | Art strategy |
| External and internal signage | Colour, maintenance, lifecycle, H&S. |
| Electrical fittings | Colour, maintenance, lifecycle, H&S. |
| Mechanical & Electrical drawings To reflect architects 1:50's for rooms and departments | Review against Room Data Sheets, project specification and architects 1:50 drawings |

The above are in addition to key design requirements as set out in SHTM's and advisory documentation as included in Volume 7.

**Appendix 6 to Contract Data part one: Guarantee Bond**

This **GUARANTEE BOND** is made BETWEEN the following parties whose names and registered office addresses are set out in the Schedule to this Bond (the "Schedule")

BETWEEN

(1) The "Contractor" as principal,

(2) The "Guarantor" as guarantor, and

(3) The 'Employer"

WHEREAS

(1) By a contract (the "Contract") entered into or to be entered into between the Employer and the Contractor particulars of which are set out in the Schedule the Contractor has agreed with the Employer to execute works comprising Stage 1 (Detailed design and construction of the laboratories and FM hub) (the "Works') upon and subject to the terms and conditions therein set out

(2) The Guarantor has agreed with the Employer at the request of the Contractor to guarantee the performance of the obligations of the Contractor under the Contract in respect of the Works upon the terms and conditions of this Guarantee Bond subject to the limitation set out in clause 2

NOW IT IS AGREED as follows:-

1. The Guarantor guarantees to the Employer that in the event of a breach by the Contractor of its obligations under and/or arising out of the Contract in respect of the Works or in the event of termination of the Contractor's obligation to Provide the Works (as defined in the Contract) by reason of the Contractor being affected by one or more of the events set out in Clause 91.1 of the Contract, the Guarantor shall subject to the provisions of this Guarantee Bond pay all losses, damages, expenses claims and costs of proceedings sustained by the Employer and due from the Contractor as a result of such breach or termination as aforesaid. Subject to Clause 1E, such losses, damages, claims and costs shall be as agreed between the parties or determined by an adjudicator in accordance with the provisions of Clause 1A or a court

provided that any payment made under this Guarantee pursuant to an award of an adjudicator ("Award") shall not prejudice the right of the Contractor or, following the occurrence of one or more of the events set out in Clause 91.1 of the Contract affecting the Contractor, the Guarantor, to refer any such Award, or any of the matters giving rise to such a Award, for further or final determination by any court having competent jurisdiction (a "Referral") and the period of four weeks from the date of the Award referred to in the Contract for the making of any Referral shall not apply to the Guarantor until such time as it has received a copy of such Award.

1A (i) Prior to the occurrence in relation to the Contractor of any of the events (each an "Insolvency Event") set out at Clause 91.1 of the Contract the sum due from the Contractor to the Employer pursuant to Clause 1 may be established for the purposes of this Guarantee Bond by an Award made in an adjudication between the Employer and the Contractor pursuant to which an amount not less than that claimed by the Employer hereunder shall be presently due and payable to it by the Contractor and

(ii) following the occurrence of an Insolvency Event in relation to the Contractor the sums due and payable under this Guarantee Bond may be agreed between the Guarantor and the Employer and in default of such agreement within [ ] days either the Guarantor or the Employer shall be entitled to refer the determination of the sums due and payable hereunder to an Adjudicator upon the terms and conditions applicable to an adjudication between the Employer and the Contractor under the Contractor which shall apply mutatis mutandis to this Guarantee Bond but so that all references therein

to the Contractor shall for the purposes of an adjudication conducted pursuant to this Clause 1A be construed as references to the Guarantor.

1B In the event that it is subsequently determined whether or not prior to Expiry as a result of any Referral either:

(i) that the Contractor and/or the Guarantor is not liable to pay the Employer where a previous Award found it was liable to pay the Employer; or

(ii) that the Guarantor made an over payment as a consequence of an Award

then the amount so paid or the excess (as the case may be) (the "Over Payment") shall be refunded to the Guarantor by the Employer together with interest from the date of the Over Payment at a rate equal to [align with contract rate] or, if greater, any interest in relation to such Over Payment awarded in accordance with such Referral.

1C If it is subsequently determined whether or not prior to Expiry as a result of any Referral either:

(i) that the Contractor and/or the Guarantor is liable where the previous Award to which the Referral relates has determined that the Contractor or the Guarantor was not liable and therefore the Guarantor made no payment; or

(ii) that the Guarantor made an underpayment as a consequence of the previous Award to which the Referral relates,

then upon receipt of a claim in respect thereof an amount equal to the amount so determined (together with interest at a rate equal to [specify rate] as determined in accordance with such Referral) shall be paid to the Employer by the Guarantor subject always to clause 2.

1D In the event that the Contractor or the Guarantor make a Referral which is determined by a court to be vexatious or have no bona fide foundation in law or fact, the Contractor or the Guarantor (as the case may be) shall indemnify the Employer in respect of all reasonable costs, losses, and expenses (including legal expenses) incurred by the Employer in respect of such Referral, which reasonable costs, losses and expenses are agreed in the case of such a determination in respect of the Guarantor not to be included in the Bond Amount.

1E. For the purposes of this Guarantee Bond:-

(1) no estimate forecast or assessment of the *Project Manager* (as defined in the Contract) shall be binding and conclusive against the Guarantor; and

(2) the damages due and payable under clause 1 of this Guarantee Bond to the Employer following termination of the Contractor's employment under condition Clause 91.1 of the Contract shall be such amounts as shall represent the difference between:-

(i) the amounts actually paid by the Employer to complete the whole of the works' together with all direct loss and expense caused to the Employer by reason of such termination; and

(ii) the amount that would have been payable to the Contractor in respect thereof but for such termination

and so that the Employer shall be placed in the same position (no better and no worse) that would have been obtained if the Contractor had duly performed and discharged its obligations under the Contract.

2. Subject to Clause 1C, the maximum aggregate liability of the Guarantor and the Contractor under this Guarantee Bond shall not exceed the sum set out in the Schedule (the "Bond Amount") but subject to such limitation and to clause 4 the liability of the Guarantor shall be co-extensive with the liability of the Contractor under the Contract.

3. The Guarantor's obligation to make payment under this Guarantee Bond shall be an independent and absolute obligation and the Guarantor shall not be entitled to delay or withhold payment for any reason. The Guarantor's obligation hereunder shall not be affected by any act, omission, matter or thing which, but for this provision, might operate to release or otherwise exonerate the Guarantor from the obligations hereunder in whole or in part, including without limitation and whether or not known to the Guarantor or to the Employer:

1. any time or waiver granted to the Guarantor or to the Contractor;
2. any variation, compromise or neglect to enforce any rights or remedies against the Guarantor or the Contractor;
3. any legal limitation, disability or incapacity relating to the Guarantor or the Contractor;

4. any variation of or amendment to the terms, conditions and provisions of the Contract, the Contract price or the extent or nature of the Works;
5. any unenforceability, invalidity or frustration of any rights or obligations of the Employer or the Contractor under the Contract or any other document or security;
6. any other fact, circumstance, provision of statute or rule of law which might entitle the Guarantor to be released or discharged in whole or in part from its undertaking.

4. Whether or not this Guarantee Bond shall be returned to the Guarantor the obligations of the Guarantor under this Guarantee Bond shall be released and discharged absolutely upon Expiry (as defined in the Schedule) save in respect of any Referral or any breach of the Contract which has occurred and in respect of which a claim in writing containing particulars of such breach has been made upon the Guarantor before Expiry.

5. The Contractor having requested the execution of this Guarantee Bond by the Guarantor undertakes with the Guarantor (without limitation of any other rights and remedies of the Employer or the Guarantor against the Contractor) to perform and discharge the obligations on its part set out in the Contract.

6. This Guarantee Bond and the benefit thereof shall not be assigned by the Guarantor without the prior written consent of the Employer. Subject to any assignee accepting the repayment obligation of the Employer in clause 1B the Employer may assign its interest in this Guarantee Bond to any party to whom it may assign its interest under the Contract.

7. No party who is not a party to this Guarantee Bond shall be entitled to enforce any of its terms for his own benefit and the application of the *ius quaesitum* tertio to the terms of this Guarantee Bond are hereby expressly excluded.

8. This Guarantee Bond shall be governed by and construed in accordance with the laws of Scotland and only the courts of Scotland shall have jurisdiction hereunder.

IN WITNESS WHEREOF these presents consisting of this, the preceding page and the Schedule are executed as follows:-

By the Guarantor at [ ] on the [ ] day of [ ] 200[ ]

This is the Schedule referred to in the foregoing Guarantee Bond between [Guarantor], [Contractor] and Greater Glasgow and Clyde Health Board

**The Contractor:** **Brookfield Europe LP**

whose registered office is at [ ]

**The Guarantor:** _____

whose [address registered office is at [ ]

**The Employer:** **GREATER GLASGOW AND CLYDE HEALTH BOARD**

Dalian House, 350 St Vincent Street, Glasgow G3 8YZ

**The Contract:** A contract [dated the _____ day of _____] between the Employer and the Contractor for the design and construction of the New South Glasgow Hospital Project

**The Bond Amount:** The sum of £ _____ ( _____Pounds)

**Expiry:** Completion of the Works which shall be conclusive for the purposes of this Guarantee Bond save in respect of any breach of the Contract which has occurred and in respect of which a claim in writing containing particulars of such breach has been made upon the Guarantor before Expiry.

**CONTRACT DATA PART TWO – DATA PROVIDED BY THE CONTRACTOR**

**CONTRACT DATA PART TWO - DATA PROVIDED BY THE CONTRACTOR**

1. **General**

- The M&E Clarification Log is set out in Volume 3 of the Employer's Requirement.
- The Maximum Price Target Costs are set out in the Contract Documents:- Part Three (Maximum Price Target Costs)
- The Cashflow and Activity Schedules are set out in the Contract documents: Part Four (Cashflow and Activity Schedules).

# Engineering and Construction Contract

This contract should be used for the appointment of a contractor for engineering and construction work, including any level of design responsibility

## Option C: Target contract with activity schedule

An NEC document

June 2005
(with amendments June 2006)

OGC endorsement of NEC3

OGC advises public sector procurers that the form of contract used has to be selected according to the objectives of the project, aiming to satisfy the *Achieving Excellence in Construction* (AEC) principles.

This edition of the NEC (NEC3) complies fully with the AEC principles. OGC recommends the use of NEC3 by public sector construction procurers on their construction projects.

OGC
Office of Government Commerce

NEC is a division of Thomas Telford Ltd, which is a wholly owned subsidiary of the Institution of Civil Engineers (ICE), the owner and developer of the NEC.

The NEC is a family of standard contracts, each of which has these characteristics:

- Its use stimulates good management of the relationship between the two parties to the contract and, hence, of the work included in the contract.
- It can be used in a wide variety of commercial situations, for a wide variety of types of work and in any location.
- It is a clear and simple document – using language and a structure which are straightforward and easily understood.

NEC3 Engineering and Construction Contract is one of the NEC family and is consistent with all other NEC3 documents. Also available are the Engineering and Construction Contract Guidance Notes, Flow Charts and Options A, B, C, D, E and F.

# ACKNOWLEDGEMENTS

The NEC first edition was produced by the Institution of Civil Engineers through its NEC Working Group.

The original NEC was designed and drafted by Dr Martin Barnes then of Coopers and Lybrand with the assistance of Professor J. G. Perry then of the University of Birmingham, T. W. Weddell then of Travers Morgan Management, T. H. Nicholson, Consultant to the Institution of Civil Engineers, A. Norman then of the University of Manchester Institute of Science and Technology and P. A. Baird, then Corporate Contracts Consultant, Eskom, South Africa.

The second edition of the NEC documents for engineering and construction contracts was produced by the Institution of Civil Engineers through its NEC Panel.

The third edition of the NEC Engineering and Construction Contract was produced by the Institution of Civil Engineers through its NEC Panel. The Flow Charts were produced by John S. Gillespie with assistance from Tom Nicholson.

The members of the NEC Panel are:

P. Higgins, BSc, CEng, FICE, FCIArb (Chairman)
P. A. Baird, BSc, CEng, FICE, M(SA)ICE, MAPM
M. Barnes, BSc(Eng), PhD, FREng, FICE, FCIOB, CCMI, ACIArb, MBCS, FInstCES, FAPM
A. J. Bates, FRICS, MInstCES
A. J. M. Blackler, BA, LLB(Cantab), MCIArb
P. T. Cousins, BEng(Tech), DipArb, CEng, MICE, MCIArb, MCMI
L. T. Eames, BSc, FRICS, FCIOB
F. Forward, BA(Hons), DipArch, MSc(Const Law), RIBA, FCIArb
Professor J. G. Perry, MEng, PhD, CEng, FICE, MAPM
N. C. Shaw, FCIPS, CEng, MIMechE
T. W. Weddell, BSc, CEng, DIC, FICE, FIStructE, ACIArb

NEC Consultant:

R. A. Gerrard, BSc(Hons), MRICS, FCIArb, FInstCES

Secretariat:

A. Cole, LLB, LLM, BL
J. M. Hawkins, BA(Hons), MSc
F. N. Vernon (Technical Adviser), BSc, CEng, MICE

The Institution of Civil Engineers acknowledges the help in preparing the third edition given by many other people, in particular, by:

J. C. Broome, BEng
A. Else, BSc, CEng, FICE
C. Flook, Esq.
R. Lewendon, FICE, MIHT, MCIArb, MAPM
T. H. Nicholson, BSc, FICE

C. Reed, CEng, MA, MSc, FICE
D. Weeks, FRICS
S. Zarka, FRICS

## SCHEDULE OF OPTIONS

| | |
|---|---|
| | One of the following dispute resolution Options must be selected to complete the chosen main Option. |
| Option W1 | Dispute resolution procedure (used unless the United Kingdom Housing Grants, Construction and Regeneration Act 1996 applies). |
| Option W2 | Dispute resolution procedure (used in the United Kingdom when the Housing Grants, Construction and Regeneration Act 1996 applies). |
| | The following secondary Options should then be considered. It is not necessary to use any of them. Any combination other than those stated may be used. |
| Option X1 | Price adjustment for inflation |
| Option X2 | Changes in the law |
| Option X4 | Parent company guarantee |
| Option X5 | Sectional Completion |
| Option X6 | Bonus for early Completion |
| Option X7 | Delay damages |
| Option X12 | Partnering |
| Option X13 | Performance bond |
| Option X14 | Advanced payment to the *Contractor* |
| Option X15 | Limitation of the *Contractor*'s liability for his design to reasonable skill and care |
| Option X16 | Retention |
| Option X17 | Low performance damages |
| Option X18 | Limitation of liability |
| Option X20 | Key Performance Indicators (not used with Option X12) |
| | The following Options dealing with national legislation should be included if required. |
| Option Y(UK)2 | The Housing Grants, Construction and Regeneration Act 1996 |
| Option Y(UK)3 | The Contracts (Rights of Third Parties) Act 1999 |
| Option Z | *Additional conditions of contract* |
| Note | Options X3, X8 to X11, X19 and Y(UK)1 are not used. |

## CORE CLAUSES

## 1 General

**Actions** **10**

10.1 The *Employer*, the *Contractor*, the *Project Manager* and the *Supervisor* shall act as stated in this contract and in a spirit of mutual trust and co-operation.

**Identified and defined terms** **11**

11.1 In these conditions of contract, terms identified in the Contract Data are in italics and defined terms have capital initials.

11.2 (1) The Accepted Programme is the programme identified in the Contract Data or is the latest programme accepted by the *Project Manager*. The latest programme accepted by the *Project Manager* supersedes previous Accepted Programmes.

(2) Completion is when the *Contractor* has

- done all the work which the Works Information states he is to do by the Completion Date and
- corrected notified Defects which would have prevented the *Employer* from using the *works* and Others from doing their work.

If the work which the *Contractor* is to do by the Completion Date is not stated in the Works Information, Completion is when the *Contractor* has done all the work necessary for the *Employer* to use the *works* and for Others to do their work.

(3) The Completion Date is the *completion date* unless later changed in accordance with this contract.

(4) The Contract Date is the date when this contract came into existence.

(5) A Defect is

- a part of the *works* which is not in accordance with the Works Information or
- a part of the *works* designed by the *Contractor* which is not in accordance with the applicable law or the *Contractor's* design which the *Project Manager* has accepted.

(6) The Defects Certificate is either a list of Defects that the *Supervisor* has notified before the *defects date* which the *Contractor* has not corrected or, if there are no such Defects, a statement that there are none.

(7) Equipment is items provided by the *Contractor* and used by him to Provide the Works and which the Works Information does not require him to include in the *works*.

(8) The Fee is the sum of the amounts calculated by applying the *subcontracted fee percentage* to the Defined Cost of subcontracted work and the *direct fee percentage* to the Defined Cost of other work.

A49342285

(9) A Key Date is the date by which work is to meet the Condition stated. The Key Date is the *key date* stated in the Contract Data and the Condition is the *condition* stated in the Contract Data unless later changed in accordance with this contract.

(10) Others are people or organisations who are not the *Employer*, the *Project Manager*, the *Supervisor*, the *Adjudicator*, the *Contractor* or any employee, Subcontractor or supplier of the *Contractor*.

(11) The Parties are the *Employer* and the *Contractor*.

(12) Plant and Materials are items intended to be included in the *works*.

(13) To Provide the Works means to do the work necessary to complete the *works* in accordance with this contract and all incidental work, services and actions which this contract requires.

(14) The Risk Register is a register of the risks which are listed in the Contract Data and the risks which the *Project Manager* or the *Contractor* has notified as an early warning matter. It includes a description of the risk and a description of the actions which are to be taken to avoid or reduce the risk.

(15) The Site is the area within the *boundaries of the site* and the volumes above and below it which are affected by work included in this contract.

(16) Site Information is information which

- describes the Site and its surroundings and
- is in the documents which the Contract Data states it is in.

(17) A Subcontractor is a person or organisation who has a contract with the *Contractor* to

- construct or install part of the *works*,
- provide a service necessary to Provide the Works or
- supply Plant and Materials which the person or organisation has wholly or partly designed specifically for the *works*.

(18) The Working Areas are those parts of the *working areas* which are

- necessary for Providing the Works and
- used only for work in this contract

unless later changed in accordance with this contract.

(19) Works Information is information which either

- specifies and describes the *works* or
- states any constraints on how the *Contractor* Provides the Works

and is either

- in the documents which the Contract Data states it is in or
- in an instruction given in accordance with this contract.

**(20) The Activity Schedule is the *activity schedule* unless later changed in accordance with this contract.**

**(23) Defined Cost is**

- **the amount of payments due to Subcontractors for work which is subcontracted without taking account of amounts deducted for**
  - **retention,**
  - **payment to the *Employer* as a result of the Subcontractor failing to meet a Key Date,**
  - **the correction of Defects after Completion,**
  - **payments to Others and**
  - **the supply of equipment, supplies and services included in the charge for overhead cost within the Working Areas in this contract**

 © copyright nec 2005 

A49342285

**and**

- **the cost of components in the Schedule of Cost Components for other work**

**less Disallowed Cost.**

**(25) Disallowed Cost is cost which the *Project Manager* decides**

- **is not justified by the *Contractor*'s accounts and records,**
- **should not have been paid to a Subcontractor or supplier in accordance with his contract,**
- **was incurred only because the *Contractor* did not**
  - **follow an acceptance or procurement procedure stated in the Works Information or**
  - **give an early warning which this contract required him to give**

**and the cost of**

- **correcting Defects after Completion,**
- **correcting Defects caused by the *Contractor* not complying with a constraint on how he is to Provide the Works stated in the Works Information,**
- **Plant and Materials not used to Provide the Works (after allowing for reasonable wastage) unless resulting from a change to the Works Information,**
- **resources not used to Provide the Works (after allowing for reasonable availability and utilisation) or not taken away from the Working Areas when the *Project Manager* requested and**
- **preparation for and conduct of an adjudication or proceedings of the *tribunal*.**

**(29) The Price for Work Done to Date is the total Defined Cost which the *Project Manager* forecasts will have been paid by the *Contractor* before the next assessment date plus the Fee.**

**(30) The Prices are the lump sum prices for each of the activities on the Activity Schedule unless later changed in accordance with this contract.**

**Interpretation and the law** **12**

12.1 In this contract, except where the context shows otherwise, words in the singular also mean in the plural and the other way round and words in the masculine also mean in the feminine and neuter.

12.2 This contract is governed by the *law of the contract*.

12.3 No change to this contract, unless provided for by the *conditions of contract*, has effect unless it has been agreed, confirmed in writing and signed by the Parties.

12.4 This contract is the entire agreement between the Parties.

**Communications** **13**

13.1 Each instruction, certificate, submission, proposal, record, acceptance, notification, reply and other communication which this contract requires is communicated in a form which can be read, copied and recorded. Writing is in the *language of this contract*.

13.2 A communication has effect when it is received at the last address notified by the recipient for receiving communications or, if none is notified, at the address of the recipient stated in the Contract Data.

13.3 If this contract requires the *Project Manager*, the *Supervisor* or the *Contractor* to reply to a communication, unless otherwise stated in this contract, he replies within the *period for reply*.

A49342285

13.4 The *Project Manager* replies to a communication submitted or resubmitted to him by the *Contractor* for acceptance. If his reply is not acceptance, the *Project Manager* states his reasons and the *Contractor* resubmits the communication within the *period for reply* taking account of these reasons. A reason for withholding acceptance is that more information is needed in order to assess the *Contractor*'s submission fully.

13.5 The *Project Manager* may extend the *period for reply* to a communication if the *Project Manager* and the *Contractor* agree to the extension before the reply is due. The *Project Manager* notifies the *Contractor* of the extension which has been agreed.

13.6 The *Project Manager* issues his certificates to the *Employer* and the *Contractor*. The *Supervisor* issues his certificates to the *Project Manager* and the *Contractor*.

13.7 A notification which this contract requires is communicated separately from other communications.

13.8 The *Project Manager* may withhold acceptance of a submission by the *Contractor*. Withholding acceptance for a reason stated in this contract is not a compensation event.

**The *Project Manager* and the *Supervisor***

**14**

14.1 The *Project Manager*'s or the *Supervisor*'s acceptance of a communication from the *Contractor* or of his work does not change the *Contractor*'s responsibility to Provide the Works or his liability for his design.

14.2 The *Project Manager* and the *Supervisor*, after notifying the *Contractor*, may delegate any of their actions and may cancel any delegation. A reference to an action of the *Project Manager* or the *Supervisor* in this contract includes an action by his delegate.

14.3 The *Project Manager* may give an instruction to the *Contractor* which changes the Works Information or a Key Date.

14.4 The *Employer* may replace the *Project Manager* or the *Supervisor* after he has notified the *Contractor* of the name of the replacement.

**Adding to the Working Areas**

**15**

15.1 The *Contractor* may submit a proposal for adding an area to the Working Areas to the *Project Manager* for acceptance. A reason for not accepting is that the proposed area is either not necessary for Providing the Works or used for work not in this contract.

**Early warning**

**16**

16.1 The *Contractor* and the *Project Manager* give an early warning by notifying the other as soon as either becomes aware of any matter which could

- increase the total of the Prices,
- delay Completion,
- delay meeting a Key Date or
- impair the performance of the *works* in use.

The *Contractor* may give an early warning by notifying the *Project Manager* of any other matter which could increase his total cost. The *Project Manager* enters early warning matters in the Risk Register. Early warning of a matter for which a compensation event has previously been notified is not required.

16.2 Either the *Project Manager* or the *Contractor* may instruct the other to attend a risk reduction meeting. Each may instruct other people to attend if the other agrees.

 © copyright nec 2005 

A49342285

Page 760

16.3 At a risk reduction meeting, those who attend co-operate in

- making and considering proposals for how the effect of the registered risks can be avoided or reduced,
- seeking solutions that will bring advantage to all those who will be affected,
- deciding on the actions which will be taken and who, in accordance with this contract, will take them and
- deciding which risks have now been avoided or have passed and can be removed from the Risk Register.

16.4 The *Project Manager* revises the Risk Register to record the decisions made at each risk reduction meeting and issues the revised Risk Register to the *Contractor*. If a decision needs a change to the Works Information, the *Project Manager* instructs the change at the same time as he issues the revised Risk Register.

**Ambiguities and inconsistencies** **17**

17.1 The *Project Manager* or the *Contractor* notifies the other as soon as either becomes aware of an ambiguity or inconsistency in or between the documents which are part of this contract. The *Project Manager* gives an instruction resolving the ambiguity or inconsistency.

**Illegal and impossible requirements** **18**

18.1 The *Contractor* notifies the *Project Manager* as soon as he considers that the Works Information requires him to do anything which is illegal or impossible. If the *Project Manager* agrees, he gives an instruction to change the Works Information appropriately.

**Prevention** **19**

19.1 If an event occurs which

- stops the *Contractor* completing the *works* or
- stops the *Contractor* completing the *works* by the date shown on the Accepted Programme,

and which

- neither Party could prevent and
- an experienced contractor would have judged at the Contract Date to have such a small chance of occurring that it would have been unreasonable for him to have allowed for it,

the *Project Manager* gives an instruction to the *Contractor* stating how he is to deal with the event.

A49342285

## 2 The *Contractor*'s main responsibilities

**Providing the Works** **20**

20.1 The *Contractor* Provides the Works in accordance with the Works Information.

**20.3 The *Contractor* advises the *Project Manager* on the practical implications of the design of the *works* and on subcontracting arrangements.**

**20.4 The *Contractor* prepares forecasts of the total Defined Cost for the whole of the *works* in consultation with the *Project Manager* and submits them to the *Project Manager*. Forecasts are prepared at the intervals stated in the Contract Data from the *starting date* until Completion of the whole of the *works*. An explanation of the changes made since the previous forecast is submitted with each forecast.**

**The *Contractor*'s design** **21**

21.1 The *Contractor* designs the parts of the *works* which the Works Information states he is to design.

21.2 The *Contractor* submits the particulars of his design as the Works Information requires to the *Project Manager* for acceptance. A reason for not accepting the *Contractor*'s design is that it does not comply with either the Works Information or the applicable law.

The *Contractor* does not proceed with the relevant work until the *Project Manager* has accepted his design.

21.3 The *Contractor* may submit his design for acceptance in parts if the design of each part can be assessed fully.

**Using the *Contractor*'s design** **22**

22.1 The *Employer* may use and copy the *Contractor*'s design for any purpose connected with construction, use, alteration or demolition of the *works* unless otherwise stated in the Works Information and for other purposes as stated in the Works Information.

**Design of Equipment** **23**

23.1 The *Contractor* submits particulars of the design of an item of Equipment to the *Project Manager* for acceptance if the *Project Manager* instructs him to. A reason for not accepting is that the design of the item will not allow the *Contractor* to Provide the Works in accordance with

- the Works Information,
- the *Contractor*'s design which the *Project Manager* has accepted or
- the applicable law.

**People** **24**

24.1 The *Contractor* either employs each key person named to do the job stated in the Contract Data or employs a replacement person who has been accepted by the *Project Manager*. The *Contractor* submits the name, relevant qualifications and experience of a proposed replacement person to the *Project Manager* for acceptance. A reason for not accepting the person is that his relevant qualifications and experience are not as good as those of the person who is to be replaced.

24.2 The *Project Manager* may, having stated his reasons, instruct the *Contractor* to remove an employee. The *Contractor* then arranges that, after one day, the employee has no further connection with the work included in this contract.

 © copyright nec 2005 

A49342285

**Working with the *Employer* and Others** **25**

25.1 The *Contractor* co-operates with Others in obtaining and providing information which they need in connection with the *works*. He co-operates with Others and shares the Working Areas with them as stated in the Works Information.

25.2 The *Employer* and the *Contractor* provide services and other things as stated in the Works Information. Any cost incurred by the *Employer* as a result of the *Contractor* not providing the services and other things which he is to provide is assessed by the *Project Manager* and paid by the *Contractor*.

25.3 If the *Project Manager* decides that the work does not meet the Condition stated for a Key Date by the date stated and, as a result, the *Employer* incurs additional cost either

- in carrying out work or
- by paying an additional amount to Others in carrying out work

on the same project, the additional cost which the *Employer* has paid or will incur is paid by the *Contractor*. The *Project Manager* assesses the additional cost within four weeks of the date when the Condition for the Key Date is met. The *Employer*'s right to recover the additional cost is his only right in these circumstances.

**Subcontracting** **26**

26.1 If the *Contractor* subcontracts work, he is responsible for Providing the Works as if he had not subcontracted. This contract applies as if a Subcontractor's employees and equipment were the *Contractor*'s.

26.2 The *Contractor* submits the name of each proposed Subcontractor to the *Project Manager* for acceptance. A reason for not accepting the Subcontractor is that his appointment will not allow the *Contractor* to Provide the Works. The *Contractor* does not appoint a proposed Subcontractor until the *Project Manager* has accepted him.

26.3 The *Contractor* submits the proposed conditions of contract for each subcontract to the *Project Manager* for acceptance unless

- an NEC contract is proposed or
- the *Project Manager* has agreed that no submission is required.

The *Contractor* does not appoint a Subcontractor on the proposed subcontract conditions submitted until the *Project Manager* has accepted them. A reason for not accepting them is that

- they will not allow the *Contractor* to Provide the Works or
- they do not include a statement that the parties to the subcontract shall act in a spirit of mutual trust and co-operation.

**26.4 The *Contractor* submits the proposed contract data for each subcontract for acceptance to the *Project Manager* if**

- **an NEC contract is proposed and**
- **the *Project Manager* instructs the *Contractor* to make the submission.**

**A reason for not accepting the proposed contract data is that its use will not allow the *Contractor* to Provide the Works.**

**Other responsibilities** **27**

27.1 The *Contractor* obtains approval of his design from Others where necessary.

27.2 The *Contractor* provides access to work being done and to Plant and Materials being stored for this contract for

- the *Project Manager*,
- the *Supervisor* and
- Others notified to him by the *Project Manager*.

27.3 The *Contractor* obeys an instruction which is in accordance with this contract and is given to him by the *Project Manager* or the *Supervisor*.

27.4 The *Contractor* acts in accordance with the health and safety requirements stated in the Works Information.

© copyright nec 2005

A49342285

## 3 Time

**Starting, Completion and Key Dates**

**30**

30.1 The *Contractor* does not start work on the Site until the first *access date* and does the work so that Completion is on or before the Completion Date.

30.2 The *Project Manager* decides the date of Completion. The *Project Manager* certifies Completion within one week of Completion.

30.3 The *Contractor* does the work so that the Condition stated for each Key Date is met by the Key Date.

**The programme**

**31**

31.1 If a programme is not identified in the Contract Data, the *Contractor* submits a first programme to the *Project Manager* for acceptance within the period stated in the Contract Data.

31.2 The *Contractor* shows on each programme which he submits for acceptance

- the *starting date*, *access dates*, Key Dates and Completion Date,
- planned Completion,
- the order and timing of the operations which the *Contractor* plans to do in order to Provide the Works,
- the order and timing of the work of the *Employer* and Others as last agreed with them by the *Contractor* or, if not so agreed, as stated in the Works Information,
- the dates when the *Contractor* plans to meet each Condition stated for the Key Dates and to complete other work needed to allow the *Employer* and Others to do their work,
- provisions for
  - float,
  - time risk allowances,
  - health and safety requirements and
  - the procedures set out in this contract,
- the dates when, in order to Provide the Works in accordance with his programme, the *Contractor* will need
  - access to a part of the Site if later than its *access date*,
  - acceptances,
  - Plant and Materials and other things to be provided by the *Employer* and
  - information from Others,
- for each operation, a statement of how the *Contractor* plans to do the work identifying the principal Equipment and other resources which he plans to use and
- other information which the Works Information requires the *Contractor* to show on a programme submitted for acceptance.

31.3 Within two weeks of the *Contractor* submitting a programme to him for acceptance, the *Project Manager* either accepts the programme or notifies the *Contractor* of his reasons for not accepting it. A reason for not accepting a programme is that

- the *Contractor*'s plans which it shows are not practicable,
- it does not show the information which this contract requires,
- it does not represent the *Contractor*'s plans realistically or
- it does not comply with the Works Information.

**31.4 The *Contractor* provides information which shows how each activity on the Activity Schedule relates to the operations on each programme which he submits for acceptance.**

 © copyright nec 2005 

A49342285

**Revising the programme** **32**

32.1 The *Contractor* shows on each revised programme

- the actual progress achieved on each operation and its effect upon the timing of the remaining work,
- the effects of implemented compensation events,
- how the *Contractor* plans to deal with any delays and to correct notified Defects and
- any other changes which the *Contractor* proposes to make to the Accepted Programme.

32.2 The *Contractor* submits a revised programme to the *Project Manager* for acceptance

- within the *period for reply* after the *Project Manager* has instructed him to,
- when the *Contractor* chooses to and, in any case,
- at no longer interval than the interval stated in the Contract Data from the *starting date* until Completion of the whole of the *works*.

**Access to and use of the Site** **33**

33.1 The *Employer* allows access to and use of each part of the Site to the *Contractor* which is necessary for the work included in this contract. Access and use is allowed on or before the later of its *access date* and the date for access shown on the Accepted Programme.

**Instructions to stop or not to start work** **34**

34.1 The *Project Manager* may instruct the *Contractor* to stop or not to start any work and may later instruct him that he may re-start or start it.

**Take over** **35**

35.1 The *Employer* need not take over the *works* before the Completion Date if it is stated in the Contract Data that he is not willing to do so. Otherwise the *Employer* takes over the *works* not later than two weeks after Completion.

35.2 The *Employer* may use any part of the *works* before Completion has been certified. If he does so, he takes over the part of the *works* when he begins to use it except if the use is

- for a reason stated in the Works Information or
- to suit the *Contractor*'s method of working.

35.3 The *Project Manager* certifies the date upon which the *Employer* takes over any part of the *works* and its extent within one week of the date.

**Acceleration** **36**

36.1 The *Project Manager* may instruct the *Contractor* to submit a quotation for an acceleration to achieve Completion before the Completion Date. The *Project Manager* states changes to the Key Dates to be included in the quotation. A quotation for an acceleration comprises proposed changes to the Prices and a revised programme showing the earlier Completion Date and the changed Key Dates. The *Contractor* submits details of his assessment with each quotation.

36.2 The *Contractor* submits a quotation or gives his reasons for not doing so within the *period for reply*.

**36.3 When the *Project Manager* accepts a quotation for an acceleration, he changes the Prices, the Completion Date and the Key Dates accordingly and accepts the revised programme.**

© copyright nec 2005

A49342285

## 4 Testing and Defects

**Tests and Inspections** **40**

40.1 The subclauses in this clause only apply to tests and inspections required by the Works Information or the applicable law.

40.2 The *Contractor* and the *Employer* provide materials, facilities and samples for tests and inspections as stated in the Works Information.

40.3 The *Contractor* and the *Supervisor* each notifies the other of each of his tests and inspections before it starts and afterwards notifies the other of its results. The *Contractor* notifies the *Supervisor* in time for a test or inspection to be arranged and done before doing work which would obstruct the test or inspection. The *Supervisor* may watch any test done by the *Contractor*.

40.4 If a test or inspection shows that any work has a Defect, the *Contractor* corrects the Defect and the test or inspection is repeated.

40.5 The *Supervisor* does his tests and inspections without causing unnecessary delay to the work or to a payment which is conditional upon a test or inspection being successful. A payment which is conditional upon a *Supervisor*'s test or inspection being successful becomes due at the later of the *defects date* and the end of the last *defect correction period* if

- the *Supervisor* has not done the test or inspection and
- the delay to the test or inspection is not the *Contractor*'s fault.

40.6 The *Project Manager* assesses the cost incurred by the *Employer* in repeating a test or inspection after a Defect is found. The *Contractor* pays the amount assessed.

**40.7 When the *Project Manager* assesses the cost incurred by the *Employer* in repeating a test or inspection after a Defect is found, the *Project Manager* does not include the *Contractor*'s cost of carrying out the repeat test or inspection.**

**Testing and inspection before delivery** **41**

41.1 The *Contractor* does not bring to the Working Areas those Plant and Materials which the Works Information states are to be tested or inspected before delivery until the *Supervisor* has notified the *Contractor* that they have passed the test or inspection.

**Searching for and notifying Defects** **42**

42.1 Until the *defects date*, the *Supervisor* may instruct the *Contractor* to search for a Defect. He gives his reason for the search with his instruction. Searching may include

- uncovering, dismantling, re-covering and re-erecting work,
- providing facilities, materials and samples for tests and inspections done by the *Supervisor* and
- doing tests and inspections which the Works Information does not require.

42.2 Until the *defects date*, the *Supervisor* notifies the *Contractor* of each Defect as soon as he finds it and the *Contractor* notifies the *Supervisor* of each Defect as soon as he finds it.

**Correcting Defects** **43**

43.1 The *Contractor* corrects a Defect whether or not the *Supervisor* notifies him of it.

43.2 The *Contractor* corrects a notified Defect before the end of the *defect correction period*. The *defect correction period* begins at Completion for Defects notified before Completion and when the Defect is notified for other Defects.

 © copyright nec 2005 

43.3 The *Supervisor* issues the Defects Certificate at the later of the *defects date* and the end of the last *defect correction period*. The *Employer*'s rights in respect of a Defect which the *Supervisor* has not found or notified are not affected by the issue of the Defects Certificate.

43.4 The *Project Manager* arranges for the *Employer* to allow the *Contractor* access to and use of a part of the *works* which he has taken over if they are needed for correcting a Defect. In this case the *defect correction period* begins when the necessary access and use have been provided.

**Accepting Defects** **44**

44.1 The *Contractor* and the *Project Manager* may each propose to the other that the Works Information should be changed so that a Defect does not have to be corrected.

44.2 If the *Contractor* and the *Project Manager* are prepared to consider the change, the *Contractor* submits a quotation for reduced Prices or an earlier Completion Date or both to the *Project Manager* for acceptance. If the *Project Manager* accepts the quotation, he gives an instruction to change the Works Information, the Prices and the Completion Date accordingly.

**Uncorrected Defects** **45**

45.1 If the *Contractor* is given access in order to correct a notified Defect but he has not corrected it within its *defect correction period*, the *Project Manager* assesses the cost to the *Employer* of having the Defect corrected by other people and the *Contractor* pays this amount. The Works Information is treated as having been changed to accept the Defect.

45.2 If the *Contractor* is not given access in order to correct a notified Defect before the *defects date*, the *Project Manager* assesses the cost to the *Contractor* of correcting the Defect and the *Contractor* pays this amount. The Works Information is treated as having been changed to accept the Defect.

© copyright nec 2005

A49342285

## 5 Payment

**Assessing the amount due** **50**

50.1 The *Project Manager* assesses the amount due at each assessment date. The first assessment date is decided by the *Project Manager* to suit the procedures of the Parties and is not later than the *assessment interval* after the *starting date*. Later assessment dates occur

- at the end of each *assessment interval* until four weeks after the *Supervisor* issues the Defects Certificate and
- at Completion of the whole of the *works*.

50.2 The amount due is

- the Price for Work Done to Date,
- plus other amounts to be paid to the *Contractor*,
- less amounts to be paid by or retained from the *Contractor*.

Any tax which the law requires the *Employer* to pay to the *Contractor* is included in the amount due.

50.3 If no programme is identified in the Contract Data, one quarter of the Price for Work Done to Date is retained in assessments of the amount due until the *Contractor* has submitted a first programme to the *Project Manager* for acceptance showing the information which this contract requires.

50.4 In assessing the amount due, the *Project Manager* considers any application for payment the *Contractor* has submitted on or before the assessment date. The *Project Manager* gives the *Contractor* details of how the amount due has been assessed.

50.5 The *Project Manager* corrects any wrongly assessed amount due in a later payment certificate.

**50.6 Payments of Defined Cost made by the *Contractor* in a currency other than the *currency of this contract* are included in the amount due as payments to be made to him in the same currency. Such payments are converted to the *currency of this contract* in order to calculate the Fee and any *Contractor's* share using the *exchange rates*.**

**Payment** **51**

51.1 The *Project Manager* certifies a payment within one week of each assessment date. The first payment is the amount due. Other payments are the change in the amount due since the last payment certificate. A payment is made by the *Contractor* to the *Employer* if the change reduces the amount due. Other payments are made by the *Employer* to the *Contractor*. Payments are in the *currency of this contract* unless otherwise stated in this contract.

51.2 Each certified payment is made within three weeks of the assessment date or, if a different period is stated in the Contract Data, within the period stated. If a certified payment is late, or if a payment is late because the *Project Manager* does not issue a certificate which he should issue, interest is paid on the late payment. Interest is assessed from the date by which the late payment should have been made until the date when the late payment is made, and is included in the first assessment after the late payment is made.

51.3 If an amount due is corrected in a later certificate either

- by the *Project Manager* in relation to a mistake or a compensation event or
- following a decision of the *Adjudicator* or the *tribunal*,

 © copyright nec 2005 

A49342285

interest on the correcting amount is paid. Interest is assessed from the date when the incorrect amount was certified until the date when the correcting amount is certified and is included in the assessment which includes the correcting amount.

51.4 Interest is calculated on a daily basis at the *interest rate* and is compounded annually.

**Defined Cost** 52

52.1 All the *Contractor*'s costs which are not included in the Defined Cost are treated as included in the Fee. Defined Cost includes only amounts calculated using rates and percentages stated in the Contract Data and other amounts at open market or competitively tendered prices with deductions for all discounts, rebates and taxes which can be recovered.

**52.2 The *Contractor* keeps these records**

- **accounts of payments of Defined Cost,**
- **proof that the payments have been made,**
- **communications about and assessments of compensation events for Subcontractors and**
- **other records as stated in the Works Information.**

**52.3 The *Contractor* allows the *Project Manager* to inspect at any time within working hours the accounts and records which he is required to keep.**

**The *Contractor*'s share** 53

**53.1 The *Project Manager* assesses the *Contractor*'s share of the difference between the total of the Prices and the Price for Work Done to Date. The difference is divided into increments falling within each of the *share ranges*. The limits of a *share range* are the Price for Work Done to Date divided by the total of the Prices, expressed as a percentage. The *Contractor*'s share equals the sum of the products of the increment within each *share range* and the corresponding *Contractor's share percentage*.**

**53.2 If the Price for Work Done to Date is less than the total of the Prices, the *Contractor* is paid his share of the saving. If the Price for Work Done to Date is greater than the total of the Prices, the *Contractor* pays his share of the excess.**

**53.3 The *Project Manager* makes a preliminary assessment of the *Contractor*'s share at Completion of the whole of the *works* using his forecasts of the final Price for Work Done to Date and the final total of the Prices. This share is included in the amount due following Completion of the whole of the *works*.**

**53.4 The *Project Manager* makes a final assessment of the *Contractor*'s share using the final Price for Work Done to Date and the final total of the Prices. This share is included in the final amount due.**

**The Activity Schedule** 54

**54.1 Information in the Activity Schedule is not Works Information or Site Information.**

**54.2 If the *Contractor* changes a planned method of working at his discretion so that the activities on the Activity Schedule do not relate to the operations on the Accepted Programme, he submits a revision of the Activity Schedule to the *Project Manager* for acceptance.**

**54.3 A reason for not accepting a revision of the Activity Schedule is that**

- **it does not comply with the Accepted Programme,**
- **any changed Prices are not reasonably distributed between the activities or**
- **the total of the Prices is changed.**

© copyright nec 2005

A49342285

## 6 Compensation events

**Compensation events** **60**

60.1 The following are compensation events.

(1) The *Project Manager* gives an instruction changing the Works Information except

- a change made in order to accept a Defect or
- a change to the Works Information provided by the *Contractor* for his design which is made either at his request or to comply with other Works Information provided by the *Employer*.

(2) The *Employer* does not allow access to and use of a part of the Site by the later of its *access date* and the date shown on the Accepted Programme.

(3) The *Employer* does not provide something which he is to provide by the date for providing it shown on the Accepted Programme.

(4) The *Project Manager* gives an instruction to stop or not to start any work or to change a Key Date.

(5) The *Employer* or Others

- do not work within the times shown on the Accepted Programme,
- do not work within the conditions stated in the Works Information or
- carry out work on the Site that is not stated in the Works Information.

(6) The *Project Manager* or the *Supervisor* does not reply to a communication from the *Contractor* within the period required by this contract.

(7) The *Project Manager* gives an instruction for dealing with an object of value or of historical or other interest found within the Site.

(8) The *Project Manager* or the *Supervisor* changes a decision which he has previously communicated to the *Contractor*.

(9) The *Project Manager* withholds an acceptance (other than acceptance of a quotation for acceleration or for not correcting a Defect) for a reason not stated in this contract.

(10) The *Supervisor* instructs the *Contractor* to search for a Defect and no Defect is found unless the search is needed only because the *Contractor* gave insufficient notice of doing work obstructing a required test or inspection.

(11) A test or inspection done by the *Supervisor* causes unnecessary delay.

(12) The *Contractor* encounters physical conditions which

- are within the Site,
- are not weather conditions and
- an experienced contractor would have judged at the Contract Date to have such a small chance of occurring that it would have been unreasonable for him to have allowed for them.

Only the difference between the physical conditions encountered and those for which it would have been reasonable to have allowed is taken into account in assessing a compensation event.

(13) A *weather measurement* is recorded

- within a calendar month,
- before the Completion Date for the whole of the *works* and
- at the place stated in the Contract Data

the value of which, by comparison with the *weather data*, is shown to occur on average less frequently than once in ten years.

 © copyright nec 2005 

A49342285

Only the difference between the *weather measurement* and the weather which the *weather data* show to occur on average less frequently than once in ten years is taken into account in assessing a compensation event.

(14) An event which is an *Employer*'s risk stated in this contract.

(15) The *Project Manager* certifies take over of a part of the *works* before both Completion and the Completion Date.

(16) The *Employer* does not provide materials, facilities and samples for tests and inspections as stated in the Works Information.

(17) The *Project Manager* notifies a correction to an assumption which he has stated about a compensation event.

(18) A breach of contract by the *Employer* which is not one of the other compensation events in this contract.

(19) An event which

- stops the *Contractor* completing the *works* or
- stops the *Contractor* completing the *works* by the date shown on the Accepted Programme,

and which

- neither Party could prevent,
- an experienced contractor would have judged at the Contract Date to have such a small chance of occurring that it would have been unreasonable for him to have allowed for it and
- is not one of the other compensation events stated in this contract.

60.2 In judging the physical conditions for the purpose of assessing a compensation event, the *Contractor* is assumed to have taken into account

- the Site Information,
- publicly available information referred to in the Site Information,
- information obtainable from a visual inspection of the Site and
- other information which an experienced contractor could reasonably be expected to have or to obtain.

60.3 If there is an ambiguity or inconsistency within the Site Information (including the information referred to in it), the *Contractor* is assumed to have taken into account the physical conditions more favourable to doing the work.

**Notifying compensation events**

**61**

61.1 For compensation events which arise from the *Project Manager* or the *Supervisor* giving an instruction or changing an earlier decision, the *Project Manager* notifies the *Contractor* of the compensation event at the time of giving the instruction or changing the earlier decision. He also instructs the *Contractor* to submit quotations, unless the event arises from a fault of the *Contractor* or quotations have already been submitted. The *Contractor* puts the instruction or changed decision into effect.

61.2 The *Project Manager* may instruct the *Contractor* to submit quotations for a proposed instruction or a proposed changed decision. The *Contractor* does not put a proposed instruction or a proposed changed decision into effect.

61.3 The *Contractor* notifies the *Project Manager* of an event which has happened or which he expects to happen as a compensation event if

- the *Contractor* believes that the event is a compensation event and
- the *Project Manager* has not notified the event to the *Contractor*.

If the *Contractor* does not notify a compensation event within eight weeks of becoming aware of the event, he is not entitled to a change in the Prices, the Completion Date or a Key Date unless the *Project Manager* should have notified the event to the *Contractor* but did not.

A49342285

61.4 If the *Project Manager* decides that an event notified by the *Contractor*

- arises from a fault of the *Contractor*,
- has not happened and is not expected to happen,
- has no effect upon Defined Cost, Completion or meeting a Key Date or
- is not one of the compensation events stated in this contract

he notifies the *Contractor* of his decision that the Prices, the Completion Date and the Key Dates are not to be changed.

If the *Project Manager* decides otherwise, he notifies the *Contractor* accordingly and instructs him to submit quotations.

If the *Project Manager* does not notify his decision to the *Contractor* within either

- one week of the *Contractor*'s notification or
- a longer period to which the *Contractor* has agreed,

the *Contractor* may notify the *Project Manager* to this effect. A failure by the *Project Manager* to reply within two weeks of this notification is treated as acceptance by the *Project Manager* that the event is a compensation event and an instruction to submit quotations.

61.5 If the *Project Manager* decides that the *Contractor* did not give an early warning of the event which an experienced contractor could have given, he notifies this decision to the *Contractor* when he instructs him to submit quotations.

61.6 If the *Project Manager* decides that the effects of a compensation event are too uncertain to be forecast reasonably, he states assumptions about the event in his instruction to the *Contractor* to submit quotations. Assessment of the event is based on these assumptions. If any of them is later found to have been wrong, the *Project Manager* notifies a correction.

61.7 A compensation event is not notified after the *defects date*.

**Quotations for compensation events**

62

62.1 After discussing with the *Contractor* different ways of dealing with the compensation event which are practicable, the *Project Manager* may instruct the *Contractor* to submit alternative quotations. The *Contractor* submits the required quotations to the *Project Manager* and may submit quotations for other methods of dealing with the compensation event which he considers practicable.

62.2 Quotations for compensation events comprise proposed changes to the Prices and any delay to the Completion Date and Key Dates assessed by the *Contractor*. The *Contractor* submits details of his assessment with each quotation. If the programme for remaining work is altered by the compensation event, the *Contractor* includes the alterations to the Accepted Programme in his quotation.

62.3 The *Contractor* submits quotations within three weeks of being instructed to do so by the *Project Manager*. The *Project Manager* replies within two weeks of the submission. His reply is

- an instruction to submit a revised quotation,
- an acceptance of a quotation,
- a notification that a proposed instruction will not be given or a proposed changed decision will not be made or
- a notification that he will be making his own assessment.

62.4 The *Project Manager* instructs the *Contractor* to submit a revised quotation only after explaining his reasons for doing so to the *Contractor*. The *Contractor* submits the revised quotation within three weeks of being instructed to do so.

 © copyright nec 2005 

A49342285

62.5 The *Project Manager* extends the time allowed for

- the *Contractor* to submit quotations for a compensation event and
- the *Project Manager* to reply to a quotation

if the *Project Manager* and the *Contractor* agree to the extension before the submission or reply is due. The *Project Manager* notifies the extension that has been agreed to the *Contractor*.

62.6 If the *Project Manager* does not reply to a quotation within the time allowed, the *Contractor* may notify the *Project Manager* to this effect. If the *Contractor* submitted more than one quotation for the compensation event, he states in his notification which quotation he proposes is to be accepted. If the *Project Manager* does not reply to the notification within two weeks, and unless the quotation is for a proposed instruction or a proposed changed decision, the *Contractor*'s notification is treated as acceptance of the quotation by the *Project Manager*.

**Assessing compensation events**

63

63.1 The changes to the Prices are assessed as the effect of the compensation event upon

- the actual Defined Cost of the work already done,
- the forecast Defined Cost of the work not yet done and
- the resulting Fee.

The date when the *Project Manager* instructed or should have instructed the *Contractor* to submit quotations divides the work already done from the work not yet done.

63.2 If the effect of a compensation event is to reduce the total Defined Cost, the Prices are not reduced except as stated in this contract.

63.3 A delay to the Completion Date is assessed as the length of time that, due to the compensation event, planned Completion is later than planned Completion as shown on the Accepted Programme. A delay to a Key Date is assessed as the length of time that, due to the compensation event, the planned date when the Condition stated for a Key Date will be met is later than the date shown on the Accepted Programme.

63.4 The rights of the *Employer* and the *Contractor* to changes to the Prices, the Completion Date and the Key Dates are their only rights in respect of a compensation event.

63.5 If the *Project Manager* has notified the *Contractor* of his decision that the *Contractor* did not give an early warning of a compensation event which an experienced contractor could have given, the event is assessed as if the *Contractor* had given early warning.

63.6 Assessment of the effect of a compensation event includes risk allowances for cost and time for matters which have a significant chance of occurring and are at the *Contractor*'s risk under this contract.

63.7 Assessments are based upon the assumptions that the *Contractor* reacts competently and promptly to the compensation event, that any Defined Cost and time due to the event are reasonably incurred and that the Accepted Programme can be changed.

63.8 A compensation event which is an instruction to change the Works Information in order to resolve an ambiguity or inconsistency is assessed as if the Prices, the Completion Date and the Key Dates were for the interpretation most favourable to the Party which did not provide the Works Information.

63.9 If a change to the Works Information makes the description of the Condition for a Key Date incorrect, the *Project Manager* corrects the description. This correction is taken into account in assessing the compensation event for the change to the Works Information.

© copyright nec 2005

A49342285

**63.11** **If the effect of a compensation event is to reduce the total Defined Cost and the event is**

- **a change to the Works Information, other than a change to the Works Information provided by the *Employer* which the *Contractor* proposed and the *Project Manager* has accepted or**
- **a correction of an assumption stated by the *Project Manager* for assessing an earlier compensation event,**

**the Prices are reduced.**

**63.12** **Assessments for changed Prices for compensation events are in the form of changes to the Activity Schedule.**

**63.15** **If the *Project Manager* and the *Contractor* agree, the *Contractor* assesses a compensation event using the Shorter Schedule of Cost Components. The *Project Manager* may make his own assessments using the Shorter Schedule of Cost Components.**

**The *Project Manager's* assessments**

64

64.1 The *Project Manager* assesses a compensation event

- if the *Contractor* has not submitted a quotation and details of his assessment within the time allowed,
- if the *Project Manager* decides that the *Contractor* has not assessed the compensation event correctly in a quotation and he does not instruct the *Contractor* to submit a revised quotation,
- if, when the *Contractor* submits quotations for a compensation event, he has not submitted a programme or alterations to a programme which this contract requires him to submit or
- if, when the *Contractor* submits quotations for a compensation event, the *Project Manager* has not accepted the *Contractor's* latest programme for one of the reasons stated in this contract.

64.2 The *Project Manager* assesses a compensation event using his own assessment of the programme for the remaining work if

- there is no Accepted Programme or
- the *Contractor* has not submitted a programme or alterations to a programme for acceptance as required by this contract.

64.3 The *Project Manager* notifies the *Contractor* of his assessment of a compensation event and gives him details of it within the period allowed for the *Contractor's* submission of his quotation for the same event. This period starts when the need for the *Project Manager's* assessment becomes apparent.

64.4 If the *Project Manager* does not assess a compensation event within the time allowed, the *Contractor* may notify the *Project Manager* to this effect. If the *Contractor* submitted more than one quotation for the compensation event, he states in his notification which quotation he proposes is to be accepted. If the *Project Manager* does not reply within two weeks of this notification the notification is treated as acceptance of the *Contractor's* quotation by the *Project Manager*.

**Implementing compensation events**

65

65.1 A compensation event is implemented when

- the *Project Manager* notifies his acceptance of the *Contractor's* quotation,
- the *Project Manager* notifies the *Contractor* of his own assessment or
- a *Contractor's* quotation is treated as having been accepted by the *Project Manager*.

65.2 The assessment of a compensation event is not revised if a forecast upon which it is based is shown by later recorded information to have been wrong.

**65.4** **The changes to the Prices, the Completion Date and the Key Dates are included in the notification implementing a compensation event.**

 © copyright nec 2005 

# 7 Title

**The *Employer*'s title to Plant and Materials**

70
70.1 Whatever title the *Contractor* has to Plant and Materials which is outside the Working Areas passes to the *Employer* if the *Supervisor* has marked it as for this contract.

70.2 Whatever title the *Contractor* has to Plant and Materials passes to the *Employer* if it has been brought within the Working Areas. The title to Plant and Materials passes back to the *Contractor* if it is removed from the Working Areas with the *Project Manager*'s permission.

**Marking Equipment, Plant and Materials outside the Working Areas**

71
71.1 The *Supervisor* marks Equipment, Plant and Materials which are outside the Working Areas if

- this contract identifies them for payment and
- the *Contractor* has prepared them for marking as the Works Information requires.

**Removing Equipment**

72
72.1 The *Contractor* removes Equipment from the Site when it is no longer needed unless the *Project Manager* allows it to be left in the works.

**Objects and materials within the Site**

73
73.1 The *Contractor* has no title to an object of value or of historical or other interest within the Site. The *Contractor* notifies the *Project Manager* when such an object is found and the *Project Manager* instructs the *Contractor* how to deal with it. The *Contractor* does not move the object without instructions.

73.2 The *Contractor* has title to materials from excavation and demolition only as stated in the Works Information.

A49342285

## 8 Risks and Insurance

**Employer's risks** **80**

80.1 The following are *Employer*'s risks.

- Claims, proceedings, compensation and costs payable which are due to
  - use or occupation of the Site by the *works* or for the purpose of the *works* which is the unavoidable result of the *works*,
  - negligence, breach of statutory duty or interference with any legal right by the *Employer* or by any person employed by or contracted to him except the *Contractor* or
  - a fault of the *Employer* or a fault in his design.
- Loss of or damage to Plant and Materials supplied to the *Contractor* by the *Employer*, or by Others on the *Employer*'s behalf, until the *Contractor* has received and accepted them.
- Loss of or damage to the *works*, Plant and Materials due to
  - war, civil war, rebellion, revolution, insurrection, military or usurped power,
  - strikes, riots and civil commotion not confined to the *Contractor*'s employees or
  - radioactive contamination.
- Loss of or wear or damage to the parts of the *works* taken over by the *Employer*, except loss, wear or damage occurring before the issue of the Defects Certificate which is due to
  - a Defect which existed at take over,
  - an event occurring before take over which was not itself an *Employer*'s risk or
  - the activities of the *Contractor* on the Site after take over.
- Loss of or wear or damage to the *works* and any Equipment, Plant and Materials retained on the Site by the *Employer* after a termination, except loss, wear or damage due to the activities of the *Contractor* on the Site after the termination.
- Additional *Employer*'s risks stated in the Contract Data.

**The *Contractor*'s risks** **81**

81.1 From the *starting date* until the Defects Certificate has been issued, the risks which are not carried by the *Employer* are carried by the *Contractor*.

**Repairs** **82**

82.1 Until the Defects Certificate has been issued and unless otherwise instructed by the *Project Manager*, the *Contractor* promptly replaces loss of and repairs damage to the *works*, Plant and Materials.

**Indemnity** **83**

83.1 Each Party indemnifies the other against claims, proceedings, compensation and costs due to an event which is at his risk.

83.2 The liability of each Party to indemnify the other is reduced if events at the other Party's risk contributed to the claims, proceedings, compensation and costs. The reduction is in proportion to the extent that events which were at the other Party's risk contributed, taking into account each Party's responsibilities under this contract.

 © copyright nec 2005 

A49342285

**Insurance cover** **84**

84.1 The *Contractor* provides the insurances stated in the Insurance Table except any insurance which the *Employer* is to provide as stated in the Contract Data. The *Contractor* provides additional insurances as stated in the Contract Data.

84.2 The insurances are in the joint names of the Parties and provide cover for events which are at the *Contractor*'s risk from the *starting date* until the Defects Certificate or a termination certificate has been issued.

**INSURANCE TABLE**

| **Insurance against** | **Minimum amount of cover or minimum limit of indemnity** |
|---|---|
| Loss of or damage to the *works*, Plant and Materials | The replacement cost, including the amount stated in the Contract Data for the replacement of any Plant and Materials provided by the *Employer* |
| Loss of or damage to Equipment | The replacement cost |
| Liability for loss of or damage to property (except the *works*, Plant and Materials and Equipment) and liability for bodily injury to or death of a person (not an employee of the *Contractor*) caused by activity in connection with this contract | The amount stated in the Contract Data for any one event with cross liability so that the insurance applies to the Parties separately |
| Liability for death of or bodily injury to employees of the *Contractor* arising out of and in the course of their employment in connection with this contract | The greater of the amount required by the applicable law and the amount stated in the Contract Data for any one event |

**Insurance policies** **85**

85.1 Before the *starting date* and on each renewal of the insurance policy until the *defects date*, the *Contractor* submits to the *Project Manager* for acceptance certificates which state that the insurance required by this contract is in force. The certificates are signed by the *Contractor*'s insurer or insurance broker. A reason for not accepting the certificates is that they do not comply with this contract.

85.2 Insurance policies include a waiver by the insurers of their subrogation rights against directors and other employees of every insured except where there is fraud.

85.3 The Parties comply with the terms and conditions of the insurance policies.

85.4 Any amount not recovered from an insurer is borne by the *Employer* for events which are at his risk and by the *Contractor* for events which are at his risk.

**If the *Contractor* does not insure** **86**

86.1 The *Employer* may insure a risk which this contract requires the *Contractor* to insure if the *Contractor* does not submit a required certificate. The cost of this insurance to the *Employer* is paid by the *Contractor*.

**Insurance by the *Employer*** **87**

87.1 The *Project Manager* submits policies and certificates for insurances provided by the *Employer* to the *Contractor* for acceptance before the *starting date* and afterwards as the *Contractor* instructs. The *Contractor* accepts the policies and certificates if they comply with this contract.

© copyright nec 2005

A49342285

87.2 The *Contractor*'s acceptance of an insurance policy or certificate provided by the *Employer* does not change the responsibility of the *Employer* to provide the insurances stated in the Contract Data.

87.3 The *Contractor* may insure a risk which this contract requires the *Employer* to insure if the *Employer* does not submit a required policy or certificate. The cost of this insurance to the *Contractor* is paid by the *Employer*.

 © copyright nec 2005 

A49342285

# 9 Termination

**Termination 90**

90.1 If either Party wishes to terminate the *Contractor*'s obligation to Provide the Works he notifies the *Project Manager* and the other Party giving details of his reason for terminating. The *Project Manager* issues a termination certificate to both Parties promptly if the reason complies with this contract.

90.2 The *Contractor* may terminate only for a reason identified in the Termination Table. The *Employer* may terminate for any reason. The procedures followed and the amounts due on termination are in accordance with the Termination Table.

**TERMINATION TABLE**

| Terminating Party | Reason | Procedure | Amount due |
|---|---|---|---|
| The *Employer* | A reason other than R1–R21 | P1 and P2 | A1, A2 and A4 |
| | R1–R15 or R18 | P1, P2 and P3 | A1 and A3 |
| | R17 or R20 | P1 and P3 | A1 and A2 |
| | R21 | P1 and P4 | A1 and A2 |
| The *Contractor* | R1–R10, R16 or R19 | P1 and P4 | A1, A2 and A4 |
| | R17 or R20 | P1 and P4 | A1 and A2 |

90.3 The procedures for termination are implemented immediately after the *Project Manager* has issued a termination certificate.

90.4 Within thirteen weeks of termination, the *Project Manager* certifies a final payment to or from the *Contractor* which is the *Project Manager*'s assessment of the amount due on termination less the total of previous payments. Payment is made within three weeks of the *Project Manager*'s certificate.

90.5 After a termination certificate has been issued, the *Contractor* does no further work necessary to Provide the Works.

**Reasons for termination 91**

91.1 Either Party may terminate if the other Party has done one of the following or its equivalent.

- If the other Party is an individual and has
  - presented his petition for bankruptcy (R1),
  - had a bankruptcy order made against him (R2),
  - had a receiver appointed over his assets (R3) or
  - made an arrangement with his creditors (R4).
- If the other Party is a company or partnership and has
  - had a winding-up order made against it (R5),
  - had a provisional liquidator appointed to it (R6),
  - passed a resolution for winding-up (other than in order to amalgamate or reconstruct) (R7),
  - had an administration order made against it (R8),
  - had a receiver, receiver and manager, or administrative receiver appointed over the whole or a substantial part of its undertaking or assets (R9) or
  - made an arrangement with its creditors (R10).

A49342285

91.2 The *Employer* may terminate if the *Project Manager* has notified that the *Contractor* has defaulted in one of the following ways and not put the default right within four weeks of the notification.

- Substantially failed to comply with his obligations (R11).
- Not provided a bond or guarantee which this contract requires (R12).
- Appointed a Subcontractor for substantial work before the *Project Manager* has accepted the Subcontractor (R13).

91.3 The *Employer* may terminate if the *Project Manager* has notified that the *Contractor* has defaulted in one of the following ways and not stopped defaulting within four weeks of the notification.

- Substantially hindered the *Employer* or Others (R14).
- Substantially broken a health or safety regulation (R15).

91.4 The *Contractor* may terminate if the *Employer* has not paid an amount certified by the *Project Manager* within thirteen weeks of the date of the certificate (R16).

91.5 Either Party may terminate if the Parties have been released under the law from further performance of the whole of this contract (R17).

91.6 If the *Project Manager* has instructed the *Contractor* to stop or not to start any substantial work or all work and an instruction allowing the work to re-start or start has not been given within thirteen weeks,

- the *Employer* may terminate if the instruction was due to a default by the *Contractor* (R18),
- the *Contractor* may terminate if the instruction was due to a default by the *Employer* (R19) and
- either Party may terminate if the instruction was due to any other reason (R20).

91.7 The *Employer* may terminate if an event occurs which

- stops the *Contractor* completing the *works* or
- stops the *Contractor* completing the *works* by the date shown on the Accepted Programme and is forecast to delay Completion by more than 13 weeks,

and which

- neither Party could prevent and
- an experienced contractor would have judged at the Contract Date to have such a small chance of occurring that it would have been unreasonable for him to have allowed for it (R21).

**Procedures on termination** **92**

92.1 On termination, the *Employer* may complete the *works* and may use any Plant and Materials to which he has title (P1).

92.2 The procedure on termination also includes one or more of the following as set out in the Termination Table.

P2 The *Employer* may instruct the *Contractor* to leave the Site, remove any Equipment, Plant and Materials from the Site and assign the benefit of any subcontract or other contract related to performance of this contract to the *Employer*.

P3 The *Employer* may use any Equipment to which the *Contractor* has title to complete the *works*. The *Contractor* promptly removes the Equipment from Site when the *Project Manager* notifies him that the *Employer* no longer requires it to complete the *works*.

P4 The *Contractor* leaves the Working Areas and removes the Equipment.

 © copyright nec 2005 

**Payment on termination** **93**

93.1 The amount due on termination includes (A1)

- an amount due assessed as for normal payments,
- the Defined Cost for Plant and Materials
  - within the Working Areas or
  - to which the *Employer* has title and of which the *Contractor* has to accept delivery,
- other Defined Cost reasonably incurred in expectation of completing the whole of the *works*,
- any amounts retained by the *Employer* and
- a deduction of any un-repaid balance of an advanced payment.

93.2 The amount due on termination also includes one or more of the following as set out in the Termination Table.

A2 The forecast Defined Cost of removing the Equipment.

A3 A deduction of the forecast of the additional cost to the *Employer* of completing the whole of the *works*.

A4 The *direct fee percentage* applied to any excess of the total of the Prices at the Contract Date over the Price for Work Done to Date.

**93.4 If there is a termination, the *Project Manager* assesses the *Contractor*'s share after he has certified termination. His assessment uses, as the Price for Work Done to Date, the total of the Defined Cost which the *Contractor* has paid and which he is committed to pay for work done before termination. The assessment uses as the total of the Prices**

- **the lump sum price for each activity which has been completed and**
- **a proportion of the lump sum price for each incomplete activity which is the proportion of the work in the activity which has been completed.**

**93.6 The *Project Manager*'s assessment of the *Contractor*'s share is added to the amount due to the *Contractor* on termination if there has been a saving or deducted if there has been an excess.**

A49342285

# DISPUTE RESOLUTION

## Option W1

**Dispute resolution procedure (used unless the United Kingdom Housing Grants, Construction and Regeneration Act 1996 applies).**

**Dispute resolution** **W1**

W1.1 A dispute arising under or in connection with this contract is referred to and decided by the *Adjudicator*.

**The *Adjudicator*** W1.2 (1) The Parties appoint the *Adjudicator* under the NEC Adjudicator's Contract current at the *starting date*.

(2) The *Adjudicator* acts impartially and decides the dispute as an independent adjudicator and not as an arbitrator.

(3) If the *Adjudicator* is not identified in the Contract Data or if the *Adjudicator* resigns or is unable to act, the Parties choose a new adjudicator jointly. If the Parties have not chosen an adjudicator, either Party may ask the *Adjudicator nominating body* to choose one. The *Adjudicator nominating body* chooses an adjudicator within four days of the request. The chosen adjudicator becomes the *Adjudicator*.

(4) A replacement *Adjudicator* has the power to decide a dispute referred to his predecessor but not decided at the time when the predecessor resigned or became unable to act. He deals with an undecided dispute as if it had been referred to him on the date he was appointed.

(5) The *Adjudicator*, his employees and agents are not liable to the Parties for any action or failure to take action in an adjudication unless the action or failure to take action was in bad faith.

**The adjudication** W1.3 (1) Disputes are notified and referred to the *Adjudicator* in accordance with the Adjudication Table.

 © copyright nec 2005 

A49342285

**ADJUDICATION TABLE**

| Dispute about | Which Party may refer it to the *Adjudicator*? | When may it be referred to the *Adjudicator*? |
|---|---|---|
| An action of the *Project Manager* or the *Supervisor* | The *Contractor* | Between two and four weeks after the *Contractor*'s notification of the dispute to the *Employer* and the *Project Manager*, the notification itself being made not more than four weeks after the *Contractor* becomes aware of the action |
| The *Project Manager* or *Supervisor* not having taken an action | The *Contractor* | Between two and four weeks after the *Contractor*'s notification of the dispute to the *Employer* and the *Project Manager*, the notification itself being made not more than four weeks after the *Contractor* becomes aware that the action was not taken |
| A quotation for a compensation event which is treated as having been accepted | The *Employer* | Between two and four weeks after the *Project Manager*'s notification of the dispute to the *Employer* and the *Contractor*, the notification itself being made not more than four weeks after the quotation was treated as accepted |
| Any other matter | Either Party | Between two and four weeks after notification of the dispute to the other Party and the *Project Manager* |

(2) The times for notifying and referring a dispute may be extended by the *Project Manager* if the *Contractor* and the *Project Manager* agree to the extension before the notice or referral is due. The *Project Manager* notifies the extension that has been agreed to the *Contractor*. If a disputed matter is not notified and referred within the times set out in this contract, neither Party may subsequently refer it to the *Adjudicator* or the *tribunal*.

(3) The Party referring the dispute to the *Adjudicator* includes with his referral information to be considered by the *Adjudicator*. Any more information from a Party to be considered by the *Adjudicator* is provided within four weeks of the referral. This period may be extended if the *Adjudicator* and the Parties agree.

(4) If a matter disputed by the *Contractor* under or in connection with a subcontract is also a matter disputed under or in connection with this contract and if the subcontract allows, the *Contractor* may refer the subcontract dispute to the *Adjudicator* at the same time as the main contract referral. The *Adjudicator* then decides the disputes together and references to the Parties for the purposes of the dispute are interpreted as including the Subcontractor.

© copyright nec 2005

A49342285

(5) The *Adjudicator* may

- review and revise any action or inaction of the *Project Manager* or *Supervisor* related to the dispute and alter a quotation which has been treated as having been accepted,
- take the initiative in ascertaining the facts and the law related to the dispute,
- instruct a Party to provide further information related to the dispute within a stated time and
- instruct a Party to take any other action which he considers necessary to reach his decision and to do so within a stated time.

(6) A communication between a Party and the *Adjudicator* is communicated to the other Party at the same time.

(7) If the *Adjudicator*'s decision includes assessment of additional cost or delay caused to the *Contractor*, he makes his assessment in the same way as a compensation event is assessed.

(8) The *Adjudicator* decides the dispute and notifies the Parties and the *Project Manager* of his decision and his reasons within four weeks of the end of the period for receiving information. This four week period may be extended if the Parties agree.

(9) Unless and until the *Adjudicator* has notified the Parties of his decision, the Parties, the *Project Manager* and the *Supervisor* proceed as if the matter disputed was not disputed.

(10) The *Adjudicator*'s decision is binding on the Parties unless and until revised by the *tribunal* and is enforceable as a matter of contractual obligation between the Parties and not as an arbitral award. The *Adjudicator*'s decision is final and binding if neither Party has notified the other within the times required by this contract that he is dissatisfied with a decision of the *Adjudicator* and intends to refer the matter to the *tribunal*.

(11) The *Adjudicator* may, within two weeks of giving his decision to the Parties, correct any clerical mistake or ambiguity.

**Review by the *tribunal*** W1.4

(1) A Party does not refer any dispute under or in connection with this contract to the *tribunal* unless it has first been referred to the *Adjudicator* in accordance with this contract.

(2) If, after the *Adjudicator* notifies his decision a Party is dissatisfied, he may notify the other Party that he intends to refer it to the *tribunal*. A Party may not refer a dispute to the *tribunal* unless this notification is given within four weeks of notification of the *Adjudicator*'s decision.

(3) If the *Adjudicator* does not notify his decision within the time provided by this contract, a Party may notify the other Party that he intends to refer the dispute to the *tribunal*. A Party may not refer a dispute to the *tribunal* unless this notification is given within four weeks of the date by which the *Adjudicator* should have notified his decision.

(4) The *tribunal* settles the dispute referred to it. The *tribunal* has the powers to reconsider any decision of the *Adjudicator* and review and revise any action or inaction of the *Project Manager* or the *Supervisor* related to the dispute. A Party is not limited in the *tribunal* proceedings to the information, evidence or arguments put to the *Adjudicator*.

(5) If the *tribunal* is arbitration, the *arbitration procedure*, the place where the arbitration is to be held and the method of choosing the arbitrator are those stated in the Contract Data.

(6) A Party does not call the *Adjudicator* as a witness in *tribunal* proceedings.

# Option W2

**Dispute resolution procedure (used in the United Kingdom when the Housing Grants, Construction and Regeneration Act 1996 applies).**

**Dispute resolution** **W2**

W2.1 (1) A dispute arising under or in connection with this contract is referred to and decided by the *Adjudicator*. A Party may refer a dispute to the *Adjudicator* at any time.

(2) In this Option, time periods stated in days exclude Christmas Day, Good Friday and bank holidays.

**The *Adjudicator*** W2.2 (1) The Parties appoint the *Adjudicator* under the NEC Adjudicator's Contract current at the *starting date*.

(2) The *Adjudicator* acts impartially and decides the dispute as an independent adjudicator and not as an arbitrator.

(3) If the *Adjudicator* is not identified in the Contract Data or if the *Adjudicator* resigns or becomes unable to act

- the Parties may choose an adjudicator jointly or
- a Party may ask the *Adjudicator nominating body* to choose an adjudicator.

The *Adjudicator nominating body* chooses an adjudicator within four days of the request. The chosen adjudicator becomes the *Adjudicator*.

(4) A replacement *Adjudicator* has the power to decide a dispute referred to his predecessor but not decided at the time when his predecessor resigned or became unable to act. He deals with an undecided dispute as if it had been referred to him on the date he was appointed.

(5) The *Adjudicator*, his employees and agents are not liable to the Parties for any action or failure to take action in an adjudication unless the action or failure to take action was in bad faith.

**The adjudication** W2.3 (1) Before a Party refers a dispute to the *Adjudicator*, he gives a notice of adjudication to the other Party with a brief description of the dispute and the decision which he wishes the *Adjudicator* to make. If the *Adjudicator* is named in the Contract Data, the Party sends a copy of the notice of adjudication to the *Adjudicator* when it is issued. Within three days of the receipt of the notice of adjudication, the *Adjudicator* notifies the Parties

- that he is able to decide the dispute in accordance with the contract or
- that he is unable to decide the dispute and has resigned.

If the *Adjudicator* does not so notify within three days of the issue of the notice of adjudication, either Party may act as if he has resigned.

(2) Within seven days of a Party giving a notice of adjudication he

- refers the dispute to the *Adjudicator*,
- provides the *Adjudicator* with the information on which he relies, including any supporting documents and
- provides a copy of the information and supporting documents he has provided to the *Adjudicator* to the other Party.

Any further information from a Party to be considered by the *Adjudicator* is provided within fourteen days of the referral. This period may be extended if the *Adjudicator* and the Parties agree.

© copyright nec 2005

A49342285

(3) If a matter disputed by the *Contractor* under or in connection with a subcontract is also a matter disputed under or in connection with this contract, the *Contractor* may, with the consent of the Subcontractor, refer the subcontract dispute to the *Adjudicator* at the same time as the main contract referral. The *Adjudicator* then decides the disputes together and references to the Parties for the purposes of the dispute are interpreted as including the Subcontractor.

(4) The *Adjudicator* may

- review and revise any action or inaction of the *Project Manager* or *Supervisor* related to the dispute and alter a quotation which has been treated as having been accepted,
- take the initiative in ascertaining the facts and the law related to the dispute,
- instruct a Party to provide further information related to the dispute within a stated time and
- instruct a Party to take any other action which he considers necessary to reach his decision and to do so within a stated time.

(5) If a Party does not comply with any instruction within the time stated by the *Adjudicator*, the *Adjudicator* may continue the adjudication and make his decision based upon the information and evidence he has received.

(6) A communication between a Party and the *Adjudicator* is communicated to the other Party at the same time.

(7) If the *Adjudicator's* decision includes assessment of additional cost or delay caused to the *Contractor*, he makes his assessment in the same way as a compensation event is assessed.

(8) The *Adjudicator* decides the dispute and notifies the Parties and the *Project Manager* of his decision and his reasons within twenty-eight days of the dispute being referred to him. This period may be extended by up to fourteen days with the consent of the referring Party or by any other period agreed by the Parties.

(9) Unless and until the *Adjudicator* has notified the Parties of his decision, the Parties, the *Project Manager* and the *Supervisor* proceed as if the matter disputed was not disputed.

(10) If the *Adjudicator* does not make his decision and notify it to the Parties within the time provided by this contract, the Parties and the *Adjudicator* may agree to extend the period for making his decision. If they do not agree to an extension, either Party may act as if the *Adjudicator* has resigned.

(11) The *Adjudicator's* decision is binding on the Parties unless and until revised by the *tribunal* and is enforceable as a matter of contractual obligation between the Parties and not as an arbitral award. The *Adjudicator's* decision is final and binding if neither Party has notified the other within the times required by this contract that he is dissatisfied with a matter decided by the *Adjudicator* and intends to refer the matter to the *tribunal*.

(12) The *Adjudicator* may, within fourteen days of giving his decision to the Parties, correct a clerical mistake or ambiguity.

**Review by the *tribunal*** W2.4

(1) A Party does not refer any dispute under or in connection with this contract to the *tribunal* unless it has first been decided by the *Adjudicator* in accordance with this contract.

(2) If, after the *Adjudicator* notifies his decision a Party is dissatisfied, that Party may notify the other Party of the matter which he disputes and state that he intends to refer it to the *tribunal*. The dispute may not be referred to the *tribunal* unless this notification is given within four weeks of the notification of the *Adjudicator's* decision.

 © copyright nec 2005 

A49342285

(3) The *tribunal* settles the dispute referred to it. The *tribunal* has the powers to reconsider any decision of the *Adjudicator* and to review and revise any action or inaction of the *Project Manager* or the *Supervisor* related to the dispute. A Party is not limited in *tribunal* proceedings to the information or evidence put to the *Adjudicator*.

(4) If the *tribunal* is arbitration, the *arbitration procedure*, the place where the arbitration is to be held and the method of choosing the arbitrator are those stated in the Contract Data.

(5) A Party does not call the *Adjudicator* as a witness in *tribunal* proceedings.

© copyright nec 2005

A49342285

## Option X1: Price adjustment for inflation

**Defined terms** **X1**

X1.1 (a) The Base Date Index (B) is the latest available index before the *base date*.

(b) The Latest Index (L) is the latest available index before the date of assessment of an amount due.

(c) The Price Adjustment Factor is the total of the products of each of the proportions stated in the Contract Data multiplied by (L – B)/B for the index linked to it.

**Price Adjustment Factor** X1.2 If an index is changed after it has been used in calculating a Price Adjustment Factor, the calculation is repeated and a correction included in the next assessment of the amount due.

The Price Adjustment Factor calculated at the Completion Date for the whole of the *works* is used for calculating price adjustment after this date.

**Compensation events** X1.3 The Defined Cost for compensation events is assessed using the

- Defined Cost current at the time of assessing the compensation event adjusted to *base date* by dividing by one plus the Price Adjustment Factor for the last assessment of the amount due and
- Defined Cost at *base date* levels for amounts calculated from rates stated in the Contract Data for employees and Equipment.

**Price adjustment** X1.5 Each time the amount due is assessed, an amount for price adjustment is added to the total of the Prices which is the sum of

- the change in the Price for Work Done to Date since the last assessment of the amount due multiplied by (PAF/(1 + PAF)) where PAF is the Price Adjustment Factor for the date of the current assessment and
- correcting amounts, not included elsewhere, which arise from changes to indices used for assessing previous amounts for price adjustment.

 © copyright nec 2005 

## Option X2: Changes in the law

**Changes in the law** **X2**

X2.1 A change in the law of the country in which the Site is located is a compensation event if it occurs after the Contract Date. The *Project Manager* may notify the *Contractor* of a compensation event for a change in the law and instruct him to submit quotations. If the effect of a compensation event which is a change in the law is to reduce the total Defined Cost, the Prices are reduced.

## Option X4: Parent company guarantee

**Parent company guarantee** **X4**

X4.1 If a parent company owns the *Contractor*, the *Contractor* gives to the *Employer* a guarantee by the parent company of the *Contractor*'s performance in the form set out in the Works Information. If the guarantee was not given by the Contract Date, it is given to the *Employer* within four weeks of the Contract Date.

## Option X5: Sectional Completion

**Sectional Completion** **X5**

X5.1 In these *conditions of contract*, unless stated as the whole of the *works*, each reference and clause relevant to

- the *works*,
- Completion and
- Completion Date

applies, as the case may be, to either the whole of the *works* or any *section* of the *works*.

## Option X6: Bonus for early Completion

**Bonus for early Completion** **X6**

X6.1 The *Contractor* is paid a bonus calculated at the rate stated in the Contract Data for each day from the earlier of

- Completion and
- the date on which the *Employer* takes over the *works*

until the Completion Date.

© copyright nec 2005

A49342285

## Option X7: Delay damages

**Delay damages** **X7**

X7.1 The *Contractor* pays delay damages at the rate stated in the Contract Data from the Completion Date for each day until the earlier of

- Completion and
- the date on which the *Employer* takes over the *works*.

X7.2 If the Completion Date is changed to a later date after delay damages have been paid, the *Employer* repays the overpayment of damages with interest. Interest is assessed from the date of payment to the date of repayment and the date of repayment is an assessment date.

X7.3 If the *Employer* takes over a part of the *works* before Completion, the delay damages are reduced from the date on which the part is taken over. The *Project Manager* assesses the benefit to the *Employer* of taking over the part of the *works* as a proportion of the benefit to the *Employer* of taking over the whole of the *works* not previously taken over. The delay damages are reduced in this proportion.

## Option X12: Partnering

**Identified and defined terms** **X12**

X12.1 (1) The Partners are those named in the Schedule of Partners. The *Client* is a Partner.

(2) An Own Contract is a contract between two Partners which includes this Option.

(3) The Core Group comprises the Partners listed in the Schedule of Core Group Members.

(4) Partnering Information is information which specifies how the Partners work together and is either in the documents which the Contract Data states it is in or in an instruction given in accordance with this contract.

(5) A Key Performance Indicator is an aspect of performance for which a target is stated in the Schedule of Partners.

**Actions** X12.2 (1) Each Partner works with the other Partners to achieve the *Client's objective* stated in the Contract Data and the objectives of every other Partner stated in the Schedule of Partners.

(2) Each Partner nominates a representative to act for it in dealings with other Partners.

(3) The Core Group acts and takes decisions on behalf of the Partners on those matters stated in the Partnering Information.

(4) The Partners select the members of the Core Group. The Core Group decides how they will work and decides the dates when each member joins and leaves the Core Group. The *Client's* representative leads the Core Group unless stated otherwise in the Partnering Information.

(5) The Core Group keeps the Schedule of Core Group Members and the Schedule of Partners up to date and issues copies of them to the Partners each time either is revised.

(6) This Option does not create a legal partnership between Partners who are not one of the Parties in this contract.

 © copyright nec 2005 

**Working together** X12.3 (1) The Partners work together as stated in the Partnering Information and in a spirit of mutual trust and co-operation.

(2) A Partner may ask another Partner to provide information which he needs to carry out the work in his Own Contract and the other Partner provides it.

(3) Each Partner gives an early warning to the other Partners when he becomes aware of any matter that could affect the achievement of another Partner's objectives stated in the Schedule of Partners.

(4) The Partners use common information systems as set out in the Partnering Information.

(5) A Partner implements a decision of the Core Group by issuing instructions in accordance with its Own Contracts.

(6) The Core Group may give an instruction to the Partners to change the Partnering Information. Each such change to the Partnering Information is a compensation event which may lead to reduced Prices.

(7) The Core Group prepares and maintains a timetable showing the proposed timing of the contributions of the Partners. The Core Group issues a copy of the timetable to the Partners each time it is revised. The *Contractor* changes his programme if it is necessary to do so in order to comply with the revised timetable. Each such change is a compensation event which may lead to reduced Prices.

(8) A Partner gives advice, information and opinion to the Core Group and to other Partners when asked to do so by the Core Group. This advice, information and opinion relates to work that another Partner is to carry out under its Own Contract and is given fully, openly and objectively. The Partners show contingency and risk allowances in information about costs, prices and timing for future work.

(9) A Partner notifies the Core Group before subcontracting any work.

**Incentives** X12.4 (1) A Partner is paid the amount stated in the Schedule of Partners if the target stated for a Key Performance Indicator is improved upon or achieved. Payment of the amount is due when the target has been improved upon or achieved and is made as part of the amount due in the Partner's Own Contract.

(2) The *Client* may add a Key Performance Indicator and associated payment to the Schedule of Partners but may not delete or reduce a payment stated in the Schedule of Partners.

## Option X13: Performance bond

**Performance bond** X13

X13.1 The *Contractor* gives the *Employer* a performance bond, provided by a bank or insurer which the *Project Manager* has accepted, for the amount stated in the Contract Data and in the form set out in the Works Information. A reason for not accepting the bank or insurer is that its commercial position is not strong enough to carry the bond. If the bond was not given by the Contract Date, it is given to the *Employer* within four weeks of the Contract Date.

A49342285

## Option X14: Advanced payment to the *Contractor*

**Advanced payment** **X14**

X14.1 The *Employer* makes an advanced payment to the *Contractor* of the amount stated in the Contract Data.

X14.2 The advanced payment is made either within four weeks of the Contract Date or, if an advanced payment bond is required, within four weeks of the later of

- the Contract Date and
- the date when the *Employer* receives the advanced payment bond.

The advanced payment bond is issued by a bank or insurer which the *Project Manager* has accepted. A reason for not accepting the proposed bank or insurer is that its commercial position is not strong enough to carry the bond. The bond is for the amount of the advanced payment which the *Contractor* has not repaid and is in the form set out in the Works Information. Delay in making the advanced payment is a compensation event.

X14.3 The advanced payment is repaid to the *Employer* by the *Contractor* in instalments of the amount stated in the Contract Data. An instalment is included in each amount due assessed after the period stated in the Contract Data has passed until the advanced payment has been repaid.

## Option X15: Limitation of the *Contractor*'s liability for his design to reasonable skill and care

**The *Contractor*'s design** **X15**

X15.1 The *Contractor* is not liable for Defects in the *works* due to his design so far as he proves that he used reasonable skill and care to ensure that his design complied with the Works Information.

X15.2 If the *Contractor* corrects a Defect for which he is not liable under this contract it is a compensation event.

## Option X16: Retention

**Retention** **X16**

X16.1 After the Price for Work Done to Date has reached the *retention free amount*, an amount is retained in each amount due. Until the earlier of

- Completion of the whole of the *works* and
- the date on which the *Employer* takes over the whole of the *works*

the amount retained is the *retention percentage* applied to the excess of the Price for Work Done to Date above the *retention free amount*.

X16.2 The amount retained is halved

- in the assessment made at Completion of the whole of the *works* or
- in the next assessment after the *Employer* has taken over the whole of the *works* if this is before Completion of the whole of the *works*.

The amount retained remains at this amount until the Defects Certificate is issued. No amount is retained in the assessments made after the Defects Certificate has been issued.

 © copyright nec 2005 

A49342285

## Option X17: Low performance damages

**Low performance damages** **X17**

X17.1 If a Defect included in the Defects Certificate shows low performance with respect to a performance level stated in the Contract Data, the *Contractor* pays the amount of low performance damages stated in the Contract Data.

## Option X18: Limitation of liability

**Limitation of liability** **X18**

X18.1 The *Contractor*'s liability to the *Employer* for the *Employer*'s indirect or consequential loss is limited to the amount stated in the Contract Data.

X18.2 For any one event, the liability of the *Contractor* to the *Employer* for loss of or damage to the *Employer*'s property is limited to the amount stated in the Contract Data.

X18.3 The *Contractor*'s liability to the *Employer* for Defects due to his design which are not listed on the Defects Certificate is limited to the amount stated in the Contract Data.

X18.4 The *Contractor*'s total liability to the *Employer* for all matters arising under or in connection with this contract, other than the excluded matters, is limited to the amount stated in the Contract Data and applies in contract, tort or delict and otherwise to the extent allowed under the *law of the contract*.

The excluded matters are amounts payable by the *Contractor* as stated in this contract for

- loss of or damage to the *Employer*'s property,
- delay damages if Option X7 applies,
- low performance damages if Option X17 applies and
- *Contractor*'s share.

X18.5 The *Contractor* is not liable to the *Employer* for a matter unless it is notified to the *Contractor* before the *end of liability date*.

## Option X20: Key Performance Indicators (not used with Option X12)

**Incentives** X20.1 A Key Performance Indicator is an aspect of performance by the *Contractor* for which a target is stated in the Incentive Schedule. The Incentive Schedule is the *incentive schedule* unless later changed in accordance with this contract.

X20.2 From the *starting date* until the Defects Certificate has been issued, the *Contractor* reports to the *Project Manager* his performance against each of the Key Performance Indicators. Reports are provided at the intervals stated in the Contract Data and include the forecast final measurement against each indicator.

X20.3 If the *Contractor*'s forecast final measurement against a Key Performance Indicator will not achieve the target stated in the Incentive Schedule, he submits to the *Project Manager* his proposals for improving performance.

X20.4 The *Contractor* is paid the amount stated in the Incentive Schedule if the target stated for a Key Performance Indicator is improved upon or achieved. Payment of the amount is due when the target has been improved upon or achieved.

X20.5 The *Employer* may add a Key Performance Indicator and associated payment to the Incentive Schedule but may not delete or reduce a payment stated in the Incentive Schedule.

© copyright nec 2005

A49342285

# OPTION Y

## Option Y(UK)2: The Housing Grants, Construction and Regeneration Act 1996

**Definitions** Y(UK)2
Y2.1 (1) The Act is The Housing Grants, Construction and Regeneration Act 1996.

(2) A period of time stated in days is a period calculated in accordance with Section 116 of the Act.

**Dates for payment** Y2.2 The date on which a payment becomes due is seven days after the assessment date.

The final date for payment is fourteen days or a different period for payment if stated in the Contract Data after the date on which payment becomes due.

The *Project Manager*'s certificate is the notice of payment from the *Employer* to the *Contractor* specifying the amount of the payment made or proposed to be made and stating how the amount was calculated.

**Notice of intention to withhold payment** Y2.3 If either Party intends to withhold payment of an amount due under this contract, he notifies the other Party not later than seven days (the prescribed period) before the final date for payment by stating the amount proposed to be withheld and the reason for withholding payment. If there is more than one reason, the amount for each reason is stated.

A Party does not withhold payment of an amount due under this contract unless he has notified his intention to withhold payment as required by this contract.

**Suspension of performance** Y2.4 If the *Contractor* exercises his right under the Act to suspend performance, it is a compensation event.

## Option Y(UK)3: The Contracts (Rights of Third Parties) Act 1999

**Third party rights** Y(UK)3
Y3.1 A person or organisation who is not one of the Parties may enforce a term of this contract under the Contracts (Rights of Third Parties) Act 1999 only if the term and the person or organisation are stated in the Contract Data.

## Option Z: *Additional conditions of contract*

***Additional conditions of contract*** Z1
Z1.1 The *additional conditions of contract* stated in the Contract Data are part of this contract.

 © copyright nec 2005 

# SCHEDULE OF COST COMPONENTS

In this schedule the *Contractor* means the *Contractor* and not his Subcontractors. An amount is included only in one cost component and only if it is incurred in order to Provide the Works.

**People** **1** The following components of the cost of

- people who are directly employed by the *Contractor* and whose normal place of working is within the Working Areas and
- people who are directly employed by the *Contractor* and whose normal place of working is not within the Working Areas but who are working in the Working Areas.

**11** Wages, salaries and amounts paid by the *Contractor* for people paid according to the time worked while they are within the Working Areas.

**12** Payments to people for

(a) bonuses and incentives
(b) overtime
(c) working in special circumstances
(d) special allowances
(e) absence due to sickness and holidays
(f) severance related to work on this contract.

**13** Payments made in relation to people for

(a) travel
(b) subsistence and lodging
(c) relocation
(d) medical examinations
(e) passports and visas
(f) travel insurance
(g) items (a) to (f) for dependants
(h) protective clothing
(i) meeting the requirements of the law
(j) pensions and life assurance
(k) death benefit
(l) occupational accident benefits
(m) medical aid
(n) a vehicle
(o) safety training.

**14** The following components of the cost of people who are not directly employed by the *Contractor* but are paid for by him according to the time worked while they are within the Working Areas.

Amounts paid by the *Contractor*.

**Equipment** **2** The following components of the cost of Equipment which is used within the Working Areas (including the cost of accommodation but excluding Equipment cost covered by the percentage for Working Areas overheads).

**21** Payments for the hire or rent of Equipment not owned by

- the *Contractor*,
- his parent company or
- by a company with the same parent company

at the hire or rental rate multiplied by the time for which the Equipment is required.

© copyright nec 2005

A49342285

22 Payments for Equipment which is not listed in the Contract Data but is

- owned by the *Contractor*,
- purchased by the *Contractor* under a hire purchase or lease agreement or
- hired by the *Contractor* from the *Contractor*'s parent company or from a company with the same parent company

at open market rates, multiplied by the time for which the Equipment is required.

23 Payments for Equipment purchased for work included in this contract listed with a time-related on cost charge, in the Contract Data, of

- the change in value over the period for which the Equipment is required and
- the time-related on cost charge stated in the Contract Data for the period for which the Equipment is required.

The change in value is the difference between the purchase price and either the sale price or the open market sale price at the end of the period for which the Equipment is required. Interim payments of the change in value are made at each assessment date. A final payment is made in the next assessment after the change in value has been determined.

If the *Project Manager* agrees, an additional item of Equipment may be assessed as if it had been listed in the Contract Data.

24 Payments for special Equipment listed in the Contract Data. These amounts are the rates stated in the Contract Data multiplied by the time for which the Equipment is required.

If the *Project Manager* agrees, an additional item of special Equipment may be assessed as if it had been listed in the Contract Data.

25 Payments for the purchase price of Equipment which is consumed.

26 Unless included in the hire or rental rates, payments for

- transporting Equipment to and from the Working Areas other than for repair and maintenance,
- erecting and dismantling Equipment and
- constructing, fabricating or modifying Equipment as a result of a compensation event.

27 Payments for purchase of materials used to construct or fabricate Equipment.

28 Unless included in the hire rates, the cost of operatives is included in the cost of people.

**Plant and Materials** **3** The following components of the cost of Plant and Materials.

31 Payments for

- purchasing Plant and Materials,
- delivery to and removal from the Working Areas,
- providing and removing packaging and
- samples and tests.

32 Cost is credited with payments received for disposal of Plant and Materials unless the cost is disallowed.

**Charges** **4** The following components of the cost of charges paid by the *Contractor*.

41 Payments for provision and use in the Working Areas of

- water,
- gas and
- electricity.

 © copyright nec 2005 

A49342285

42 Payments to public authorities and other properly constituted authorities of charges which they are authorised to make in respect of the *works*.

43 Payments for

(a) cancellation charges arising from a compensation event
(b) buying or leasing land
(c) compensation for loss of crops or buildings
(d) royalties
(e) inspection certificates
(f) charges for access to the Working Areas
(g) facilities for visits to the Working Areas by Others
(h) specialist services
(i) consumables and equipment provided by the *Contractor* for the *Project Manager*'s and *Supervisor*'s offices.

44 A charge for overhead costs incurred within the Working Areas calculated by applying the percentage for Working Areas overheads stated in the Contract Data to the total of people items 11, 12, 13 and 14. The charge includes provision and use of equipment, supplies and services, but excludes accommodation, for

(a) catering
(b) medical facilities and first aid
(c) recreation
(d) sanitation
(e) security
(f) copying
(g) telephone, telex, fax, radio and CCTV
(h) surveying and setting out
(i) computing
(j) hand tools not powered by compressed air.

**Manufacture and fabrication**

5 The following components of the cost of manufacture and fabrication of Plant and Materials which are

- wholly or partly designed specifically for the *works* and
- manufactured or fabricated outside the Working Areas.

51 The total of the hours worked by employees multiplied by the hourly rates stated in the Contract Data for the categories of employees listed.

52 An amount for overheads calculated by multiplying this total by the percentage for manufacturing and fabrication overheads stated in the Contract Data.

**Design**

6 The following components of the cost of design of the *works* and Equipment done outside the Working Areas.

61 The total of the hours worked by employees multiplied by the hourly rates stated in the Contract Data for the categories of employees listed.

62 An amount for overheads calculated by multiplying this total by the percentage for design overheads stated in the Contract Data.

63 The cost of travel to and from the Working Areas for the categories of design employees listed in the Contract Data.

**Insurance**

7 The following are deducted from cost

- the cost of events for which this contract requires the *Contractor* to insure and
- other costs paid to the *Contractor* by insurers.

# SHORTER SCHEDULE OF COST COMPONENTS

An amount is included only in one cost component and only if it is incurred in order to Provide the Works.

**People** **1** The following components of the cost of

- people who are directly employed by the *Contractor* and whose normal place of working is within the Working Areas,
- people who are directly employed by the *Contractor* and whose normal place of working is not within the Working Areas but who are working in the Working Areas and
- people who are not directly employed by the *Contractor* but are paid for by him according to the time worked while they are within the Working Areas.

**11** Amounts paid by the *Contractor* including those for meeting the requirements of the law and for pension provision.

**Equipment** **2** The following components of the cost of Equipment which is used within the Working Areas (including the cost of accommodation but excluding Equipment cost covered by the percentage for people overheads).

**21** Amounts for Equipment which is in the published list stated in the Contract Data. These amounts are calculated by applying the percentage adjustment for listed Equipment stated in the Contract Data to the rates in the published list and by multiplying the resulting rate by the time for which the Equipment is required.

**22** Amounts for Equipment listed in the Contract Data which is not in the published list stated in the Contract Data. These amounts are the rates stated in the Contract Data multiplied by the time for which the Equipment is required.

**23** The time required is expressed in hours, days, weeks or months consistently with the list of items of Equipment in the Contract Data or with the published list stated in the Contract Data.

**24** Unless the item is in the published list and the rate includes the cost component, payments for

- transporting Equipment to and from the Working Areas other than for repair and maintenance,
- erecting and dismantling Equipment and
- constructing, fabricating or modifying Equipment as a result of a compensation event.

**25** Unless the item is in the published list and the rate includes the cost component, the purchase price of Equipment which is consumed.

**26** Unless included in the rate in the published list, the cost of operatives is included in the cost of people.

**27** Amounts for Equipment which is neither in the published list stated in the Contract Data nor listed in the Contract Data, at competitively tendered or open market rates, multiplied by the time for which the Equipment is required.

 © copyright nec 2005 
A49342285

**Plant and Materials** 3 The following components of the cost of Plant and Materials.

31 Payments for

- purchasing Plant and Materials,
- delivery to and removal from the Working Areas,
- providing and removing packaging and
- samples and tests.

32 Cost is credited with payments received for disposal of Plant and Materials unless the cost is disallowed.

**Charges** 4 The following components of the cost of charges paid by the *Contractor*.

41 A charge calculated by applying the percentage for people overheads stated in the Contract Data to people item 11 to cover the costs of

- payments for the provision and use in the Working Areas of water, gas and electricity,
- payments for buying or leasing land, compensation for loss of crops or buildings, royalties, inspection certificates, charges for access to the Working Areas, facilities for visits to the Working Areas by Others and
- payments for equipment, supplies and services for offices, drawing office, laboratories, workshops, stores and compounds, labour camps, cabins, catering, medical facilities and first aid, recreation, sanitation, security, copying, telephone, telex, fax, radio, CCTV, surveying and setting out, computing, and hand tools not powered by compressed air.

42 Payments for cancellation charges arising from a compensation event.

43 Payments to public authorities and other properly constituted authorities of charges which they are authorised to make in respect of the *works*.

44 Consumables and equipment provided by the *Contractor* for the *Project Manager*'s and *Supervisor*'s office.

45 Specialist services.

**Manufacture and fabrication** 5 The following components of the cost of manufacture and fabrication of Plant and Materials, which are

- wholly or partly designed specifically for the *works* and
- manufactured or fabricated outside the Working Areas.

51 Amounts paid by the *Contractor*.

**Design** 6 The following components of the cost of design of the *works* and Equipment done outside the Working Areas.

61 The total of the hours worked by employees multiplied by the hourly rates stated in the Contract Data for the categories of employees listed.

62 An amount for overheads calculated by multiplying this total by the percentage for design overheads stated in the Contract Data.

63 The cost of travel to and from the Working Areas for the categories of design employees listed in the Contract Data.

**Insurance** 7 The following are deducted from cost

- costs against which this contract required the *Contractor* to insure and
- other costs paid to the *Contractor* by insurers.

# CONTRACT DATA

## Part one – Data provided by the *Employer*

Completion of the data in full, according to the Options chosen, is essential to create a complete contract.

**Statements given in all contracts**

1 General

- The *conditions of contract* are the core clauses and the clauses for main Option C, dispute resolution Option ..... and secondary Options ..... of the NEC3 Engineering and Construction Contract June 2005 (with amendments June 2006).
- The *works* are

  .....
- The *Employer* is

  Name .....

  Address .....

  .....
- The *Project Manager* is

  Name .....

  Address .....

  .....
- The *Supervisor* is

  Name .....

  Address .....

  .....
- The *Adjudicator* is

  Name .....

  Address .....

  .....
- The Works Information is in

  .....

  .....

  .....
- The Site Information is in

  .....

  .....

  .....

 © copyright nec 2005 

A49342285

- The *boundaries of the site* are .....
- The *language of this contract* is .....
- The *law of the contract* is the law of .....
- The *period for reply* is ..... weeks.
- The *Adjudicator nominating body* is .....
- The *tribunal* is .....

.....

- The following matters will be included in the Risk Register

.....

.....

.....

3 Time

- The *starting date* is .....
- The *access dates* are

| Part of the Site | Date |
|---|---|
| 1 ..... | ..... |
| 2 ..... | ..... |
| 3 ..... | ..... |

- The *Contractor* submits revised programmes at intervals no longer than ..... weeks.

4 Testing and Defects

- The *defects date* is ..... weeks after Completion of the whole of the *works*.
- The *defect correction period* is ..... weeks except that
  - The *defect correction period* for ..... is ..... weeks
  - The *defect correction period* for ..... is ..... weeks.

5 Payment

- The *currency of this contract* is the .....
- The *assessment interval* is ..... weeks (not more than five).
- The *interest rate* is ..... % per annum (not less than 2) above the ..... rate of the ..... bank.

6 Compensation events

- The place where weather is to be recorded is

  .....

- The *weather measurements* to be recorded for each calendar month are
  - the cumulative rainfall (mm)
  - the number of days with rainfall more than 5 mm
  - the number of days with minimum air temperature less than 0 degrees Celsius
  - the number of days with snow lying at ..... hours GMT
  - and these measurements:

    .....

    .....

    .....

- The *weather measurements* are supplied by .....
- The *weather data* are the records of past *weather measurements* for each calendar month which were recorded at .....

  and which are available from .....

  .....

**Where no recorded data are available**

- Assumed values for the ten year return *weather data* for each *weather measurement* for each calendar month are

  .....

  .....

  .....

  .....

8 Risks and insurance

- The minimum limit of indemnity for insurance in respect of loss of or damage to property (except the *works*, Plant and Materials and Equipment) and liability for bodily injury to or death of a person (not an employee of the *Contractor*) caused by activity in connection with this contract for any one event is

  .....

- The minimum limit of indemnity for insurance in respect of death of or bodily injury to employees of the *Contractor* arising out of and in the course of their employment in connection with this contract for any one event is

  .....

**Optional statements**

**If the *tribunal* is arbitration**

- The *arbitration procedure* is .....
- The place where arbitration is to be held is

  .....

- The person or organisation who will choose an arbitrator
  - if the Parties cannot agree a choice or
  - if the *arbitration procedure* does not state who selects an arbitrator is

  .....

A49342285

**If the *Employer* has decided the *completion date* for the whole of the *works***

- The *completion date* for the whole of the *works* is .....

**If the *Employer* is not willing to take over the *works* before the Completion Date**

- The *Employer* is not willing to take over the *works* before the Completion Date.

**If no programme is identified in part two of the Contract Data**

- The *Contractor* is to submit a first programme for acceptance within ..... weeks of the Contract Date.

**If the *Employer* has identified work which is to meet a stated *condition* by a *key date***

- The *key dates* and *conditions* to be met are

| *condition* to be met | *key date* |
|---|---|
| 1 ..... | ..... |
| 2 ..... | ..... |
| 3 ..... | ..... |

**If the period in which payments are made is not three weeks and Y(UK)2 is not used**

- The period within which payments are made is .....

**If Y(UK)2 is used and the final date for payment is not 14 days after the date when payment is due**

- The period for payment is .....

**If there are additional *Employer*'s risks**

- These are additional *Employer*'s risks

1 .....

2 .....

3 .....

**If the *Employer* is to provide Plant and Materials**

- The insurance against loss of or damage to the *works*, Plant and Materials is to include cover for Plant and Materials provided by the *Employer* for an amount of

.....

**This document is the M & E Clarification Log**

| | | | | | | | Where the 'Agreed Position' box is shaded grey the relevant agreement is that in the next box to the left which has text included. |
|---|---|---|---|---|---|---|---|
| **Item** | **Add** | **Omit** | **Board Comment** | **Status** | **Brookfield Comment** | **Board Comment 2** | **Agreed Position** |
| **ER 2/1** | | | | | | | |
| Text | - | - | Volume 2/1 of the ERs remains as the output requirements of the Board to be achieved as a minimum standard by the Contractor. Including M&E appendices 1, 2, 3, 4, 5, 6 & 7. | **Agreed** | Needs to be replaced by Brookfield contractor's proposal drawings in so far as these drawings are in conflict to the ER`s or the Works Information 2 should take precedence over Works Information 1 if this is ultimately how the Board wish to encompass the final contract documents. A schedule of derogations is to be produced. | Volume 2/1 of the ERs remains as the output requirements of the Board to be achieved as a minimum standard by the Contractor. Including M&E appendices 1, 2, 3, 4, 5, 6 & 7. except as described in this design summary which reflects the agreed position on the items therein. | **Agreed** |
| Drawings | - | - | The ER drawings remain as the output requirements of the Board. The submitted bid drawings of BC supplement the ER drawings and the following system comments are provided to assist in resolving certain anomalies within BC proposals. | **Agreed** | Needs to be replaced by Brookfield contractor's proposal drawings in so far as these drawings are in conflict to the ER`s or the Works Information 2 should take precedence over Works Information 1 if this is ultimately how the Board wish to encompass the final contract documents. A schedule of derogations is to be produced. | The ER drawings remain as the output requirements of the Board except as descr bed in this design summary which reflects the agreed position on the items therein. | **Agreed** |
| **Bid Submission – Vol 2 Drawings** | | | | | | | |
| Chilled Water | - | - | The chillers to incorporate free cooling coil sections or equivalent provision. | **Agreed** | We have centralised the chillers to a single energy | Based upon examples of previous installation | **Agreed** |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | | | centre to optimise resilience and benefit from absorption cooling.<br>Free cooling' chillers are not appropriate, however, high efficiency 'turbo core' chillers using magnetic free field bearings are proposed to maximise energy efficiency | locations, the Board accept the use of 'turbo core' chillers | |
| | - | - | Plate heat exchangers to be fully independent duty/standby including wiring and control panels etc. | Ag ed | | | |
| | - | - | Chillers to have screw compressors, "Rated as residentially quiet". | Ag ed | Chillers will use oil free 'turbo core' compressors (magnetic free field bearings) Noise levels will be within site boundary constraints. | | |
| | - | - | Chillers to have variable speed head pressure control with load and efficiency optimized head pressure and chilled water flow temperature control to improve seasonal efficiency will be incorporated. | Ag ed | Typically one manufacturer of Turbo core chillers offers a product that "utilizes EC fan technology" coupled with floating head pressure to enhance part load chiller efficiency. The PLC control system integrates fan speed, head pressure and compressor control to optimize chiller efficiency during periods of low ambient temperature and reduced cooling load." | | |
| | - | - | Full system details and drawings to be provided for specialist areas (Plant required to ensure max feed water temp of 5 to 12 deg C to specialist areas noted in correspondence during CD) | Ag ed<br>Agreed | Chillers selected already have high Co-efficient of Performance<br>Brookfield is currently unclear as what this refers to. System configurations and operating temperatures will be applicable | Stage 2 design development to demonstrate compliance. | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | Reduction in Chiller Plant resilience where (N+1) N=8 is not agreed, provision of additional unit together with associated distribution pipework and controls required to comply with ER's. | | to the application.<br><br>N+1 resilience is provided and includes the absorption unit. All as identified within Brookfield Contractors Proposal Volume 3 Cooling Design Strategy 3.33. | N+1 resilience accepted by the Board | See attached email identifying extent |
| Ventilation | - | - | Typical Isolation Room Supply. All air system heater battery +5°C to 21°C – supply temperature will require to be higher for provision of room heating. | **Agreed** | | | **Agreed** |
| | - | - | Pressure stabiliser to be located in the wall above the bedroom door to the lobby. Currently indicated within ductwork in the ceiling void, no access in this location due to ceiling construction. | **Ag ed** | A review will be undertaken so that jetting draughts through Pressure Stabiliser does not cause discomfort to bedded patient. | | |
| | - | - | Conventional Theatre Supply System Schematic. Air on temp to cooling coil to be +30°C ER's, not 28°C as shown on BE drawing (Also main heater battery within AHU to be rated at +6°C to 35°C). | **Ag ed** | | | |
| | - | - | Typical Ultra Clean Theatre Supply air on temp to cooling coil to be +30°C ER's, not 28°C as shown on BE Drawing (Also main heater battery to be rated at +6°C to 35°C). | **Ag ed** | | | |
| | - | - | Typical Isolation Room Extract Schematic. All air system heater battery +5°C to 21°C – Supply temperature will require to be higher for provision of room heating. | **Ag ed** | | | |
| | | | Typical Conventional Theatre Extract | **Agreed** | | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | - | - | System Schematic Air on temp to cooling coil to be +30°C ER's, not 28°C as shown on BE drawing (Also main heater battery within AHU to be rated at +6°C to 35°C). | | | | |
| | - | - | Typical Ultra Clean Theatre Extract System Schematic Air on temp to cooling coil to be +30°C ER's, not 28°C as shown on BE drawing (Also main heater battery within AHU to be rated at +6°C to 35°C). | Ag ed | | | |
| | | | Ward Air change to be 6AC/HR, currently shown as 2.5AC/HR which is not in compliance with SHTM 03-01. | Ag ed | Brookfield proposal as outlined within the bid submission is to incorporate chilled beams as a low energy solution to control the environment which do not rely on large volumes of treated air or variable natural ventilation. All accommodation is single bedrooms and therefore the need for dilution of airborne microbiological contamination should be reduced (rooms could also be at slightly negative pressure to corridor).<br>Providing 6 air changes is energy intensive and not necessary. | | The proposal is accepted on the basis of 40 litres per second per single (8 litres per second per second) for one patient and four others. |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Hot & Cold Water Services | - | - | Renal Water Schematic to be reviewed by SGH Renal Water Advisory Group and comments incorporated within the scheme. | **Agreed** | | | **Agreed** |
| | - | - | Renal Acid Circulation Schematic to be reviewed by SGH Renal Water Advisory Group | **Ag ed** | | | |
| | - | - | Renal Water System response to Volume<br>2/1 , Appendix M&E 6<br>Renal Water is to be completed and approved by NSGH Renal Water Advisory Group | **Ag ed** | | | |
| | - | - | Concentrate Bulk Delivery to site Strategy is to be completed and approved by NSGH Renal Water Advisory Group | **Ag ed** | | | |
| | - | - | Stainless Steel pipework to be provided as per ER's in lieu of ABS plastic for the larger sizes. | **Ag ed** | 63mm dia and above will use Stainless Steel pipe.<br>50mm dia below will use ABS plastic pipe. | Stainless Steel pipework to be provided for all sizes. | |
| | - | - | 24 Hour water storage to be provided in lieu of 12 hours as proposed and modularity of tanks to be as per the ER's.<br>(if we change to 12 hours, change to 4 tanks) | **Ag ed** | However this requires further discussion since the project has two diverse incoming water supplies and thus Brookfield consider our proposal to be the most economic solution. | Board considering ZBP calculations for 24 hour capacity, dated 08 December 2009 | 700m³ water storage to be provided |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Heating Systems | - | - | 3 no. off flow pipes to be provided between the Energy Centre and the Hospitals capable of passing 50% flow through each, where one fails and the other two can carry the total load. Current proposal is to reduce to 2 no. off pipes each capable of carrying 66% should one fail. | **Not Agreed** | Brookfield proposal is based on capacity for each A and B service rated at 66% each. | Brookfield considering how to provide 100% resilience most efficiently. Proposals to be provided. | Agreed that 3 sets all running at 50% to be provided.<br><br>These are to be design and installed to provide a resilient system, such that a failure/burst in one set will not affect another set, with each set able to be accessed (excavated) for repair or maintenance without affecting or impeding the other sets. In this regard, should a 'single trench' system be proposed, clear separation of sets within separate compartments in the trench to be provided. |
| | - | - | Plate heat exchangers to be fully independent duty/standby including wiring and control panels etc. | **Ag ed** | | | |
| Medical Gases | - | - | Medical gas schematic to be amended to reflect ER requirements together with the BC plant room services layout drawing and design dialogue. | **Agreed** | Medical gas schematic is in compliance with SHTM02.01 | | **Agreed** |
| | - | - | All references to BOC should be Air Products Ltd. | **Ag ed** | | | |
| | - | - | Details of the plant resilience for Medical Air, Oxygen, Vacuum, Surgical Air, Nitrous Oxide and Nitrous Oxide to be in accordance with the ER's. | **Ag ed** | Medical gas is in compliance with SHTM02.01 | Medical Gas resilience also to comply with ER's including for example Board's specific requirement for two VIE installations | |
| Wet Riser Schematic | - | - | Water storage tank capacity to be with local authority. | **Agreed** | | | **Agreed** |
| | - | - | BC drawings to be developed. | **Ag ed** | Part of stage 2 design activities. | | |
| Sprinkler Schematic | - | - | Note on BC drawing states ' Tank by Others ' to be clarified as included. | **Agreed** | | | **Agreed** |
| | - | - | Note on BC drawing states ' Others to | **Agreed** | | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | include tank immersion heater, trace heating, lighting etc. to be clarified as included. | | | | |
| | - | - | Note on BC drawing states Pump House by others to be clarified as included. | Ag ed | | | |
| Energy Centre | - | - | Man access to be provided to the chimney stack to allow full access to flues over its total height as ER's. | Agreed | | | |
| | - | - | Chimney stack enclosure to be provided. | Ag ed | Brookfield proposal includes an open frame structure | | |
| | | | Boiler layout to be configured to simplify flue routes. | Ag ed | Part of Stage 2 detailed design activities if practical. | | |
| | - | - | External oil transfer point to be provided on the wall of the Energy Centre to serve the retained estate. | Ag ed | | | |
| | - | - | Minimum requirement is accessible diverse twin trench solution to be provided in accordance with the ER's to provide required resilience. Pipe material selection will be critical | Ag ed | Part of Stage 2 detailed design activities if practical | Minimum requirement is to provide physical separation of resilient services route, ie separate primary from back-up | This may be achieved by separation within a single trench (see response in relation to Heating Systems, above, for clarity of separation requirement). |
| Plant Replacement Strategy | - | - | Scaffold platform to be capable of supporting the plant weights of the larger items of equipment or other strategy adopted to minimise plant replacement time. | Agreed | Part of Stage 2 detailed design activities | | **Agreed** |
| | - | - | Ground finishes to be capable of taking the scaffolding weight with plant added adjacent to plantrooms. | Ag ed | Part of Stage 2 detailed design activities | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| UPS | - | - | UPS autonomy to be amended in line with the ER's. | **Agreed** | Superseded by agreed RFI log. | Board to review Theatre UPS requirements. | 1 hour in Theatres, 30 minutes elsewhere. **Agreed** |
| Lighting | - | - | Lighting control to be amended inline with ER's. | **Agreed** | Superseded by agreed RFI log. Refer to contractors proposal. | | **Agreed** |
| | - | - | Full luminaire details to be provided including LED's and feature lighting. | **Ag ed** | | | |
| | - | - | Bedside lights to be low energy type. | **Ag ed** | | | |
| | - | - | Feature lighting LED's to be provided inline with the ER's. | **Ag ed** | | | |
| | - | - | BE lighting design strategy to be applied to the Internal Lighting scheme which shall be developed in line ER's to provide full CIBSE compliance. | **Ag ed** | | | |
| | - | - | Lamp colour strategy to be developed in line with HSE & CIBSE guidance | **Ag ed** | | | |
| | - | - | External Lighting scheme to be developed in line ER's with full CIBSE compliance. | **Ag ed** | | | |
| Comms Room Racks | - | - | Reduction in racks is not agreed, ie. 10 indicated by BE in each main Comms Room to be amended inline with the ER's drawing. | **Agreed** | Rack number will be as the ER's | Number of racks to be as ER drawing | **Agreed** |
| | - | - | Comms room cooling strategy to be detailed to minimise energy use. | **Ag ed** | Part of Stage 2 detailed design activities. | | |
| Fire Alarm | - | - | Graphic user interface system details to be provided during detailed design | **Agreed** | Part of Stage 2 detailed design activities. | | **Agreed** |
| | - | - | BE to provide full details of the proposed voice alarm system and | **Ag ed** | Part of Stage 2 detailed design activities. | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | - | - | indicate areas to be covered by conventional sounders<br><br>Atrium protection system details to be provided | Ag ed | Brookfield confirm that a Double knock fire detection only will be provided.<br>Atrium is provided with ETFE roof covering which includes a hot wire system and therefore no other protection systems should be required. | Confirm all systems will be provided to meet the building control and fire engineering solution. | |
| | - | - | Comms room VESDA system details to be provided | Agreed | Part of Stage 2 detailed design activities | | |
| Structured Data Wiring | - | - | Comms room and rack layouts to be provided for early discussion with GG&C Technology to verify equipment space allocation. | Agreed | Part of Stage 2 detailed design activities | | Agreed |
| Metering | - | - | All metering to be provided in accordance with ER's to allow active energy management together with associated BREEAM credits. | Agreed | Metering has been included to CIBSE TM39 with provision for fitting future metering to individual department as required (i.e. stool sections in pipe and a BMS connection point). | BE to provide proposal to meet ER requirement including potential use of portable active monitoring. | BE proposal agreed, supported by identification of areas of metering (see attached) |
| Energy Management | - | - | Energy Management software to be fully compliant with ER's complete with BMS management and interactive link to GG&C system | Agreed | Part of Stage 2 detailed design activities | | Agreed |
| Standby Power | - | - | BE to provide early proposals for system management, CHP and Utility Company interface details to progress agreement of all parties | Agreed | | | Agreed |
| Bio fuels | - | - | BE to advise outcome of their proposed feasibility study and provide | Agreed | Brookfield advised that a further investigation would be | Please provide details of the review in report format for | Post Contract |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | detailed proposals | | made into the use of biogas if supply was made available to Board from the sewage water treatment operator. Biofuel was investigated and found not feas ble. | overview. | |
| Utiliities | - | - | BE to provide design estimates for water, gas and electricity to verify and update Utility company info . | **Agreed** | | | **Agreed** |
| Service reserve capacity<br><br>Electrical Utilities Estimated Loads | -<br><br>- | -<br><br>- | BE to ensure that service reserve capacity is maintained during detailed design<br><br>MVA Requirement varies from ER | **Agreed**<br><br>**Agreed** | | <br><br>Quotation is for 24 MVA and this is acceptable | **Agreed** |
| As fitted drawings, asset register and O&M's | - | - | BE to ensure that all systems shall be linked to the As Fitted drawings via MiCAD drawing mapping, the MiCAD should also integrate with the LMS to provide a fully integrated system complete with interfaces to the PPM and Board's labour resource software systems (Apollo or Eclipse). | **Agreed** | Agreed as detailed in Brookfield Contractors Proposal Vol 3 Completion Strategy 3.24 | Confirm that a full operating system will be provided with all of the requested operational activities and working links | Confirmed that ER requirement will be met. |
| PPM | - | - | BE to provide, as part of the contract, a full PPM manual and system (computer based software package) for all the buildings and for all building and building services elements of the project. This system will incorporate the As Fitted drawings (MiCAD format) and specifications. This schedule shall have a full planned maintenance programme of works that the FM & Estates managers can review to plan and establish their annual maintenance schedules and annual budgets. BE will be responsible for the purchase and installation of the full PPM system, | **Agreed** | Agreed as detailed in Brookfield Contractors Proposal Vol 3 Completion Strategy 3.24 | Confirm that a full operating system will be provided with all of the requested operational activities and working links. | Confirmed that ER requirement will be met. |

**Commented [a1]:** Need confirmation that we can achieve this

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | including pc work stations, barcode readers and tablets. | | | | |
| General Items | - | - | BE drawings will require further development to meet ER requirements. | Agreed | Part of Stage 2 detailed design activities | | Agreed |
| | - | - | V bration and noise solutions to be included on drawings. | Ag ed | Part of Stage 2 detailed design activities | | |
| | - | - | Weather proofing to be in accordance with ER's. | Ag ed | Part of Stage 2 detailed design activities | | |
| | - | - | All plant sound attenuation measures to be shown. | Ag ed | Part of Stage 2 detailed design activities | | |
| | - | - | All plant tagging to be in compliance with ER's. | Ag ed | Part of Stage 2 detailed design activities | | |
| | - | - | Compliance with ER's to be demonstrated for all plant and systems maintainability and area isolation. | Ag ed | Part of Stage 2 detailed design activities which will comply with CDM regulations. | | |
| | - | - | Leak detection to be incompliance with ER's. | Ag ed | | | |
| | - | - | All clinical areas with special emphasis on Operating Theatres, Radiology, MRI and Critical Care to be configured to miminise risk of water damage from plant and equipment. All plantrooms to be treated for mitigation of water leaks in accordance with the ER's. | Ag ed | | | |
| | - | - | Environmental proving of all rooms to be provided in accordance with the ER's. Samples and reliance on BMS only for test results is not acceptable. | Ag ed | Part of commissioning and handover | | |
| | - | - | All services elements to be included to | Agreed | | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | meet the buildings Fire Engineering solution, eg. Stair Pressurisation, Smoke Control etc. all in accordance with the ER's and to the requirements of building Control. | | | | |
| | - | - | Dual path distribution resilience to be provided for all services in accordance with the ER's. | Ag ed | For agreed extent of dual paths for electrical services refer to RFI log. (RFIs 031 & 068). | Not agreed. Heating, Chilled water, controls and BMS must have dual path distribution resilience. All piped services including CWS & HWS must be configured to ensure minimum disturbance to services. Refer to paragraphs in section 8.1.3 and 8.1.5 etc. | Agreed that dual path distr bution relates to electricity and all water systems (e.g. distribution, heating, chillers) |
| | - | - | BMS IP network to be fully stand alone with all active equipment will be included.<br>BMS to be fully compliant with ER appendix M&E5. | Ag ed | | | |
| | - | - | All Mechanical, Electrical, Public Health and Specialist System plant to be designed and installed in modular arrangements incorporating plant N+1 redundancy to minimize disruption during planned maintenance in accordance with the ER's. | Ag ed | Not possible in all cases to do this. (S)HTMs in some cases will not allow for example: HWS systems. | Not accepted. All plant to be N+1.<br>In respect of the specific item the BE bid has 2+1 service units for the HWS which is acceptable | Generally all plant will come N+1. On HWS we proposed that an extra pump be provided for quick change if required |
| | - | - | BE to provide detailed backup to justify plant selection e.g.<br>Capital Costs<br>Lifecycle & Maintenance Costs<br>Additional Electrical etc loadings<br>Projected Energy costs etc | Ag ed | Part of Stage 2 detailed design activities | | |
| | - | - | BE shall develop the sustainability brief in conjunction with the Local Authority to ensure compliance with: | Ag ed | As detailed in contractors proposal and Part of Stage 2 detailed design activities | | |

**This document is the RFI Log**

| Ref | Information Requested | Add | No Change / Info | Board Comment 1 | Status | Brookfield Comment | Board Comment 2 | Brookfield Comment 2 | Agreed Position |
|---|---|---|---|---|---|---|---|---|---|
| 001 | Drawings to be uploaded in dwg format<br><br>**RESPONSE: THESE HAVE BEEN UPLOADED** | - | Info | Drawings addressed under the Drawing Log to be issued to Brookfield under separate cover. | Agreed | Brookfield Drawings to be included as Works Information 2 should take precedence over Works Information 1 (Employer Requirements) in the event of conflict. | Exceptions to be highlighted by the Board (i.e. out put CD1 drawings that require to remain, to be met by the developed BE CD2 drawing). | **Agreed that BIW log to be amended as relevant to replace Board drawings with Brookfield drawings. Refer BIW Log. | The Contractor drawing list is agreed and has been inserted into the contract: this can be located in the Contents Page of Volume 2 of the Contractors Proposals in Contract Data Part 1.<br><br>The Board M&E drawings that remain which remain as the output requirement of the Board, and require to be met by the Contractor design, are contained in the Employer's Requirements.<br><br>It is confirmed that the items agreed in the M&E Clarifications Log take precedence over the M&E drawings where relevant.<br><br>The Contractor is required to present their design proposals (drawings and narrative) through the design development (Stage 2) process for review by the Board, with such development by the Contractor to demonstrate achievement by the design of the above mentioned output requirement(s) of the Board through the iterative process of the developing design. |
| 002 | **Bedrooms – Clinical Risk Category.** Page 184 of the ERs states that wards are to be classed as Clinical Risk Category 3. Page 27 of Appendix M&E3 lists bedrooms as IEE GN7 Group 1, which would normally be viewed as Clinical Risk Category 4. We believe that the latter statement is correct.<br><br>**RESPONSE: IEE GN7 GROUP 1 TAKES PRECEDENCE** | - | NC | Information is included in ERs and therefore need not be added. | Agreed | BCL offer based on Wards being Clinical Risk Category 4 which we do not believe is reflected within ER`s. | It is agreed that wards are clinical risk 4 as SHTM | Agreed | |
| 003 | **Crash Call** The ERs refer to "crash" call. Is this "staff to staff" call or an additional layer of call?<br><br>i.e.:<br><br>Patient to Staff /<br>staff to staff /<br>and Crash call<br><br>or | Y | - | Statement that Crash Call is staff to staff with automatic paging to time scheduled list to be included ERs for clarity. | Agreed | * Subject to confirmation that as per Board intention the ER`s are updated such that this is clearly defined in the Works Information 1 (Employer Requirements). | This document to be included as an addendum to Works Information Part 1. The ER's will not be updated (track changed) rather the RFI log, BIW log etc sit as addendum to ERs. | **Noted but then there will be a discrepancy between the actual original ER`s and the subsequent addendum documents. In this situation how would the Board address this discrepancy? | Agreed that addendum Logs take precedence over original ERs where a discrepancy occurs. |

| Ref | Information Requested | Add | No Change / Info | Board Comment 1 | Status | Brookfield Comment | Board Comment 2 | Brookfield Comment 2 | Agreed Position |
|---|---|---|---|---|---|---|---|---|---|
| | Patient to Staff /<br>and Staff to Staff (aka Crash).<br><br>**RESPONSE: CRASH CALL IS STAFF TO STAFF WITH AUTOMATIC PAGING TO TIME SCHEDULED LIST** | | | | | | | | |
| 004 | HTM06-01 states that electrical loads in hospitals are growing by 3% to 6% per year. At 6% growth the spare capacity would be used within 5 years, at 3% within 9 years.<br><br>Based on current experience at SGH, does the Board have a view on whether the allowance of 25% for future growth is adequate?<br><br>**RESPONSE: THE 25% IS OVER THE COMPLETE FOOTPRINT, THIS IS IN LINE WITH THE FINANCIAL MODEL** | Y | - | Statement that 25% is over the complete footprint to be included in ERs for clarity. | Agreed | * Subject to confirmation that as per Board intention the ER`s are updated such that this is clearly defined in the Works Information 1 (Employer Requirements). | See response to Item 003, above. | Agreed | See agreed position in relation to Item 003, above. |
| 005 | HTM 06-01 states that it is preferable for large healthcare premises that dual public electrical supplies should be provided from diverse sources originating from separate distribution network operator substations and fed from different parts of the National Grid with independent cable routes to and across the site to the main substation.<br><br>Can you advise if the negotiations carried out to date with the Utilities have indicated the extent to which this would be possible?<br><br>**RESPONSE: ONGOING NEGOTIATIONS INCLUDE THE PROVISION OF A TERTIARY 11KV CONNECTION (THIS WILL BE PRESENTED AT THE BREAKER IDENTIFIED FOR THE TEMPORARILY LAB SUPPLY)** | - | NC | Compliance with the HTM (now SHTM) requirement is included in the ERs and is to be met by the Contractor – the specific issue requires to be addressed by the Contractor (with support by the Board) as an aspect of the 33kV discussions and agreement with the utility provider. | Agreed | *Contractor, in discussion with Scottish Power, will endeavour to satisfy this requirement subject to availability of diverse sources from the grid. | No further action | **As discussed at the utilities meeting held on 2nd Dec 09 Brookfield understand that the Board accept that dual supplies from the grid may not be available. | The Board accept twin supplies from the Govan Road grid connection point. |
| 006 | **High Voltage Generators.**<br>We note from drawing G1274E/(60)01 that Low Voltage generators are proposed each with a step up transformer for site ring connection. Would there be any objection, in principle, to High Voltage generators? We note that the CHP is shown as an HV unit.<br><br>**RESPONSE: THIS CONCEPT HAS BEEN INDICATED TO ALLOW THE USE OF EASY TO OBTAIN 400V HIRE SETS TO COVER MACHINE OUTAGES. ANY SOLUTION MUST INCLUDE THE USE OF EASY TO OBTAIN 400V HIRE SETS TO COVER MACHINE OUTAGES** | Y | - | The statement that any design solution must include the provision for use of easy to obtain 400V hire sets to cover machine outages to be included in ERs for clarity. | Agreed | * Subject to confirmation that as per Board intention the ER`s are updated such that this is clearly defined in the Works Information 1 (Employer Requirements). | See response to Item 003, above. | **Refer to Brookfield response to 003 above | See agreed position in relation to Item 003, above |
| 007 | The ERs, page 143, require the services to be configured to ensure that isolation can be achieved in each room without taking other rooms out of use. As written this requirement could be taken to mean that, for example, each electrical circuit must serve no more than one room, which we are sure is not intended. We seek further guidance on the intention of this clause.<br><br>**RESPONSE: A ROOM MAY BE "IN USE" AS LONG AS A PROPORTION (SAY 50%) OF THE OUTLETS ARE RETAINED AVAILABLE DURING MAINTENANCE OF A FINAL CIRCUIT OR LOCAL DB** | Y | - | The statement that a room may be "in use" as long as a proportion (50%) of the outlets are retained available during maintenance of a final circuit or local DB to be included in the ERs for clarity. | Agreed | * Subject to confirmation that as per Board intention the ER`s are updated such that this is clearly defined in the Works Information 1 (Employer Requirements). | See response to Item 003, above. | **Refer to Brookfield response to 003 above | See agreed position in relation to Item 003, above |

<table>
<tr><th>Ref</th><th>Information Requested</th><th>Add</th><th>No Change / Info</th><th>Board Comment 1</th><th>Status</th><th>Brookfield Comment</th><th>Board Comment 2</th><th>Brookfield Comment 2</th><th>Agreed Position</th></tr>
<tr><td>008</td><td><u>Standby Lighting</u><br>We seek clarification of Appendix M&E3, page 27, clause 3.5, Standby Lighting.<br><br>The ERs appear to require Grade A standby lighting to be UPS supported. We believe that this is not always necessary and that compliance with applicable standards can be achieved in a more cost effective manner.<br><br>Standby lighting grades signify the percentage of normal lighting to be maintained on mains failure. The grade of standby lighting required is not related to the permitted duration of interruption to the power supply.<br><br>For example, CIBSE LG2 requires bedrooms to be provided with Grade A standby lighting. Bedrooms are classed as group 1 by IEE GN7 and MEIGaN which implies that they would fall into Clinical Risk Category 4. The table below which is based on Appendix 1 of HTM 06-01 (we do not believe that SHTM 06-01 has been published yet) would indicate that this type of room would normally require the interruption to general lighting to be not more than 15 seconds. Thus it would not be usual to support all lighting to all bedrooms by UPS.<br><br><table><tr><th>Clinical risk category</th><th>IEE GN7 /MEIGaN group</th><th>Standby Grade / % provision</th><th>Interruption to general lighting</th><th>Interruption to fixed medical lighting and escape lighting</th></tr><tr><td>3</td><td>0</td><td>B / 30-50%</td><td><15s to 3hours></td><td><0.5s</td></tr><tr><td>4</td><td>1</td><td>A / 95%+</td><td><15s</td><td><0.5s</td></tr><tr><td>5</td><td>2</td><td>A / 95%+</td><td><15s</td><td><0.5s</td></tr></table><br>The above implies that only ‘fixed medical lighting and escape lighting’ is required to be supported by battery or UPS. This is often interpreted to include the lighting around an operating table.<br><br>We appreciate that there may be special circumstances and therefore would welcome to opportunity to discuss this further at a workshop with the Board to arrive at a solution acceptable to the Board.<br><br>RESPONSE: PLEASE ADD TO SUB-GROUP AGENDA AT NEXT DESIGN DIALOGUE SESSION IF REQUIRED</td><td>-</td><td>NC</td><td>Overall treatment of lighting on Board ‘Watchlist’ for development and compliance to be demonstrated by the Contractor.</td><td>Agreed</td><td>Brookfield design will be compliant with SHTM06-01, CIBSE LG2, IEE GN7 and MEIGaN. Brookfield design proposal does not include for UPS support to all Grade A lighting as a blanket provision, as the grade of standby lighting is unrelated to the permitted duration of interruption to the power supply.</td><td>This can only be accepted if BE guarantee that the lights will be reinstated (by the generators) within 15 seconds. This will be challenging and will require full load management<br><br>OR<br><br>Provide inverter cover to grade A lighting with for example 5 minute battery autonomy.</td><td>**Load estimate of lighting is such that 1 generator on “A” side and one on “B” side will accept the lighting load within 15 seconds. Generators will be selected and configured and controlled to achieve this. The remainder of the load will be supported when remaining generators are synchronised</td><td>Brookfield to demonstrate via Design Development (Reviewable Design Data) that this can be achieved.<br><br>Should this not be the case (i.e. cannot demonstrate) Brookfield to revert to and include inverters at no additional cost to the Board.</td></tr>
<tr><td>009</td><td><u>Treatment Room Lighting</u><br><br>P186 of the ERs implies that luminaires in Treatment Rooms are to be fed from 2 circuits – does this mean 2 circuits to each luminaire? We request guidance on the reason for this.<br><br>RESPONSE: SINGLE SUPPLY TO LUMINARIES. LUMINAIRES TO BE SPLIT EVENLY OVER TWO CIRCUITS FROM ALTERNATIVE DISTRIBUTION BOARDS.</td><td>-</td><td>NC</td><td>ERs address this item.</td><td>Agreed</td><td>BCL bid submission Volume 4 section 4.35 provides for LV distribution split between two distribution boards.</td><td>Light fittings shall be on one circuit generally. Patient treatment areas, where procedures will take place, to have minimum of two lighting circuits.</td><td>Agreed</td><td>Light fittings shall be on one circuit generally. Patient treatment areas, where procedures will take place, to have minimum of two lighting circuits.</td></tr>
<tr><td>010</td><td>Could you please provide the final version of the Geo-Environmental Report as the current version is in draft form only.</td><td>-</td><td>Info</td><td>This information was issued to bidders for background/informati</td><td>Agreed</td><td>Please note that we have not received the final SI report. Brookfield</td><td>BE to check records as disc was uplifted from the offices of Currie & Brown</td><td>Still checking!!Memory loss at BE</td><td>Copy of SI Report provided to Brookfield at meeting of 08 December 2009.</td></tr>

# This Document is the Clarification Log

| Item | Topic/Bid Reference | Board Clarification | Bidder Response | ADD | NO CHANGE / INFO | BOARD COMMENT |
|---|---|---|---|---|---|---|
| Technical Clarification 1 | | | | | | |
| **General** | | | | | | |
| 0.0 | | | | | | |
| **Logistics** | | | | | | |
| 1.0 | Site Parking | You have options but no firm plans for site parking, please confirm that the provision for site parking (incl any delivery area/holding area/lay-down areas off site) for all phases are included in your priced bid. | Brookfield have considered a number of options with regards to temporary parking/holding areas etc during the construction period and should we be selected would wish to discuss with the Board and other interested parties these arrangements to develop a strategy for the benefit of the Project. In the meantime, we confirm our prelims identify pricing allowances for the relevant Stages and refer you to the logistics section. In addition, our procurement strategy with regards the supply chain will include for the provision of temp parking spaces and this will be identified in the cost when packages are let accordingly. I.e. the amounts in the Prelims will be supplemented by amounts in the trade cost plan. We also recognise that using local labour will enable us to encourage the use of public transport to mitigate the requirement for extensive on site/off site temporary parking. Finally whilst we identified on the risk register temporary parking as being an issue to resolve, we felt a combination of the above will be sufficient to deal temporary parking and this reduced the risk element to acceptable. | | NC | Brookfield have identified options for car parking as well as the associated cost allowance (£220,000). A decision on which option will be taken up to be made post-contract |
| 2.0 | Delivery Team | Several of your proposed delivery team appear to have commitments to another healthcare scheme (i.e. Peterborough). Please confirm how your delivery team will be deployed in line with the NSGH timescales and your programme requirements. | We reaffirm our commitment that the proposed delivery team will be deployed in accordance with the NSGH timescales and our programme requirements. Taking each stage:<br><br>- Labs Construction Team:<br>The individuals noted are available now, and no longer have commitments on Peterborough.<br><br>- FBC/Core team:<br>The individuals are available now, and have already been working on the NSGH project.<br><br>- Adult/Children's Team:<br>The individuals identified will be available before November 2010. At Peterborough, the Mental Health Unit and City Care Centre have already been completed on programme and handed over to the Trust earlier this year. This has released some of the individuals who have since being involved in the bid submission. The main Acute facility is 3 months ahead of programme and notice will be given shortly to confirm the end of September 2010 date for handover. Many departments are being closed off progressively (as some of the Board's team will have witnessed during the recent site visit). By the end of 2009, the Acute facility will be into testing and commissioning phase and we are confident that a September 2010 completion is likely and the individuals will be available as scheduled. | | NC | |
| **Design/HP** | | | | | | |
| 3.0 | Entrances | Confirm your proposals for significant entrances to the site per ER requirement in this regard. | The NSGH campus masterplan has been configured to provide clear entrances which lead directly to the primary arrival space at the heart of the campus. Entrances have been designed in plan form to provide the | | NC | |

Formatted Table

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | necessary function and capacity to respond to highway requirements associated with the various modes of transport. Significant entrances are to be delivered as features within the context of both the wayfinding and public art strategies. The entrances are important as part of the legibility and identity of the rejuvenated hospital campus. To achieve this it will be necessary for the design team to work with the Board to determine the correct balance between an innovative and unique site-specific response (informed by public art) and the guidance for standardised signage contained within the NHS Scotland guidance for signage and branding for use within NHS sites (which we have reviewed). For this reason our designs have not been developed beyond the concept stage in advance of Stage 2 engagement. The attached concept images illustrate the general potential for an entrance feature sign at the primary Govan Road entrance to<br>the site, but should not be considered a firm design proposal at this point. We can confirm that the commercial proposal includes provision for this approach.<br><br>Our drawing GIL-WS-00-PL-502 illustrates the signage hierarchy and proposed locations for the various sign types. This includes the proposed location of campus gateway signage features at the key entrances to the campus. It is intended that the main entrances should include feature lighting as part of the significant entrance features. It should be noted that the entrances need to be considered in parallel with the design and quality of the main arrival square, as this forms an important part of the entrance and arrival sequence and experience. The point of entrance and the route to the arrival square should therefore be considered as part of the entrance arrangement. | | | |
| 4.0 | Specification | Confirm your proposals for electronic information points per ER requirement (7.15.4) in this regard. | In response to the ER requirement (7.15.4) we have made provision for 1x ‘Real Time Public Transport System’ electronic Information Point externally at the Bus Drop-Off Area.<br><br>Additionally, in response to ER requirement (7.2.19), as part of our Wayfinding Strategy we have proposed electronic/interactive ‘You Are Here’ maps in the Main Entrance Foyers to both the Adult and Children’s Hospitals.<br><br>Please refer to our Wayfinding Strategy contained within **Volume 3.0; Section 3.2** for further details of our proposals and imagery. | | info | |
| 5.0 | Interstitial Blinds | Confirm your strategy for interstitial blinds to external windows/façade and internal observation screens (this to include a cross-section detail of your proposal(s)). | Interstitial Blinds have been included in our priced bid to **internal** glazed screens generally to all Bedrooms, including those within Critical Care (Adult Hospital and Children’s PICU), AAU and all Inpatient Wards (Adult and Children’s Hospitals).<br>In addition, interstitial blinds have been included to internal door vision panels as part of our Internal Door detailed proposals. Our Internal Door Strategy is contained within the Introduction to<br>Volume 2.0; Section 2.21<br>- Door & Ironmongery Schedules. Where a door is noted in the Schedule as being<br>‘obscurable’<br>, this equates to a vistamatic type vision panel with interstitial<br>blinds.<br><br>Please note that our priced bid does not currently have a provision for internal blinds or curtains which are not integral to the internal fabric of | Y | | Interstitial blinds are included for all external windows. |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | the building. In our past experience these items would be included in the Equipment List. We have priced this List accordingly as requested by the Board, and would be pleased to debate with the Board further whether these items should be included within the Equipment List.<br><br>With respect to **external** windows, we have included for interstitial blinds to all external windows in patient areas within Critical Care (Adult Hospital and Children's PICU).<br><br>Again, please note that our priced bid does not currently have a provision for internal blinds or curtains which are not integral to the internal fabric of the building.<br><br>Please refer our separate attachments for the requested detailed section drawings, our Internal Glazed Screen Strategy Document and External Windows Privacy Strategy Document. | | | |
| **M&E Services** | | | | | | |
| 6.0 | | | | | | |
| **Renewables/Sustainability/BREEAM** | | | | | | |
| 7.0 | Carbon | You noted at the presentation of 21 September you're your variant 2 for Laboratories will achieve the 80Kg CO2m2 – can you confirm that your compliant bid achieves this target also. | Achieving the 80kg CO2 m2 for both the compliant and Variant Option 1 Laboratory bid will be dependant on the construction of the Energy Centre, with which the overall solution is integrated. **RFI 144** refers and is attached for ease of reference.<br><br>As noted in **RFI 147** (attached) the Energy Centre is dependant on FBC and commencement of Stage 3.<br><br>Variant Option 2 offers an integrated M&E plant solution and the early construction of the Energy Centre shell and core to house it. This may be achieved through an advanced design and planning process and cash flow solution indicated in Volume 16 of our bid submission. | | info | Note that stand alone Labs does not achieve 80kg $CO_2/m^2$ |
| 8.0 | BREEAM | Clarify BREEAM Ene 1 score – 8 and 11 referred to in different sections. | Please note the correct score is 8 and we apologise for the confusion. | | info | |
| 9.0 | Renewables | Confirm which LZC and renewables are included in the bid. | LZC –<br>3MW Combined Heat and Power units.<br>High efficient friction less bearing chillers providing COP 9.<br>1000kW Absorption chiller unit.<br>Active chilled beams.<br>Variable speed pumps.<br>Natural daylighting.<br>Natural ventilation.<br><br>Renewables.<br>12no Vertical axis wind turbines. | Y | | |
| 10.0 | Energy Model | Confirm that the energy model is fully compatible with the servicing strategies set out in volume 3 in particular the use of a sealed building with chilled beams. | Brookfield confirm the energy model is fully compatible with the requirements as set out in Volume 3 in particular the use of sealed building with chilled beams. | Y | Info | Refer to Sustainability and Energy Issues |
| 11.0 | Energy Monitoring | Confirm that the energy monitoring system illustrated is included in the bid. | Brookfield confirm the energy monitoring system is included in the bid. | | Info | Refer to M&E Clarification Log in Contract Data Part 1for confirmation of position on building metering |
| 12.0 | Energy Management | Has active energy management been included for by BE post construction as per clarification? | Brookfield confirm we will provide active monitoring, reporting and fine tuning during the 24 months DLP period. Please refer to our Volume 3 Sec 3.24 Item 1 Building Services Commissioning Strategy, Post Occupancy DLP Period for further information. | Y | | |

| Technical Clarification 2 | | | | | | |
| **General** | | | | | | |
| 1.0 | Bid Return Section 5 – Component / Product & Manufacturer Schedule | Noted that M&E related items do not appear in Section 5.<br><br>Clarification required of M&E component/product and manufacturers as well as (for all elements) that listed names will be utilised or "equal and approved" component/product manufacturers. | Full component schedule is as detailed in ***Appendix Q1*** attached<br><br>This indicates the quality of manufacturers proposed for components / products | | | Component manufacturer Schedule<br><br>Agreed Schedule Included in Volume 5 of the Contractor's Proposals contained in Contract Data Part 1. |
| 2.0 | Bid Return Section 7 – SHTM Compliance | **Mandatory Section –** clarification is required with regard to the following items:<br><br>**SHTM85 and SHTM86 –** these are relevant as the design joins the existing hospitals, what are the proposals to comply in this regard.<br><br>**Health and Safety Action Notices (HSANs) –** require to confirm will comply with rather than "with reference to".<br><br>**NHSE10 and SN(01)01 –** confirmation that anti-ligature is included in A&E as well as DFCP.<br><br>**NHSE HN04 –** confirmation that anti-ligature is included in A&E as well as DFCP.<br><br>**SFPN3 –** clarification required of how compliance with updated document will be achieved/documented.<br><br>**SHTM2010 –** confirmation required that design will comply with rather than "with reference to".<br><br>**SHTM2003 –** notes that the services follow the principles set down in the HTM – clarification of compliance with the SHTM required (and specifically compliance with the services dimensions to be provided).<br><br>**SHTM2024 Part 4 –** confirmation required that original maintenance provisions are included and priced in the bid. | Full clarifications have been provided in the attached ***Q2 Appendix*** | | | Compliance to be as per tables in Volume 7 of the Contractor's Proposals contained in Contract Data Part 1. |
| 3.0 | Bid Return Section 7 – SHTM Compliance | Where no specific options have been listed in your bid return (ref ERs 5.2.3) clarify that all options remain available to the Board with no additional costs to the Board. | We have endeavoured in our bid submission to confirm in detail the basis of our design, specifications and cost plan. To avoid uncertainty these proposals need to take priority over the various options given in the various documents scheduled in tables 2 and 3 of the ER's.<br><br>We are however conscious that within the various documents there are options that the Board may feel would enhance the scheme and assist in producing an exemplar facility. We are more than happy to review any options with the Board, within the confines of the cost plan, to ensure that the optimum solution is adopted across the project" | | | Compliance to be as tables in Volume 7 of the Contractor's Proposals contained in Contract Data Part 1. |
| **Logistics** | | | | | | |
| - | - | No items in this TC. | | | | |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| **Design/HP** | | | | | | |
| 4.0 | H+S Landscape | Courtyards – clarify what is intended by white gravel? | The white gravel is a aesthetic material used in geographical arrangements producing dramatic patterned landscapes when viewed from above. This material can be laid loose or bound to correspond to the courtyards function. Please refer to drawings GIL-WS-00-EF-S04 Courtyard Design Intent. ***See Appendix Q4-7 attached*** | Y | | |
| 5.0 | H+S Landscape | Aside from the separately identified therapy courtyards is there any access or intended function for the remaining courtyards indicated? | The other courtyards have the potential to be accessed depending on the adjacent hospital departments, to be developed further with the board. Please refer to drawings GIL-WS-00-EF-S04 Courtyard Design Intent<br>***See Appendix Q4-7 attached*** | Y | | |
| 6.0 | H+S Landscape | External Works Layout Dwg No. CD-WS-00-PL-711-01 indicates concrete blocks to the front of the hospital. The masterplan Dwg No. GIL-WS-00-PL-100 indicates exposed aggregate concrete paving. The Outline Specification for roads, car parks, pavements and cycle paths suggests paving in these areas will be natural stone granite. Can we clarify actual proposals for these areas? | The palette of materials has been selected to provide a cost effective high quality environment. Natural granite is proposed to the entrance thresholds with concrete pavers with exposed granite aggregate proposed to the arrival square. Please refer to drawings GIL-WS-00-EF-S05 Arrival Square Pavement Design intent<br>***See Appendix Q4-7 attached*** | Y | | |
| 7.0 | H+S Landscape | The drawings indicate a limited number of bike shelter locations (2No.)? Is this correct or are other bike shelter locations intended? | The two cycle shelters shown on the master plan are key structural features place near the main entrances, other cycle stands are located throughout the site in key location. Please refer to drawings GIL-WS-00-EF-S06 Cycle Parking Strategy and GIL-WS-00-PL-115 Vehicle Movements- Cycles<br>***See Appendix Q4-7 attached*** | Y | | |
| **M&E Services** | | | | | | |
| 8.0 | M&E Services | Please indicate any deviations from M&E elements of the ER's. | The following deviations are proposed:<br>• UPS autonomies proposed are compliant with SHTM 06-01 and differ in some respects from the ERs. | | | Refer to the RFI Log in Contract Data Part 1 |
| | | | • The proposals for automatic lighting controls as described in Volume 3 Section 3.12 and Volume 4 Section 4.3.6 differs in some respect from the ERs. | | | Refer to the RFI Log in Contract Data Part 1 |
| | | | • A single energy centre is proposed split into two plant spaces with 4 hour fire separation to provide the resilience of two separate energy centres. | Y | | Agreed |
| | | | • N+1 has not been provided to all plant as noted in Volume 2/1 Clause 8.1.1.17. N+1 has been included to all energy source plant, pumps, heat exchangers and duplicate motors provided on air handling plant. | | | Refer to the M&E Clarification Log in Contract Data Part 1. |
| | | | • Dual path distribution has not been provided on all systems as this would be impractical for piped systems and specialist electrical systems, e.g fire alarms. Supplies from the energy centre have an element of duplication for resilience and electrical power distribution has A & B separation throughout using diverse routes wherever possible. | | | Refer to the M&E Clarification Log in Contract Data Part 1. |
| | | | • Bulk water storage has been based on the busiest 12 hour period rather than 24 hour as suggested in volume 2/1 clause 8.2.8.2. It is considered that with duplicate incoming water mains to the site a reduced water storage capacity will reduce the risk of legionella. | | | Refer to the M&E Clarification Log in Contract Data Part 1. |
| 9.0 | M&E Services | Please confirm that racks will be provided for Client's active equipment. | The following allowances have been made:-10 racks in each of the adult's and the children's hospital main comms rooms, and<br>2 racks in each hub room | | | Deviation from ER's not accepted<br><br>The ER's requirement noted below, is agreed as included and to be provided by the Contractor<br><br>C1-C6 External comms<br>S1-S10 Board servers<br>E1-E8 General board equipment. |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | | | | B1-B6 contractors equipment including patching BMS CCTV raid etc.<br>3 racks in each hub room |
| 10.0 | M&E Services | Please confirm that BMS IP network will be fully stand alone and that all active equipment has been included. | Yes | | NC | |
| 11.0 | M&E Services | Please confirm that asset tagging system has been included and that all services equipment shall be tagged. | Included | | NC | |
| 12.0 | M&E Services | What function does scaffolding platform have in plant replacement strategy for transformers and generators. | The scaffolding platform allows a level surface for the equipment to be withdrawn from the plant space and craned off to ground level | | info | Plant replacement strategy for large items requires to be further developed in Stage 2 |
| 13.0 | M&E Services | Confirm that reference to BOC should be "Air Products". | Yes | | info | |
| 14.0 | M&E Services | Please provide luminaire details to supplement pictorial views | Refer to separate document outlining details<br>***See Appendix Q14 attached*** | Y | | |
| 15.0 | M&E Services | Please confirm light switches will be selected to suit lighting control system. | Yes | | NC | |
| 16.0 | M&E Services | Please confirm that bedside adjustable luminaires will be a modern low energy high output units. | Yes | | NC | |
| 17.0 | M&E Services | Please confirm fire alarm PC includes incident location graphics. | Included | | NC | |
| 18.0 | M&E Services | Please confirm that 4 CHP units have been proposed as the narrative (schedule indicates 3). | Three CHP units are proposed | | info | |
| 19.0 | M&E Services | Television outlets on equipment schedule (are these back up for the CAT6A for digital distribution via the patient entertainment system? | YES, This allows flexibility and future proofing | | info | |
| 20.0 | M&E Services | Please provide details on the proposed patient entertainment systems. | Refer to supplementary schematic MER-XX-XX-SM-1400-001 outlining details<br>***See Appendix Q20 attached*** | Y | | |
| 21.0 | M&E Services | Please advise how Renal & Specialist Departments water temperature requirements will be achieved. | This system will interact with the BMS which monitors the temperature and, if required, dumps RO water from the circulating loop to maintain optimum temperature conditions. A heat sanitise cycle is also allowed for. | Y | | |
| 22.0 | M&E Services | Confirm reference to 5A Switches equipment schedule should be 20A. | Confirmed | | NC | |
| 23.0 | M&E Services | Please confirm that metering will be provided to meet BREEAM requirements. | Yes | | NC | |
| 24.0 | M&E Services | Please advise proposals for water spillage protection from fan coils in secondary comms room. | Drip drays and leak detection | Y | | Positioning of leak detection to be included in design development<br><br>See Item 34 Appendix B |
| 25.0 | M&E Services | Please confirm compliance with maintainability and area isolation requirements. | Maintainability and area isolation will be incorporated in the design to give compliance. Individual rooms will have isolation of components such as sanitary ware and terminal heating/cooling devices. It will not be possible to isolate each individual room for lighting and power. It will be possible to isolate each individual circuit, and with each room having at least two circuits the room will continue to function | | | Design to achieve ER's including 8.1.5.2 (c) and 8.1.5.4. |
| 26.0 | M&E Services | Please confirm that the renal Central Concentrate Delivery system is included (adult hospital). | Yes | | Info | |
| 27.0 | M&E Services | Please confirm that all services comply with HAI – SCRIBE. | The Services Engineer will be part of the overall SCRIBE team along with the Board's Infection Control Manager, Clinical Advisers, Facilities Manager, and | | info | |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | Departmental Representatives, plus the other members of the design team and other relevant specialists. The Services Engineer will discharge the duties as set out in HAI-SCRIBE Implementation Strategy | | | |
| 28.0 | M&E Services | Please confirm that all plant and equipment will be suitably isolated to prevent transmission of noise and vibration. | Yes | | info | |
| 29.0 | M&E Services | Please confirm that full environmental proving off all rooms will be provided. | Yes | | Info | |
| 30.0 | M&E Services | Please confirm that all metering requirements will be provided in accordance with the ER's and BREEAM requirements. | Yes | | NC | |
| 31.0 | M&E Services | Please confirm that all services elements are included to meet the fire engineering solution, e.g. stair pressurisation, smoke control etc. | Yes | | Info | |
| 32.0 | M&E Services | Please confirm that ICT cooling has been included and provide details. | Yes, this is achieved with a chilled water solution, via crac units and fan coil units, as appropriate. | | Info | |
| 33.0 | M&E Services | Please confirm that specialist drainage has been included. | Included | | Info | |
| 34.0 | M&E Services | Please confirm that leak detection has been included. | Included | | Info | |
| 35.0 | M&E Services | Please indicate percentage capacity of all water service pipework mains from the energy centre to the main buildings for resilience. | The A and B circuits are sized for 66% of the maximum operational load. The A & B circuits from the energy centre are primary circuits and totally isolated from the secondary plantroom circuits via the plate heat exchanger units. It is envisaged that any routine maintenance | Y | | Refer to the M&E Clarification Log in Contract Data Part 1. |
| **Renewables/Sustainability/BREEAM** | | | | | | |
| - | - | No items in this TC. | | | | |
| **Laboratories** | | | | | | |
| 36.0 | Laboratories | The Values on Labs Summary Page for Overhead and Profit do not correspond with % values provided on Stage 1 or Incoming Utility Costs Associated with Stage 1. | This is Correct. The figures are calculated by adding 6.2% plus an apportioned value for overhead recovery. | | | All responses will be addressed in Stage D to Stage E alignment |
| 37.0 | Laboratories | On Labs Final Summary Page (Page 4 of Submission) £281,552.00 in included for Additional Fee and Profit on Max Cost. If you apply the %'s from elsewhere on the page this value would be approx £43K less? | Unlike the way the Board have asked us to submit the MPTC Calculator Brookfield methodology for calculating Overhead and Profit is by taking this amount against Prime Cost excluding Fees which actually means that in the case of the Laboratory Building the gross margin on Prime Cost is circa 7.5% and thus provides the number given. | | | |
| 38.0 | Laboratories | Can you confirm extent of tunnels included within Stage 1 Section | The bid is based upon the URS and BMJ drawings issued under addendum 34. The basement and tunnels are reduced for the variant option and are as detailed within our Volume 13 of the bid. The extent of tunnels are as per the BMJ demarcation lines identified on the above BMJ drawings | | | Brookfield require the route of the tunnels to be reviewed to ensure that the Labs building and the Adult and Childrens Hospital align. There is currently a mismatch in propose routes that needs to be resolved |
| 39.0 | Laboratories | No evidence of anything noted as "Provisional". Please confirm or provide detail of items to be considered as Provisional. The Bills make reference to "general assumptions". Please confirm that they are not to be considered provisional. | There are no provisional items within the cost plan | | | |
| 40.0 | Laboratories | Substructure: Please confirm what exactly the £100k allowance is for fire escape and stairs includes for. | Fire strategy requirements dictate that an escape tunnel and stair will be required from the basement tunnel that is not currently indicated by BMJ or URS drawings. Cost allowance included is based on similar staircase and concrete enclosure to | | | |

| | | | | | | |
|---|---|---|---|---|---|---|
| 49.0 | Laboratories | M&E Lifts: Current drawings show 4 Nr FF Lifts, 4 Nr Goods Lifts, 3 Nr Passenger Lifts and 1 Nr Mortuary Lifts. This does not correspond with your bid. Please advise. | Drawings show 16nr lifts which we have priced. | | | |
| 50.0 | Laboratories | Siteworks: Imported fill for backfilling. Is there no potential to re-use excavated materials ? | Option to re-use excavated material is limited and will require extensive double handling and logistical issues retaining a clean site. | | | |
| 51.0 | Laboratories | Siteworks: No inclusion of barrier system to service yard. Please advise. | Included in bid | | | |
| 52.0 | Laboratories | Ext Services: £5k allowed for main water distribution. Seems low | The allowance is for the final connection between a valved connection on the site water mains and the laboratory building boundary.<br>Site water mains and pipe work within the building are covered within the energy centre section. | | | |
| 53.0 | Laboratories | Please provide statement on Inflation allowances included. | Given that this work will be primarily secured in Year 2010 no allowance has been made for any inflation of the Net Package Costs. It is assumed that all packages can be procured at 2009 prices. There is an allowance within the preliminaries for a 3% staff increase in Jan 2010 and a similar increase in 2011. | | | |
| 54.0 | Laboratories | Has audio/visual system to Mortuary been included? If so, where and how much. | An allowance of £10k has been made with the M&E section of the Tender Bid | | | |
| 55.0 | Laboratories | Please confirm that the Cat 3 Containment Facilities Spec referred to in Clause 1.0, Appendix C1.2 of Outline Architect Spec is included. Is so, please advise where and provide breakdown of value. | The wall, floor and ceiling finish items are based on Polyflor.<br>Single Leaf Doors £ 17,500.00<br>1 /12 Leaf Doors £ 5,000.00<br>Wall Finishes £ 47,900.00<br>Floor Finishes £ 17,300.00<br>Ceiling Finishes £ 8,650.00<br>Safe Change Filters £ 12,000.00<br>Cat 3 Light Fittings £ 8,500.00<br>£ 116,850.00<br>All costs above are net of Sub-Contract Prelims (The percentage additions for S/C Prelims are 10% on internal doors, floors and ceilings and 19% on walls) , B.E. Prelims and B.E. OH&P | | | |
| 56.0 | Laboratories | Has allowance been included in bid for various treatments to soffits under 1F slab in open yard or entrance areas? | Included in bid. | | | |
| 57.0 | Laboratories | Design fees included are different to the fees provided to Bidders. Please provide details of difference. | The difference in design fee for the laboratories is due to additional consultants identified as being required to advise on building control and CDM. We have also made an allowance within the risk register to cover additional fees to the design team resulting from an increase in their scope of works | | | Agreed in final costings |
| 58.0 | Laboratories | Please confirm that all temporary services connections prior to Energy Centre being completed are included | Main incoming services are included within the energy centre section.<br>Allowance has been made for local temporary service connections until Energy Centre is sufficiently progressed. | | | |
| 59.0 | Laboratories | Please confirm that all robotics costs included in Hospital element of bid. | Confirmed | | | To be reviewed in stage D to stage E comparison |
| 60.0 | Laboratories | Please identify any costs associated with pneumatics included in the Labs element of your bid. | An allowance £62,200 has been included within section 5L Communications of the bid. This includes for the distribution Pipe work and Receivers within the Labs, but does not include any of the main plant elements which are included within the main hospital buildings. See Appendix Q60 for further information | | | |

| 2.0 | Energy Centre | Please confirm the location in your compliant bid the Energy Centre Layout plan reflecting the retention of the Stage D Laboratories design. | We would enclose drawing NA-EC-00-PL-251-020 that shows the energy centre from our masterplan located against the stage D laboratory design.<br><br>There is some flexibility with regard to the plan location that would require BMJ input should our bid prove to be successful.<br><br>The laboratory stage D design shows all main plant within the laboratory building plant rooms, which enables the laboratory building to operate stand alone.<br><br>The compliant bid for the Energy Centre does allow for some plant in the current designs; namely Standby Generators and Boiler capacity as detailed in Volume 3 Sections 3.8 & 3.10 and Volume 4 Section 4.55. | | | Subject to Development in Stage 2 |
| **M&E Services** | | | | | | |
| - | - | | - | - | | |
| **Renewables/Sustainability/BREEAM** | | | | | | |
| 3.0 | - | Please confirm that your compliant laboratory scheme will achieve BREEAM Excellent. | Our assessment of the compliant stage D design BREEAM rating is 65 which achieves very good but falls 5 points short of an excellent rating. The main reason for this shortfall is the difficulty in achieving the energy target of 80kgCO2/m2 without linking the laboratory building to the energy centre as confirmed in the Board response to RFI144.<br>There are a number of other options that could be looked at to improve the BREEAM rating such as reduction in CO2 emissions, limiting water consumption etc. These are not currently part of the compliant scheme. | | | Statement required identifying that “excellent” will be achieved via connection to Energy Centre once completed – existing Lab plant to become resilience<br>Agreed based upon stage D design available at tender stage |

| 1.0 | Schedule of Accommodation | Clarity is required with regard to your Schedule of Accommodation. The attached Appendix A identifies the area assessment presently (in column C). Please identify each actual figure in the column D ‘Confirmation’ listing to reflect the following (with item 3 provided separately): | Please find attached the completed Appendix A which has identified the actual area figures requested to be clarified in column D ‘Confirmation’.<br><br>We have assumed the ‘Y’ noted against Section Number 1 is the Board’s acceptance that this information has already been provided by Brookfield in Volume 1; Sections 1.1, 1.2, 1.3, 1.4 of our Bid Submission. | | | Refer to the agreed Schedule of Accommodation contained in Volume 1 of the Contractors Proposals in Contract Data Part 1 |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | | 1. **Gross departmental area** (including planning and engineering and departmental circulation) for each department and the total for each hospital<br>2. **Net departmental area** (sum of net as drawn/designed rooms only) for each department and the total for each hospital<br>3. **Net room areas** (excluding all ducts, pipe boxing and service zones) listed room by room and by department<br>4. **Circulation area** (departmental) for each department and the total for each hospital<br>5. **Communications and plant areas** (interdepartmental circulation horizontal and vertical and main plant rooms and risers) for each hospital<br>**Total gross floor area** for each hospital. | In addition, please note that the Total Gross Floor Area noted in our submission did not include the % Planning allowance. This SOA was generated by Codebook, and was an accurate 'As Drawn Area' which excluded the thickness of the internal partitions. This has now been included in the completed Appendix A. These figures represent the GIFA which has been priced and included within the Cost Plan. | | | |
| 2.0 | MRI replacement | Please confirm your proposals (methodology, routes and structural provision to support) the replacement/retro fit of MRI equipment. | In the absence of specific MRI product information, the building footprint areas identified on the plans as housing MRI installations have been checked against a 7.5 tonne magnet installation (example from a recent comparable project).<br>In each case it was noted that the floor and foundation structures as currently presented could be appropriately detailed to facilitate the incorporation of this equipment.<br>The proposed transit route for the MRI installation is not known but is expected to be either through double access doors at ground level, along corridors and possibly via a wall knock-out access panel into the proposed room. Alternatively, the MRI unit could be delivered to the FM area and transported via the service tunnel to a lift and then to the corridor etc as above. The floor and foundation structures for the possible routes noted above have been checked against the 7.5t load and noted to be able to be appropriately detailed to facilitate the incorporation of this equipment.<br>The final location of any such equipment will require to be specifically checked against the details of the actual equipment proposed. | | | This will be subject to Design Development Review<br>Allowance based upon 7.5t MRI load |
| **M&E Service** | | | | | | |
| 3.0 | M&E Services | Please confirm pipework types for DH&CW, CHW and heating. | For DH&CW pipework, Stainless Steel Mapress by Gilbert (or equivalent) is proposed up to 67mm dia. And an ABS type material will be used on sizes above this. Copper will not be used on these systems.<br>For CHW & LTHW, carbon steel galvanised Mapress by Gilbert (or equivalent), Large bore, mild steel medium grade tube, Victaulic mechanical couplings (or equivalent).<br>For MTHW mild steel heavy grade tube fully welded/flanged. | | | Agreed stainless steel throughout. |
| 4.0 | M&E Services | Please provide more clarity (detail) with regard to your proposed lighting controls. | A mixture of automatic 'absence' and 'presence' detection will be provided.<br><br>Presence detection: detector switches lighting on and off.<br>Extent of provision: intermittently occupied areas such as WCs, en suites, corridors, ward kitchens, stores, plant rooms, services risers, hospital streets, bathrooms etc.<br><br>Absence detection: lights manually switched on, detector extinguishes lighting in unoccupied room.<br>Extent of provision: offices, consulting rooms etc.<br><br>In addition, in rooms benefiting from daylight, luminaires near windows will be dimmable, regulated by the amount of daylight available.<br><br>Dimmable lighting has been included where specifically required by the ADB sheets.<br><br>Automatic control of lighting in rooms which have plenty of natural light will be regulated by means of a photocell within the space to ensure the required LUX is achieved by the combination of ambient and artificial light. | | | Refer to the RFI Log contained in Contract Data Part 1. |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| 5.0 | M&E Services | Please confirm that duty / stand-by plate heat exchangers will be provided for Domestic hot water. | Packaged plate heat exchangers/buffer vessels will be arranged to provide run/standby as described in Volume 4 Specification 4.28 and Volume 5 Schedule 5.2. | | | |
| 6.0 | M&E Services | Please provide details of proposed thermostatic mixing valves for DHW. | Taps with integral TMV3 will be used wherever suitable (refer to attached data sheet). In situations where these are not appropriate separate TMV3 thermostatic mixing valves will be used such as Oventrop Brawa-Mix 97 (or equivalent). | | | |
| 7.0 | M&E Services | Please provide details of trench make up for main services. | Trench depths, spacings and backfill will be as NHS Model Engineering Specifications C01 for pipe services and C41 for electrical services. Buried pre-insulated heating and chilled water mains will be in accordance with the system manufacturer's recommendations but will be similar to above. | | | |
| 8.0 | M&E Services | Please confirm that twin regulating valves have been included for gas supplies. | Yes confirmed | | | |
| 9.0 | M&E Services | Please confirm that NRV will be fitted at each fire isolation valve as ER's. | Yes confirmed | | | |
| 10.0 | M&E Services | Please confirm mechanical air change rate for the ward tower. | A typical ward in the tower has the following air change rates to either meet the ADB requirements or achieve the environment conditions:<br>• Bedrooms 2.5 ACH (related to ensuite extract rate and air volume for chilled beam unit loadings)<br>• Ensuites 10 ACH<br>• Clean Utility 6ACH<br>• Disposal Hold 10 ACH<br>• Pantry 6 ACH<br>• Dirty Utility 10 ACH<br>• Equipment store<br>• Cleaner 5 ACH<br>• Nurse base Up to 12 ACH to balance extract from utility spaces, etc<br>• Office/meeting 4 ACH | | | Refer to the M&E Clarification Log in Contract Data Part 2 for typical single bed ward. |
| 11.0 | M&E Services | Please confirm type of fire Extinguishants gas proposed for the main Comms rooms. | The main comms rooms will be protected by a gaseous fire suppression system, the two gases for consideration at detailed design stage are NOVEC1230 and FM200. Both gases have attributes and issues; NOVEC1230 has a Global Warming Potential(GWP) of 1, while FM200 has a GWP of 2900. Certainly NOVEC1230 is kinder to the environment, but it is less kind to the IT assets it is protecting due to the much greater temperature drop when released, over FM200. The rapid rate of change of temperature has been shown to result in failure of the electronic components. The hope is that the suppression gas is never released and that the systems operate on a double knock strategy of operation | | | Subject to detailed review Stage 2 |
| 12.0 | M&E Services | Please indicate the plant resilience for hot and cold water services, e.g. full duplicate or is one extra unit proposed per plant area? | HWS calorifiers are provided in groups to serve zones of the building. Each group includes a standby calorifier. Refer to Volume 5 Schedule 5.2 Calorifier. | | | |
| 13.0 | M&E Services | Further to your responses to TC#2, the items listed in the attached Appendix B require further clarification/responses. | As noted on Appendix B | | | |

| Technical Clarification 5 | | | | | | |
| **General** | | | | | | |
| 1.0 | LCC | Please check and confirm/clarify 60 year LCC values. | We can confirm the 60 year LCC values, which are based on the same assumptions as the 30 year values. The assumptions and detail are outlined within the LC Models provided. | | | |
| 2.0 | LCC | Please resubmit LCC rates as per Volume 4 Clarification Technical 19n0 – Item 8 Table 1 Item 4.0. | The LCC rates have been derived from detailed LC models based on the Specification and Capital Cost information in the Brookfield (Doig & Smith) Capital Cost Plans ("*Stage 3 Bid Cost Plan"* and *"Stage 1 Non-Compliant Bid Cost Plan"*). These cost plans have been submitted based on the NSGH bid deliverable cost plan breakdown requirements.<br><br>In line with these the LC Models have therefore only been able to been built for:<br><br>1) The Acute Adult and Children's Hospital;<br><br>2) The Laboratory Building<br><br>3) The External Works<br><br>Refer to Appendix 1 for Hospital Benchmarks used. | | | |
| 3.0 | FM | Please provide information in connection with derivation of FM services £/m2/yr rate – e.g. Sample Range, Hospital Type, Level of Service. Ditto as against differing Facilities e.g. Hospital/Lab etc. | The £/m$^2$ /yr rate for FM Services is based on an average cost derived from the Davis Langdon FM database which includes detailed FM service costs and specifications across a suitable range of appropriate projects. The database has been adjusted to reflect the current size and location of this Project. | | | |
| 4.0 | FM | Please provide breakdown of FM rate as per requirements of Table 1 Item 6.3 (Management/Staff/Contracted/Materials/Equipment costs) | An indication of the expected split of FM costs is as follows:<br>Management / Admin: 12.5%<br>Staff: 37.5%<br>External Contracts: 25%<br>Materials: 20%<br>Equipment: 5% | | | |
| 5.0 | Software | Please confirm that your Zutec software has been included in your priced proposals (this to include access, licensing and any necessary product maintenance requirements). Further please advise of system compatibility (i.e. does this interface with 'standard' software packaging and provision such as Microsoft products). | We confirm Zutec software/service is included in our priced proposals. This includes the access, licensing and associated product maintenance requirements during the 2 year DLP. We would also highlight that Zutec have included an additional 12 months beyond the 2 year DLP as a benefit to the project.<br><br>Zutec system is compatible with Microsoft products. Besides overcoming the logistics of handling volumes of hard copies, it provides an efficient and quick means to search/locate project information/data. This facility is also available remotely (from anywhere with internet connection).<br><br>At the end of DLP, a hard drive of the project information uploaded at that time will be handed over to the Board. The information in that hard drive is readable using internet browser (ie. Only software required to read/run the data is an Internet Explorer). This information can be exported/copied into Microsoft Word or Excel.<br><br>Should the Board wish to use the Zutec website to make ongoing updates to the project database beyond DLP, Zutec is able to offer a hosting solution on a monthly or annual fee basis. | | | |

| 6.0 | Fire Strategy | Can you confirm the qualified chartered fire engineer who will develop your design/strategy moving forwards. | The qualified chartered fire engineer overseeing our design development from WSP is:<br><br>Ryan McCreadie – Associate Director<br>BEng (Hons), PhD, MIFireE, Ceng<br>Chartered Engineer with the Engineering Council Division of the IFE.<br>Membership number – 00035119.<br><br>Mr McCreadie is assisted by the following WSP fire engineers:<br><br>Tom Grace – Associate Director<br>BE (Civil), ME (Fire), CPEng, MIFE, MSFPE, MIEAust<br><br>and<br><br>Kenny Hamill – Senior Fire Engineer<br>BSc (Hons) MRICS MIFireE | | | |
| 7.0 | Fire Strategy | It is noted that the smoke control proposal for the atrium relies on the decomposition of the ETFE roof based on a smoke/gas hot gas temperatures. What contingency planning would you recommend with regard to business continuity in this regard? | The ETFE roof system will be designed to ensure that the 'hot wire' activation only occurs in the highly unlikely event where a major fire occurs from adjoining areas into the atrium.<br><br>This activation sequence will be developed/14inalized in conjunction with the Fire Authority and the Board. However, we have considered the following features to limit the need for 'hot wire' activation:<br><br>• The environmental ventilation strategy for the atrium space includes for high level (side) vents to the ETFE roof and this will be used to support the smoke strategy in the early stages of fire development within the atrium (prior to any 'hot wire' activation).<br><br>• Lower volumes of buoyant smoke (at a temperature below ETFE failure) can be exhausted via the natural vent system.<br><br>• The vent sizes will be based on fire engineering calculations using BRE 368 for smoke management systems.<br><br>• Controlled fire load to atrium base by using fire load island philosophy. Fire loads will be concentrated into specific areas and separated by minimum distance to mitigate against fire spreading throughout the atrium base.<br>• The design fire size will be within the capacity for the natural vent system.<br><br>Furthermore and to reduce the threat of a major conflagration from adjoining areas into the atrium the following design features will be in place:<br><br>• Fire separation of areas opening onto atrium<br><br>• Sprinklers to areas adjoining atrium and appropriate areas in the atrium itself<br><br>• Glazing at ward levels to prevent smoke ingress from atrium to adjoining circulation areas<br><br>• Fire separation between clinical areas and circulation areas adjoining atrium<br>In developing the 'hot wire' activation sequence with the Enforcing Authorities and the Board, the aim is to filter out and avoid unnecessary occurrence by subjecting the activation to a number of "knocks/triggers". It is envisaged that this multiple layer control will firstly involve detection of a fire within the compartment adjacent to and off the atrium that may spread into the atrium. This detection is | | | |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | then subject to another knock whereby a manual override is provided to allow a suitable investigation period to establish cause of alert and validation of the size of the fire threat for 'hot wire' system to be finally activated.<br><br>In the next stage of our design development, we will assess the possibility of limiting the loss of the ETFE roof to partial sections only (ie. Sufficient to vent the fire size to be agreed with the Enforcing Authorities). We will also assess to further minimize the impact of damaged roof on the operation for the clinical side of the Hospital by for example having glazed (smoke) separation to the atrium as mentioned above.<br><br>In reference to the contingency planning with regard to the business continuity, we believe that the ETFE roof 'hot wire' system would only occur in a very significant fire incident. In this scenario, the Hospital building itself is likely to have extensive damages and will be subject to major business continuity contingency planning. | | | |
| 7.0 | **M&E Service** | | | | | |
| 8.0 | Lift Study | Please confirm that your reference to the Exemplar in the lift study is erroneous and provide bed movement time from the ground floor to the top storey ward. | The data provided was based on the population figures issued by the client in the exemplar report. The approx time taken to move a bed from Ground to top storey ward will be 42 seconds assuming no intermediate stops (door opening at ground to door opening at top floor). On average each journey will take - 60 seconds including intermediate stops. | | | Lift Analysis to be confirmed in Stage 2 |
| 9.0 | Maintenance | Please confirm that a maintenance gantry in the atrium (ventilation actuator maintenance) is included in your priced proposals. | Actuators will be located externally (IP65 rated) for ease of maintenance.<br><br>Localised access facilities will be provided as necessary. | | | |
| **Renewables/Sustainability/BREEAM** | | | | | | |
| 10.0 | U-Value | Please confirm your primary U-values for (i) Glazing, (ii) Fabric and (iii) Roof. | Glazing 1.4 $W/m^2K$ inc frame<br>External wall 0.3 $W/m^2K$<br>Roof 0.25 $W/m^2K$ | | | |
| 11.0 | Permeability | Please confirm your building permeability. | The air permeability (infiltration) will be in accordance with the ERs Volume 2/1 App M&E.4/3.3.5(1) i.e 5 $m^3/hr/m^2$ @ 50Pa | | | |
| **Laboratories** | | | | | | |
| - | - | No items in this TC. | - | | | |

**APPENDIX B**
**NSGH – Bid Evaluation – TC#4 Items from TC # 2 which require further clarification**

| Prev TC ref | Original Item | Action update required | Bidder Response | | | |
|---|---|---|---|---|---|---|
| 1 | List received of suggested suppliers | Client not aware of several e.g. Switchgear, fire alarm, Nurse call and wholesalers used for several systems please provide details and confirm that any changes will require agreement with the Board (up to three manufacturers for each M E & PH item) | The list of suggested suppliers gives an indication of the manufacture/suppliers of the components proposed. The final selection of components will be by agreement with the Board from a selection of no fewer that 3 manufacturers unless specialist equipment dictates otherwise | | | Refer Volume 5 the Contractor's Proposals in Contract Data Part 1. |
| 10 | Please confirm that BMS IP network will be fully stand alone and that all active equipment has been included. | Yes. Please provide supporting narrative for the included BMS IP network. E.g. raid storage, servers racks switches etc | The BMS kernel is built on two fault tolerant servers configured in a primary and hot standby fashion. The operating system will be Linux based with a SQL database for data management. The storage of BMS data will be on a RAID configured system and this will hold the immediate data live for 1 month. The SQL will be used for back up functionality and subsequent long terms analysis of the BMS system.<br>The system will have a primary fibre backbone with the appropriate Cisco managed switches breaking out into the copper IP networks at local system level. | | | |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| 11 | Tagging | Included. Please provide supporting narrative. e.g. tags are electronic integrated in the WIFI systems etc | The Tagging system works on RFID technology and there are two methods of operation.<br>1. For items such as wheelchairs, the system will display graphically the location of the asset and can be polled to find the nearest required equipment, such as staff requiring a wheelchair.<br>2. Other items can be set up so that they are governed by a boundary and if the asset is brought beyond this defined boundary, an alarm is triggered. | | | |
| 12 | Scaffolding will be used to land generators and transformers | Is this practical, will the scaffolding have permanent foundations etc. | The majority of replacement and maintenance items detailed in the plant replacement strategy in Volume 3.23 of our submission are dealt with via the FM lifts.<br><br>It is anticipated that the expected frequency for the replacement of the major plant items is once every 20-25 years or so in normal circumstances, if at all, and, if required, likely to take place during a period of planned major plant renewal.<br><br>It is considered that it is a reasonable strategy to allow for the erection of a temporary scaffolding working platform to facilitate the removal and replacement of equipment. A structure of this type with sufficient height and capacity can be easily erected at reasonable cost using readily available materials and labour.<br><br>It will be possible to erect such a temporary structure using standard scaffolding details with the footings bearing onto the ground externally, but with protection applied to the surface finishes.<br>It is possible to incorporate permanent concrete foundations to facilitate this work but it is unlikely that the specific scaffolding arrangement will be available during the initial construction work to enable a specific design to be constructed, or that the scaffolding proposals will not change over time and render the installed foundations redundant.<br><br>Where the equipment is required to be transported over the flat roof to reach a loading platform, the structure has sufficient design load capacity to facilitate this but with the actual roof finishes requiring protection as noted in the bid documentation. | | | |
| 13 | Medical gases and VIE | Please provide details of the plant resilience for medical air, 02, vacuum surgical air gas scavenging and nitrous oxide | All medical gas systems and plant are designed as per the current SHTM02-01, resilience within the selected plant items being provided in the following way:<br>Medical Air; a quadruplex plant will be provided, one compressor will act as a permanent standby, the remaining three compressors will be rotated through the demand requirements, this will insure boiling off of any excess condensate.<br>O2; two VIE stores will be provided, each store will be selected to provide 100% of the calculated demand, the stores will be configured as a run and standby mode.<br>AGSS; all AGSS pumps will be selected as duplex units, each pump will be rated to 100% of the calculated load. Each duplex plant will serve only four operating theatres.<br>Nitrous Oxide; a 2 x 10 manifold system with full automatic changeover facilities will be provided complete with a 2 x 1 ESM (emergency) manifold back up, all manifolds will be fully alarmed.<br>All other Air4 and Air 7 systems will have similar manifold systems complete with alarms and automatic changeover facilities | | | |
| 14 | luminaire details | Please provide info on LED and feature lighting luminaires | Refer to attached supplementary information | | | |
| 17 | Fire alarm PC includes incident location graphics | Please confirm fire alarm PC includes incident location graphics | Confirmed as included | | | |
| 20 | Patient entertainment | Schematic representation noted. Please provide equipment details e.g. infrastructure, equipment, patient | The primary patient and staff interface within the ward spaces, is based on a unit, such as the Lincor system. These units are connected back over CAT6A | | | |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | systems. | interface etc. | cables to the local hub rooms to an appropriate Cisco managed switch. At this point the system is connected back to the head end, via fibre network. The head end, is a fault tolerant server solution with various interfaces to broadcast receiver equipment.<br>It is possible for this system to be integrated with medical records IT to have the local interface become part of the clinical information management at the bedside. This is not included in this proposal at this time. There is only one screen in the patient space that covers all functionality. | | | |
| 23 | Please confirm that metering | BREEAM compliance noted, please provide a narrative e.g. central monitoring and storage | Metering of engineering services will be provided in accordance with the requirements of the ERs, BREEAM and GIL 65. All metering points will be monitored, recorded and stored on the BMS. | | | |
| 24 | Water spillage protection in secondary comms room. | It is noted that fan coils will have drip trays. On the assumption that the drip tray is full please advise how fan coils can be used in secondary comms rooms while ensuring that the equipment will be protected | Subject to the final layout of the comms rooms options for the fan coil units include positioning high level detection in the drip trays linked to the FCU operation, or more preferably locating the FCU outside of the comms room and ducting the conditioned air into the room. | | | |
| 25 | Please confirm compliance with maintainability and area isolation requirements. | Compliance on Electrical services noted, please confirm compliance with maintainability and area isolation requirements. | Isolation of electrical services will be possible as follows:<br><br>It will be possible to isolate an entire HV ring by opening protective devices at each end in the energy centre.<br><br>Sections of HV ring may be isolated by selective switching of devices at substations along the length of the ring.<br><br>Transformers may be isolated at the associated ring main units.<br><br>Main LV Switchboards may be isolated by opening their main incomer.<br><br>Submains cables to sub switchboards may be isolated by opening their protective device.<br><br>Sub switchboards may be isolated by opening their main incomer.<br><br>A minimum of 2 distribution boards will be provided per department and final circuits will be interleaved so far as is practicable (see below). Thus isolation of one distribution board will affect half of the circuits in the area served by that board.<br><br>The majority of rooms will be provided with at least 2 lighting and 2 small power circuits. Exceptions will be rooms with one luminaire or one socket outlet such as toilets, cupboards, risers and so on where it would be impractical to provide duplication.<br><br>The ERs appear to require each individual room to be capable of isolation without impact upon adjoining areas. We have not interpreted this to mean that each room should be provided with dedicated electrical circuits. Strict adherence to this requirement would result in a minimum of 4 circuits dedicated to each room ie: Side A lighting, Side A power, Side B lighting, Side B power. A department with 100 rooms would require 400 circuits which equates to say 10 no. 18 way 3 phase distribution boards. There would be a considerable impact on the size of the local sub switchboards and the quantity of submains cabling as well as on the quantity of final circuit cable containment systems and space requirements to accommodate the distribution boards and large sub switchboards. | | | The specific ER requirement at 8.1.5.4 is to be achieved by the Contractor |
| 28 | Plant and equipment will be suitably isolated to prevent transmission of | Compliance noted, please provide narrative on proposals | Sound and vibration control for ventilation systems are described in Volume 4 Specification 4.33 giving proposals for plant attenuation, cross-talk attenuation and vibration control under fans etc.<br><br>Major plant such as chillers, generators, compressor etc. will be provided with spring isolation mounts as required to reduce vibration. | | | |

Formatted: Centered

| | | | | | | |
|---|---|---|---|---|---|---|
| | noise and vibration. | | Vibration isolation of pumps will be assessed with the pump manufacturer to determine the most appropriate method of isolation, with spring pipe hangers provided adjacent to pump assemblies.<br><br>Plant noise breakout to site boundaries and intrusive noise into adjacent buildings will be controlled by sound attenuators in the fresh air intakes to all plant to meet the limiting noise criteria for the hospital site. | | | |
| 29 | Please confirm that full environmental proving off all rooms will be provided. | Compliance noted, please provide narrative on proposals | A full environmental check on all rooms will be provided. This will be undertaken at the commissioning stage of the project, all rooms will be put through a range of internal conditions to prove the capacity within the systems to increase and or decrease the space temperatures within a set time line. These tests will be trend logged within the BMS over a given period of time and any faults found will be addressed before final handover. | | | |
| 31 | Please confirm that all services elements are included to meet the fire engineering solution, e.g. stair pressurisation, smoke control etc | Compliance noted, please provide narrative on proposals | All service elements have been included to meet the Section 2.10 Fire Strategy report.<br>Fire engineering has been used wherever beneficial to meet, or surpass, the minimum fire safety performance standards contained within the various guidance documents. To achieve this the services strategy includes for areas such as detection / alarm systems; escape bed lift provision; smoke dispersal from stair protected zones / fire fighting shafts / lift lobbies, atrium smoke and ventilation strategy; basement smoke control / clearance strategy; fire damper actuation etc. | | | Contractor to develop a fire engineered strategy which complies with Statutory Regulations and Fire Code |
| 34 | Please confirm that leak detection has been included. | Compliance noted, please provide narrative on proposals | The leak detection systems will be developed during the detailed design phase and will utilise linear detection elements, broken into appropriate lengths. The system will form part of the BMS, with a graphic interface of the overall system. Leak detection will be logged under the BMS alarm handling and it will also be possible to configure plant shut down or other intervention, on the presence of a leak being detected. | | | |
| 35 | Please indicate percentage capacity of all water service pipework mains from the energy centre to the main buildings for resilience. | Heating response noted, please provide narrative for CWS and CHWS | The site water mains feed directly into the hospital with bulk storage in the basement. No CWS is fed from the Energy Centre.<br><br>HWS is generated locally within the plant areas to feed the various zones of the building. No HWS is fed from the Energy Centre. | | | Refer to the M&E Clarification Log in Contract Data Part 2. |

Formatted: Centered

**Sustainability and Energy Consumption**

**Requirements from Brookfield (Brookfield final response indicated in red below)**

1) Operational Energy Targets (basis)
   - Updated Energy Model to be produced within 6 weeks
   - Issue updated report prior to each key design stage (condition of approval to proceed to subsequent stages)
   - Final model to be provided 3 months in advance of Stage 3

   Brookfield will include within the detailed design programs for Laboratory and Adult / Children's hospital monthly sustainability design review hold points up to FBC as per schedule provided by WSP & Ecoteric.

2) Operational Energy Targets (areas)
   - Clarify exact area as a benchmark going forward

   80kg$CO_2m^2$ against net building area 136,490$m^2$

3) Operational Energy Targets (content)
   - State clearly in Mwh per annum and $CO_2$ for fossil and electrical energy, the building demand, gross energy supply and carbon offset by renewables
   - State assumed area in m2

   Energy model will include this information and will be developed during the design development stage as Brookfield programme

4) Operational and Design Energy Target
   - Include climate change impact within future modelling

   Future modelling could include potential effect of climate change subject to an agreed set of parameters.

5) Operational Energy Target: Energy Costs
   - Range of 15% given on Energy Cost: Confirm stated energy target includes upper value of range stated.

   80kg$CO_2m^2$ is within upper range (£2.6 million plus 15%) as stated.

6) Laboratories Board to advise energy use determined at Stage E
   - Establish likely energy usage of laboratories

   Ecoteric confirmed stage D laboratory design did not comply with target emission reduction (TER) 80kg$CO_2m^2$ and or BREEAM Rating Excellence.

   The Board has stated that the laboratory target emission reduction 80kg$CO_2m^2$ is to be achieved upon connection to the Energy Centre.

   Stage E Laboratory design will be assessed upon receipt in respect of BREEAM rating and target emission reduction.

7) Future Proofing
   - Confirm provision of a comprehensive solution for future fuel flexibility without impact on current design

Reference Clause 8.3.38 of Volume 2/1, there is no specific requirements for 'future fuel flexing' and as such the Contractor's Proposals do not include these.
However, as boilers are dual fuel oil and gas, some ability exists to run on alternative fuels although limited by current oil storage provision as Appendix M&E.2 Section 4 (7 days).

Future fuels flexibility based on fuel oil, natural gas and biogas if supplied as the same characteristics of natural gas.

8) Lighting Controls
   - Clarify extent of automatic controls

Lighting control based on Brookfield proposal and as stated in agreed RFI log.

9) Renewables
   - Clarify what has been included
   - Clarify output of proposed wind turbines

Refer to contractor's proposal section 3.20.
Brookfield will further investigate the following:

- Off site wind.
- Borehole water use.
- Ground Source.

The investigations and conclusions will consider commercial viability

10) Active Energy Management
   - Provide statement on deliverables, expertise and included scope.

Brookfield advised that the bid offer included during 24 months DLP (as per Contractors proposal Vol 3 3.24)

- Energy monitoring.
- Monthly energy report.
- Ongoing fine tuning of systems to ensure compliance with design.
- Zutec asset management system interfaced with the energy metering system
- WSP sustainability will review energy data and reports.

11) Natural Ventilation
   - Clarify extent of openable windows within bid

The Board's requirement to limit space temperatures to 26 $^{o}$C means that the use of natural ventilation is limited and that a sealed building is the only way to meet the requirement.

There may be areas that can be naturally ventilated, but this can only be determined once the whole building has been thermally modelled during the detailed design stage, and is reliant on the following being available:-

- Signed off 1-200 layouts
- Signed off envelope details
- Agreed information on occupancy and equipment gains
- Agreed room environmental conditions (also expressed on a set of Environmental Treatment drawings)

However, at this time our opinion is that all continuously occupied spaces will be sealed and use either all air or chilled beams to maintain the required conditions. Transient spaces such as street, circulation spaces and atria (subject to CFD analysis) are envisaged as being naturally ventilated, as there is unlikely to be a strict requirement for upper temperature control

12) Energy Saving Measures
    - Provide detailed list of bid inclusions.
    - System by system, zone by zone listing required stating heat recovery, motor type and controls method required in design development stage.

Refer to Volume 3 Section 3.20 of Contractor Proposals for details.
Brookfield will provide all necessary information during detailed design and technical Submissions prior to procurement.

13) Whole Site Energy
    - Confirm retained and future estates are included within the energy provision of the Energy Centre.

Agreed that this is not a Brookfield issue.
Ecoteric will discuss issue with Board.

14) Individual Room Controls
    - Confirm ability to control rooms individually.

It is envisaged that the majority of the hospital will be able to be provided with individual room temperature control on the following basis:-

- Individual occupied spaces served by chilled beams will have local control
- Heated only spaces utilising radiant panels with have local control
- Specialist 'air conditioned' areas (such as theatre suites, diagnostic imaging, etc) will have individual room control

In multiple occupancy spaces such as A&E cubicles areas, waiting areas, ancillary support rooms, etc where individual room control is impractical then temperature control will be on common return air.

**This is Appendix 2 & 3 to the foregoing Agreement between Greater Glasgow and Clyde Health Board**

**and**

**Brookfield Construction (UK) Limited**

**GREATER GLASGOW AND CLYDE HEALTH BOARD** of J B Russell House, Gartnavel Royal Hospital, 1055 Great Western Road, Glasgow G12 0XH ("the *Employer*"); and

**BROOKFIELD CONSTRUCTION (UK) LIMITED** having its principal place of business at 23 Hanover Square, London, W1S 1JB (the "*Contractor*").

WHEREAS

1. The *Employer* and the *Contractor* entered into the Agreement dated 18th December 2009 whereby the *Contractor* is to Provide the Works in connection with the New South Glasgow Hospital Project.
2. The *Employer* wishes the *Contractor* to continue to Provide the Works by commencing and carrying out:

| | | |
|---|---|---|
| Stage 3 | Design and Construct New Hospitals Building | Design and Construction of the New Adult Acute and Children Hospitals Building and Energy Centre. |
| Stage 3A | Demolition of Surgery Block | Demolition of surgical block and associated buildings and completion of soft landscaping |

NOW IT IS AGREED THAT

1. The *Employer* hereby authorises the *Contractor* to commence and carry out Stage 3 and Stage 3 A of the *works* i.e. the Design and Construction of the New Hospitals Building, and demolition of the surgical block and associated buildings and completion of soft landscaping.
2. The *Contractor* will continue to Provide the Works in accordance with the Agreement.

3. The Agreement is amended and modified to the following extent:-

i. The Base Date for monitoring the *Employer* Accepted Risk on Inflation for all Stages will be 1st January 2011.

ii. The Start on Site date for Stage 3 is amended from 28th February 2011 to 28th March 2011 at which point the *Employer* will ensure the provision of a totally clear site for access by the *Contractor*. It is accepted by the *Employer* that the *Contractor* shall be entitled to undertake enabling works prior to this date.

iii. The Start on Site Date for Stage 3A is amended from 20th July 2015 to 17th August 2015

iv. Option X5 Clause, the Completion Date for Section 2 (Stage 3 New Hospital) is amended from 31st January 2015 to 28th February 2015 and the Completion Date for Section 3 (Stage 3A Demolition) is amended from 19th July 2016 to 16th August 2016

v. Contract Data Part One and Contract Data Part Two forming part of executed Contract dated 18th December 2009, is amended and supplemented as follows:-

Employers Requirements Supplemental Information –

- BIW Log (as included within Folder B1 of the Instruction to Proceed Bible titled The BIW Log (2010 ItP) – (FINAL) )
- RFI Log (as included within Folder B1 of the Instruction to Proceed Bible titled The RFI Log (2010 ItP) – (FINAL) )
- Clarification Log (as included within Folder B1 of the Instruction to Proceed Bible titled The Clarification Log (2010 ItP) – (FINAL))
- M+E Clarification Log (as included within Folder B1 of the Instruction to Proceed Bible titled The M&E Clarification Log (2010 ItP) – (FINAL))
- Laboratory Log (as included within Folder B1 of the Instruction to Proceed Bible) (as executed Agreement 18th December 2009)
- Sustainability Log (as included within Folder B1 of the Instruction to Proceed Bible titled The Sustainability Log (2010 ItP) – (FINAL))

- Stage 3 Instruction to Proceed Log December 2010 (new) (as included within Folder S of the Instruction to Proceed Bible)

Contractors Proposals –

- Volume 1 (as included with Folder C1 of the Instruction to Proceed Bible) – Schedule of Accommodation titled SOA 1:200 Drawings. By reference to the 1:200 drawings included within Volume 13 of this agreement the areas denoted on the drawings represent the agreed position between the Parties to the Contract. The Parties agree to use reasonable endeavours to prove functionality and to maintain the overall areas as currently indicated and the *Employer* agrees that any adjustments to areas during the remaining 1:50 review process (excluding Plantrooms and Service Risers with the exception of those adjustments due to a change within the Employer's Requirements) that cannot be accommodated within the Departmental areas or within the overall building envelope that give rise to an increase in area will be an additional Employer Risk. The Parties accept that the 0.5% risk accepted by the Contractor within the Agreement of 18th December 2009 has already been absorbed by the Contractor.
- Volume 2 (as included within Folder D1 of the Instruction to Proceed Folder) – Drawings.
- Volume 3 (as included within Folder F1 of the Instruction to Proceed Bible) – Design Narratives
- Volume 4 (as included within Folder G1 of the Instruction to Proceed Bible) – Specifications
- Volume 5 (as included within Folder H1 of the Instruction to Proceed Bible) – Components titled 2010 ItP Project Bible - Folder H1 – Components (FINAL)
- Volume 6 (as included within Folder T of the Instruction to Proceed Bible) – Equipment (as amended 16th December 2010). These revised Equipment Schedules define the current position agreed between the Parties to the Contract and thus the quantities and coding identified therein take precedence over the Drawings included

within Volumes 2, 13, 14, and 15 of this Appendix 2 and 3 agreement. For purpose of clarity any change in quantity or coding will be an Employer Risk pursuant to Risk Items 25, 39 and 40 on the Stage 3 NSGH Board Risk Schedule included within the Contract.

- Volume 7 (as included within Folder I1 of the Instruction to Proceed Bible) – SHTM (as executed Agreement 18th December 2009)
- Volume 8 (as included within Folder J1 of the Instruction to Proceed Bible) – ADB titled EDS ItP Batch 1 - ZBP updates_141210" & "EDS ItP Batch 2 - ZBP updates_141210" & "2900-NSGH-Environmental matrix_comments-011210 (Final)
- Volume 9 (as included within Folder K1 of the Instruction to Proceed Bible) – Programme titled Stage 3 Summary Master Programme, BCL-GSM-CN02-0001 (FINAL)
- Volume 10 (as included within Folder L1 of the Instruction to Proceed Bible) – Logistics (as amended 16th December 2010)
- Volume 11 – Not Used
- Volume 12 – Commercial (as executed Agreement 18th December 2009 unless amended by this Appendix 2 & 3, or Compensation Event already issued, or Project Managers Instruction already issued)
- Volume 13 (as included within Folder U of the Instruction to Proceed Bible) (new) – Masterplan & Architecture Proposals (Agreed Appendix k drawing schedule)
- Volume 14 (as included within Folder V of the Instruction to Proceed Bible) (new) – M&E Engineering Proposals (Agreed Appendix k drawing schedule)
- Volume 15 (as included within Folder W of the Instruction to Proceed Bible) (new) – Civil / Structural Engineering Proposals (Agreed Appendix k drawing schedule)
- Volume 16 Critical Failures (as included within Folder X of the Instruction to Proceed Bible titled Appendix X1 (FINAL)

- Volume 17Planning Consents Pack (as included within Folder Y of the Instruction to Proceed Bible)

vi. Compensation Events and Project Managers Instructions as issued prior to execution date of this Appendix 2 & 3

EXECUTED for and on behalf of the *Employer* at 16th day of December 2010 as follows:-

[redacted]

(Authorised official)

Before this witness:- [redacted]

ALAN SEABOURNE ..... Full name
CONSTRUCTION SITE, HARDGATE ROAD,
GOVAN, GLASGOW, G51 4SX Address

[redacted] *Contractor* at 16th day of December 2010 as follows:-

(~~Director/~~Authorised Signatory)

Before this witness:-

[redacted] ..... Full name
